LISTS OF ABBREVIATIONS

I. GENERAL

A.H. = Anno Hijrae (A.D. 622).
 Ak. = Akkadian.
 Alex. = Alexandrian.
 Amer. = American.
 Apoc. = Apocalypse, Apocalyptic.
 Apocr. = Apocrypha.
 Aq. = Aquila.
 Arab. = Arabic.
 Aram. = Aramaic.
 Arm. = Armenian.
 Ary. = Aryan.
 As. = Asiatic.
 Assy. = Assyrian.
 AT = Altes Testament.
 AV = Authorized Version.
 AVm = Authorized Version margin.
 A.Y. = Anno Yazdagird (A.D. 639).
 Bab. = Babylonian.
 c. = *circa*, about.
 Can. = Canaanite.
 cf. = compare.
 ct. = contrast.
 D = Deuteronomist.
 E = Elohist.
 edd. = editions or editors.
 Egyp. = Egyptian.
 Eng. = English.
 Eth. = Ethiopic.
 EV, EVV = English Version, Versions.
 f. = and following verse or page.
 ff. = and following verses or pages.
 Fr. = French.
 Germ. = German.
 Gr. = Greek.
 H = Law of Holiness.
 Heb. = Hebrew.
 Hel. = Hellenistic.
 Hex. = Hexateuch.
 Himy. = Himyaritic.
 Ir. = Irish.
 Iran. = Iranian.

Isr. = Israelite.
 J = Jahwist.
 J" = Jehovah.
 Jerus. = Jerusalem.
 Jos. = Josephus.
 LXX = Septuagint.
 Min. = Minæan.
 MSS = Manuscripts.
 MT = Massoretic Text.
 n. = note.
 NT = New Testament.
 Onk. = Onkelos.
 OT = Old Testament.
 P = Priestly Narrative.
 Pal. = Palestine, Palestinian.
 Pent. = Pentateuch.
 Pers. = Persian.
 Phil. = Philistine.
 Phœn. = Phœnician.
 Pr. Bk. = Prayer Book.
 R = Redactor.
 Rom. = Roman.
 RV = Revised Version.
 RVm = Revised Version margin.
 Sab. = Sabæan.
 Sam. = Samaritan.
 Sem. = Semitic.
 Sept. = Septuagint.
 Sin. = Sinaitic.
 Skr. = Sanskrit.
 Symm. = Symmachus.
 Syr. = Syriac.
 t. (following a number) = times.
 Talm. = Talmud.
 Targ. = Targum.
 Theod. = Theodotion.
 TR = Textus Receptus, Received Text.
 tr. = translated or translation.
 VSS = Versions.
 Vulg., Vg. = Vulgate.
 WH = Westcott and Hort's text.

II. BOOKS OF THE BIBLE

Old Testament.

Gn = Genesis.	Ca = Canticles.
Ex = Exodus.	Is = Isaiah.
Lv = Leviticus.	Jer = Jeremiah.
Nu = Numbers.	La = Lamentations.
Dt = Deuteronomy.	Ezk = Ezekiel.
Jos = Joshua.	Dn = Daniel.
Jg = Judges.	Hos = Hosea.
Ru = Ruth.	Jl = Joel.
1 S, 2 S = 1 and 2 Samuel.	Am = Amos.
1 K, 2 K = 1 and 2 Kings.	Ob = Obadiah.
1 Ch, 2 Ch = 1 and 2 Chronicles.	Jon = Jonah.
Ezr = Ezra.	Mic = Micah.
Neh = Nehemiah.	Nah = Nahum.
Est = Esther.	Hab = Habakkuk.
Job.	Zeph = Zephaniah.
Ps = Psalms.	Hag = Haggai.
Pr = Proverbs.	Zec = Zechariah.
Ec = Ecclesiastes.	Mal = Malachi.

Apocrypha.

1 Es, 2 Es = 1 and 2 Esdras.	To = Tobit.
	Jth = Judith.

Ad. Est = Additions to Esther.	Sus = Susanna.
Wis = Wisdom.	Bel = Bel and the Dragon.

LIFE AND DEATH (Biological).—The characteristic quality, common to plants, animals, and man, which distinguishes them from all other things, is what we call 'life.' It cannot be defined in terms of anything else, but what the concept implies may be illustrated; and that is the aim of this article. The word 'life' is often used to denote the living creature's complete sequence of activities and experiences throughout the period during which it is alive; as when we say that an eagle has a very long, busy, and free life. It is also used as a short word for what is almost always going on in connexion with living creatures—their acting upon their environment and reacting to it; and it is, of course, quite clear and useful to say that life consists of action and reaction between organism and environment. We must, indeed, be careful never to lose sight of the fact that life is a relation. But what we wish to discern is the characteristic quality of organisms, one term in the relation. It may also be noted that 'life' is a distinctively biological concept, and that there is always a risk in transferring it to other fields. No harm is done, perhaps, in speaking of mental, moral, social, and spiritual life; but one may beg important questions in speaking of the life of crystals. By death we mean here the cessation of an organism's individual life, a fatal disruption of the unity of the organism. There is no confusion in using the same word for the end of the individual as such, and for the apparently irreversible process which leads to the end.

1. General characteristics of living organisms.—Many biologists have sought to sum up the char-

acteristics of living organisms, but no formulation has won general acceptance. This doubtless means that the insignia of life have not yet been discerned either wholly or in their proper perspective. One of the clearest statements is given by Roux (*VII Internat. Zoological Congress Boston*, Cambridge, U.S.A., 1912, p. 436), who recognizes five 'elementary functions': (1) self-dissimilation; (2) self-preservation, including assimilation, growth, movement, etc.; (3) self-multiplication; (4) self-development; and (5) self-regulation in the exercise of all functions, including self-differentiation, self-adjustment, self-adaptation, and, in many organisms, distinctly recognizable psychical functions. The persistent use of the prefix self, on the part of the founder of *Entwicklungsmechanik*, is very interesting. Przibram (*Experimentelle Zoologie*, iv.) arranges 'the criteria of life' in three groups—morphological, chemical, and physiological. The morphological characteristic is some measure of differentiation or heterogeneity of structure, which distinguishes even the simplest organism from a crystal. The chemical characteristic is the invariable presence of albuminoid substances in a colloid state. The physiological characteristic is to be found in growth and in the movement of parts. Another way of stating the general characteristics of organisms will now be expounded—under three heads.

(1) *Persistence of complex specific metabolism and of specific organization.*—We place in the forefront the fact that the organism is typically in continual flux and yet retains its integrity. Chemical change is the rule of the world, but the

peculiarities in the case of organisms are (a) that many of the changes are very complex, having in part to do with proteids; (b) that they are specific for each kind of creature; and (c) that they are correlated in such a way that they continue and the associated structure persists. Each of these peculiarities requires some exposition. (a) Many chemical changes occur in the living organism, and some of them are relatively simple, but the essential changes appear to be concerned with proteid or albuminoid substances, which are always present. These compounds are peculiarly intricate, with a large number of atoms or atom-groups in their molecules; they diffuse very slowly and do not readily pass through membranes; they occur in a colloid state, and, although some are crystallizable, e.g. haemoglobin, they are not known in a crystalloid state in the living organism; they are relatively stable bodies, yet they are continually breaking down and being built up again in the living body, partly under the direct influence of ferments or enzymes. The constructive, synthetic, up-building, winding-up processes are summed up in the term 'anabolism'; the disruptive, analytic, down-breaking, running-down processes are summed up in the term 'katabolism,' both sets of processes being included in the term 'metabolism,' for which we have, unfortunately, no English equivalent like the fine German word *Stoffwechsel*, 'change of stuff.'

(b) It is a noteworthy fact that each kind of organism, so far as we know, has its specific metabolism, its own chemical individuality. This is often well illustrated by the difference in the analogous chemical products of related species. There is chemical specificity in the milk of nearly related animals and in the grapes of nearly related vines. It has become possible of recent years to make absolutely sure, within given limits, of the kind of animal to which a blood-stain is due—e.g., whether horse or ass. The familiar fact that there are people who cannot eat certain kinds of food—e.g., eggs, milk, oysters, crabs—without more or less serious symptoms is an illustration of specificity which is actually individual. It looks as if a man is individual not only to his finger-prints, but to his chemical molecules. We come back to what was said of old: 'All flesh is not the same flesh: but there is one kind of flesh of men, another flesh of beasts, another of fishes, and another of birds' (1 Co 15⁸⁹).

(c) In the ordinary chemical changes of the inorganic world, as in the weathering of rocks into soil, one substance changes into another. The same sort of thing goes on in the living body, but the characteristic feature is a balancing of accounts so that the specific activity continues. We lay emphasis on this characteristic since it seems fundamental—the capacity of continuing in spite of change, of continuing, indeed, through change. An organism was not worthy of the name until it showed, for a short time at least, not merely activity, but persistent activity. The organism is like a clock, inasmuch as it is always running down and always being wound up; but, unlike a clock, it can wind itself up, if it gets food and rest. The chemical processes are so correlated that up-building makes further down-breaking possible; the pluses balance the minuses; and the creature lives on. We are familiar with the self-preservative activities of higher animals, but not less important is the continual maintenance of the specific chemical activity of each cell and of the correlated invisible structure or organization. It is an extraordinary fact that a particular functional activity in a nervous system may be restored after the destruction of the nerve-cells and fibres on which the activity previously depended—a fact all the more remarkable

since in higher animals there is no regeneration of nerve-cells. But not less important is the manner in which a unicellular organism can spend its substance and yet, as it were, have it, because of the fundamental capacity for self-renewal.

To what has just been said several saving clauses must be added to prevent misunderstanding. (a) The organism is no exception to the law of the conservation of energy. In doing work and even in mere living it expends energy and suffers wear and tear. It cannot continue active unless it captures more energy and has time for rest and repairs. But its chemical activities are so correlated that it remains for a considerable time a going concern. Fatigue, senescence, and death show that its fundamental capacity for self-maintenance is not perfect. (β) A particular chemical reaction that takes place in an organism may sometimes be repeated in artificial isolation, and, when this can be done, it is plain that there is nothing characteristically vital about it. It is the same in the eagle as in the test-tube. But in the living organism it is a link in a concatenated series which makes for self-repair and continuance. The riddle of life is that of the burning bush—'nec tamen consumebatur.' (γ) If a living organism were to be minced up quickly, no change of chemical composition would necessarily occur for some little time. But what exhibition would there be of the alleged fundamental characteristic of self-repair? It may be answered that the minced-up organism would be dead, whereas we are dealing at present with living organisms. Or it may be more shrewdly pointed out that the living units of the body are adapted to chemical self-repair in particular conditions—e.g., an environment of other cells, which have been abolished by the mincing. But perhaps the most instructive answer is the experimental one, that, if a sponge be minced up and forced through a cloth filter, little drops of the débris, placed in appropriate environment, will at once proceed to build themselves up into new sponges. (δ) It has to be admitted that the criterion of life to which we are giving prominence is relative. Some organisms can keep going for a hundred years, and some for only a hundred days, and some for only a hundred hours—the question rises as to the limit. Among the primordial organisms may there not have been some which lived only for a hundred seconds? How then would these hypothetical creatures have differed from the pill of potassium which flares itself out, rushing over the surface of the basin of water on which it has been thrown? The answer must be that an organism did not begin to be until alongside of disruptive processes associated with proteid substances there were also correlated constructive processes, making for repair and self-maintenance.

(2) *Growth, reproduction, and development.*—When an inorganic thing is affected by an external influence inducing chemical change, the result is apt to be destructive. It changes into something else—the bar of iron into rust, and the barrel of gunpowder mostly into gas. The organism's responses to stimuli—in most cases a more accurate phrasing than 'reactions to external forces'—also involve disruptions, but these are not destructive. As we have seen, they are correlated with self-maintaining processes. Now we can conceive of an organism which balanced its accounts from hour to hour, but never had much margin. There are such organisms which live, to use a homely expression, from hand to mouth. They are viable, going concerns, but they are trading on a very restricted basis of capital. It is plain that organisms could not have gone very far on such dangerous lines. They could not have survived any crisis. There is

obvious advantage, therefore, in storing energy in potential form, and this accumulation of reserves is fundamentally characteristic of organisms—especially of plants. As regards income and output of energy, an organism is far and away more efficient than any engine that man has yet invented. The organism can make its income go farther. It allows a smaller proportion of energy to sink into unavailable form. It can turn potential energy into useful form in a way that engines cannot do without enormous waste. More than this, however, there is a power of laying by what can be used later on. J. Joly ('The Abundance of Life,' *Scient. Proc. Roy. Soc. Dublin*, vii. [1891] 55-90) expressed the dynamic contrast long ago when he said that, whereas the transfer of energy into an inanimate material system was attended with effects conducive to dissipation and retardative to further transfer, the transfer of energy into an animate material system is attended with effects retardative of dissipation and conducive to further transfer. This seems to lead on to the criterion of growth. A surplus of income over expenditure is the primal condition of organic growth, and in this respect plants are pre-eminent, since they accumulate such rich reserves (potential energy of chemical substances) and are so very economical in the getting of them. It must not be forgotten that it is the existence of the plant world that has made it possible for animals to dispense, relatively speaking, with intra-organismal stores. In the art. GROWTH it has been pointed out that the growth of living creatures, as contrasted with that of crystals, is at the expense of materials different from those which compose the organism; that it implies active assimilation, not passive accretion; and that it is, in quite a new sense, a regulated process. An organism does not grow like a snowball rolling down a hill. To sum up, the power of sustained metabolism—of balancing accounts with some margin to go on with—makes growth possible.

But growth naturally leads on to multiplication or reproduction. As Haeckel clearly pointed out in his *Generelle Morphologie* (Berlin, 1866), reproduction is discontinuous growth. It seems impossible to draw any hard-and-fast line between a fragmentation which separates off overgrowths and the more specialized modes of reproduction. We seem to be looking back to near the beginning of organic life when we see the breakage of a protoplasmic mass which has grown too large to be a unity. It was long ago pointed out by Herbert Spencer and others that a living unit would tend to divide when the increase of volume outran—as it soon must if it continues—the increase of surface. In a sphere, for instance, the volume must increase as the cube, and the surface only as the square, of the radius. Thus, if it grew beyond a certain size, a spherical organism would get into serious functional difficulties, the volume of material to be kept alive having increased out of proportion to the surface by which it is kept alive. By division into two units, the disproportion is counteracted. It has also been suggested that there is a certain normal proportion between the nucleus and the cell-substance or cytoplasm, which is disturbed if the cytoplasm increases beyond a certain limit. A non-nucleated piece of cytoplasm cut off from a large protozoon can move about for a time, but it can neither feed nor grow. There are facts which indicate that the nucleus is a trophic and respiratory centre of the cell. It may be then that the division of a cell is a means of restoring the balance between volume and surface and between cytoplasm and nucleoplasm. The balance may also be restored by the emission of processes from the surface of the cell,

as in rhizopod protozoa (Amœbæ, Foraminifera, Radiolaria, etc.); or by a multiplication of nuclei, as often happens. But what has been suggested is a theory of the advantage of cell-division, not of the immediate physiological reason for its occurrence. As to this, it has been mooted that a period of growth is followed automatically by a process of 'autokatalysis,' but precise data are wanting. It cannot be gainsaid that the division of a cell remains one of the deep problems of biology. W. Bateson writes:

'I know nothing which to a man well trained in scientific knowledge and method brings so vivid a realisation of our ignorance of the nature of life as the mystery of cell-division. . . The greatest advance I can conceive in biology would be the discovery of the nature of the instability which leads to the continual division of the cell. When I look at a dividing cell I feel as an astronomer might do if he beheld the formation of a double star: that an original act of creation is taking place before me' (*Problems of Genetics*, p. 89).

In most cases a cell divides into two precisely similar daughter cells; this is associated with an exceedingly complicated division of the nucleus, which secures that each of the two daughter cells gets a very accurate half of each part of the original nucleus. But the difficulty of the problem is increased by the fact that a cell may also divide into two dissimilar halves, one with and another without one or more of the constituent parts of the original nucleus. In some cases among higher animals and in many unicellular organisms the cell-division may be apparently less complicated than in the usual 'indirect' method. The cell constricts in a dumb-bell-like fashion, and the nucleus likewise. In some unicellular organisms there is fragmentation of the unit. It is probable that the complicated methods of cell-division which are now the rule are the results of a long process of evolution, and that the fundamental characteristic is simply division. In any case there is no doubt that the power of spontaneous division is one of the most distinctive features of living units.

A consideration of effective activity led us to the idea of self-repair and the accumulation of reserves; this led us to the fact of growth; and this to multiplication, which takes place by division. It is characteristic of organisms to multiply, and, since what is separated off is in many cases a fragment, a group of cells, or a single cell, we are brought face to face with development—the power that a part has of growing and differentiating until it has literally reproduced the whole. Development is the expression of the latent possibilities of an imperfect organism in an appropriate environment. It is the making visible of the intrinsic manifoldness of some primordium—a bud, a fragment, a sample, or a germ-cell—and, as it appears to us, it should be thought of as a continuation (under special circumstances and with a special result, namely, a new individual) of the restitution and regrowth which goes on always to make good the body's wear and tear. Every gradation between the two may be illustrated by the phenomena of regeneration, which is exhibited when a lost part is replaced. It is a noteworthy fact that a starfish, which practises autotomy or self-mutilation in the spasms of capture and finds safety in its reflex device (for it often escapes and can regrow at leisure what it has lost), may also (e.g., *Linckia guildingii*) habitually multiply in this rather expensive fashion.

Bateson quotes Sir Michael Foster's definition: 'A living thing is a vortex of chemical and molecular change,' and points out that 'the living "vortex" differs from all others in the fact that it can divide and throw off other "vortices," through which again matter continually swirls. We may perhaps take the parallel a stage further. A simple vortex, like a smoke-ring, if projected in a suitable way will twist and form two rings. If each loop as it is formed could grow and then twist again to form more loops, we should have a model representing several of the essential features of living things' (*op. cit.* p. 40). It has to be added, as we have seen, that the living

'vortex' is the seat of complex and specific chemical changes which are correlated in such a way that the creature *lasts*. But more has to be added still.

(3) *Effective behaviour, registration of experience, and variability.*—The common idea in this grouping is self-expression. (a) Life is a kind of activity, reaching a climax in behaviour, *i.e.* in an organically determined, correlated series of acts which make towards a definite result. Behaviour concerns the organism as a whole, as in locomotion, or a considerable part of an organism, and differs from a reflex action in being a concatenation. It has different modes (tropisms, taxisms, instinctive behaviour, intelligent behaviour), but there is the common feature of correlation, of purposiveness (not necessarily purposefulness), and, usually, of individuality. When an amoeba appears to go on the hunt, follows another, catches it, loses it, re-captures it, we must say either 'behaviour' or 'magic.' We need not suppose that the amoeba knows what it is about, but it is very difficult not to say that its awareness is accompanied by some analogue of 'will.' In the case of instinctive behaviour there is often an extraordinary adherence to routine, and this may defeat itself, but in ninety-nine cases out of a hundred what is done is effective, and the individuality probably finds expression in ways that escape us. (b) The effectiveness which characterizes the behaviour of organisms (*i.e.* of those that show behaviour enough to be studied) seems to depend on profiting by experience in the individual lifetime, or on the results of successful ancestral experiments, or, usually, on both. It appears to us to be one of the insignia of life that the organism registers its experiments or the results of its experiences. We must here include under the term 'organism' the germ-cell, which is an organism implicit or *in potentia*, and may be said to make experiments in internal organization just as much as, in reality far more than, a protozoan which makes experiments in its skeletal architecture or in its behaviour. As W. K. Clifford said,

'It is the peculiarity of living things not merely that they change under the influence of surrounding circumstances, but that any change which takes place in them is not lost, but retained, and as it were built into the organism to serve as the foundation for future actions' (*Lectures and Essays*, London, 1879, i. 82).

As Bergson puts it,

'Its past, in its entirety, is prolonged into its present, and abides there, actual and acting' (*Creative Evolution*, p. 16).

As Jennings says, from the physiological point of view, in discussing the behaviour of the starfish,

'The precise way each part shall act under the influence of the stimulus must be determined by the past history of that part; by the stimuli that have acted upon it, by the reactions which it has given, by the results which these reactions have produced (as well as by the present relations of this part to other parts, and by the immediate effects of its present action). . . . We know as solidly as we know anything in physiology that the history of an organism does modify it and its actions—in ways not yet thoroughly understood, doubtless, yet none the less real' ('Behavior of the Starfish,' *University of California Publications in Zoology*, iv. [1907] 177).

(c) The organism's variability or power of producing some distinctively new character must, in the present state of science, be taken as 'given.' The only capacity like it that we know of is our own power of mental experiment—the secret of the artist, the musician, the thinker, or the inventor. It may be noted that 'modifications' wrought on the body by some peculiarity of nurture, environment, or habit are to be distinguished from germinal variations. They are important individually, but they are not known to affect the progeny in any representative fashion. We may also distinguish those negative variations which are due to the loss of an ancestral character, like horns or a tail, for there are various opportunities in the history of the germ-cells for the dropping out of an hereditary item. Similarly, in regard to

those variations which are plainly interpretable as new arrangements of previously expressed ancestral characters, there is no theoretical difficulty. What is baffling, however, is the origin of something definitely novel, especially when there is reason to believe that it originates brusquely. We can hardly do more at present than assume that the organism is essentially creative. Just as the intact organism, from amoeba to elephant, tries experiments, so the germ-cell, which is no ordinary cell but an implicit organism, a condensed individuality, may perhaps make experiments in self-expression, which we call variations or mutations. This completes our statement of the general characteristics of organisms.

2. *Death.*—It is convenient to distinguish, from a biological point of view, three different kinds of death. (1) There is *violent* death, when some external influence shatters, or dissolves, or benumbs the organization. A wound, a sudden change of temperature, or being swallowed by another organism may involve the irrecoverable cessation of bodily life. For many animals in open nature the end seems to be always violent. (2) There is *microbic* death, when some intruding micro-organism, establishing itself in the body, multiplies exceedingly and produces fatal effects. The intruders cause lesions, or destroy important elements, or produce fatal toxins, and so on. In wild nature there is little microbic death except when man effects disarrangements in distribution, so that organisms are exposed to the attack of new microbes. (3) There is *natural* death, which results from some breakdown in the correlation of vital processes. Hard-worked organs, such as the heart, may suffer from the imperfect recuperation of their wear and tear. The highly specialized cells of the nervous system tend to lose early in life their power of dividing and therefore of replacement; thus in higher animals there is not after birth any increase in the number of nerve-cells. In various ways there arises within the body an accumulation of physiological arrears which eventually implies physiological insolvency. Especially does the process of reproduction strain the resources of the organism.

In spite of criticisms, Weismann's doctrine of the immortality of the protozoa remains acceptable. Not that these unicellular organisms live any charmed life; they are continually being killed by accidents, vicissitudes, and enemies; some of them are occasionally consumed by microbes; but it seems to be the case that in their normal conditions (when waste-products do not accumulate in the surrounding medium and when there is opportunity for conjugation) many of them at least are not subject to natural death in the same degree as higher animals are. Some of them, indeed, may be exempt from natural death altogether. The reasons for this immunity are to be found in the relative simplicity of structure, for unicellular organisms can continuously and completely make good their wear and tear, and in the relatively simple modes of multiplication, which do not involve the nemesis so frequent in higher organisms. Though it is not improbable that very simple multicellular organisms, such as the freshwater hydra, may enjoy some measure of immunity from natural death, there is doubtless general truth in the epigram that, in the course of evolution, natural death was the price paid for a body. The relative immunity of unicellular organisms strongly suggests that natural death is not to be regarded simply as an intrinsic necessity—the fate of all life.

Life was described by Bichat as 'the sum of the functions which resist death,' but this is a one-sided emphasis. For, while it is characteristic of

organisms that they are continually at work in securing the persistence of their specific organization, it is equally characteristic that they spend themselves in securing the continuance of their kind. Instead of seeking to avoid death, to speak metaphorically, they often rather invite it, sacrificing themselves in producing and providing for the next generation. Their reproductive activities put an end to their self-preservation. Natural death is not to be thought of as like the running down of a clock. It is more than an individual physiological problem; it is adjusted in reference to the welfare of the species. As has been noted in art. AGE, there is good reason for regarding the occurrence of death at a particular time as adaptive. Constitutions which lose their correlation at the end of a year have been selected in certain conditions; constitutions which lose their correlation at the end of ten years have been selected in others. It is certain, as Weismann says, that 'worn-out individuals are not only valueless to the species, but they are even harmful' (*Essays upon Heredity*, etc. i. 24). As Goethe put it, 'Death is Nature's expert contrivance to get plenty of life' ('Aphorisms on Nature,' tr. Huxley, in *Nature*, i. [1869] 1).

3. **Organism and mechanism.**—The task of mechanics, as G. Kirchhoff said, is 'to describe completely and in the simplest manner the motions which take place in nature' (*Vorlesungen über mathematische Physik*, Leipzig, 1876, i. 1). A mechanical description is satisfactory as such when it enables us to formulate a process as a continuous series of necessarily concatenated mechanical operations like those of an automatic machine or of a volcano. We shall use the term 'mechanical' throughout as meaning a matter-and-motion description, and as equivalent to physico-chemical, for chemical and physical descriptions are (ideally at least) reducible to mechanical terms. The question before us is how far mechanical description can be usefully employed in the study of organisms. The question is twofold: (1) how far we can describe characteristically vital events in terms of those concepts and formulæ which certainly serve us well when we study the tides or eclipses, the fashioning of a dewdrop, or the making of a star; and (2) how far a mechanical description answers the distinctly biological questions as to the correlation of an organism's activities, its behaviour, its growth and reproduction, its development and evolution.

There is no doubt that chemical and physical laws apply to living creatures—to what has been called their inorganic aspect. Chemically regarded, living involves a complex of reactions in or associated with the material which we call 'protoplasm,' and some of these can be reproduced apart from the organism altogether. Some vital processes illustrate J. H. van't Hoff's rule of chemical reactions, for they increase in rapidity as the temperature increases. This may serve as an instance of the solidarity of the organism's chemical processes with those that occur in things in general, but it must be carefully noticed that we cannot assert that the movements of molecules in a living protoplasmic system are the same as those in an inorganic system. In his posthumously published *Prinzipien der Mechanik* (Leipzig, 1894) H. Hertz emphasized the need of caution.

'It is certainly a justified caution with which we confine the realm of mechanics expressly to inanimate nature and leave the question open how far its laws can be extended beyond. In truth, the matter stands thus, that we can neither maintain that the internal phenomena of animated beings obey the same laws nor that they follow other laws' (quoted by J. T. Merz, *History of European Thought*, iii. [Edinburgh and London, 1912] 684).

It is plain that many physical processes occur in the body which are comparable to those observ-

able in the inorganic domain—processes of diffusion, capillarity, surface-tension, and so on. And, just as the living body illustrates conservation of matter, so is it with the conservation of energy. One mode may change into another mode, but no energy ceases or is lost in the transformation. Careful experiments with a calorimeter show that it is possible to square accounts of the energy-income and energy-expenditure of an organism, the slight discrepancy that is sometimes observed being reasonably explained as due to the inevitable imperfections of instruments and observations. It should be noticed, however, that, according to some physicists, the second Law of Thermodynamics does not apply to living creatures. While no fact securely established in regard to organisms has been shown to be inconsistent with the generalizations of chemistry and physics, and while many results of importance, both theoretically and practically, have rewarded the application of chemico-physical methods to living creatures, we believe it to be quite inaccurate to say that mechanical concepts and formulæ suffice for more than a partial and abstract description of the life of organisms. We shall proceed to test this.

(a) *Everyday functions.*—As things stand at present, there is not forthcoming any physico-chemical description of any total vital operation, even of everyday functions such as the interchange of gases in the lungs, the passage of digested food from the alimentary canal into the blood-vessels, or the filtering processes that go on in the kidneys. The co-ordination involved in the discharge of a function and the correlation of one function with another are characteristic physiological facts which are not made clearer when the chemistry or physics of an artificially isolated corner is worked out.

Even in such a familiar occurrence as a response to a stimulus 'there is in reality no experimental evidence whatsoever that the process can be understood as one of physical and chemical causation. . . . In the case of physiological stimulus and response no real quantitative relation can be traced between the supposed physical or chemical cause, and its effect. When we attempt to trace a connection we are lost in an indefinite maze of complex conditions, out of which the response emerges' (J. S. Haldane, *Mechanism, Life, and Personality*, p. 34).

A very familiar fact is that the same stimulus applied to two apparently similar animals, or to the same animal at different times, evokes different answers. We can indeed give reasons for this, but the reasons are not mechanical reasons.

(b) *Behaviour.*—When we think of a collie dog controlling a flock of sheep according to instructions, or of a swallow returning from its winter in the South to the place of its birth, or of the spider spinning a typical web without experience or model, or of the larval freshwater mussels fastening themselves to minnows, or of the larval liver-fluke responding to the contact of the water-snail by which alone it can successfully continue its life, or of the amoeba capturing its prey, losing it, following it, re-capturing it, and so on, we are face to face with animal behaviour which transcends mechanical description. The behaviour is made up of a succession of acts which are correlated in a particular sequence. This is true even in instances where we know nothing of the associated mentality. It goes without saying that the behaviour implies chemical and physical events, but the bond of union eludes the chemist and physicist. There are elements of spontaneity, plasticity, adaptiveness, and purposiveness that are foreign to mechanical reasoning. We can make nothing of behaviour without new concepts, notably that of the organism as an historical being that trades with time.

(c) *Development.*—The condensation of the inheritance into microscopic germ-cells, the combination of two inheritances in fertilization, the subsequent division of the inheritance involved in the

segmentation of the ovum, the process of differentiation wherein from the apparently simple the obviously complex emerges, the embryo's power of righting itself when the building materials of its edifice are artificially disarranged, the way in which different parts are correlated and, as it were, conspire together towards some future result—these and many other facts lead towards a convincing impression that development far transcends mechanism.

In his *Science and Philosophy of the Organism* (1908), Driesch has with unexampled thoroughness and subtlety tested the possibilities of mechanical description with particular reference to the facts of development, and reached a conclusion of the first importance.

'No kind of causality based upon the constellations of single physical and chemical acts can account for organic individual development; this development is not to be explained by any hypothesis about configuration of physical and chemical agents. . . . Life, at least morphogenesis, is not a specialised arrangement of inorganic events; biology, therefore, is not applied physics and chemistry; life is something apart, and biology is an independent science' (i. 142).

But, if the description of development is beyond mechanics, what, it may be asked, is the rôle of the young and vigorous science of 'developmental mechanics' (*Entwicklungsmechanik*) so well represented by the work of Roux? It may be answered that the developing embryo, as a material system, does of course exhibit chemical and physical processes which may be analyzed apart and treated singly; that development shows a continuous action and reaction between an implicit organism and the environing conditions; and that developmental mechanics so-called is in great part concerned with discovering the correlation between steps in development and their appropriate external stimulation and nurture. But a further answer is this, that the term 'mechanical' or 'mechanistic' is often, unfortunately, applied to a systematic or connected description which displays a series of events in causal coherence without any intervention of mentality. Given certain properties of organisms in general and of nerve-cells in particular, we may give a more or less connected and complete account of a reflex action without implying any psychical agency. But this should not be called a mechanical or mechanistic description; it is simply what it pretends to be, a physiological or biological description, and it implies various non-mechanical concepts. Similarly, given the organism's power of registration and of persistently reproducing its specific organization, given the cell's mysterious power of dividing—of dividing now into similar and again into dissimilar halves—given the power of utilizing nurlural stimuli to educe the inherent manifoldness, and so on, we can begin to discover the connectedness of the successive stages in development. But this should not be called mechanical description.

(d) *Evolution*.—The adequacy of mechanical description may also be tested in reference to evolution. There is apt to be fallacy in speaking of organic evolution as a continuation of 'evolution' in the inorganic domain. For it is more accurate, probably, to speak of the development than of the evolution of the solar system, since it is the differentiation of one mass into explicit manifoldness. The originative nebula, if such it was, is comparable to a great world-egg which developed into several embryos, as eggs sometimes do, but there was no struggle between the various planets, or between them and their environmental limitations, no sifting process which eliminated some and left others surviving. There were no alternatives, no trial and error methods. There was nothing comparable to that staking of individual lives and losing of them which is so char-

acteristic of that sublime adventure which we call organic evolution. The theory of organic evolution starts with the mystery of variability, which is more like experimenting in self-expression than anything in the inorganic world, though it is not without its analogies even there. In natural selection the organism is often anything but a passive pawn. It does not simply submit to the apparently inevitable. It often evades its fate by a change of habit or of environment; it compromises, it experiments, it is full of device and endeavour. It not only adapts itself to its environment, it adapts its environment. The evolving organism is an historical being, a genuine agent which trades with its talents. Such mechanical description as is possible leaves the essential features undescribed.

4. *The uniqueness of life*.—The negative conclusion has been arrived at that mechanical or physico-chemical concepts do not suffice for answering biological questions. This is because organisms show a certain apartness or uniqueness, the various theories of which may be roughly designated vitalistic. Before considering these, however, we must refer, practically rather than philosophically, to three preliminary points. (a) It is maintained by some that mechanical formulation, legitimate and useful for certain purposes, apparently adequate for things as they are in certain cases, such as the tides, is not the ideal formulation even within the domain of the not-living. But, if it is not adequate there, it will be still less adequate within the realm of organisms. Practically, however, it may be answered that this is not a biologist's business. All will admit that mechanical formulæ work very usefully within the inorganic domain; but the biologist finds that they do not help him to answer his particular questions. He therefore seeks for formulæ of his own. (b) It is often pointed out that, although we cannot at present translate vital happenings, such as growth and division, into terms of any known mechanics, we may be able to do so in the course of time. It may be, for instance, that the concepts of chemistry and physics will undergo profound modification in centuries to come, and no one can say that they have not changed in the past. The practical answer to this question is that we can speak only of the chemistry and physics that we know. (c) It is held by some that it is consciousness, or mind, that gives organisms their apartness or uniqueness. But, without entering into a discussion of this, we may again give a practical answer, that the problem 'vitalism or mechanism' is the same for plants as for animals, and that we do not know anything about the mind or consciousness of plants.

There are three well-known positions in regard to the apartness of living creatures, which may be roughly described as the three grades of vitalism. (1) The first finds the differentia of organisms in the greater complexity in the configurations of elementary particles; protoplasmic metabolism is extremely intricate. New concepts are not required, but the activities of organisms cannot be predicted from a formulation of what occurs in the inorganic domain. Biology may be allowed a laboratory of its own, but it should be called biochemical. The main objection to this view is simply a matter of fact—that no headway has been made in giving mechanical answers to characteristically biological questions. (2) The second view is that there is a peculiar kind of physical energy operative in living creatures and nowhere else. Organisms have a monopoly of some power in the same series as, say, electricity. This theory is a lineal descendant of one form of the old theory of 'vital force,' but it has been brought up to date. It has been suggested that there may be a specific intra-organismal form of energy evolved by and

peculiar to the complex nature of the molecule of protoplasm or of protoplasts, which exhibits an unceasing alternation of unipolar and bipolar states, the latter resulting in cell-division.

'The attraction and repulsion observed between cell and cell are certain of the manifestations of this supposed form of energy—but probably not by any means all; just as attraction and repulsion are manifestations of electrical energy under certain conditions, but are not by any means the only manifestations. In nerve impulses we may, for instance, really be experiencing manifestations in another way of the same form of energy which under other conditions produces the attractions and repulsions and the figures of strain in the dividing cells, and the actual cell-division. . . . By this supposed form of energy, I do not mean a mysterious metaphysical influence, but a form of energy comparable to gravity, electricity, or magnetism—in some respects similar to these but in other respects differing from each, and a form which could be investigated by the ordinary methods of mensuration and computation available to the mathematician' (Asheton, *Archiv für Entwicklungsgemeinschaft*, xxix. 68f.).

(3) The third view is thoroughgoing vitalism, best represented by the work of Driesch. Its postulate is a non-perceptual vital agency or entelechy, which does not occur in not-living things, but is associated with organisms, where it operates in certain cases, directing the chemico-physical processes so that their results are different from what they would have been apart from its intervention. The postulated entelechy is not the outcome of more complex physical conditions, 'not a new elemental consequence of some constellation'; it intervenes only at certain steps, introducing an occasional indeterminism; it is supposed to be a genuine agent, counting for something, 'at work,' as Driesch says. On this view, there is a deep-lying distinction—a difference in principle—between the flight of a bird and the movement of a comet, and biology is by hypothesis autonomous. We cannot enter into a discussion of Driesch's ingenious and consistently-worked-out theory of entelechy, or of the three proofs which he gives of the autonomy of life. The first is based on a study of morphogenesis, i.e. of the way in which an organism realizes in development its specific form and structure; the second is based on a study of inheritance; the third is based on a study of the movements of organisms. That they show the impossibility of 'a machine-theory of life' will be admitted by many who are not disposed to postulate an organismal entity. According to Driesch, entelechy is 'an autonomous agent,' 'of a non-spatial nature,' without a seat or localization. It is immaterial and it is not energy; it is not inconsistent in its agency with the laws of energy; its function is to suspend and to set free, in a regulatory manner, pre-existing faculties of inorganic interaction.

'There is something in the organism's behaviour—in the widest sense of the word—which is opposed to an inorganic resolution of the same, and which shows that the living organism is more than a sum or an aggregate of its parts. . . . This something we call entelechy' (op. cit. ii. 338).

In illustration of the criticisms of Driesch's position, reference may be made to three points. (a) It is argued that, if entelechy is effective, it implies a breach in the fundamental law of the conservation of energy. But it is like begging the question to press this difficulty, and Poynting has suggested, in discussing the analogous case of the operation of our will, that a merely deflecting force does no work, though it changes configuration. The will may introduce a constraint which guides molecules to glide past one another instead of clashing—a slight change of spin which may be compensated for by a slight opposite spin put on the rest of the body.

'The will may act as a guiding power changing the direction of motion of the atoms and molecules in the brain, and we can imagine such a guiding power without having to modify our ideas of the constancy of matter or the constancy of motion, or even the constancy of energy' (H.J. i. 745).

The same may apply to the action of entelechy, and attention must be directed to the care that

Driesch has taken to state his doctrine so that it does not violate the principle of the conservation of energy. He supposes entelechy to suspend reactions which are possible 'with such compounds as are present, and which would happen without entelechy. And entelechy may regulate this suspending of reactions now in one direction and now in another, suspending and permitting possible becoming whenever required for its purposes' (op. cit. ii. 180). Entelechy stops a movement, and the energy of the latter becomes potential. Later on the movement may continue, the potential energy being reconverted into kinetic. Thus no violence is done to the principle.

(b) A recurrent argument in Driesch's exposition of his doctrine of vitalism is that no machine-like arrangement can possibly account for the facts of development, inheritance, or behaviour. A machine is defined as 'a given specific combination of specific chemical and physical agents,' and Driesch seeks to reduce to absurdity the theory that any machine could do what is required. His argument is very convincing, and of course we can argue only about machines that we know and imaginative combinations or improvements of these, but it seems open to the critic to reply that no one knows all possible machines, and to urge that proving the untenability of a machine-theory does not prove the necessity of postulating an entelechy. Concerning the ingenious machines invented by man, it may not be needless to remind ourselves that their introduction into the present argument is apt to be fallacious. For they, like the wonderful achievements of the synthetic chemists, are the fruits of intelligence, not fair samples of the inorganic world. An ingenious machine, like a type-writing or a calculating machine, is an elaborated tool, an extended hand, and has inside of it, so to speak, a human thought. It is because of these qualities that it is a little like an organism. Practically, however, most of those who have a near acquaintance with living creatures will agree with Driesch that their behaviour is not very like the working of machines. For certain purposes it is useful to think of the organism as an engine, but we must recognize that it is a self-stoking, self-repairing, self-preserving, self-adjusting, self-increasing, self-reproducing engine.

(c) Another objection is stated by J. S. Haldane: 'In order to "guide" effectually the excessively complex physical and chemical phenomena occurring in living material, and at many different parts of a complex organism, the vital principle would apparently require to possess a superhuman knowledge of these processes. Yet the vital principle is assumed to act unconsciously. The very nature of the vitalistic assumption is thus totally unintelligible' (op. cit. p. 28).

Similarly Jennings urges the difficulty of understanding how entelechy gets its power of co-ordinating and individualizing:

'To accept the Entelechy unanalysed and unexplained is merely to give up the problem as insoluble'; and, if we try to work out a development of enteleches, 'then surely we are merely transferring our problem from the complex that we actually find in time and space to a sort of manufactured copy of this problem, presenting the same difficulties, with the additional one that it is impalpable and cannot be directly dealt with at all. The entelechy simply adds to our difficulties' ('Behavior of the Starfish,' loc. cit. p. 180).

Jennings also points out that, according to Driesch, two living systems absolutely identical in every physico-chemical respect may behave differently under absolutely identical conditions, this depending upon whether, and how, the entelechy takes part in the process. This leads to a very serious admission of experimental indeterminism, which for some minds is enough to condemn the theory. It should be stated that Driesch has replied vigorously to the criticisms brought against his position, and that he never for a moment pretended that we could understand

'even in the slightest degree' how entelechy is able to discharge its function as regulator and guide.

Differing from Driesch's position, according to which entelechy is not identical with the psychical, is the animism so ably expounded by McDougall in his *Body and Mind* (1911). The panspsychism of Paulsen and the very distinctive position of Bergson should also be considered.

According to McDougall, 'not only conscious thinking, but also morphogenesis, heredity, and evolution are psycho-physical processes. All alike are conditioned and governed by psychical dispositions that have been built up in the course of the experience of the race' (p. 379).

5. Provisional conclusion.—Looking backwards, we cannot admit that the study of animal behaviour, for instance, is no more than the study of very subtle problems in chemistry and physics; we do not find evidence to justify the view that organisms exhibit a new kind of physical energy in a line with electricity and the like; and we do not share the opinion of many recognized authorities that the facts cannot be met except by a theory of entelechy. What then is our position? It is that of 'descriptive' or 'methodological' vitalism.

Making no pronouncement whatsoever in regard to the essence of the difference between organisms and things in general, we hold to what we believe to be a fact, that mechanical formulæ do not begin to answer the distinctively biological questions. Bio-chemistry and bio-physics added together do not give us one biological answer. We need new concepts, such as that of the organism as an historic being, a genuine agent, a concrete individuality, which has traded with time and has enregistered within itself past experiences and experiments, and which has its conative bow ever bent towards the future. We need new concepts because there are new facts to describe, which we cannot analyze away into simpler processes. In the present state of knowledge we cannot tell in what the newness or apartness essentially consists, and this appears to us to be a quite legitimate, though provisional, stopping-place, without pressing on to any positive vitalistic theory, which must be, from the nature of the case, metaphysical.

If we go beyond science in the endeavour to form some connected reconstruction, we should say that those constellations of 'matter' and 'energy' called organisms afford opportunity for the expression of aspects of reality which are not patent in the inorganic domain. We must not think of 'matter' and 'energy' as the exclusive stones and mortar of the ever-growing cosmic edifice; they are abstract concepts, defined by certain methods, which serve well in the description of the physical universe. They certainly represent reality, for we safely make prophecies and risk our lives on the strength of this. But it is quite another thing to say that they are exhaustive. An aspect of reality which may safely be neglected in astronomy and navigation, in chemistry and engineering, becomes patent in the realm of organisms, and we call it 'life.' It is neither a product of 'matter' and 'energy' nor an outcome of the increasing complexity of constellations; it is an expression of the reality of which atoms and their movements are also but conceptual aspects. It may be regarded as that aspect of reality which is clearly manifested only in protoplasmic systems—and in normal conditions in all of them. May it not be that the qualities which render the postulation of entelechy or vital impetus necessary to some minds have been in kind present throughout the history of the Nature that we know? We say 'in kind,' since it is plain that we share in a movement which is not the unrolling of something originally given, but a creative evolution in which

time counts. Instead of supposing the intervention of a non-material agency which controls chemical and physical processes in organisms, we suppose that a new aspect of reality is revealed in organisms—that capacity for correlation, persistence, and individuality, for growing, multiplying, and developing, for behaviour, experience, and experiment, which we call 'life,' which can nowise be explained in terms of anything simpler than itself.

To the biologist the actualities are organisms and their doings, and life is a generalized concept denoting their peculiar quality. What life in essence or principle is he does not know. Taking life in the abstract, therefore, as 'given,' we have had to be content in this article with stating the general characteristics of living creatures. It is plain, however, that analytical and formal discussion falls far short of giving any adequate idea of life in its concrete fullness. For that requires a synthesis, and that, again, is impossible without sympathy. We must use our everyday experience of livingness in ourselves and in other organisms, not for knowledge alone, but as a source of sympathy wherewith to enliven the larger data of biology; and we need not be afraid of exaggerating the wonder of life. Sympathetically and imaginatively, therefore, as well as with precision, we must seek to envisage the variety of life—hundreds of thousands of distinct individualities or species; the abundance of life—like a river always tending to overflow its banks; the diffusion of life—exploring and exploiting every corner of land and sea; the insurgence of life—self-assertive, persistent, defiant, continually achieving the apparently impossible; the cyclical development of life—ever passing from birth, through love, to death; the intricacy of life—every cell a microcosm; the subtlety of life—every drop of blood an index of idiosyncrasies; the inter-relatedness of life—with myriad threads woven into a patterned web; the drama of life—plot within plot, age after age, with every conceivable illustration of the twin motives of hunger and love; the flux of life—even under our short-lived eyes; the progress of life—slowly creeping upwards through unthinkable time, expressing itself in ever nobler forms; the beauty of life—every finished organism an artistic harmony; the morality of life—spending itself to the death for other than individual ends; the mentality of life—sometimes quietly dreaming, sometimes sleep-walking, sometimes wide awake; and the victory of life—subduing material things to its will and in its highest reaches controlling itself towards an increasing purpose.

J. ARTHUR THOMSON.

LIFE AND DEATH (Primitive).—In primitive thought, so far as we can analyze it, life and death are not the balanced opposites which civilized contemplation has made them. To early man life is the normal condition, death an abnormal catastrophe, unnatural, miraculous, and terrible. An exception is to be made when a man kills his quarry or his foe; here the satisfaction of an end achieved inhibits the feelings aroused by the non-violent death of a tribesman. According to Australian philosophy, men would live on indefinitely, except for the result of actual physical violence or of sorcery, a refined form of it.¹ This is the usual view of the savage, though it is hardly a reasoned opinion. The savage, like the majority of civilized men, lives in the present; this fact involves a certain inertia of thought as to the contrast between life and death, and it is true of both stages of culture that 'the fear of death is as nothing.'² The primitive mind, when it exercised itself on the subject of life, was concerned with the acquisition of physical strength and moral influence rather than with the problem of the nature of vitality; but the constant rage and terror which characterized its attitude towards death involved a permanent concern with the supposed causes of an event which, though inevitable, remained a mystery and a violation of natural law.

1. **The nature of life.**—The distinction between life and soul is in some cases confused, and in others not drawn. Again, the latter concept includes several ideas. We have, however, to deal with a 'life-principle' whenever there is a clear connexion between a concept and facts of life. For the earliest stage of thought the chief datum is the difference observed between the dead body and the living and moving body. It is inferred that something has departed from the body when dead; the something is a concrete object or substance, ideated vaguely at first, later with some precision, as a special entity, or identified with one or other part of the living organism.

Certain Australians speak of 'something,' a *yowee*, not described, which never leaves the body of the living man; it grows as he grows, and decays as he decays.³ This illustrates well the primary stage. Put in another form, the inference is that the 'soul' does not finally leave the body until decomposition is well advanced.⁴ Such cases indicate that the inference of life from observed movement is not in itself primary. Many peoples regard inanimate objects as 'alive,' but the meaning of this is clearly shown by the Tongan and West African notion that these objects 'die' when they are broken or destroyed.⁵ The view

that so vaguely ideated a content is concrete is supported by the fact that any haphazard identification serves as 'life'; examples will be found below. But the primal concept is, as the first Australian instance shows, very near to a result in which a man's 'life' is himself in replica.

This perhaps is to be regarded as the second stage of analysis. The Hervey Islanders considered that fat men had fat souls, thin men thin souls.¹ According to the Karo Battak of Sumatra, a man's *tendi* disappears at death. It is a 'copy' of the owner, his 'other self.'² According to the Karens, that which 'personates the varied phenomena of life' is the *kelah* or *lā*, which 'is not the soul,' but 'is distinct from the body and its absence from the body is death.' It is also the individuality of the animated being.³ 'It merely gives life,' and 'cannot be distinguished from the person himself.'⁴ The Iroquois conceived of 'an exceedingly subtle and refined image, . . . possessing the form of the body, with a head, teeth, arms, legs,' etc.⁵

The next stage is characteristic of Papuan and Malayan belief.

The Dayak idea of life is this, that in mankind there is a living principle called *semangat* or *semungu*; that sickness is caused by the temporary absence and death by the total departure of this principle from the body.⁶

But this 'principle' is a replica of the individual, and a miniature replica. This is the *tanoana*, or 'little man,' of the Torajas of Celebes.⁷ The *semangat* of the wild Malayan tribes is a 'shape,' exactly like the man himself, but no bigger than a grain of maize.⁸ The *semangat* of the Malays is a 'thumbling,' and corresponds exactly in shape, proportion, and complexion to its embodiment or casing (*sarong*), i.e. the body. It is the cause of life; it is itself an individual person, as it were, and is separable from the body in sleep, sickness, and death.⁹ A similar conception is found in S. Africa,¹⁰ America,¹¹ and other localities sporadically, but is general enough to be regarded as typical.

The problem of its origin is not clear. J. G. Frazer thus describes the conception:

'As the savage commonly explains the processes of inanimate nature by supposing that they are produced by living beings working in or behind the phenomena, so he explains the phenomena of life itself. If an animal lives and moves, it can only be, he thinks, because there is a little animal inside which moves it: if a man lives and moves, it can only be because he has a little man or animal inside who moves him.'¹²

The argument agrees with the fact that the miniature replica is usually supposed to be the cause of life, but it is difficult to understand how the idea of an inner being, whether in inanimate things or in living men, could have arisen in the first instance. Only the contrast between the dead and the living body seems adequate to produce it; later, the idea could be applied to all natural objects. As for the miniature size of the replica, this is probably a refinement of an earlier conception, in which such qualities were distinguished, and it would be naturally deduced from the fact that the man's body is still present, without any reduction; that which has departed, therefore, must be infinitesimally small. The same result is

necessitated by the idea that the life must take its departure by some one of the orifices of the body, and it is possible also that certain characteristics of the memory-image may have exercised an influence.¹

In these early stages the life-principle is, though 'refined,' always material; the conception of insubstantiality is quite a late achievement of thought.² But certain natural confusions occur. Thus, the *sēmagat* of the wild Malays differs from the conception held by other races in the same regions, for that which gives life is the *jinu*. The Pataui Malays also believe in a 'life breath,' *nyawa*; the *sēmagat*, in their view, is not the vital principle, but is possessed by every object in the universe.³

In his study of the animism of the Moluccas and neighbouring districts, A. C. Kruijt finds a permanent distinction between the soul of a living man and the soul of a dead man. The former he considers to be impersonal, though in many cases it is certainly itself a person, and always is a miniature replica of the owner; it gives him life. Its material is fine, ethereal substance; it has various seats in the body where its action is most conspicuous, such as the pulses. It dies when the man dies. The other soul is a continuation of the individual after life and does not appear till death. In the latter conception we seem to have a combined result of the memory-image and the hallucinational ghost.

A later detail, which involves the idea that all things in nature either are animate or possess 'souls,' is also attached to the theory of the *sēmagat*, though it is chiefly things concerning or interesting man that possess the miniature replica.⁴

The *sēmagat* of the Eastern Semang is red like blood, or is in the blood.⁵ Life is usually regarded as being closely connected with the blood—a natural inference from observation of wounds or of death by loss of blood. Life and blood are identified.⁶ A vaguer identification is frequently found with various parts or states of the living organism. To some, as the Iroquois, life is the flesh⁷—a concept which probably originated from experience of nutrition. The heart is a seat of life; in some cases it, like blood, has a 'soul' of its own.⁸ The Australians regard the kidney-fat as an important seat of life,⁹ and the caul-fat and omentum are so regarded.¹⁰

The absence of breath in the case of the dead is a fact naturally assisting a belief that the breath is the life, or that the life is in the breath. In the Marquesas it was the custom to hold the nose and lips of dying persons, in order to prevent death.¹¹ In primitive thought there is no explicit inconsistency in the identification of life with various things; the early books of the OT hold, now the breath,¹² now the blood, to be the 'life.' Primitive biology, in its secondary stages, has a larger list.¹³

In this is to be included the shadow of a man, which is (like everything connected with personality) 'a vital part,'¹⁴ and a man's reflexion is also closely akin to, if not identified with, his life.

In Melanesia is a pool 'into which if any one looks he dies; the malignant spirit takes hold upon his life by means of his reflection on the water.'¹⁵

The lore of shadow, mirror-image, and portrait becomes prominent, however, only in the third stage of culture—that of the higher barbarism. The Chinese place the dying man's picture upon his body, in the hope of saving his life.¹⁶ In Siam,

'when a copy of the face of a person is made and taken away from him, a portion of his life goes with the picture.'¹ The comparison of the life-essence with fire is the best known of many metaphorical analogies, and occupies a prominent place in myth—e.g., the fire of life infused by Prometheus into the clay figures which became men—and in metaphysical theology.

Until modern times, speculation has concerned itself with the source of life rather than with its origin. In early mythology conceptions like that of the Hervey Islanders, who regard a 'point'² as the beginning of existence, are rare. Rare also are such pseudo-biological ideas as the Maori concept that the life of a man is contained in the catamenia,³ but the usual conclusion is that the 'soul' is the source of life or is itself life.

2. The life of nature.—Life in the vegetable kingdom has probably always been recognized, and primitive thought doubtless distinguished it as being different in character from that of animals. The same may have been the case with its attitude to inanimate things, unless it merely 'personalized' them.

The view of Tylor, that in primitive animism there is 'a belief in the animation of all nature,' and that 'man recognizes in every detail of his world the operation of personal life and will,'⁴ can be applied only to certain developments of the higher barbaric stage.

'It is not likely that at one stage man regarded everything as alive, and at a later stage gradually discriminated between animate and inanimate. The fact is, that he began by regarding everything as neutral, merely as given. Yet though he never thought about the matter at all, in his acts . . . he distinguished as well as we do between animate and inanimate.'⁵ 'Whatever power and importance he [primitive man] may have ascribed to inanimate objects, he drew the strongest of lines between such objects and what was endowed with life.'⁶

An excellent observer remarks of the Kafirs of S. Africa, in regard to the question whether they 'imagine everything in nature to be alive,' that they very rarely think of the matter at all. When questioned on the subject of the animation of stones, they laughed, and said, 'It would never enter a Kafir's head to think stones felt in that sort of way.'⁷

Throughout the fluid and ill-defined psychology of primitive man we may distinguish a tendency to mark off the concept of things as living from the concept of them as ideas, whether in life or after death. The latter aspect is ideational, the former perceptual. An excellent illustration of the distinction is the Indonesian view, expounded by Kruijt, that the life-soul of creatures is never confused or compounded with the after-death soul. In later psychologies, on the other hand, Tylor's hypothesis, that eventually the 'life' of a thing and its 'phantom' are combined, holds good. Language has probably had much to do with the combination. The view of Kruijt, however, that the Indonesian 'life-soul' is but a part of the world-soul, applies only to the higher developments of animism.⁸ Here we have a parallel with the pantheistic theories of the world.

3. Regard for life.—Another parallel with these is the regard for life generally, a regard which develops with culture but is more pronounced in Oriental than in Western morality. At first this feeling is a vague altruism, but later it is fused

with metaphysical estimates of the intrinsic value of life, as such.

In Buddhism, Jainism, and Taoism the respect for animal life is extreme.¹ A disciple of Buddha may not knowingly deprive any creature of life, not even a worm or an ant. He may not drink water in which animal life of any kind whatever is contained, and must not even pour it out on grass or clay.² The Jain is stricter still in his regard for animal life. He sweeps the ground before him as he goes, lest animate things be destroyed; he walks veiled, lest he inhale a living organism; he considers that the evening and night are not times for eating, since one might then swallow a live thing by mistake; and he rejects not only meat but even honey, together with various fruits that are supposed to contain worms, not because of his distaste for worms, but because of his regard for life.³ Throughout Japan, the life of animals has always been held more or less sacred.⁴ In China it is regarded as 'meritorious to save animals from death—even insects if the number amounts to a hundred. . . . to set at liberty animals intended to be slaughtered. . . . To kill ten insects . . . without great reason to kill . . . animals for food . . . to be foremost to encourage the slaughter of animals' are regarded as errors 'of the same magnitude as the crime of devising a person's death or of drowning or murdering a child.'⁵ The Burmese laugh at the suggestion made by Europeans, that Buddhists abstain from taking life because they believe in the transmigration of souls, having never heard of it before.⁶ The same position may be assumed with regard to the Brahman doctrine of *ahimsa*, which includes the sanctity of all life. On the other hand, 'no creed in Christendom teaches kindness to animals as a dogma of religion.' The Manchians prohibited all killing of animals, but Manichæism did not originate on Christian ground.⁷

4. The life deposit.—A remarkable belief is that of the 'life-index' or 'external soul,' which is found with some regularity in all the stages of the lower civilizations. An early example is the sex totems of Australia.

The Wotjobaluk tribe of South-Eastern Australia 'held that "the life of Ngüngrünit (the Bat) is the life of a man and the life of Yartatgurrk (the Nightjar) is the life of a woman," and that when either of these creatures is killed the life of some man or of some woman is shortened. In such a case every man or every woman in the camp feared that he or she might be the victim, and from this cause great fights arose in this tribe.'⁸

In later folk-lore the idea is crystallized into the talisman, but previously a host of objects are regarded as eligible for the safe-deposit of the individual life. It is noteworthy that the subject is more frequent in mythology than in practical life. The fact that, according to the common-sense view, the more 'deposits' of life a man has, the more is he liable to death, may explain this natural difference. A remarkable aspect of the belief is connected with the growth of children and the growth of plants. The inception of this idea can hardly be attributed to any other influence than the observation of the facts of growth. It is therefore probably not originated by the notion of life.

But the sympathetic relation soon develops into a life-interest.

In folk-tales the life of a person is sometimes so bound up with the life of a plant that the withering of the plant will immediately follow or be followed by the death of the person.⁹ Among the M'Bengas in Western Africa, about the Gaboon, when two children are born on the same day, the people plant two trees of the same kind and dance round them. The life of each of the children is believed to be bound up with the life of one of the trees: and if the tree dies or is thrown down, they are sure that the child will soon die. In Sierra Leone also it is customary at the birth of a child to plant a shoot of a *malep-tree*, and they think that the tree will grow with the child and be its god. If a tree which has been thus planted withers away, the people consult a sorcerer on the subject. . . . Some of the Papuans unite the life of a new-born child sympathetically with that of a tree by driving a pebble into the bark of the tree. This is supposed to give them complete mastery over the child's life; if the tree is cut down, the child will die. . . . In Bali a coco-palm is planted at the birth of a child. It is believed to grow up equally with the child, and is called its "life-plant."¹⁰

¹⁰ *Ib.* ii. 160-164.

Similar customs are still frequent in Europe, and 'life-trees,' as Frazer styles them, have always been a prominent feature of European folk-lore. The life of Simeon, prince of Bulgaria, was bound up with a certain column in Constantinople, so that if the capital of the column were removed, Simeon would immediately die. The emperor took the hint and removed the capital, and at the same hour . . . Simeon died of heart-disease in Bulgaria.¹¹

The conclusion of these ideas supplies a constant motive in fairy-tales and the mythology which is their basis.

Thus, 'Koshchei the Deathless is killed by a blow from the egg or the stone in which his life or death is secreted; . . . the magician dies when the stone in which his life or death is contained is put under his pillow; and the Tartar hero is warned that he may be killed by the golden arrow or golden sword in which his soul has been stowed away.'¹² A remarkable instance occurs in the myth of the god Balder. His life was bound up in the mistletoe. The apparent inconsistency that he was slain by a blow from the plant is explained by Frazer: 'When a person's life is conceived as embodied in a particular object, with the existence of which his own existence is inseparably bound up, and the destruction of which involves his own, the object in question may be regarded and spoken of indifferently as his life or his death. . . . Hence if a man's death is in an object, it is perfectly natural that he should be killed by a blow from it.'¹³

The idea that the mistletoe itself is the life of the tree on which it grows is of the same order as the Malay and Chinese idea with regard to the knobs and excrescences on tree trunks.¹⁴ Two converse ideas may be noted. A person whose life is magically isolated has one weak spot, e.g. the heel of Achilles. Death, no less than life, may be 'deposited,' as in the stories where it is kept in a bottle. See, further, art. LIFE-TOKEN.

5. Life magic.—When the conception of life as a magical essence is established, the formula is applied all round the social and religious spheres. The elementary facts of nutrition thus become the basis of an elaborate vitalistic philosophy. In its more primitive forms this appears as a practical science of life insurance. 'Food . . . during thousands of years occupied the largest space in man's mental area of vision.'¹⁵ This consideration helps to explain the existence of so large a body of superstitions concerning food. And into these enter the magical and, later, the vitalistic theory. Particular creatures are eaten because of their particular vital force.¹⁶ The slayer eats part of his foe in order to assimilate his life and strength (see, further, art. CANNIBALISM, §§ 3-7). In order to procure longevity the Zulus ate the flesh of long-lived animals.¹⁷ Medea injected into the veins of Æson an infusion of the long-lived deer and crow.¹⁸ In the lower culture special virtue is assigned to human flesh.¹⁹ Besides the eating of flesh and the drinking of blood, there are various methods of acquiring the 'life essence.' The Caribs transfer the life of an animal to a boy by rubbing its juices into his body.²⁰ Anointing with *amrita* oil and with gold-grease are methods of procuring life found in Indian and Chinese folk-lore respectively.²¹ The Tibetan Buddhist acquires 'life' by drinking the 'ambrosia' from the 'Vase of Life'²² (see, further, art. FOOD AND EATING THE GOD).

Long life is often the subject of charms. The Chinese wear a longevity garment on birthdays.²³ The Hindus ascribed long life to continence.²⁴ Most religions include prayers for long life. After

a death, magic is employed to prolong the life of the survivors.¹

Magical persons, and later the gods, are regarded as both possessing a richer store of life and being able to impart it to others; the savage medicine-man is able to infuse life into an inanimate fetish. Breathing upon the object gives it the breath of life (as in Ezekiel's apologue of the dead bones); smearing it with blood gives it the life of the blood.² According to the Tantras, a king may slay his enemy by infusing life into his foe's effigy and then destroying it.³ Divine persons naturally tend to become long-lived or immortal.

But, though divine persons throughout bear a more or less 'charmed life,' absolute immortality is a late conception. The gods of the Homeric pantheon maintained their life by eating ambrosia, the 'food of deathlessness,' and by drinking nectar;⁴ and similar ideas were connected with the Persian *haoma* and the Hindu *soma*. In Scandinavian myth the apples of Iðunn are eaten by the gods in order to perpetuate their life.⁵ The Egyptian gods were mortal.⁶ The tendency to immortality, however, is carried out in the higher religions, probably in connexion with the natural attribution to the gods of a general power over life and a control of creation. In the end the gods assume in themselves the ultimate hopes and fears of men, and they become 'lords and givers of life.'

6. **Renewal of life.**—A crude form of the ideas connected with a renewed earthly life after death, or resurrection, may be seen among the Australian aborigines, who speak of the ghost returning at times to the grave and contemplating its mortal remains.⁷ Similarly, on the W. Coast of Africa 'it is the man himself in a shadowy or ghostly form that continues his existence after death.'⁸ The belief in the revivification of a dead person does not appear until the thaumaturgic stages of barbarous religion, when it becomes a favourite miracle, performed by a word of power or by the life-giving touch or contact with the body of the divine person. But the belief in a second life, or, rather, a series of lives, is a remarkable and regular feature of primitive thought. It takes the form of reincarnation; the dead are born again in their descendants, the idea being a natural inference from the resemblance of children to their parents and grandparents.⁹ The Central Australians have developed it into an elaborate theory of heredity, in which the 'life' is a germ-plasm.¹⁰ Other Australians evolved the notion that white men were blackfellows returned to life; 'tumble down blackfellow, jump up whitefellow' is a familiar phrase. The whiteness of the native corpse after cremation has been suggested as the basis of the notion.¹¹

The idea of reincarnation refers also to living parents. Thus an old blackfellow of Australia cries to his son, 'There you stand with my body!' The son is recognized as 'the actual re-incarnation of the father.'¹² This frequent belief has been sug-

gested as an explanation of certain customs of which killing the first-born is a culmination—the child is supposed to have robbed the father of a portion of his life (cf. *ERE* vi. 33^a).

7. **The nature of death.**—Primitive thought has no definition of the nature of death, but the usual attitude towards it, as may be inferred from mourning customs, is a mystic terror. The catastrophic nature of the event is perhaps the fundamental reason for this attitude, but various emotions and ideas are superimposed. Grief and sympathy occur among the lowest races, and they develop with culture. Another emotion is fear of the corpse as a mysterious personality; a parallel fear is that of the departed 'something,' ghost or spirit. Like other tabu states and social crises, death has not only its *rites de passage*, such as mourning, but a mysterious power of pollution. This is partly connected with a fear that the survivors may also become victims, a fear which develops into an avoidance of infection.¹ These ideas reach their climax in the Zoroastrian conception of the absolute impurity of death, a type of all uncleanness.² In others of the higher religions, particularly Christianity, the material notions of the state of death give way to spiritual. The departed soul has less connexion with the body, although even here a physiological fact has kept up the idea of 'the odour of sanctity.'

Fear of dying has no connexion with the primitive fear of death.³ Suicide for trivial reasons is very common among the lower races.

Many savages meet death with much indifference, or regard it as no great evil, but merely as a change to a life very similar to this. But it is a fact often noticed among ourselves, that a person on the verge of death may resign himself to his fate with the greatest calmness, although he has been afraid to die throughout his life. Moreover, the fear of death may be disguised by thoughtlessness, checked by excitement, or mitigated by dying in company. There are peoples who are conspicuous for their bravery, and yet have a great dread of death. Nobody is entirely free from this feeling, though it varies greatly in strength among different races and in different individuals. In many savages it is so strongly developed that they cannot bear to hear death mentioned.⁴ The last objection, however, may often be due to mystical notions.

Christianity esteems death as the passage to a better life, and the higher religions, generally, mitigate the inevitable lot.

Speculation on the origin of death is considerable in early thought, and myths innumerable have been invented to explain it (cf. art. **DEATH AND DISPOSAL OF THE DEAD** [Introductory], vol. iv. p. 411 f.). A common motive of these is a misunderstanding or a trick. At a higher stage death is attributed to the malevolence of demons, often supposed to eat the life of men and so produce death.⁵ Otherwise, the separation of the life-giving soul from the body as a fact, not as a theory of origin, is usually explained as the result of sorcery, except in cases of obvious violence or accident.⁶ By various means the human sorcerer, like the supernatural demon, destroys or abstracts the life.

In the higher barbarism death appears as a punishment for breaking tabu or other supernatural injunctions. The greater religions connect its origin with sin, Christianity with the primal sin of disobedience.⁷ Throughout, humanity is instinctively agreed that death is unnatural, and the conception of a second life is a protest against it.

8. **Mythological and ethical applications.**—Apart from myths in explanation of the origin of death and the less frequent fancies of a mystical or magical life-source, primitive thought makes little use of the concepts of life and death as motives of

story. Their deification is rarer still. In some stories one or more remarkable personages are brought into close connexion with the facts of life and death. Thus, the Maoris tell how men would have been deathless if Maui, the culture-hero, had succeeded in passing through the body of Night. In Scandinavian story Líf and Lífprásir ('life' and 'desiring life') survive the destruction of the world.¹ The usual result is that some great deity possesses control over life, as in Hebraism, Christianity, and Islām. There is a tendency also to connect vitality with the sun-god; the Rígvēda speaks of the sun in the character of Savitar, the Vivifier.² In Hindu theology Yama, the first of mortal men, became 'King of the Dead.'³ In Christian theology a contrast is drawn between the old Adam, by whom death entered the world, and the new, who re-introduced 'life' on a higher plane. A less refined moral is drawn in the Babylonian epic; the conclusion is that Gilgamesh must die and cannot escape the universal lot.

'Let him hope for and, if possible, provide for proper burial. . . . He will then, at least, not suffer the pangs of hunger in the world of spirits.'⁴

The Scandinavian figures, Líf and Lífprásir, are among the rare cases where life is personified. Death is more frequently deified. Old Slavic myth seems to have had a goddess Smrt,⁵ and the Baganda are said to have a god of death, Walumbe.⁶ The Etruscan figure of Charon may be similar to the last, the conception being derived from human executioners, and the god being a slayer rather than a god of death. The Thanatos of Greek poetry, the brother of Sleep, is hardly a religious personification. The Sheol of the OT and the Hel of the Eddas are originally places which receive the dead. As a rule, the figure later described as Death is either a messenger of the gods or a god whose office is indirectly connected with the death of men. So Yama has his messengers, and the Tatars believe in an 'angel' of death. The latter is the type of Christian ideas. The Greeks had both Charon and Hermes Psychopompos, but in modern Greek folk-lore Charon has become a figure of terror, Death himself.⁷ Death with his scythe seems to be a transference from a personification of Time.

A certain control over life is assumed in primitive ritual drama, as in the pretended death and revivification of youths at initiation, and of candidates for the priesthood.⁸ Ideas of a magical vitality grew up out of sacred meals; at the same time there appears the connexion of sin and death, and the consequent aspiration towards a purging of sin accompanied by a renewal of life. Out of these elements arises the ethical view of the renewal, but still undivorced from a mystical idea of a spiritual prolongation of existence. 'Salvation' in the life after death was promised by the Greek mysteries.⁹ In its lowest terms the salvation resulting from belief in Christ was eternal life. Faith and morality meet when eternal life is the reward for a good life on earth. Life is identified with goodness.

The fear of retribution in a future existence has been impressed by several of the great religions,

notably by Christianity. But there is no justification for connecting the origins of religion with either this fear (long posterior to the inception of religious ideas, and a late and special ethical development) or the worship of death or the dead. The dead are more or less feared in early thought; the infection of death is carefully avoided; the ghosts of the dead are intensely dreaded, and therefore carefully propitiated. Many ghosts, it is true, have been developed into gods, but there are many keys which fit the doors of religion.

LITERATURE.—This is cited in the article, but the whole of E. B. Tylor's exposition of animism in his *Primitive Culture*,⁸ London, 1891, applies to the subject.

LIFE AND DEATH (American).—The beliefs of the aborigines of America agree in the main with those of other peoples at the same stages of development; but there are a few interesting features of an individual character.

With regard to ideas of the life which informs the organism, the Eskimos identify it or its action with the 'life-warmth.'¹ So the Navahos regarded the warmth of the body as the living soul; the 'shade' or 'double,' a distinct concept, was supposed to wander away when a man was sick or dying.² The Sauk identified the soul with 'vitality,' and supposed it to exist after death.³ The Toltec explained that it was 'something within them which made them live: . . . which caused death when it quitted them.'⁴ Identifying breath or air with the vital principle, the Acaghemems are represented as crediting the atmosphere with a mortiferous quality.⁵

'In many American languages the Great Spirit and the Great Wind are one and the same both in word and signification.'⁶

The Aztec word *ehcatl*, e.g., means 'wind, air, life, soul, shadow.' A phrase attributed to an Indian orator is: 'The fire in your huts and the life in your bodies are one and the same thing.' Spirits and human magicians, such as the shamans, devour men's souls; the result is death.⁷ Death is 'infectious'; a dead man's belongings decay quickly. Such is the ancient opinion among the Irish also, who hold that a dead man's clothes wear out more quickly than those of a living man.⁸ The belief in the reincarnation of the dead in children is widely spread and firmly held. The Haida refine upon it by saying that after five such reincarnations the individual 'soul' is annihilated.⁹

A special feature of American religious theory, on which practically the whole ritual of the central nations was founded, was developed from the usual primitive idea that divine persons are subject to senility, death, and decay. Alone among the Mexican gods Tezcatlipoca 'is credited with perpetual juvenility.'¹⁰ The principle was developed that the gods, in particular the sun, would die if deprived of food. Hence the perpetual round of human sacrifices offered on Maya and Nahua altars. This daily 'feast of flowers,' as it was euphemistically termed, kept the gods alive. A serious result was the equally perpetual carrying on of warfare for the sole purpose of obtaining captives to serve as victims. The heart, as the symbol of life, was the choicest portion.¹¹

¹¹ *Id.* i. 523; cf. L. Spence, *The Myths of Mexico and Peru*, London, 1913, pp. 74, 98.

It is natural that an old chronicler should say: 'The Maya have an immoderate fear of death, and they seem to have given it a figure peculiarly repulsive.'¹ In the Dresden and other codices god A is represented as a figure with exposed vertebrae and skull-like countenance, with the marks of corruption on his body, and displaying every sign of mortality. On his head he wears a snail-symbol, the Aztec sign of birth, perhaps to typify the connection between birth and death. He also wears a pair of cross-bones. The hieroglyph which accompanies his figure represents a corpse's head with closed eyes, a skull, and a sacrificial knife. His symbol is that for the calendar day Umi, which means death. He presides over the west, the home of the dead, the region towards which they invariably depart with the setting sun. That he is a death-god there can be no doubt, but of his name we are ignorant. He is probably identical with the Aztec god of death and hell, Mictlan, and is perhaps one of those Lords of Death and Hell who invite the heroes to the celebrated game of ball in the *Kiche Popol Vuh*, and hold them prisoners in their gloomy realm.²

Like Hel and Hades, Mictlan seems to have developed from a place into a person. He is a 'grisly monster with capacious mouth,' like the mediæval European identification of the whale and hell. Mediæval Europe evolved also, but by poetical rather than religious imagination, a figure akin to that of the American god A. For similar reasons the Sinaloa are said to have devoted most of their worship to Cocahuame, who is Death.³

Another detail of the human sacrifice is this:

'The idea that the god thus slain in the person of his representative comes to life again immediately, was graphically represented in the Mexican ritual by skinning the slain man-god and clothing in his skin a living man, who thus became the new representative of the godhead.'⁴

This principle, probable enough, is, however, a secondary development; the revivification of the god was the primary meaning of the sacrifice.

In Mexican theology the supreme deity Tloque-Nahuque (of Molina) is 'he upon whom depends the existence of all things.' As is the case elsewhere, the sun is connected with vitality, 'animating and keeping alive all creatures.' An interesting point is the connexion of Mexican food-goddesses with the idea of life and its bestowal.⁵

The aboriginal creation of a Great Spirit has been discredited. Equally unreliable are such forms as the Master of Life (of Lafitau), and Master of Breath, though such phrases may have been applied sporadically by the Northern Indians to some 'great medicine.'

A feature of the eschatology⁶ is the other-world paradise for the brave, comparable only with the belief of Islām, although European chivalry shares the aversion from dying in bed.

The 'happy hunting-grounds,' which have become a proverb, are typified in the Comanche belief—here is 'the orthodox American paradise, in its full glory. In the direction of the setting sun lie the happy prairies, where the buffalo lead the hunter in the glorious chase, and where the horse of the pale-face aids those who have excelled in scalping and horse-stealing, to attain supreme felicity.'⁷

LIFE AND DEATH (Chinese).—I. Popular ideas.—Life and death are more intimately associated in the Chinese mind than in the Western. The curtain separating life and death is thinner. The future life to the average Chinese, taught as he is by popular Buddhism and Taoism, is largely a replica of this life on a different plane of existence, but death is no theme of beauty. After passing through the Judgment Halls of the Ten Judges of Hades (a hell with many furies), the victims are supposed to require food, clothing, houses, servants, means of travelling both on land and on water, and money. All these are sent

to them by their friends and relatives by means of burning paper models and imitations.

2. **Ancient beliefs.**—The ancient Chinese were unable to distinguish between death, sleep, and a swoon. They therefore tried to resuscitate the dead by calling them by name to return,¹ etc., by providing food for them, by keeping their bodies in the dress that they wore, and, at first, by tightly covering the corpse.² Many customs now in vogue in China are due to this belief. Death was a prolonged sleep (or due to suspended animation); and, as the sleeper will wake, so the corpse may do the same, should the soul return to its habitation.³ Articles which were believed to promote vitality, such as jade, gold, silver, pearls, and cowries, were stuffed into the mouths of the dead.⁴ No methods of disposing of the dead were employed which would quickly destroy the body, and coffins were made of such materials as pine and cypress, for they 'were intended to preserve human bodies from putrefaction and to facilitate their resurrection by enveloping them thus air-tight in a material which, being possessed of vital energy, was considered capable of transmitting life once more into the clay.'⁵

The ancient Chinese were most scrupulous in washing and dressing the dead, so that the body might be ready at any time for the soul to return to its fleshly dwelling-place.⁶

The strong Chinese reprobation of the mutilation of the body had its origin in these ancient ideas, for mutilation prevents the body from being in a fit state for the soul to return to it, or to appear in the next world. Hence criminals were beheaded as a severe punishment, and strangling was considered a lesser one.⁷ The mode since the revolution seems to be that of shooting.

In the belief of the Chinese life 'remains after the soul has left the body.'⁸ There is thus a belief in a life in death itself, or, as de Groot graphically describes it, a cohabitation of the soul and the body after death.⁹ In accordance with this idea, there is not a complete separation of soul and body. In the popular ideas of the people, one of the three souls is in the grave. Thus death dominates life, and life lives in death and is not extinguished by it. One of the other souls is believed to inhabit the ancestral tablet, while the third passes to the other world.¹⁰

3. **Classical ideas.**—If we turn now to the ancient classics, which throw a light on the early life of the Chinese, we find, besides the views already expressed, higher conceptions as well, or, at all events, less gross ones. Amidst all the ceremonial and ritual, the belief in immortality is clearly seen.¹¹ Ancestor-worship alone is enough to prove this. Even before the days of Taoism and Buddhism, the souls of the ancestors were believed to be in heaven.¹² Confucianism 'teaches the existence of the soul after death,' but nothing regarding the character of that existence.¹³ The knowledge of a future life was hazy and indefinite in the old religion of China.¹⁴

'Thus they looked up to heaven (whither the spirit was gone), and buried (the body) in the earth,'¹⁵ for, it is added, 'the body and animal soul go downward; the intelligent spirit is on high.'¹⁶

The attitude of Confucius towards death was that of an agnostic.

He virtually avoided a direct answer to the question asked him by one of his disciples about death, his reply being, 'While we do not know life, how can we know about death?'¹ The older commentators say that the master gave 'no answer, because spirits and death are obscure and unprofitable subjects to talk about.' Some of the modern Confucian writers agree with this opinion, but the majority say that the answer was profound, and showed the proper order in which such inquiries should be prosecuted, for 'death is only the natural termination of life.'² To the ordinary reader, however, it would appear that this reply was only an exemplification of a passage in the *Doctrine of the Mean* (xu. 2), 'There is that which even the Sage does not know.'³

The followers of Confucius have not risen above the agnostic position which he took, and here it was that Buddhism came to satisfy the longings of the ignorant as to the future with its scheme of rewards and punishments, its firm beliefs and precise statements, its apparent knowledge of futurity, and its assurance of lives to come and the influence of this life on them.

The duration of life and its early or late ending were believed by most of the Confucian school to be dependent on man's proper use of life, and this is a very general belief among the Chinese.

'Heaven does not cut short men's lives—they bring them to an end in the midst themselves.'⁴ 'A man of great virtue is sure to have long life.'⁵ A concrete example of this is the Great Shun (c. 2300 B.C.), whose filial piety was so great that he attained the age of 100.⁶

Length of days, therefore, was regarded by the Chinese as the reward of virtue, and longevity is one of the five blessings earnestly desired. Over many a door is pasted a piece of red paper, renewed at the New Year, bearing the wish, 'May the five blessings descend on this door.'

Though what is stated above is the general opinion, all have not subscribed to it.

The materialistic Wang Ch'ung (c. A.D. 97) says, 'Worthies are taken ill and die early, and wicked people may be strong and robust and become very old.' 'Human diseases and death are not a retribution for evil doing.' 'When a man expires, his fate is fulfilled. After his death he does not live again.' 'Human life and death depend on the length of the span [of life], not on good or bad actions.'⁷

The Chinese temperament is one which enjoys life to the full. The people are generally contented and happy, and the deep hidden meanings of life are largely wanting.

4. Taoism.—In the 3rd and 4th centuries B.C. Chinese philosophy was in its golden period. It critically examined life and its connotations, and evolved original conceptions of the nature, motives, and mysteries of existence. This 'pursuit of truth and wisdom' claimed not a few noted men among its adherents. Later, Confucianism, with its love of rites and ceremonies and its reverence for former sages, had the effect of turning men's minds from the inquiries which a philosophical spirit delights to make, and Taoism, under whose ægis such inquiries had arisen, to a large extent changed to a system of rites and idolatry.⁸

Primitive Taoism—that shown to us as developed through the sayings and mind of its founder, Lao-tzu (b. 604 B.C.), and its earlier writers—knew little more than Confucianism as to the great subjects of life and death.

Licuius (Lieh-tzu, 4th cent. B.C.) says: 'The living and the dead . . . know nothing of each other's state.'⁹ 'We all have an end, but whither the end leads us is unknown.'¹⁰ Chuancius (Chuang-tzu, 3rd and 4th cent. B.C.) asks: 'What should the dead know of the living or the living know of the dead? You

and I may be in a dream from which we have not yet awaked.'¹¹ 'To him who can penetrate the mystery of life, all things are revealed.'¹²

The prolongation of life and the cheating of death of its due, or, rather, the raising of mortal life above death by the transforming of life into a higher existence,¹³ has been one of the aims of Taoism, to be attained 'by quietism and dispassionativism, by regulating one's breath and using medicines.'¹⁴

Lao-tzu is stated to have said that, to a perfect man, 'life and death . . . are but as night and day, and cannot destroy his peace.'¹⁵ In Licuius we find (as the statement of one almost a sage) that life and death were looked upon in the same light. Licuius says that 'the source of life is death.'¹⁶ 'There is no such thing as absolute life or death';¹⁷ i.e., 'from the standpoint of the Absolute, since there is no such principle as life in itself, it follows there can be no such thing as death.'¹⁸ On the other hand, we have such statements as 'Great indeed is death! . . . It gives rest to the noble-hearted and causes the base to cower.'¹⁹ 'The sage looks upon life and death 'merely as waking and sleeping.'²⁰

In the idealistic and mystical writings of Chuancius (Chuang-tzu), one of the great Taoist philosophers, who lived about two centuries after the founder Lao-tzu, there are some striking statements.

He says that for the sage 'life means death to all that men think life, the life of *seeming* or reputation, of *doing* or action, of *being* or individual selfhood.'²¹ 'He who clearly apprehends the scheme of existence does not rejoice over life, nor repine at death, if he knows that terms are not final.' In other words, 'life and death are but links in an endless chain.'²² Life is inevitable, for it 'comes and cannot be declined. It goes and cannot be stopped.'²³ The quick passage of life is thus expressed. 'Man passes through this sublunary life as a white horse passes a crack. Here one moment, gone the next.'²⁴ 'The life of man is but as a stoppage at an inn.'²⁵ 'The living are men on a journey.'²⁶ 'Life is a loan.'²⁷

Taoism borrowed largely from Buddhism, and developed its scheme of life and death, amplifying its descriptions of renewed lives, which are to succeed death itself.²⁸

In the Epicurean Yang Chu's philosophy (c. 800 B.C.) life is to be lived for the possessor's own self and to be an expression of his individuality. There is to be a disregard of life and death; life is of importance only to him who lives it, and that solely during his brief existence.²⁹ The Chinese have not followed this philosopher.

Wang Ch'ung, who holds a mid position between Confucianism and Taoism, was of the opinion that the dead do not become ghosts, and are unconscious,³⁰ and that 'sleep, a trance, and death are essentially the same.'³¹

He also says that 'human death is like the extinction of fire. . . . To assert that a person after death is still conscious is like saying that an extinguished light shines again. . . . The soul of a dead man cannot become a body again.'³²

5. Buddhism.—For the general attitude of Buddhism as regards life and death see art. DEATH AND DISPOSAL OF THE DEAD (Buddhist) and KARMA. It is, however, more than questionable whether esoteric Buddhism, with its metaphysical aspect towards the world of senses, has much or any hold on the mass of the people.³³ Accordingly, many of

its votaries in the Northern branch of that religion believe in the glorious Paradise of the West, to which the souls of the believers in Amida (Amitābha) Buddha can ascend and escape the long catena of lives and deaths supposed to be the lot of the aspirant to Nirvāṇa on his weary road thither.

To vie with its sister religion, Taoism evolved in its turn a nine-storeyed heaven with the Dragon King as ruler to await the arrival of pious souls.

6. Conclusion. — Thus, with the multiplicity of lives to which Buddhism has accustomed the Chinese mind, death looms largely in the purview of life, not only to the Buddhist, but also to the Taoist and even the Confucianist; for Buddhism has entered into the religious life of the whole people and tintured their ideas and thoughts. The Chinese is practical in his outlook on life. He finds himself in the midst of it, he has to accept it, and his thoughts turn more naturally to what its outcome is to be than to its source and origin. More fantastic than his visions of his future are those of his past. With no inkling, for the most part, as to whence he came, he has given full play to his fancy to conjure up the origin of the human race.¹ One of the fairy-like tales of his mythology is that the vermin on the body of a colossal giant, who brought order out of chaos, were the progenitors of mankind;² while in another account the mountains produced the lowest of the lower creation, and these, in turn, developed higher forms, culminating in man, who was evolved from the ape.³

We find higher ideas in the ancient classics; for, though covering but limited ground, the rudimentary knowledge of the Supreme Being possessed by the ancient Chinese embraced the idea that He gave 'birth to the multitudes of the people,'⁴ so that in the State worship by the Emperors He has been addressed as the maker of heaven, earth, man, and all animate beings.⁵

LITERATURE.—Authorities are cited in the footnotes.

J. DYER BALL.

LIFE AND DEATH (Christian).—In passing from the OT view to that of the NT there is no abrupt or startling gap, although a delicate tact is conscious of a difference of atmosphere, and becomes aware that the elements common to both are not in the same proportion, and appear to have been subjected to some organic change in the later form. In the OT words denoting 'life' occur in 166 passages, and in the Apocrypha in 24; words denoting 'death' occur in 354 passages, and in the Apocrypha in 33; on the other hand, in the NT words denoting 'life' occur in 135 passages, and words denoting 'death' in 128. In this quantitative analysis the striking fact is that death occupied the OT mind more predominantly than life. Qualitatively taken, however, a striking difference at once appears. Life in the OT for the most part refers to existence here in the flesh, and comparatively rarely rises above it, being summed up in the LXX phrase in Sir 37²⁵: 'the life of man is in the number of his days.' Instances occur, of course, especially in the later Psalms and Wisdom literature, of life being regarded as independent of bodily conditions, but these are to be treated as indications of a transition in thought to a higher plane, as a *preparatio evangelica*.

The significant feature of the NT allusions to life (and death) is their want of any real interest in mere earthly living, and this feature is plain even where the necessities of experience compel

reference to the fact of physical death. Thus, out of the 135 passages where 'life' (ζωή) occurs, not more than seven can be referred to physical life. In one (Lk 17⁷) the text varies, and the life referred to might be heavenly. In Lk 16²⁵ the life of Dives is sharply contrasted with the life of Lazarus. Ac 8³⁸ is a quotation from the LXX; Ac 17²⁵ is inspired by Stoic thought. In Ro 8³⁸, 1 Co 3²², and Ph 1²¹, where life and death are conjoined as correlative powers, the reference may be to earthly life and death, but the probability is that in each case the meaning is that spiritual life and spiritual death face us. In the first passage it is invisible powers personified that are declared incapable of sundering the Christian from Christ; in the second passage the words are equally patient of either meaning; and in the third, if Theophylact may be followed,¹ the spiritual meaning prevails. Besides these seven passages, the word 'life' in the NT does not seem to be used anywhere in the lower sense.

The case is different with the term 'death' (θάνατος), for in something less than a score of passages in the Gospels, and in eight passages of Acts, the death of Jesus is referred to; in nine passages of Heb. physical death, especially that of Jesus, is the subject; and in Rev. 'death' is personified in conjunction with Hades, or is described as being followed by a second death, or is regarded as the term of this life. On the other hand, St. Paul and St. John, with hardly an exception, when they refer to death at all, mean spiritual death, not physical. Our task is to examine the passages where the terms ζωή and θάνατος, or their cognates, occur in the NT, in order to ascertain their precise meaning.

1. Life.—(a) The first mode of expression for the 'life' which Christ gives is to be found in the use of the definite article. Examples of this are Mt 7¹⁴, 'straitened is the way that leadeth unto the life'; 18⁴⁰, Mk 9⁴⁵, 'to enter into the life maimed,' 'to enter into the life with one eye'; Mt 19¹⁷, 'thou wouldst enter into the life'; Jn 5²⁴ (cf. Jn 3¹⁵), 'hath passed out of the death into the life'; 6⁴⁸, 'the bread of the life'; 8¹², 'shall have the light of the life'; 11²⁵ 14⁶, 'I am the life'; Ac 3¹⁵, 'the prince of the life'; Ro 8², 'the law of the spirit of the life'; 2 Co 4¹², 'the life worketh in you'; 5⁴, 'the mortal may be swallowed up by the life'; 1 Ti 6¹², 'lay hold of the æonian life'; 1 Jn 1¹, 'the word of the life'; 5¹², 'he that hath the Son hath the life'; Rev 2⁷ 10 3⁵ 13⁸, 'the tree,' 'the crown,' 'the book of the life'; 21¹, 'the water of the life.'

In all these cases the article is used in what grammarians call the anaphoric sense, by which the substantive is pointed to as referring to an object already definitely known. Thus, in the instances given the implication is that the life mentioned is that with which the readers were already familiar as the subject of Evangelic preaching, and an object of their own religious experience. It is also implicitly contrasted with another and a lower kind of life—that of the natural man, of the man of this world (cf. F. W. Blass, *Grammar of NT Greek*, London, 1905, p. 146).

(b) Life which is unreal and fleeting is set aside in favour of the life which is real and abiding: 1 Ti 4⁸, 'life that is now and life which is to come'; 6¹², 'the life that really is.'

(c) It is assigned a heavenly nature by a predicative clause: Ro 5¹⁰, 'we shall be saved by his [the Son's] life'; 2 Co 4¹⁰, 'the life of Jesus'; Eph 4¹⁸, 'the life of God'; 2 Ti 1¹, 'life that is in Christ Jesus'; 1 Jn 5¹¹, 'the life in his Son.'

(d) The characteristic NT expression qualifying life, however, is 'æonian,' rendered in AV 'everlasting' 24 times, and 'eternal' 42 times, but both terms are misleading, as giving a quantitative in-

¹ A kind of new life I live, and Christ is all things to me, breath and life and light' (see M. R. Vincent, 'Philippians and Philemon,' *ICC*, 1897, *in loco*).

⁵ *Ib.* p. 47 ff.

stead of a qualitative category. 'Æonian' as an adjective occurs in all 71 times in the NT, and in 43 of these it qualifies 'life.' These passages (in addition to 17 in the Fourth Gospel) are Mt 19^{16, 29} 25⁴⁶, Mk 10^{17, 30}, Lk 10³² 18¹⁸ 30, Ac 13^{46, 48}, Ro 2⁷ 5²¹ 6²², Gal 6⁸, 1 Ti 1¹⁶ 6¹², Tit 1³ 3⁷, 1 Jn 1² 2²⁵ 3¹⁵ 5^{11, 13, 20}, Jude 2¹. In all these passages it is not the duration of the life that is in question, but its nature and its source. Hence, though the rendering 'eternal' may be permissible, that of 'everlasting' is erroneous, and even 'eternal' can be allowed only where eternity is understood as by Boethius:

'Whatsoever, therefore, comprehendeth and possesseth the whole plenitude of unlimited life at once, to which nought of the future is wanting, and from which nought of the past hath flowed away, this may rightly be deemed eternal' (*Phil. Consol.*, v. prosa 6 [PL LXII. 859], cf. Dante, *Parad.* xxii. 61-69).

It is in the prominence given to this view of life that we are to find the superiority of the NT teaching on it over that of the OT.

The transition from the sense of 'æonian' in the LXX (where it [or its cognates] is used about 330 times) to its sense in the NT is of the nature of an evolution. The NT sense of 'spiritual,' or 'divine,' is not wanting in the OT,¹ yet the more usual sense of the term is that of duration. Out of this lower sense there gradually unfolds, at first tentatively, but at length surely and fully, the ground on which duration rests, viz. the possession of an essence which is superior to the category of time. What endures is that of which time is but the changing expression, and the great gift of Christ is seen to consist in the power which He confers of escaping from the jurisdiction of 'the prince of the power of the air' into the higher realm where the 'æon' or the 'æonian' king rules.

The use of the term 'æon' in the NT is important for our present purpose; for, in addition to the passages in which the temporal meaning of the term is required, there are a number which are ambiguous, and also a further number where 'æon' is certainly used in a personal sense. Different ages, or different regions of the universe, are placed by God under the control of rulers to whom the name of 'æon' is given. In Ac 15¹⁸ the rendering should in all probability be 'God maketh these things known from æon.' So in Ac 3²¹ and Lk 1⁷⁰ the prophets are said to receive their inspiration 'from æon.' The sense of Jn 9³² is best reached by paraphrasing it: 'From the realm of the æon the news has not been heard of anybody opening the eyes of a man born blind.' In Eph 2² no question can be raised, for the 'æon of this world' there is clearly a personal being, since he is given as a sub-title 'the prince of the power of the air.' In 1 Ti 1¹⁷ God is distinguished as the 'King of the æons.' In Col 1²⁶ the revelation given to the saints is exalted above that given to the æons. The latter knew nothing of the mystery of the indwelling Christ, the hope of glory. The knowledge of this was the prerogative of the saints. In 2 P 3¹⁸ the 'day of æon' can be nothing but the 'day of the Lord,' and hence the æon here is Jesus (cf. also He 1³, 1 Co 10¹¹, Gal 1⁴, and the appendix to Mk in the Freer-logion).

When we remember that Christianity grew up in a Gnostic environment, that among the Gnostics the doctrine of personal æons was universal, and that 1 Clem. 85, Origen (*c. Celsum*, vi. 31), Ignatius (*Eph.* 19), Clem. Alex. (*Strom.* iv. 13), Irenæus (*Hæc.* i. 17), and Hippolytus (*Ref.* vi. 26) all refer to the doctrine explicitly as worthy of note and demanding correction, we shall not be surprised if echoes of it are found within the Canon. Further, the same fluidity of meaning which attaches to the use of the term outside the Canon attaches to it also within the Canon. Omitting temporal significance as too general to need exemplification, it is enough to say that the word 'æon' may stand for a superhuman being who is good or

evil, supreme or subordinate. Hippolytus (*Ref.* iv. 2) mentions speculators who 'speak of a sedition of æons and of a revolt of good powers to evil, and of a concord of good and wicked æons.' Irenæus (*Hæc.* i. 1) relates that the Valentinians taught the existence of 'a certain perfect, pre-existent æon whom they call Froarche, Propator, and Bythos.' So Epictetus (ii. 5) says: 'I am not God (*æon*) but man, and, therefore, mortal,' and pseudo-Dionysius (*de Div. Nom.* v. 4) says: 'God is called Arche and Measure of Æons and Essence of Times and Æon of things that are . . . for He is the æon of æons, He that is before all æons.' The Valentinians further taught, according to Irenæus, that the supreme Æon emanated eight æons, the ogdoad, and these ten others, after which twelve more were produced, making thirty in all, they also saw in the visit of Jesus to the Temple when He was twelve years old, and in His baptism when He was thirty, a cryptic reference to the system of æons. R. Reitzenstein (*Poimandres*, Leipzig, 1904, p. 270) quotes a Hermetic hymn addressed to Isis as the moon-goddess in which it is said: 'Thou art the beginning and the end, and thou rulest over all, for of thee are all things and to (thee as) Æon do they run as to their end.' So in the Hermetic tractate *Mind unto Hermes*, 2, it is said: 'God makes æon, the æon makes the world, the world makes time, time makes generation.' Here 'æon' is the name of the ideal principle which ultimately takes form in the world of becoming. Similarly, Plato (*Tym.* 87) says: 'When the father and creator saw the creature which he had made moving and living, the created image of the eternal gods (τῶν αἰδίων θεῶν), he rejoiced, and in his joy determined to make the copy still more like the original; and, as this was eternal (αἰδίων), he sought to make the universe eternal, so far as might be.' In this passage, where Plato wants to express the idea of everlastingness, he has the word αἰδίων ready to his hand. But, when he goes on to express a different idea, he uses a different term (αἰώνιος): 'Now the nature of the ideal being was æonian (αἰώνιος), but to bestow this attribute in its fullness on a creature was impossible. Wherefore he resolved to make a moving image of the æon (αἰώνος), and, setting in order at the same time the heaven, he made this æonian image of the æon abiding in unity (μὲνόντος αἰώνος) [an image that in itself was æonian] to move in accordance with number; and this image we call time.' In the latter passage, as is obvious, Plato is dealing with the quality of the archetypal order, and, therefore, he uses the word αἰώνιος. In the former passage he was dealing with a category of quantity, and, accordingly, he employed the word αἰδίων, 'everlasting.' J. Adam (*Vitality of Platonism*, Cambridge, 1911, p. 35 f.) translates αἰώνος in Pindar (fr. 131, ed. Bergk) as the 'living man,' and says that it never means 'eternity' in Pindar. The passage is ἄφρον δ' ἐστὶ λείπεται αἰώνος εἰδωλόν· τὸ γὰρ ὅτι μόνον ἐκ θεῶν (cf. *Il.* xix. 27). Plato's antithesis of æon and time reappears in Philo (ed. T. Mangey, London, 1742, i. 496), who makes the three first days of creation, before sun and moon were created, an image of 'æon' and the last three of time, 'for He set the three days before the sun for the æon, and the three after the sun for time, which is a copy of æon.' Similarly, he says (i. 619) that 'the life of the intelligible world is called æon, as that of the sensible is called time.'

The question whether 'æon' and 'æonian' are to be rendered qualitatively or quantitatively is not identical with the question whether a Jewish or Greek conception is the determinant, for the Hellenization of Christianity was active, even if not in its acute form, from the earliest NT days. Greek thought had penetrated Jewish before NT times (W. Bousset, *Die Religion des Judentums im neutest. Zeitalter*, Berlin, 1903, p. 493; cf. 'æonian torment,' in 4 Mac 9⁹; 'æonian life' in Enoch 10¹⁰; 'judgment of the æon of æons,' 10¹²; 'the King of the æon,' 27⁸), and is embedded in the NT itself. Moreover, the Rabbinical antithesis of 'this world' and 'that world' lay on the border-line of Greek thought, and might pass easily into it. The witness of Philo must be added to that of the Synoptic Gospels (with their many isolated sayings redolent of Greek thought and their record of the teaching of a mystery-religion), the Fourth Gospel as a whole, Eph. and Col., and the constant tendency of the Greek in St. Paul to burst its Jewish fetters. We conclude, therefore, that 'æonian life' in the NT is life that belongs to a higher order than animal or ordinary human life; it is from above, and the recipient of it is lifted, by possessing it, into a higher state of consciousness. It is not this present life indefinitely or infinitely prolonged, nor is it life beyond the grave distinguished as such from life on this side of the grave.

It is not possible here to do more than allude to the central place which the fact and truth of regeneration (*g.v.*) occupy in the religion of Jesus Christ. All that is required is a reminder of the close connexion of regeneration with the æonian

¹ e.g., in Ec 3¹¹ we are told that God has placed the æon in the heart of man, i.e., has given him a seed of a higher order of being.

life which forms the theme of the NT. To be born from above (*ἄνωθεν*, Jn 3³); to be turned and to become as little children (Mt 18³); to come out into the resurrection of life (Jn 5²⁰); to put on Christ (Gal 3²⁷); to be quickened together with Christ (Eph 2⁵); to be in Christ (2 Co 5¹⁷); to put on the new man (Eph 4²⁴); to be a new creature (Gal 6¹⁵)—these and many similar passages describe that dynamic process of which the result is æonian life, or salvation, or the Kingdom of God, or blessedness.

2. Death.—Christian theology has been at once oppressed and confused by its failure to note that in the NT it is not physical life cleared of its experienced ills that is called life, and that it is not physical death as such that is connected with sin. (1) Reflexion would assure us that, when life is used in a super-physical sense, it is at least probable that the death referred to is always something more than the death which dissolves the connexion between the self and its physical vehicle. If one be of the transcendental order, so must the other be. (2) It has never been easy to maintain a causal nexus between sin as a wrong act of will and death as an event of the natural order. Modern science has convinced itself that death has reigned not only since Adam's transgression, but from the first appearance of life. Death indeed, apart from sin, is a process of nature and not a super-natural punishment for sin. (3) Christianity is admittedly a religion whose home is in the spiritual order, and its interest, therefore, in the physical, though real, is only indirect. From its superior standpoint it may have something to say as to the origin and meaning of physical death, but, if it speaks of death as intimately bound up with its own life, that death will not be of the physical order. (4) The law of analogy points in the same direction. A principle which is operative on one level repeats itself analogously at other levels. Just as gravity may be described without straining as love embryonic in matter, or, conversely, as love in the spiritual world exercises an attraction which binds spiritual beings as surely as gravity binds together atoms, so death as physical is a reflexion of a similar principle in the world where life is life indeed. (5) All philosophy assures us of the existence of an infinite principle or truth in the finite event or fact, of the existence of a universal in the particular. But a physical death is a fact in the world of space and time; hence it conceals what is more than a fact—a truth or idea, or a fragment of reality presented under the guise of the actual. If, therefore, a religion which proclaims itself as having the real for its object speaks of death, or attributes to death any place in its world, it cannot be supposed to limit its reference to the death which is merely physical.

It will be found on examination that the conclusion thus reached *a priori* is confirmed by a careful scrutiny of the evidence. (a) We may conveniently begin with passages in which death is obviously treated as acting in the spiritual sphere. The following passages in the Fourth Gospel may be cited: 'He hath passed out of the death into the life' (5²⁴; cf. 1 Jn 3¹⁴); 'If a man keep my word, he shall never see death' (8⁵¹); in ch. 11 the difficulty caused by the apparent indifference of Jesus in the beginning, by the reference to sleep, and by the affirmation that the believer should never die can be fairly met only by the hypothesis that the story in form moves on the physical plane, but that in substance it is the story of the resurrection of the soul from spiritual death; the reference to the manner of death in 12²⁸ is contained in what is certainly a gloss. In 1 Jn we have similar references to spiritual death: 'He that loveth not abideth in the death' (3¹⁴), where

the death is clearly on the same plane of being as love; in 5¹⁶ the sin unto death (or not unto death) is also clearly a sin which is followed by death of the same order, viz. in the world of free will, for it is said in explanation that God will give life for them that sin not unto death—a sentence which is meaningless if physical life is meant, since that is *ex hypothesi* there already. In Rev. the second death, which is spiritual, is distinguished from the first death, which is physical (2¹¹ 20⁶, 14 21⁸).

In the Epp. also many passages occur in which death must be interpreted as spiritual. In Ro 1³² St. Paul, speaking not as a jurist but as a preacher (cf. W. Sanday and A. C. Headlam, *Romans*⁵, Edinburgh, 1903, *ad loc.*), sets up an ideal standard with ideal consequences for violation of it. Those who outrage the plainly expressed mind of God as to what righteousness is do so with the full knowledge that they deserve death ('und meint damit den ewigen Tod' [H. A. W. Meyer, *Der Brief an die Römer*, ed. B. Weiss⁶, Göttingen, 1899, *ad loc.*]). In the striking passage Ro 5¹²⁻²¹, unless St. Paul is guilty of inexcusable logical confusion, the death which in vv. 17-21 is obviously spiritual must be of the same kind in vv. 12-14. The current exegesis which assumes such looseness of thought in St. Paul is itself responsible for the confusion. The meaning is simple, plain, and consistent throughout: Adam was guilty of a sin which was spiritual in its character, being a misuse of free will; therefore he brought on himself spiritual death, and this death has afflicted mankind ever since. But now at last the Christ of God, by Himself entering into vital union with a race self-deprived of the higher life, that is, by sharing in some sense their loss, has restored what they had lost; He has, that is, obeyed the law that only through death do we enter into life. The death He has undone is that which consists in the absence of spiritual life; and the death He has borne is that which consists in the process of taming the lower nature, in the process of the mystic crucifixion. The one lost æonian life by self-will; the other gained it by obedience, and gave it through love.

Similarly, the linking of baptism with Christ's death and life in Ro 6 is explicable only if it is æonian life and æonian death that are in question, and the best proof of this view is to be found in the difficulties into which exegesis has long been implicated through its mistaken assumption that the life and death referred to are physical. Hence it has to say that St. Paul's 'thought glides backwards and forwards from the different senses of "life" and "death" almost imperceptibly' (Sanday-Headlam on 6⁸). But, from the facts that Christ's death was transacted in the spiritual order, that baptism in its genuine meaning was a moment in a dynamic process, that the life which Christ truly lived was an æonian life, it follows that, the life being the same both in the Lord and in His disciples, they both were united in the mystic Vine, since one and the same life was in it and in its branches. Therefore, St. Paul concludes, since it is now æonian life that rules in both Christ and His members, death is automatically excluded. While 'the seed abideth' in the believer, he not only does not sin, but he cannot sin; or, if he sins, the sin is proof that the life is not yet dominant.

The argument in Ro 7 is similar. Using the image of marriage being valid for life, St. Paul says that the natural man has law for a husband and sin for his child, and sin in turn begets death, i.e. spiritual death (v. 5). This spiritual death is in turn undone by the Spirit of life in Christ Jesus (8²). We are given even an exact definition of death as being identical with the mind of the flesh, and of life as being spiritual-mindedness (8⁶).

Even the famous passage in 1 Co 15 is given a coherent meaning only when the thought of spiritual life and spiritual death is kept in the foreground. It is true that here the thought is less pure, and that the physical death of Christ and His resurrection from physical death are made the proofs of the reality of the heavenly order. But, even so, it is not the physical resurrection that is the vital point, but the spiritual, of which the physical is but an expression. The argument is as follows. To be still in your sins is death; faith, however, when it comes, annuls this (spiritual) death, for it is essentially life. This living faith (the life of God in the soul) is what filled Christ, and constituted His title to the higher state of being, as is proved by the fact that He overcame (spiritual) death; the proof that He did so overcome spiritual death is to be seen in the fact that He could not be holden by physical death. Hence death in both senses is abolished, or is in the process of being abolished, but the death which is the enemy is spiritual, and, if physical death comes into question at all, it is incidental only or by way of illustration. That this is the true interpretation becomes clear when we observe that the remainder of the chapter (vv. 35-38) is concerned only with affirming that this higher spiritual, or risen, life will require a cognate spiritual body, and that as God gave the life so He will give the suitable body.

(b) There are, however, unquestionably many passages in the NT which seem, on the surface at all events, to refer exclusively to a physical death. They are those which in the Gospels (12 times) and the Acts (8 times) deal with the death of Jesus Christ. But even here a sound exegesis will compel us to distinguish between what is said and what is signified. What is said is that Jesus suffered physical death at the hands of the civil and ecclesiastical authorities of His day. What is signified is that His sufferings as witnessed had a hidden counterpart and a universal validity because, He being a heavenly subject, what He experienced in strong crying and tears affects all who are united to Him as a transcendental subject by being made sharers of His life, partakers of His divine nature. What is signified is that His crucifixion is a mystic process before it takes shape in the moment of a physical death, and that this process of crucifixion, therefore, goes on necessarily in all those who are made one with His life (Gal 5²⁴ 6¹⁴). What is signified is that the physical death and burial of Christ are a reflexion of a spiritual death and burial which He underwent in order that He might be a radiating centre of heavenly life to all men. The real death and burial are to be found in the æonian world; the death and burial that fall under history are shadows of the real.

The Epistle to the Hebrews also refers explicitly to the physical death and sufferings, but here we must allow for the exigencies of the line of argument adopted. This compelled the author to place the physical death of the man Christ Jesus over against the physical death of the animals slain in OT sacrifices. Yet, even so, the force of the argument depends on the superior worth of the former. His sacrifice was all-compelling, partly because it was voluntary (7²⁷ 9¹⁴ 10⁹), still more because of its transcendent worth, it being the offering of One whose life was divine, and made in accordance with the power of an indissoluble life (7¹⁶) and through an æonian spirit (9¹⁴). The life, we may say, that even here is dealt with is essentially spiritual, and is physical only in a secondary and subordinate sense.

(c) A third and small class of passages alone remains where death is of an ambiguous appearance. In Rev 1¹⁸ 6⁸ 9⁶ 20¹³. Death is personified

and joined with Hades, and both may attack man on his physical or on his spiritual side. In Mt 4⁶ and Lk 1⁷⁹ the shadow of death falls across the heathen world, where spiritual death is surely meant. In Mt 16²⁸, Mk 9¹, and Lk 9²⁷ contemporaries of Jesus, it is said, should not taste of death till they saw the Kingdom of God. It is impossible to say what was the original context of this triplicated passage, but it is improbable that the passage itself is to be regarded as a falsified prophecy of a historical fact. The 'Kingdom of God' and the 'Son of Man' are terms which express inner realities, and it is at least likely, then, that 'death' is also æonian. In this case the meaning of the passage is that there were some (a 'remnant,' the few who were 'chosen') who would not taste the bitterness of spiritual death, because to them would be vouchsafed the mystic vision of the King in His beauty, of the land that to most men remains far off.

It will be clear, from what has been said, that the NT and Christian antithesis is not that of the OT and Judaism, between this world and the next, but between two kinds of life both here and there. It is a qualitative and not a quantitative difference. On one side is the life of sense, of intellect, of static forms, of fixed perceptions and well-defined conceptions—the life, in short, whose boundaries are set by the practical needs of the empirical Ego. On the other side is the life which creates the very power by which sense and intellect discharge their limited functions, which is in itself deliant of forms, is only partially grasped by perceptions, and for the most part remains outside conceptions—the life, in short, which Jesus came to reveal and to give, which is called æonian, or spiritual, or heavenly, or divine, and is that ever-flowing stream from the life of God of which all expressions of life are at all levels fragmentary flashes. We pass from the fragment towards the complete and perfect in exact proportion to our surrender of our lower and separated self to the life of the whole, which is God. It is this enhanced life and expanded consciousness that the religion of Jesus Christ and His Church is primarily concerned with. Its interest in eschatology, in theories about resurrection, in hypotheses such as that of universalism, of conditional immortality, of the nature of the ultimate union of soul and body, or of re-incarnation, though real, is subordinate only. It is concerned with a higher life experienced here and now, and to grow hereafter more and more towards the perfect day. It is interested in theories about that life, but its interest in them is not vital.

LIFE AND DEATH (Egyptian).—The Egyptian conceptions of life and death seem at first sight to be full of inexplicable contradictions. No wonder is felt when these states are found to be alternately praised and execrated, for in such praise and execration personal preferences are involved, and these may vary. But it is more perplexing to find diametrically opposite views expressed or implied with regard to questions of fact or belief, as when the same being is described almost in one breath both as alive and as dead, or when men who fear the dead are seen to have used

magical means to kill their enemies, thinking thus to be rid of them. Such inconsistencies arise from the blending of the simple distinction between physical life and death with the extremely ancient and almost universal belief in immortality—a belief that is rooted partly in the passionate abhorrence which death inspires as an indignity inflicted upon the living,¹ and partly in the fact that death is known to us only through observation of the external world, and not by conscious inner experience.

Life and death are facts, since they are ever being forced upon our notice; death is a falsehood, however, because we have never known it to be true of ourselves, and, furthermore, because we will not admit that it can be true of ourselves. But, if after the physical death we are not dead, then we must be alive. The words 'life' and

ωωπρε, 'to become,' 'come into existence.' For 'death' there are various euphemistic expressions, such as *hpyt* or *swd*, 'passing away,' *mini*, 'reaching port'; 'my dying day' is once expressed by *hrw nfr-nl tm*, 'the day on which it went well with me' (*Sphinx*, iv. [1901] 16); the phrase *sbt r im;h*, 'to attain to beatitude,' is ambiguous, sometimes referring to honoured old age and sometimes to death. The dead are described as *ntlw tm*, 'those who are yonder,' or as *b;gy nnyw*, 'the weary ones.' Theological is the phrase *s n k;f*, 'to go to one's *ka*, or double'; so, too, are the words *i;h*, 'glorified being,' *s;h*, 'noble,' and *hsy*, 'blessed,' applied to the illustrious dead. Two epithets that from the early Middle Kingdom onwards are appended to the names of dead persons reflect, the one the identification of the dead with Osiris, and the other the

'death' thus both acquire a double meaning, and a wide field for speculation opens out; the achievements of the Egyptians within this field have here to be considered.

1. **Philological.**—Whereas the Egyptian word for 'to die,' *mut*, Coptic μοϣ (infinitive), μοϣϣ (qualitative), is shared with all the Semitic languages, the verb for 'to live,' 'nh, Coptic ων, ωνϣ, is of doubtful affinities. Several derivatives from the same stem, such as 'nh, 'sandal-string,' 'nh, 'goat,' 'nh, 'ear,' fail to suggest any earlier or more concrete meaning for it, while other words having the same radical letters, such as 'nh, 'oath' (Coptic αναω), or 'nh, 'mirror,' clearly derive their meaning from 'nh, 'to live.' Closely related in sense are the verbs *wnn*, 'to exist,' and *hpr* (Coptic

belief in immortality; these are *m;h-rn*, 'the justified,'¹ and *whm nh*, 'who repeats life,' respectively. The deceased Pharaoh was called 'the great God,' like his great prototype Osiris, while the living king is 'the good god.'

2. **Writing and figured representation.**—(a) The symbol of life, which is also the hieroglyph used for writing the words 'life' and 'live,' is the so-called *crux ansata*, , popularly known as the 'ankh' ('nh), or 'key of life.' Its origin has been much discussed, most scholars agreeing that the sign represents a tie or knot of some kind, though in V. Loret's opinion (*Sphinx*, v. [1902] 138) it depicts a mirror. The true explanation, hinted at but immediately rejected by G. Daressy (*RTAP*

¹ See particularly R. Hertz, 'La Représentation collective de la mort,' in *ASoc* x. [1905-06] 124.

¹ See art. ETHICS AND MORALITY (Egyptian), § 7.

xxvi. [1904] 130), was first enunciated by Battiscombe Gunn, who proves the symbol to depict the strings or straps of the sandal.

No demonstration of Gunn's discovery (acknowledged by A. Erman in his *Ägyptische Grammatik*³, Berlin, 1911, p. viii) has yet found its way into print: the crucial evidence in the following argumentation has been supplied by Gunn himself. There is an object called 'nh', exactly resembling the symbol and hieroglyph for 'life,' which is often represented pair-wise at the foot-end of Middle Kingdom coffins. These coffins are covered with pictures of articles deemed necessary for the happiness of the dead in the after-life, and care is taken in most cases to place each object in its appropriate position as regards the body of the dead man within the coffin; thus necklaces are shown on the level of his neck, sceptres within reach of his hand, and so forth. *A priori*, therefore, it is to be concluded that the object was connected with the feet—a point clinched by the fact that a pair of these objects is usually shown next one or more pairs of sandals, while the other articles depicted (anklets, bows for washing, etc.) are more or less clearly connected with the feet (see J. Garstang, *Burial Customs of Anc. Egypt*, London, 1907, pl. 6, opposite p. 168; P. Lacau, *Sarcophages antérieurs au nouvel empire*, Paris, 1904, no. 28034 [p. 96 f.]; H. Schafer, *Priestergräber*, Leipzig, 1908, fig. 78 [p. 64], 83 [p. 59], and pl. 11). In several instances the accompanying inscriptions describe the pair of objects as 'the two nh on the ground under his feet' (cf. Garstang, *loc. cit.*; Lacau, *ii*, 168; the preposition 'under' must not be pressed too closely, but it at least shows that the 'nh' was part of, or belonged in some way to, the sandals). If now we compare the

object  with the representation of the sandals, we shall see

that the same elements enter into both—the long loop that passes round the ankle, the straps that serve to bind this loop to the sides of the sandal, and possibly a kind of ribbed bow or buckle. It is difficult to make the representations harmonize in detail, but, remembering that the sign is a very old one, that the modes of binding the sandal to the foot vary greatly, and that possibly the sign depicts the straps not as actually worn but laid out in such a way as to exhibit them to the best advantage, we shall hardly doubt that the objects shown on the Middle Kingdom coffins and called 'nh' are a spare pair of sandal-strings for use in the event of those attached to the sandals requiring to be replaced. The cut on the preceding page depicts various examples of the sandal-strings both as an article of use and as a hieroglyph, together with pictures of sandals for comparison; the hieroglyph is normally painted black.

There being no obvious connexion between the idea of life and that of sandal-strings, it must be supposed that the idea of life, not being itself susceptible of pictorial representation, was symbolized by an object the name of which fortuitously coincided in sound with the word for 'life'; this procedure is merely the procedure called 'phonetic transference,' extremely common in hieroglyphic writing.

It is, of course, possible that 'nh' ('ankh?'), 'sandal-strings,' and 'nh' ('ankh?'), 'life' (the vowel in both cases is hypothetical), are ultimately connected etymologically, but, as said above, the original meaning of the stem 'nh' is unknown. It would certainly be wrong to advance the hypothesis that the sandal-strings were called 'nh' because they resembled the symbol for life, the origin of that symbol itself being regarded as undecipherable. The evidence of the earliest writing (the absence of the stroke-determinative) shows that the 'ankh' sign was regarded as a phonetic and not as a pictorial sign.

As a symbol the 'ankh' is everywhere to be found on the Egyptian monuments. Gods and goddesses hold it in their hands, or present it to the nose of their favourites. It appears with arms supporting a standard (e.g., E. Naville, *The Temple of Deir el-Bahari*, v., London, 1906, pl. 149) or as itself representing the legs of a human figure (*Louvre*, C 16); such religious representations have still to be collected and classified. As a mere ornamental device the 'ankh'-sign is frequently found on furniture, jewellery, etc., often in association with other

auspicious symbols, e.g., , 'life, stability, and prosperity.' As an amulet the 'ankh' is fairly common, and is usually made of green or blue faience.

(b) There is no corresponding symbol for 'death.' The words 'death' and 'to die' are in early times followed (or 'determined,' to use the technical expression) by a sign representing a man fallen

¹ Except where 'the symbol life' is meant.

upon his knees, and bleeding from a wound on the head; later this sign is merged into another of wider application and varying form—the commonest

form is —which accompanies various words

meaning 'prisoner' or 'enemy.' Very often, however, these hieroglyphs are mutilated or suppressed because of their ill-omened associations (*ZA* li. [1914] 19).

3. **Literal views of life and death.**—How life was envisaged may best be learned from the following wishes on behalf of a dead man:

'May there be given to thee thy eyes to see, thy ears to hear what is spoken; thy mouth to speak, and thy feet to walk. May thy hands and arms move, and thy flesh be firm. May thy members be pleasant, and mayest thou have joy of all thy limbs. Mayest thou scan thy flesh (and find it) whole and sound, without any blemish upon thee; thy true heart being with thee, even the heart that thou didst have heretofore' (K. Sethe, *Urkunden des ägypt. Altertums*, Leipzig, 1904–09, iv. 114 f.).

Death is the negation of life; in slaying their foes, the Egyptians sought to make them 'as though they had never been' (*Urkunden*, iv. 7, and *passim*), and the custom of cutting off their hands and phalli indicates of what activities it was intended to deprive them. Further light is thrown on these materialistic conceptions of life and death in a passage of the 175th chapter of the *Book of the Dead*, where the state of death is described:

'Of a truth it is without water, it is without air—deep, dark, and void, a place where one lives in quietude. Pleasure of love is not there to be had, nay, but beatitude is given to me in lieu of water and air and love, quietude in lieu of bread and beer.'

Inertia is the chief characteristic of the dead, wherefore they were called 'the weary,' 'the inert' (§ 1); elsewhere we find death compared with sleep (e.g., *Pyramid Texts*, ed. Sethe, Leipzig, 1908, 721). Life, on the other hand, is full of activity, and chief among its needs are air to breathe ('breath of life' is a common expression) and food and drink for sustenance. Here, again, the wishes for the dead are the best evidence of the things deemed needful for the living; 'bread and beer, oxen and geese, cloth and linen, incense and myrrh, and things good and pure whereon a god lives'—so runs the common formula, which hardly less often mentions 'the sweet breeze of the North-wind' as a necessity of life. The place of life was pre-eminently the earth; 'O all ye who live upon earth,' begins a favourite invocation.

Various views were held as to the whereabouts of the dead, but their habitation was normally not the earth; 'those who are yonder' is, as we have seen, a common designation of the dead. That the land of death is a land whence there is no returning was early said; already in the *Pyramid Texts* (2175) we find the warning, 'Go not upon those western ways, for those who have gone yonder come not back again'¹ (the same thought recurs later; cf. *Harris* 500, recto 7, 2). Reflexions as to the duration of life and death are often encountered in the texts. The Egyptian prayed that, like Joseph, he might attain to the age of 110 years (see *RTA* xxxiv. [1912] 16–18). In comparison with death, the endlessness of which was constantly alluded to (cf. 'the city of eternity' for the necropolis, 'the lords of eternity' for the funerary gods), 'the span of things done upon earth is but as a dream' (*PSBA* xxxv. [1913] 169; cf. *Pap. Petersburg 1116 A*, recto 55 [*Les Papyrus hiératiques* . . . de l'Ermitage, 1913]; it should be said parenthetically that this comparison of life with a dream refers only to the dreamlike fugitiveness of its events, not to any speculations concerning its reality). With regard to the extension of the idea of life, it seems to have included man and the animal

¹ For this and other valuable references the writer is indebted to Professor Sethe of Göttingen.

kingdom only (cf. the words quoted from a Memphite text in § 11); it is doubtful whether an Egyptian would have spoken of plants as living; nor is there any expression found to describe the neutral inanimate state of things not belonging to the animal world.

4. The hatred of death.—The opening words of the gravestone-formula, 'O ye who love life and hate death,' strike to the root of the most profound feelings of the Egyptians, whose intense love of life and detestation of death made them devote more time and thought to funerary things than has been done by any other people before or since. The best expression of these feelings is on a stele dating only from the year 46 B.C., but wholly Egyptian in feeling; a woman speaks from the tomb to the husband who has survived her:

'O brother, husband, friend, highpriest—thy heart shall not grow weary of drinking and eating, drunkenness and love. Celebrate a happy day; follow thy heart by day and night; put no care in thy heart. What are thy years upon the earth? The West [i.e. the place of burial] is a land of slumber, dark and heavy, the habitation of those who are yonder, who sleep in their mummy-shapes, nor wake to see their brethren, nor regard their fathers and mothers, and their hearts are reft of their wives and children. The living water of which all have a share, for me it is thirst, but it comes to him who is upon earth. Thirst have I, though water is beside me, and I know not the place where I am, since I came to this valley. . . . Turn my face to the North wind on the bank of the water; perchance so my heart shall be relieved of its affliction. Nay but Death, his name is "Come"; every one to whom he hath called comes to him straightway, their hearts affrighted, through fear of him. There is none can see him either of gods or of men; great and small alike rest with him, nor can any stay his finger. He loveth all, and robbeth the son from his mother. The old man moves to meet him, and all men fear and make petition before him. Yet he turns not his face towards them, he comes not to him who implores him, he hearkens not when he is worshipped, he shows himself not, even though any manner of bribe is given to him' (R. Lepsius, *Auswahl der wichtigsten Urkunden des ägypt. Alterthums*, Leipzig, 1842, pl. 16).

This is perhaps the only passage in which death is personified, though the Egyptians were not averse to a sort of fictitious dedication of abstract ideas; Life, e.g., is found beside Health in the outward guise of a Nile-god (J. E. Gautier and G. Jéquier, *Mémoire sur les fouilles de Licht*, Paris, 1902, p. 25). The exhortation 'celebrate a happy day' recurs again and again in the songs of the harpers at Egyptian banquets, together with the reminder that life is short, death inevitable and eternal. Herodotus tells us (ii. 78) that at the entertainments of the rich a wooden figure of a dead body in a coffin was borne around and shown to the guests, with the words: 'When thou lookest upon this, drink and be merry, for thou shalt be such as this when thou art dead.' No reference is made to this custom in our texts, but it is thoroughly Egyptian in spirit (see also Plut. *de Is. et Osir.* xvii.). The old songs collected by W. Max Müller, *Die Liebespoesie der alten Ägypter*, Leipzig, 1899 (pp. 29-37), recall the wretched fate of the dead:

'The nobles and glorified ones . . . buried in their pyramids, who build themselves chapels, their place is no more; what is become of them? I have heard the words of Imhotep and Hardelef, told and told again; where is their place? Their walls are destroyed, their place is no more, as though they had never been. None cometh thence who can relate how they fare. . . . Then comes the inevitable moral: 'Be of good cheer, forget and enjoy thyself. Follow thy heart, so long as thou livest; place myrrh on thy head, clothe thyself with fine linen, anoint thyself; forget sorrow and remember joy, until arrivest that day of putting to shore in the land that loveth silence.'

5. The hope of immortality.—From the same Theban tomb from which the last words are drawn (tomb of the priest Neferhotpe [50], XIXth dyn.) comes a song expressing widely different sentiments:

'I have heard those songs that are in the ancient tombs, and what they tell extolling life on earth, and belittling the region of the dead. Yet wherefore do they thus as concerns the land of Eternity, the just and fair, where terrors are not? Wrangling is its abhorrence, nor does any gird himself against his fellow.

That land free of foes, all our kinsmen rest within it from the earliest day of time. The children of millions of millions come thither, every one. For none may tarry in the land of Egypt; none there is that passes not yonder. The span of earthly deeds is but as a dream; but a fair welcome awaits him who has reached the West' (*PSSA* xxxv. 160).

This pretty poem voices the opinions of those who, holding a firm faith in immortality, rejected the cold comfortless views of death already illustrated. No doubt that faith was born of a revulsion of feeling against the pitiless cruelty of death; and, being the offspring of the will rather than of the reason, it did not supersede or drive out the opposite belief. There is an argumentative, controversial note in the asseveration of the old funerary texts, 'Thou hast departed living, thou hast not departed dead' (*Pyramid Texts*, 134; cf. 833); or we may quote the reiterated assurance, 'Thou diest not, in the same texts (657, 775, 781, 792, 810, 875, 1464, 1477, 1810, 1812, 2201). The multifarious funerary rites, the contracts made with *ka*-priests, and the petitions or threats to passers-by and visitors to the tombs all imply that the benefits of immortality were not to be obtained except by elaborate forethought and deliberate effort. It is true that a discontinuance of the funerary cult might not entail complete annihilation; the Egyptians dreaded, for instance, lest the cessation of the offerings made to them might compel them to devour their own excrements (*ZÄ* xlvii. [1910] 100-111). Nevertheless, there was ever lurking in the background the fear that a man might perish altogether, and that his corpse might decay and fall to pieces (*Book of the Dead*, titles of chs. 45, 163), this fear giving rise to the strange apprehension of a 'second death in the necropolis' (*ib.* chs. 44, 175, 176).

Similar conclusions might perhaps be drawn from the variety of the theories concerning the fate of the departed, who were alternately (or even simultaneously) believed to be stars in the sky, dwellers in the nether world, incarnations of Osiris, or spirits living in the tomb or revisiting their earthly homes (see art. STATE OF THE DEAD [Egyptian]). It is unthinkable that all these divergent views were accepted and believed with a fervent sincerity; rather they were conjectures sanctioned by ancient tradition, half-believed, half-doubted, and expressed with a naive and credulous thoughtlessness, which at the same time failed to silence the haunting suspicion that absolute death, after all, might be a reality.

6. Secondary views of life and death.—Under the influence of the conception of immortality the terms 'life' and 'death' became so impregnated each with the meaning of the other that they no longer contradicted and excluded one another as they had originally done; 'life' was not necessarily the short term of existence upon earth, and 'death' was perhaps but another mode of living. Sometimes, of course, by the abstraction which language permits, the words were used in their old strictly contrasted senses, but often there is left only a shadow of the original meaning; 'living' may be any form of existence vaguely analogous to physical, terrestrial existence, and 'death,' 'die,' 'dead,' are terms that might be applied to various states from which some characteristic feature of living was absent. A few examples, mainly of philological interest, may serve to illustrate this transition of meaning. Not only was prolongation of life the reward of moral conduct (see ETHICS AND MORALITY [Egyptian], § 6), but in a sense the moral life was the only true life; in the *Teaching of Ptahhotpe* we read:

'As for the fool who hearkens not, he achieves not anything, he looks upon him who knows as one who is ignorant, and upon things useful as things harmful, . . . he lives upon that

wherewith men die, . . . his character is told (?) in the opinion of the nobles in that he dies living every day' (*Le Papyrus Prisse*, ed. G. Jéquier, Paris, 1911, 17. 4-8)

Such was the fear felt by him who was admitted to the presence of Pharaoh that he knew not whether he was alive or dead (*Sinuhe*, 255; *Koller* [ed. A. H. Gardiner, *Literary Texts of the New Kingdom*, Leipzig, 1911, 5. 1]). The verb 'to live' was applied to other things besides human beings and animals; thus, whatever else in a man might die, his name, if properly tended, would continue to live (*Pyramid Texts*, 764, 899, 1024, and in later texts *passim*). 'Living soul' (*b' nhy*) is a collocation of words which frequently occurs; yet, from its association with the dead, the word 'soul' is often determined with the hieroglyph that implies death. Pictures, statues, and images of all kinds were imbued with a sort of life,¹ by virtue of a principle common to all early superstition; the sculptor was called 'he who makes to live' (*s'nh*); hieroglyphs representing animals and human beings were sometimes mutilated or suppressed, obviously because they were considered to have the same power to injure as living things (*ZÄ* li. 1-64).

7. Death and the gods.—Could the gods be said to live? In a sense, no doubt, they were considered to live more fully, more truly, than human beings. The solar deity in particular was full of vitality; the Pharaoh is said to be 'granted life like Rē'; Rē 'lives upon truth'; the solar hymns, especially those to the Aten (the solar god of the heretic king Akhenaten) represent all life as emanating from the god; and all gods and goddesses were dispensers of life. On a closer view, however, we find that the kind of life that was predicated of the gods is more analogous to the life of the blessed dead than to the life of human beings; to the virtuous dead it is promised, 'he who is yonder shall be a living god' (Erman, *Gespräch eines Lebensmüden mit seiner Seele*, Berlin, 1896, p. 142; cf. *Pap. Petersburg*, 1116A, recto 56). That the gods dwell afar off together with the dead is shown by the following sentence from a sepulchral stele of the Middle Kingdom: 'I have gone down to the city of eternity, to the place where the gods are' (Cairo, 20485). Various dead Pharaohs and celebrities were posthumously deified (see art. HEROES AND HERO-GODS [Egyptian]), and the green or black complexions of their images suggest that they were not regarded as wholly alive. Osiris, as King of Eternity, chief of the Westerners, led but a shadowy existence, and similar conclusions are implied by the fact that certain deities had their 'living' terrestrial representatives. The Pharaoh ruled as Horus 'on the throne-of-Horus of the living'; under another aspect he was the 'living sphinx-image of Atum' (*sšp nhy n 'Itm*). Alternately regarded as 'son of Rē' and as identical with Rē, the King did not die, but 'flew to heaven and joined the sun, the flesh of the god becoming merged in its creator' (*Sinuhe*, R 7f.). The Apis and Mnevis bulls were respectively living emanations of Ptah and Atum, and other sacred animals whose cult was celebrated in late times doubtless stood in a similar relation to the gods whom they represented. Lastly, the historical aspect from which the gods were sometimes regarded represented them as rulers of a far-distant age, and, in consequence, as beings long since dead.

8. The dead as a class of beings.—In the *Book of the Dead* and elsewhere we find the following classification: men, gods, blessed dead (*nhw*, 'bright' ones), and dead (*mtw*) (see E. A. W. Budge, *Book of the Dead*, London, 1898, pp. 113,

293, 298, 308, 366, 389, 477). In this classification there is a kind of chronological hierarchical arrangement; the dead of the most remote times are holier, and partake more of divinity, than those recently deceased. So, too, the Turin Canon of Kings conceived the earliest rulers of Egypt to have been the gods of the first ennead; then came the lesser gods, and, lastly, the followers of Horus and earliest historical kings. Manetho records a similar sequence of 'gods' and 'semi-divine dead' (*vévtes ol hūtheot*). In the *Book of the Dead* and elsewhere 'the dead' are spoken of in a way that clearly assumes them to enjoy a kind of existence; they 'see', 'hear', and so forth.

9. Relations of the living and the dead.—Some Egyptologists, influenced more by anthropological theorists than by the unambiguous evidence of the Egyptian texts, have asserted that the funerary rites and practices of the Egyptians were in the main precautionary measures serving to protect the living against the dead (e.g., J. Capart, in *Trans. Third Congr. Hist. Rel.*, Oxford, 1908, i. 203). Nothing could be farther from the truth; it is of fundamental importance to realize that the vast stores of wealth and thought expended by the Egyptians on their tombs—that wealth and that thought which created not only the pyramids, but also the practice of mummification and a very extensive funerary literature—were due to the anxiety of each member of the community with regard to his own individual future welfare, and not to the feelings of respect, or fear, or duty felt towards the other dead. We have only to read the story of the exile Sinuhe to realize the horror felt by an Egyptian at the prospect of dying abroad, and of being thus deprived of the usual funerary honours; it is a feeling akin to this that created the whole system of funereal observances.

It does not vitiate the assertion here made that the dead cannot bury themselves, and are to that extent at the mercy of the living. Death does not absolutely snap all relations; and motives of filial piety, the calculation that one's own funeral rites are dependent on others, liberal inducements in the form of legacies, previous contracts with the deceased, and also a certain modicum of fear and hope—all these things afforded a certain guarantee to the dying man that his own wishes with regard to burial and a *post mortem* cult would be carried out. But there was no real ancestor-worship or objective cult of the dead in ancient Egypt.¹ The feelings of the living towards the other-dead, if they may be so called, constitute, therefore, a question apart from the question of funerary rites (see art. DEATH AND DISPOSAL OF THE DEAD [Egyptian]). The Egyptians wailed and mourned at the death of relatives, not merely out of grief, but as a matter of propriety; under the New Kingdom, mourning-clothes of a bluish colour were worn by women at the funeral (*ZÄ* xlvii. 162); we have at least one possible allusion to fasting on the occasion of a death (*Pap. Petersburg*, 1116B, recto 42); friends as well as relatives attended the funeral. It was thought that after death the deceased might return 'to afford protection to their children upon earth' (*Urkunden*, iv. 491; Nina de Garis Davies and A. H. Gardiner, *Tomb of Amenemhêt*, London, 1914, pl. 27); and we have a number of pathetic letters to departed relatives craving their intervention and help (Cairo, 25,975, hieratic text on linen, Old Kingdom; Cairo, 25,375, and Petrie collection, bowls with hieratic inscription, before Middle Kingdom; Pitt-Rivers collection, cup with hieratic inscription, before XVIIIth dyn. = *PSBA* xiv. [1892] 328). In one of these letters (*Pap. Leyden* 371, XXth dyn.; see Maspero, *Études égyptiennes*, Paris, 1879-91, i. 145-159)

¹ See, further, art. ETHICS AND MORALITY (Egyptian), § 13 (18).

¹ It has often been stated, especially by G. Maspero, that objects found in the tombs have been deliberately broken in order to 'kill' them, and so to send them into the realms of the dead for the use of the deceased. No authentic evidence in favour of this statement seems to be forthcoming.

bitter reproaches are addressed to a dead woman by her widower, who has fallen ill, blaming her for her neglect of him after all his kindness towards her while she was alive.

10. The dead as malignant beings.—In the magical and medical papyri incantations are often directed against 'every enemy male or female, every dead person male or female,' who shall come to injure N, the son of M. The dead are conceived of as the cause of disease, though perhaps only those dead are meant who still wandered homeless over the earth. The evidence seems fairly clear that actual 'possession' by the dead, conceived of as haunting spirits, is meant in such cases; for the demon is charged to 'flow forth,' and honey is said to be a useful medicament 'which is sweet to men, but bitter to the dead' (Erman, *Zaubersprüche für Mutter und Kind*, Berlin, 1901, p. 12 f.). At the same time, the duly-buried dead also had power to take vengeance on those who injured their property or violated their tombs (H. Sottas, *La Préservation de la propriété funéraire*, Paris, 1913). Evidently in Egypt, as in other lands, there was a danger inherent in death and in the dead, as also in blood, the symbol of death; in a Leyden papyrus it is lamented that 'plague is throughout the land, blood is everywhere, death is not lacking' (Gardiner, *The Admonitions of an Egyptian Sage*, Leipzig, 1909, p. 25); and, perhaps because of its association with blood, red colour is in many papyri avoided for writing the names of the gods, except in the case of the evil god Seth.

11. Origin and nature of life and death.—The Pyramid Texts (1466) recall a time 'when heaven was not, when earth was not, when mankind was not, before the gods were born, before death had come into existence.' Many cosmogonic legends were told by the Egyptians (see Erman, *Ägyptische Religion*², Berlin, 1909, pp. 32-36, for best summary); most of these referred the origin of life to some god, but there was a superstition which attributed self-generative powers to various small forms of animal life, such as mice, snakes, or flies. The frog was particularly prominent in this connexion, doubtless owing to the numbers in which tadpoles appear, just as though they had come into existence by themselves out of the wet mud. Hence not only did the frog become a symbol of the resurrection (*whm 'nh*, 'living again'), but it was intimately associated with the beginning of things; in the Hermopolitan myth the eight primitive creatures had the heads of frogs or snakes, and in the Abydene tale the frog-headed goddess Heket was associated with Khnum in the creation (see W. Spiegelberg and A. Jacoby, in *Sphinx*, vii. [1903] 215-228). Life, once being started, was continued by the physical methods of reproduction (see esp. *Song of Harper*, l. 1; *Admonitions*, 12, 2-4), but the gods, especially the sun-god, Rē, were none the less the cause and mainspring of life (the birth-scenes in the temples of Luxor and Deir el Bahri are very instructive in this connexion).

A daringly speculative attempt to follow up this train of thought is found in an inscription from Memphis, a late copy of a text of early date (J. H. Breasted, 'The Philosophy of a Memphite Priest,' in *ZÄ* xxxix. [1901] 39),¹ which seeks to explain how Ptah, having primitively divided himself into 'Heart' (the seat of the imaginative, judging faculty), as impersonated by Horus, and 'Tongue' (the organ of command, i.e. the executive, willing faculty), as impersonated by Thoth, henceforward pervaded all that lives, 'all gods, all men, all cattle, and all reptiles.' It is then shown how all actions and reactions to sense-impressions presuppose the functions of 'heart' and 'tongue': when the eyes see, or the ears hear, or the nose smells, they convey (this sensation) to the heart, and it is the heart that causes every recognition (judgment) to go forth; it is the tongue that iterates (in the form of a command or act of the will) what the heart devises. In this way Ptah necessarily appears to be the cause of all things done by living creatures; he is, in

other words, the vital principle itself. This psychological analysis of human, or rather animal, activity is up to the present unique, and perhaps represents the thought of some unusually gifted individual rather than that of the priests and learned men generally.

The medical papyri show that a serious attempt was early made to understand the workings of the body, but no other effort to reconcile semi-scientific views with the current mythology has yet come to light.

12. Magico-medical views.—A certain pre-natal existence is assumed in many hyperbolic expressions, as 'he ruled (already) in the egg' (*Sinuhe*, R 93). The normal view, of course, was that life began with birth; a writer speaks of the 'children who are broken in the egg, who have seen the face of the crocodile before they ever lived' (*Lebensmühle*, 79). The medical papyri contain prognostications for telling whether a child will live or not; 'if it says *ny* [a sound like the word for 'yes'], it will live; if it says *embi* [a sound like the word for 'no'], it will die' (*Pap. Ebers*, ed. L. Stern, Leipzig, 1875, 97. 13 f.). Spells were used to prevent women from conceiving, and there are various other ways in which birth is touched upon by the magico-medical literature. Amulets and charms of all sorts were employed to protect life; and, conversely, magic was secretly employed to bring about an enemy's death (e.g., by means of waxen images [*Pap. Lee*; see P. E. Newberry, *The Amherst Papyri*, London, 1899]). A Turin papyrus attempts to cover all contingencies by enumerating all the possible kinds of death that may happen to a man (W. Pleyte and F. Rossi, *Pap. de Turin*, Leyden, 1869-76, p. 120 f.). Some kinds of death were considered happier than others; death by drowning, e.g., was a kind of apotheosis, doubtless because Osiris had perished in this way, and those who died thus were called *hasye*, 'blessed' (*ZÄ* xlv. [1909] 132). Curses were considered efficient magical means of affecting life (for a good collection of curses see Sottas, *op. cit.*). Oaths are conditional curses; it was usual to swear 'by the life of Rē,' and so common was this style of oath that the verb *ʾnh*, 'to live,' was used transitively in the sense of 'to swear by,' and the Coptic word for an oath is *anash*. Most contracts and judicial depositions during the New Kingdom begin with the words, 'As Amūn endures, and as the Sovereign endures.' In the law-courts witnesses often swore oaths affecting their own life and property (conditional self-curses; see Spiegelberg, *Studien und Materialien zum Rechtswesen des Pharaonenreiches*, Hanover, 1892, pp. 71-81).

13. Life and the law.—On this subject consult the art. ETHICS AND MORALITY (Egyptian), § 13 (1-3), from which it will be seen that the sanctity of human life was strongly felt, as far at least as Egyptians were concerned. A few details may be added here. Abortion was considered a crime (*Pap. Turin*, 55. 1), unless the charge made in the passage here quoted was one of brutality leading to a miscarriage. Particularly abhorrent was bloodshed between close relatives, as father and son, or a man and his maternal brothers (see Gardiner, *Admonitions*, p. 9). Capital punishment was less favourably considered than punishment by imprisonment and the bastinado (*Pap. Petersburg*, 1116A, recto 48 f.), and persons condemned to death were allowed to make away with themselves.

14. Life as a thing undesirable.—The Egyptians' intense love of life and appreciation of its value are reflected in many of the passages that have been quoted. There is, however, a limited pessimistic literature (see art. ETHICS AND MORALITY [Egyptian], § 6) in which life is regarded as undesirable. This point of view may have been inspired originally by some such anarchical con-

¹ See also Erman, *SBAW*, 1911, p. 910 ff.; a new ed. is promised by Sethi.

ditions as prevailed after the fall of the Memphite dynasties. By the beginning of the Middle Kingdom the pessimistic style of literature was a recognized *genre*. Sometimes the despondent attitude towards life finds expression in the wish for a total cessation of life:

'Would that there might be an end of men, no conception, no birth! O that the earth would cease from noise, and tumult be no more!' (*Leyden Admonitions*, 5, 14-6, 1).

Elsewhere the misery of life is eloquently contrasted with the desirability of death; in a composition containing the dialogue between a misanthrope and his soul, death is described as follows:

'Death is before me to-day like the recovery of a sick man, like going forth abroad after lying prostrate.

Death is before me to-day like the scent of myrrh, like sitting beneath the sail on a windy day.

Death is before me to-day like the scent of lilies, like sitting on the shore of the land of intoxication.

Death is before me to-day like a trodden road, like the return of men from a campaign to their homes.

Death is before me to-day like the clearing of the sky, or as when a man becomes enlightened concerning that which he did not know.

Death is before me to-day as a man longs to see his home, when he has spent many years in captivity' (Erman, *Lebensmüde*, 130 ff.).

In the sequel it appears that the death here so highly praised is not non-existence, but the untroubled existence 'yonder.' And so it mostly was; the Egyptian remains true to his love of life—not perhaps the life on earth with its mingled joys and sorrows, but the life of his dreams in the land of Eternity, 'the just and fair, where terrors are not,' and where 'none girds himself against his fellow.'

LITERATURE.—There is no published monograph on the subject; such references as are needful have been given in the text. For the sign 'ankh' see a detailed discussion by G. Jéquier, in *Bull. de l'Institut français d'archéologie orientale*, xi. (Cairo, 1914) 121-136.

ALAN H. GARDINER.

LIFE AND DEATH (Greek and Roman).—The outlook on life of the average Greek of the 5th cent. B.C. may be illustrated by the language which Herodotus, i. 30 ff., puts into the mouth of Solon of Athens in his interview with Croesus, King of Lydia.

When Solon visited Sardis, after all the grandeur of the royal palace had been exhibited for his admiration, he was asked by Croesus whom he considered the happiest man (*δαεινός*) he had ever seen. To the surprise of Croesus, Solon answered, 'Tellus of Athens,' because, 'on the one hand, Tellus lived in a prosperous city, and had sons handsome and good (*καλοί καὶ ἀγαθοί*), and saw children born to them all and all surviving; on the other hand, after a life affluent as we count affluence in Hellas, he died a most glorious death. He fought in a battle between the Athenians and their neighbours at Eleusis, and, routing the enemy, died most nobly; and the Athenians gave him a public burial where he fell, and honoured him greatly.'

Croesus then asked whom he considered second in happiness. Solon answered, 'Cleobis and Biton.' These were natives of Argos, possessed of sufficient fortune, and, moreover, endowed with such strength of body that both were prize-winners in the games. It is further related of them that on one occasion, when the Argives were celebrating a festival in honour of Hera, it was necessary that their mother, as priestess of Hera, should be conveyed to the temple on an ox-waggon. The oxen not arriving from the field in time, the young men harnessed themselves to the waggon and drew it to the temple, a distance of forty-five stades. After they had performed this feat in view of the assembly, there came upon them a most excellent end of life, wherein God clearly revealed that death is better for a man than life. For the men of Argos standing round praised the strength of the young men, and the women of Argos called their mother blessed in that she had such sons. Then their mother rejoiced exceedingly in her sons' deeds and in the speech of the citizens, and, standing before the image of the goddess, besought her to grant to her children, who had done her such honour, the best thing that man can receive. After this prayer, when her sons had sacrificed and feasted, they fell asleep in the temple and awaked no more, but there ended their days. The Argives, in commemoration of their piety, caused their statues to be made and dedicated at Delphi.

Croesus was indignant that Solon should not assign to him even the second place among happy men. Then Solon said: 'O Croesus, you ask me regarding human affairs—me who know that the deity (*τὸ θεόν*) is always jealous and delights in confounding mankind. For in the length of days men are constrained to see many things they would not willingly see, and to suffer many things they would not willingly suffer. I put the term of a man's life at seventy years. . . . Now in all these

days of seventy years . . . no one day brings us at all anything like another. Thus, O Croesus, man is altogether the sport of chance (*πάν ἔστιν ἀνθρώπου συμφορὴ*). You appear to me to be master of immense treasures and king of many nations, but I cannot say that of you which you demand, till I hear you have ended your life happily. For the richest of men is not more happy (*δαεινέτερος*) than he that has sufficient for the day, unless good fortune attend him to the grave and he end his life in happiness. Many men who abound in wealth are unhappy (*ἀνολβίοι*); and many who have only a moderate competency are fortunate (*εὐτυχέες*). He that abounds in riches, and is yet unhappy (*ἀνολβίος*), excels the other only in two things; but the other surpasses him in many things. The wealthy man, indeed, is better able to gratify his desires and to bear a great blow of adversity. But the other surpasses him in these respects: although he is not able to meet the blows of misfortune or the claims of his desires, yet his good fortune (*εὐτυχίη*) wards off these things from him, and he enjoys the full use of his limbs; he is free from diseases, unscathed by evil, blessed with a fine form (*εὐεὶδής*), happy in his children (*εὐπαις*); and, if all these things come at last to be crowned by a decent end, such a one is the man you seek, and may justly be called happy (*δαίσιος*). For until that time we ought to suspend our judgment, and not to pronounce him happy (*δαίσιος*), but only fortunate (*εὐτυχής*). Now because no man can possibly attain to this perfection of happiness; as no one region yields all good things, but produces some and wants others, that country being best which affords the greatest plenty; and, further, because no human body is in all respects self-sufficient, but, possessing some advantages, is destitute of others; he therefore who continues to enjoy the greatest number of these and then ends his life graciously, in my judgment, O King, deserves the name of happy. We ought to consider in every matter how the end shall be, for many to whom God has given a glimpse of happiness (*ἐποδείξας δαίμον*), He has afterwards utterly overthrown.'

In reviewing these passages we may begin with the last point: 'Consider the end of everything.' This is a favourite sentiment in Greek writers, and there seems to be a note of conscious pride in the words with which Herodotus concludes the episode:

'When he made this reply, he found no favour with Croesus, who held him of no account and dismissed him, considering him a very foolish man (*ἀνάθής*) who, overlooking present blessings, bade men look to the end of everything.'

Life is to be viewed as a whole. Already in Homer we find it a mark of the wise man that he 'looks before and after.'¹ It is a favourite notion in Pindar:

'There hang around the minds of men unnumbered errors, and this is the hopeless thing to discover—what is best for a man both now and in the end' (*Ol.* vii. 24 ff.).

Hence the distinction here drawn between the 'happy' man (*δαίσιος*—ὁ δὲ διὰ τοῦ ὅλου βίου μακαριστός [Hesychius]) and the merely fortunate (*εὐτυχής*). A man may be prosperous, as Croesus was. The Asiatic straightway calls him happy, but the 'foolish' Greek refuses that title till he has seen the end of all:

'Behold, this is Oedipus; this is he who solved the famous riddle and was a man most mighty . . . into what a sea of dire calamity is he fallen! Therefore, while a mortal waits to see that final day, call no man happy (*μὴδὲν δαίσιον*) till he have passed the final bourne of life, having suffered no evil' (Sophocles, *Oed. Rex*, 1524 ff.; cf. *Trach.* i. ff.; Eurip. *Androm.* 100 ff., etc.).²

Aristotle discusses the saying of Solon in *Eth. Nic.* i. 10:

πότερον οὐκ οὐδ' ἄλλον οὐδένα ἀνθρώπων εὐδαιμονιστέον ἕως ἂν ζῇ, κατὰ Σόλωνα δὲ χρᾶν τέλος ὄραν;

He begins by asking what the saying means. Does it mean that a man is happy (*εὐδαίμων*) only when he is dead, but not before? If so, then it is absurd, especially if we hold that happiness (*εὐδαιμονία*) is an activity (*ἐνέργεια* τίς). Does it mean that only when a man is dead is one safe to call him happy, as being at last beyond the reach of evil and misfortune? Even if this is the meaning intended, the saying is open to dispute. In estimating a man's life, as happy or unhappy, we cannot confine our view to the individual. Man is a social being (*φύσει πολιτικὸς ἄνθρωπος* [*Eth. Nic.* i. 7; cf. *Pol.* i. 2]). If happiness, then, as we have

¹ *ἔμα πρόσσω καὶ ὀπίσσω* (*Il.* iii. 109; cf. i. 848, xviii. 250, *Od.* xxiv. 452).

² The sentiment is not, of course, specifically Greek; cf. *Sir* 1128; *πρὸ τέλευτῆς μὴ μακάριε μὴδὲνα*; Ovid, *Met.* iii. 135:

'Ultima semper | Expectanda dies homini; dicique beatus | Ante obitum nemo supremamque funera debet.'

seen, is characterized by self-sufficiency (*αὐτάρκεια*), it is a self-sufficiency which includes children and other relatives and friends—within certain limits, of course; otherwise it would have to include the relatives of relatives, the friends of friends, and so on indefinitely (*Eth. Nic.* i. 7). When we are estimating the happiness of a man's life, then, we must include in the estimate a consideration of the fortunes or misfortunes of relatives and friends; but, here again, within limits. A man may have lived happily until old age and have died happily. But after his death (1) all sorts of things may happen to his relatives, and (2) these relatives will be of all degrees of nearness and remoteness of relation to the dead man. Now it is equally absurd either (1) to suppose that we must include in our consideration all sorts of degrees of distant relations, which would mean an indefinite postponement of our verdict, or (2) to refuse to take into account any posthumous happenings at all.

The ground of our refusal to bestow the title of 'happy' on a living man is that we consider happiness as something stable and abiding, whereas life is subject to continual change. Consequently, if we judge a man by his condition at any one given time, we shall have to call him sometimes happy, sometimes unhappy. Is not our true solution that we must neglect accidents in our estimate? Most accidents are not determinative of *εὐδαιμονία*. What determines happiness or the reverse is *ἐνέργειαι κατ' ἀρετήν* or the reverse. This view is supported by our present problem. So long as we judge by accidents, we are no better off when the individual is dead than when he was alive. We are driven, then, to judge by the stable things, *i.e.* by the *ἐνέργειαι κατ' ἀρετήν*, and the higher of these are the more abiding, as it is in these chiefly that the happy live out their lives (*καταζήν*).¹ Hence these are more stable and abiding even than our knowledge of special sciences, which we are not living in and are therefore liable to forget. Thus the stability and permanence which we desire will belong to the *εὐδαιμονία*, and he will be *εὐδαιμων* all his life. His happiness may be tarnished by untoward accidents, but it will not be extinguished. He will never become *δθλιος*, or truly unhappy, for he will never do things which are *φάβλα καὶ μισήντα*. If overwhelming misfortune, such as overtook Priam—*τύχαι Πριαμικαί*—should come to him, he will cease to be *μακάριος*, but he will not become *δθλιος*. Happiness can be affected only by the greatest things, whether for good or evil.

We may, then, define the happy man (*εὐδαιμων*) as a man who energizes *κατ' ἀρετήν* and is adequately equipped in externals, not for a moment, but for a *χρόνος τέλειος*. Or, since the future is uncertain, and *εὐδαιμονία* is a *τέλος* and *τέλειον*, perhaps we may add the proviso 'if it continue.' If so, we shall say that those who have goods and shall continue to have them are *μακάριοι*, but *μακάριοι ἄνθρωποι*—always liable to *τύχαι Πριαμικαί*. We need not defer our judgment, but we may qualify it by saying that they are happy, but with a mortal happiness.

To confine our view to the individual's life, and take no account of what happens after his death to those near and dear to him, is to take too unsocial a view. On the other hand, we must make some limitation. There are two further considerations: (1) posthumous events must be regarded as modifying our judgment of a man's life much less than if the same things had happened while he still lived; he, at any rate, was spared the knowledge of them; (2) we do not know whether the dead *αἰσθάνονται*—whether they are aware of what goes

¹ The proposal to read *ζήν* for *καταζήν* is completely mistaken. *καταζήν* is the regular word for describing a fixed manner of existence. 'to be a spinster' is *καταζήν ἄνυμφος*. So *καταβίων* as contrasted with *βίων*.

on here. If they are, the news that penetrates to them must be supposed to be slight in itself or at any rate of little moment to them. It follows, then, that posthumous events have no determining effect on our estimate of the individual's life.

The doctrine of the jealousy of the gods appears often in Greek literature, and deserves special notice. It is a mistake to suppose that the Greek view is that the deity acts in an arbitrary and, so to say, spiteful fashion. It is true that the conception is sometimes so baldly expressed as to lend colour to such an interpretation.

Thus in Herod. vii. 10 Artabanos, the uncle of Xerxes, tries to dissuade Xerxes from invading Greece: 'Do you see how God strikes with His lightning those animals which rise above others, and suffers them not to vaunt themselves, while the lowly do not at all excite His jealousy? Do you see how He hurls His bolts against the most stately edifices and the most lofty trees? For God is wont to cut down whatsoever is too highly exalted. Thus a great army is often defeated by a small number of men; when God in His jealousy (*φθονήσας*) strikes them with fear or with thunder, they often perish in a manner unworthy of themselves, because God suffers none to be proud save Himself.'

But, while this may have been a popular conception, the underlying idea is a much deeper one. It is, in fact, nothing more than the expression of the Greek idea of justice, or Dike. The definition of justice (*δικαιοσύνη*) which Plato gives in the *Republic*¹ is nothing new, but is implied in the whole Greek attitude to life, as Plato says:

ὅτι γε τὸ τὰ αὐτοῦ πράττειν καὶ μὴ πολυπραγμαίνειν δικαιοσύνη ἐστίν, καὶ τοῦτο ἄλλων τε πολλῶν ἀνηκόαμεν καὶ αὐτοὶ πολλὰκις εἰρήκαμεν (433 A).

Now, as applied to the relation of God and man, justice lies in the recognition that the divine and the human destinies are utterly unlike. The gods and men are alike the children of earth (mother) and heaven (father): 'from one source spring gods and mortal men' (Hesiod, *Works and Days*, 107); but the lot of the gods is altogether different from that of mankind. Pindar emphasizes this distinction in a beautiful passage:

'One is the race of men, one the race of gods, and from one mother do we both have breath. But separate altogether is the power [faculty, *ingenium*, *indoles*] that sunders us; for one is naught, but the brazen heaven abides, an habitation unshaken for ever. Yet do we resemble somewhat, in mighty mind or in bodily form, the deathless gods, albeit we know not unto what line sovereign Destiny hath appointed us to run either by day or by night' (*Nem.* vi. 1 ff.).

Here we have the two characteristic distinctions which the average Greek drew between the gods and mankind: the gods are deathless and ageless, and untouched of evil; the years of man are few and full of sorrow, and the certain end is death; the gods have knowledge of the future; for man 'the river of prevision is set afar' (Pind. *Nem.* xi. 46). Now it is implied in the very nature of mortality that human life is a chequer-work of good and evil. A life of unbroken success, even if not attained by or attended with wickedness, is already a breach of nature, an injustice, an encroachment on the attributes of divinity, and so excites the jealousy of God, who allows none save Himself to be proud.

A life of unbroken happiness is no portion for men:

'Happy (*ὀλβιος*) is he to whom God hath given a portion of glory (*καλὰ*, especially success in the national games), and to live all his life with enviable fortune and in opulence; for no mortal is happy in all things' (Bacchylid. v. 50 ff.).

Hence it is a condition of abiding prosperity that a man's happiness should not be uninterrupted; only by being interrupted will it conform to the law of nature, the demands of justice:

'In thy new success I rejoice, but also I am grieved that jealousy [there, human jealousy] requites glorious deeds. But only thus, they say, will a man's happiness (*εὐδαιμονία*) prosper abidingly, if it wins both these things and those' [*i.e.* good and evil] (Pind. *Pyth.* vii. 14 ff.). 'Not one is without lot in sorrow nor shall be; yet the ancient prosperity (*ὀλβος*) of Daitos attends them, giving them these and those' (*Id.* v. 54 f.).

¹ ὅτι ἕνα ἕκαστον ἐν θεοῖς ἐπιτηδεύειν . . . εἰς δ' αὐτοῦ ἡ φύσις ἐπιτηδεωσάτη πεφικυῖα εἴη (433 A).

This is the point of Clytæmnestra's words in Æsch. *Agam.* 904 f.:

'Let there be no jealousy: for many were the evils that we endured aforetime.' That is, our present good fortune should not excite jealousy. It is but the offset to former adversity.

So Nikias in Thucyd. vii. 77. 3:

'Our calamities are likely to abate: for the enemy have had enough success; and if our expedition provoked the jealousy of any of the gods, we have now been sufficiently punished.'

If a man is attended by an unbroken felicity, he must restore the balance by a voluntary sacrifice of some portion of his happiness.

This is the point of the famous story of Polykrates of Samos (Herod. ii. 40 ff.). His continued prosperity (*eutuchia*) excited the anxiety of his friend Amasis, who wrote to him in these terms: 'It is pleasant to hear of the good fortune of a friend and ally. But the excess of thy prosperity does not please me, because I know how jealous the deity is. As for me, I would choose that my affairs and those of my friends should sometimes be fortunate and sometimes stumble, rather than be fortunate in everything. For I cannot remember that I ever heard of a man who was fortunate in everything, who did not in the end finish in utter ruin. Be advised, therefore, by me, and in view of your good fortune do this: think what it is that you value most and the loss of which would most grieve you, and cast it away, so that it may never be seen again among men; and if after that your good fortune does not alternate with misfortune, repeat the remedy which you have now from me.' It is well known how Polykrates cast a valuable ring into the sea, but, unfortunately, afterwards recovered it in the belly of a fish—which so convinced Amasis that his friend's ruin was inevitable that he sent a herald to Samos to renounce his friendship and dissolve all obligations of hospitality between them, 'lest, if any great and dreadful calamity should befall Polykrates, he might himself be grieved for him, as for a friend.' So in Æsch. *Agam.* 1005 f.: 'A man's destiny while sailing straight strikes a hidden reef. And, if betimes fear with well-measured (*eumetropu*) sling makes jettison of a portion of his goods, the whole house sinks not, overlaid with woe, nor is the ship engulfed.' The epithet 'well-measured' suggests the restoration of the balance, of the *metron* which justice demands. The use of *σφειδδωρη*, which is here in its usual sense of 'sling' but elsewhere occurs with the meaning 'bezel of a ring,' may possibly indicate that Æschylus had in mind the story of Polykrates.

The crude popular conception of the jealousy of the gods is refined by Æschylus in a remarkable passage of the *Agamemnon*:

'There is an ancient saying spoken of old among men, that a man's prosperity (*εὐχρη*), when it grows big, breeds and does not die childless, but from great fortune (*τύχη*) there springs for his race insatiable woe. But apart from others I hold an opinion of my own. It is the impious deed that breeds others like to its own kind, but the lot of the house which observes straight justice is blest in its children for ever. But old pride (*υἱσπύς*) is wont to breed a young pride that wantons in the woes of men, now or anon, whensoever the appointed day of birth comes; breeds, too, that spirit (*δαίμων*) unconquerable, undefeatable, even unholy boldness (*θράσος*), dark curses (*ἄραι*) for the house, like unto their parents' (760 ff.).

The teaching of Æschylus amounts to this. It is not mere prosperity that is sinful and brings evil in its train. Æschylus would, no doubt, admit that great prosperity has its temptations, that hardly shall a rich man enter into the Kingdom of Heaven, as Plato in the *Gorgias* tells us that the incurable souls who are hung up in the prison-house of Hades as deterrent examples to evildoers will mostly be the souls of tyrants and kings and potentates and politicians: 'for these, owing to the licence which they enjoy, commit the greatest and most unholy crimes' (525 D). That, in fact, Æschylus had this idea in mind seems to be proved by the immediately following words of the ode (772 ff.):

'But Justice (*Δίκη*) shines in smoky homes and honours the righteous (*δίκαιος*) man; while from gold-bespangled dwellings of unclean hands she turns with averted eyes, and goes to pious homes, regarding not the power of wealth stamped with a false stamp of praise.'

We find the same thought in Pindar, *Pyth.* xi. 50 ff.:

'May I desire glory by the grace of Heaven, seeking things possible at my time of life. For, finding that the middle estate (*τὰ μέσα*) blooms with the more abiding prosperity (*εὐχρη*), I dislike the lot of the tyrant and am zealous for the common excellences. But the curses of jealousy are warded off, if one attaining the highest success and using it quietly avoids dread pride. So finds he the verge of death fairer, leaving to his dear children the best of possessions, the grace of a good name.'

If, however, continued prosperity leads a man to pride (*ἕβρις*), then pride leads to further pride or

acts of pride, and by repetition come boldness (*θράσος*) and more daring deeds of sin: 'then he changed to thoughts of utter daring; for wretched base-devising infatuation, fount of woes, makes men bold (*θρασύει*)' (Æsch. *Agam.* 221 ff.). To the Greek mind the Persian invasion of Greece was a typical example of pride and the effects of pride. Æschylus declares of the Persians who fell at Salamis:

'The heaps of corpses shall dumbly declare to the eyes of men even to the third generation that a mortal should not think thoughts too high; for pride flowers, and its fruit is an ear of doom (*ἄρη*), whence it reaps a harvest of tears' (*Pers.* 818 ff.).

The jealousy of God in the OT is exactly parallel to the Greek doctrine. It is not a capricious spite, but merely the justice which punishes any invasion of the prerogatives of the Deity by man: 'I the Lord thy God am a jealous God, visiting the iniquity of the fathers upon the children, upon the third and upon the fourth generation of them that hate me; and shewing mercy unto thousands, of them that love me and keep my commandments' (Ex 20th). One form of the breach of justice is that a man should desert the God to whom he belongs and follow after strange gods. Just as the civil law recognized the duty owing from a metec to his *προστάτης*, or patron, and provided for the punishment of the neglect of these duties by a *δική προστάτου* (Dem. xxv. 65, xxxv. 48, etc.), so neglect of a man's duty to his gods or the following after strange gods was *ἀσεβεία*, or impiety (cf. Dt 32nd).

The wise and good man is the man who recognizes the conditions of mortality. The fool refuses this recognition and kicks against the pricks.

'Not for happiness in everything did Atreus beget thee, Agamemnon: thou must have grief as well as joy. For thou art mortal,' says the old man to Agamemnon (Eurip. *Iph. in Aul.* 28 ff.). 'If thou, Hiero, understandest a pithy saying, thou hast heard from them who were of old and knowest that for one good the deathless gods give to mortals two evils. This fools cannot endure with decency, but only the good, turning the fair side out' (Pind. *Pyth.* iii. 80 ff.). 'We with mortal minds should seek from the gods the things that are meet for us, knowing that which lies before our feet, to what destiny we are born. Seek not, my soul, deathless life, but exhaust thy practicable means' (ib. 59 f.).

Pindar illustrates the doctrine by the story of Asclepius, whom Zeus slew with the thunderbolt because he tried to bring a man (Hippolytus) back from the dead—an attempt to overstep the limits of mortality, and therefore demanding punishment. The same story is referred to by Æsch. *Agam.* 984 ff., in a passage which excellently illustrates the Greek doctrine:

Excessive prosperity demands voluntary jettison, says Æschylus. Then he proceeds: 'Abundant bounty given of Zeus from the yearly field destroys the plague of famine. But the blood of death that has once fallen on the ground at a man's feet—who shall call that back by any incantation? Did not Zeus for safety's sake (i.e. repelling an invasion of his divine prerogative of immortality) stop him who was skilled to bring back from the dead? And were it not that one fate is appointed by the gods to check another fate from going too far, my tongue would have outrun my heart,' etc. All life is based on the principle of justice, compensation, balance, that each should have his own.

Hence, too, it is *τὰ ἀπὸ τύχης*, the gifts of good-luck, that excite jealousy, not the good things which are won by toil.

The doctrine of the jealousy of the gods is repudiated as a 'poetic falsehood' by Aristotle, *Met.* i. 2, 983^a.

The things which make up human happiness are, according to Solon, adequate endowment of worldly goods, health, beauty of person, prosperous children, and a death in accord with these goods.

This enumeration of the elements of happiness is consonant with general Greek feeling. Similar catalogues occur frequently. Thus the distich inscribed in the temple of Leto at Delos (Aristotle, *Eth. Eudem.* 1214^a 1 ff., *Eth. Nic.* i. 8, 1099^a 25):

'Fairest (*κάλλιστον*) is justice, best (*ἀρίστον*) is health, and sweetest (*ῥηδιστόν*) of all is to attain what one desires.'

The same order is given in Theognis, 255 f. (cf.

Sophocles, frag. 323 f.). A popular *scolion*, or drinking-song, says: ¹

'Health is best for a mortal man; second, to be fair of body (*φῶν καλός*); third, to have wealth without guile; fourth, to be young with one's friends.'

Philemon, frag. 163, gives (1) health, (2) success (*εὐπραγία*), (3) joy (*χαίρειν*), and (4) to owe no man. Pindar (*Pyth.* i. 99 f.) says:

'Success (*εὖ παθεῖν*, practically = prosperity or happiness) is the first of prizes; a fair fame (*εὖ ἀκούειν*) is the second lot; he who hath chanced on both and taken them to be his hath received the highest crown.' Cf. *Isth.* iv. 12, v. 12, *Nem.* i. 33, ix. 46, *Pyth.* iii. 104; Aristoph. *Av.* 605; Soph. *Œd. Col.* 144; Phocylid. frag. 10; Theocrit. xvii. 116; Bacchylid. i. 27 ff.

According to Aristotle, happiness is an *ἐνέργεια κατ' ἀρετήν*. But he admits, in *Eth. Nic.* i. 8, that 'nevertheless it does appear that happiness has need also of the external goods as aforesaid. For it is impossible or not easy for a man unprovided with these to do noble things. For many things are performed by friends, wealth, political power, the instruments, as it were, of action. The lack of some things mar happiness—the lack of birth, children, beauty. You could not well apply the term "happy" to a man who was utterly ugly, or low-born, or solitary and childless. Again, less still, if his children or his friends are altogether bad, or if he had good friends or children who are now dead. As we have said, happiness seems to need such outward prosperity. Hence some identify good fortune (*εὐτυχία*) with happiness, others identify happiness with virtue (*ἀρετή*).² In the *Rhetoric* (i. 5), where happiness is defined more popularly, such 'external' goods as the above are termed 'parts of happiness,' and the list is *εὐγένεια*, *πολυφιλία*, *χρηστοφιλία*, *πλοῦτος*, *εὐτεκνία*, *πολυτεκνία*, *εὐγῆρτα*; the physical excellences, as *ὀλγία*, *κάλλος*, *ισχύς*, *μέγεθος*, *δύναμις ἀγωνιστική*; and *δόξα*, *τιμή*, *εὐτυχία*, *ἀρετή*.

He proceeds to explain what he means by the several terms here employed.

(a) *εὐγένεια*, good birth, may be predicated of a nation or a State, or of an individual. As applied to a nation or a State, it means that it is autochthonous or at any rate ancient, and had as its earliest leaders distinguished men, and has had many distinguished members in the course of its history. As applied to an individual, it refers to descent on either the male or the female side; it implies legitimacy, i.e. both father and mother must be citizens (*ἄστος*, *δοτή*) in lawful wedlock (Arist. *Pol.* iii. 1. 4 f.; Dem. *adv. Neær.*; Aristoph. *Av.* 1660 ff.); it implies, further, that the earliest ancestors of the family were famous for virtue or wealth or some such distinction, and that many members of the family, both men and women, have in the course of its history distinguished themselves.

The high importance attached to heredity is evident on every page of Greek literature (see art. PINDAR).

(b) *πολυφιλία* and *χρηστοφιλία*, the possession of many and good friends, a friend being defined as 'one who, if he consider anything to be good for another, is ready to do it for the other's sake' (Arist. *Rhet.*, loc. cit.). Friendship takes a prominent place in the Greek ideal of life.

'Of all kinds are the uses of friends; above all in trouble, but joy also seeks to behold its own assurance' (Pindar, *Nem.* vii. 42 ff.). 'To cast away a good friend I count even as that a man should cast away the life in his own bosom, which he loves most' (Soph. *Œd. Res.* 611 f.).

We hear of many celebrated friendships—Achilles and Patroclus, Orestes and Pylades, Castor and Pollux. The last is the theme of one of the most beautiful of Pindar's poems, *Nem.* x.

When Castor, the mortal one of the Twins, is slain, Pollux asks to be allowed to die with him: 'Grant me, O Lord, to die

with him! A man's honour is departed when he is left of his friends, and few there be that are faithful in the day of trouble to share the travail' (76 ff.).

The false friend is the object of bitter scorn (Pind. *Isth.* ii. 11; Æsch. *Agam.* 798, etc.). We hear, of course, of a more cynical view, that one should always look upon a friend as a possible enemy (Soph. *Aj.* 677 ff.; Eurip. *Hippol.* 253 ff.).

(c) *πλοῦτος*, wealth.

(d) *εὐτεκνία* and *πολυτεκνία*: these may be predicated either of the community or of the individual. In the case of the community, they mean the possession of a numerous body of splendid youth, splendid physically—in stature, beauty, strength, and athletic prowess—and splendid morally, the moral qualities desirable in a young man being self-restraint and courage. In the case of the individual, they imply that his children, male and female, are many and good. In a woman, the physical excellences are beauty and stature; the moral excellences are 'self-control and industry without illiberality' (*φιλεργία ἀνευ ἀνελευθερίας*).

'The high standard of female excellence is very important for the state; for where the condition of the women is vicious, as at Lacedæmon, there is no happiness in half the state.'

The importance of having children lies partly in keeping property within the family, since the bitterest thought of the childless man when dying is that his wealth will go to an outsider:

'Even as a child by his wife is longed for by his father who has reached the other side of youth, and greatly warms his heart, since wealth that falls to an outside alien's keeping is most hateful for a dying man' (Pind. *Ol.* x. [xi] 94 ff.);

partly in that there will be no one to pay the memorial offerings to the dead (*ἐναγίσματα*).³ These motives find their consequence in the frequency of adoption (*εἰσπολίσεις*).⁴

(e) *εὐγῆρτα*, a good old age. This denotes an old age which approaches gradually and without 'pain'; if it comes rapidly, or slowly but accompanied with pain, it is not a good old age. This requires both physical excellences and good fortune. It is incompatible with weakness or disease, and a man must have good fortune to live long and remain *ἄλυστος*. 'It is indeed true that some attain long life without physical excellences.'

(f) The physical excellences: (1) *ὀλγία*, health, i.e. freedom from disease, full possession of bodily faculties. Such valetudinarianism as that of Herodicus (Plato, *Rep.* iii. 406) is not desirable, as it means the denial of all, or nearly all, human pleasures. (2) *κάλλος*, beauty. A different kind of beauty is appropriate to different periods of life: the young man must be adapted to exercises of speed and strength, and pleasant and delightful to look upon. Hence pentathletes are most beautiful. The man in the prime of life must be fit for military exercises, combining grace with sternness in his appearance. The old man must be equal to such exertions as are inevitable, and his appearance must not be repulsive, i.e. must be free from the disfigurements of age. (3) *ισχύς*, strength. (4) *μέγεθος*, stature—but not so as to be unwieldy. (5) *δύναμις ἀγωνιστική*, athletic excellence—size, strength, speed; good running, wrestling, and boxing.

¹ Cf. Isaus, ii. 45 ff.: 'I have shown you that the laws give power to childless men to adopt sons. It is clear, moreover, that I paid attention to him while he lived and buried him when he died. My opponent wishes to turn me out of my father's estate, be it great or small; wishes to make the dead man childless and nameless, so that there shall be none to honour in his behalf the ancestral holes, none to make annual offerings to him (*ἐναγίσζῃ αὐτῷ καθ' ἑκάστον ἑνιαυτὸν*), but to rob him of his honours. Providing for this, Menocles, being master of his property, adopted a son, that he might get these things. Do not, then, be persuaded by these men to rob me of the title of heirship, which is all that is left, and make my adoption by him invalid. But, since the matter has come to you and you have power to dispose of it, help us and help him who is now in the house of Hades and do not, in the name of gods and *daïmones*, allow him to be insulted by them' (see, further art. *ADOPTION* (Greek)).

¹ Plato, *Gorg.* 451 E, *Legg.* 891 C, 661 A; cf. schol. *Gorg.*, loc. cit.: 'this *scolion* is attributed by some to Simonides, by others to Epicharmus.'

(g) *δόξα* or *εὐδοξία*, *i.e.* to be regarded as a good man (*σπουδαῖος*), or as 'the possessor of something which all men or most men or good men or wise men desire.'

(h) *τιμή*, or honour, *i.e.* honours paid for benefactions either great in themselves or great in the circumstances (cf. Dem. *adv. Lept.* § 41). Such honours are sacrifices, memorials in verse and prose, privileges, allotments in land, foremost seats on public occasions, tombs, statues, maintenance at the public charges, barbaric compliments—*e.g.*, prostrations and giving place—local compliments. *Τίμα*, as being both honourable and valuable intrinsically, appeal equally to the *φιλοχρήματος* and the *φιλότιμος*.

(i) *εὐτυχία*, or good fortune. It is the gifts of fortune that especially excite envy.

(j) *ἀρετή*, virtue. This is discussed in *Rhet.* ch. ix. Virtue is not merely desirable—as gifts of *τύχη*—but also *ἐπαινετόν*. It is 'a faculty of providing and preserving good things and a faculty of conferring benefits, and its elements are justice, bravery, self-control, 'magnificence' (*μεγαλοπρέπεια*), highmindedness, liberality, gentleness, wisdom practical (*φρόνησις*) and speculative (*σοφία*).

The virtues which go to make up virtue, the *μέρη ἀρετῆς*, are given by Aristotle in the *Rhet.* i. 9 as *δικαιοσύνη, ἀνδρεία, σωφροσύνη, μεγαλοπρέπεια, μεγαλοψυχία, εὐθεριότης, πραΐτης, φρόνησις, σοφία*. Plato, *Rep.* 402 C, gives *σωφροσύνη, ἀνδρεία, μεγαλοπρέπεια, εὐθεριότης, καὶ δαα τούτων ἀδελφά, Μέτρο*, 73 E–74 A, *δικαιοσύνη, ἀνδρεία, σωφροσύνη, σοφία, μεγαλοπρέπεια καὶ ἄλλαι πάμπολλαι*.

The four cardinal virtues, according to Plato, are courage, justice, temperance, and wisdom (*Rep.* 427 E); but the sovereign virtue, which involves all these,¹ is justice, which, as we have seen, Plato defines as *τὸ τὰ αὐτοῦ πράττειν καὶ μὴ πολυπραγμαίνειν*.²

In the famous passage of Pindar (*Nem.* iii. 74 ff.) the first three virtues are that of youth, that of men, and that of the old, while the fourth seems to be nothing else than justice, which is the sovereign and governing principle of all the rest: *ἐλξέ δὲ καὶ τέσσαρας ἀρετὰς ὁ θνατὸς αἰὼν, φρονεῖν δ' ἐνέπει τὸ παρκεῖμενον* = *τὸ τὰ αὐτοῦ πράττειν*.

However this may be, justice includes all the other virtues. And the moral conscience of man demands in the name of justice that the just man shall have his reward. So Hesiod, *Works and Days*, 270 ff.:

'Now may neither I nor son of mine be just among men! For it is an ill thing to be just, if the unjust shall have the greater justice. *Εὐοβέηθι τὰς τινὲς ἰδέω, καὶ τὸ καὶ Ζεὺς ὡς ἔσται*. Injustice may prevail for a time, but justice is better in the end (*ib.* 217 f.). 'On that which is pleasant but contrary to justice a most bitter end awaits' (*Pind. Isth.* vi. 47 f.). 'Too swift are the minds of men to accept a guileful gain in preference to justice, albeit they travel to a harsh reckoning' (*τραχέειαν ἐπίσταν* [*Pind. Pyth.* iv. 139 ff.]). On the other hand, end and beginning are alike pleasant if God speed.

How, then, and where shall it be better for the just man? The typical answer of the Greek moralist is 'Here and in this life.' Hesiod expresses the prevailing view of the Greek as of the Hebrew wisdom when he says:

'But whoso to stranger and to townsman deal straight judgments, and no whit depart from justice, their city flourisheth, and the people prosper therein. And in their land is peace, the nurse of children, and Zeus doth never decree war for them. Neither doth Famine ever consort with men who deal straight judgments, nor Doom; but with mirth they tend the works that are their care. For them earth beareth much livelihood, and on the hills the oak's top beareth acorns, the oaks midst bees; their fleecy sheep are heavy with wool; their wives bear children like unto their parents; they flourish with good things continually, neither go they on ships, but bounteous earth beareth fruit for them' (*Works and Days*, 225 ff.).

Even so the punishment of the wicked is in this life. *ὅς τις ἐκείνοις τὴν δυνάμιν παρέσχειν, ὥστε ἐγγενέσθαι, καὶ ἐγγενέσθαι γε σωτηρίαν παρέχειν, ὥσπερ ἂν ἐγγὺς* (*Rep.* 438 B). ¹ *Rep.* 438 A; cf. Aristotle, *Rhet.* i. 9. 7, *ἔστι δὲ δικαιοσύνη μὲν ἀρετὴ δι' ἣν τὰ αὐτῶν ἕκαστοι ἔχουσι καὶ ὡς ὁ νόμος*.

world, whether in their own persons or in the persons of their descendants:

'But whoso ensue evil, insolence, and froward works, for them doth Zeus of the far-seeing eye, the son of Cronus, decree justice. Yea, oftentimes a whole city reapeth the recompense of the evil man, who sinneth and worketh the works of foolishness. On them doth the son of Cronus bring from heaven a grievous visitation, even famine and plague together, and the people perish. Their women bear not children, their houses decay by devising of Olympian Zeus; or anon he destroyeth a great host of them, within a wall it may be, or the son of Cronus taketh vengeance on their ships in the sea' (*ib.* 238 ff.).

In *Republic*, 363 A ff., Plato discusses this view of justice and its rewards. Goods are classified as of three sorts: (1) those desirable for their own sakes, (2) those desirable for their own sakes and for their consequences, and (3) those desirable for their consequences alone. Whereas Socrates would place justice in the second of these classes, the many would place it in the third. Popular morality says that justice is desirable because it leads to reward in this life—a position which is open to the objection that 'seeming to be just' is preferable to 'being just.' Parents exhort their children to be just for the sake of office and other advancement, and because, according to Hesiod (*loc. cit.*) and Homer (*Od.* xix. 109 ff.), the gods prosper the just in this life. Then follows a striking passage:

'Still grander are the gifts of heaven which Musæus and his son (Eumolpus) offer to the just: they take them down into the world below, where they have the saints lying on couches at a feast, everlastingly drunk, crowned with garlands; their idea seems to be that an immortality of drunkenness is the highest reward of virtue. Some extend their rewards yet further; the posterity, as they say, of the faithful and just shall survive to the third and fourth generation. This is the style in which they praise justice. But about the wicked there is another strain; they bury them in a slough in Hades, and make them carry water in a sieve; also while they are yet living they bring them to infamy, and inflict upon them the punishments which Glaucon described as the portion of the just who are reputed to be unjust; nothing else does their invention supply.'

According to Homeric eschatology, there remains for the dead only a shadowy existence in the dim under world, in dank places which even the gods abhor. This life after death, if it can be called life, holds nothing lovely or desirable:

'Speak not comfortably to me of Death, glorious Odysseus. Rather would I be on earth a servant with a landless man of no great livelihood than king over all the dead which are perished' (*Od.* xi. 488 ff.).

There seems to be no distinction of destiny between the good and the wicked, except, indeed, that perjury is said to be punished in the world below (*Il.* iii. 279, xix. 260). We have, it is true, some traces of a brighter fancy.

The poets told of an 'Elysian plain at the ends of earth, where fair-haired Rhadamanthus is; where life is most easy for men; neither snow nor great storm nor rain is there, but ever as the shrill West wind blows, Ocean sends forth breezes to refresh men' (*Od.* iv. 563); but Homer assigns this fate only to Menelaus, 'to whom it was decreed that he should not die nor meet his fate in Argos, the pastureland of horses,' because he 'had Helen to wife and was the son-in-law of Zeus.' They told of certain Islands of the Blest far in the Western Ocean where the heroes of the Theban and Trojan Wars dwelt under the kindly rule of Cronus—'happy (*εὐδαίμονες*) heroes, for whom the bounteous earth bears honeysweet fruit, blooming thrice a year' (*Hesiod, Works and Days*, 166 ff.; cf. also art. *BLESSED ABODE OF THE [Greek and Roman]*).

But such a lot was apparently reserved for the heroes of old, who, without suffering dissolution of soul and body, were by the favour of the gods transported to a terrestrial paradise.

The introduction to Greece of mystic and orgiastic worship, and the rise of the Orphic and Pythagorean teaching towards the end of the 6th cent., gave a new and heightened meaning to the doctrine of the soul's survival after death. In the mysteries, of which those at Eleusis were the most celebrated, it would seem that a fairer prospect was offered to the initiated—a reward for righteousness in a life of perpetual felicity beyond the grave. Hence we find in Pindar, alongside of the language of orthodox Greek belief, glimpses of a larger and brighter hope, expressed in passages

which are among the most striking in the range of Greek literature:

'Wealth adorned with deeds of prowess . . . is a conspicuous star, a most true light for a man, if he that hath it knoweth that which is to come: that the helpless minds of the dead pay straightly here their penance, while the sins done in this kingdom of Zeus one judges under earth, pronouncing doom by abhorred constraint. But equally evermore by night and day the good enjoy the sun, receiving a life free from toil, vexing not the earth with might of hand, neither the waters of the sea in that ghostly life, but with the honoured of the gods they that rejoiced in keeping their oaths live a tearless life, while those others endure woe too dire to behold. But whose thrice on either side have endured to refrain their souls utterly from unrighteousness, travel by the Way of Zeus unto the tower of Cronus, where round the Islands of the Blessed the Ocean breezes blow, and flowers of gold are glowing, some on the land from glorious trees, while others the water feedeth, with wreaths and garlands whereof they entwine their hands by the true counsels of Rhadamanthus, whom the father Cronus hath as his ready assessor, Cronus, husband of Rhea, throned highest of all. Peleus and Cadmus are numbered among these, and thither his mother brought Achilles, when she had with her prayers persuaded the heart of Zeus' (Ol. ii. 58 ff.).

Pindar's teaching here appears to be that the soul passes through three successive incarnations, alternating with a disembodied state, and that only after passing through all these blamelessly is it finally redeemed. Such souls, according to another passage of Pindar (frag. 133), receive a final embodiment as kings and wise men and athletes, and after death become, not indeed gods, but heroes:

'From whom Persephone in the ninth year accepts the atonement of ancient woe, the souls of them she sends back into the upper sunlight. From them spring glorious kings and men swift and strong and mightiest in wisdom; and for the future they are called by men holy heroes.'

Again, in frag. 137 Pindar says, in reference to the mysteries:

'Happy is he who beholds these things before he goes beneath the earth; he knows the end of life, he knows its god-given beginning.'

According to this view, the soul lives on after death, it alone being of divine origin:

'By happy dispensation (δαίμων ἀίωνα) all travel to an end which sets free from woe. And the body, indeed, of all goes with mighty Death. But there remaineth alive a phantom of life; for that alone cometh from the gods. It sleepeth when the limbs are active, but to men asleep in many a dream it reveals the coming judgment of pleasant things and hard.'

For the souls of the good there awaits a paradise which is imagined in terms of human bliss:

'For them shines the strength of the sun below while here it is night. And in meadows of red roses their suburb is shady with frankincense and laden with golden fruits. And some in horses, some in games, some in draughts, some in the lyre take their delight, and by them flourisheth all the fair flower of blessedness. And a fragrance spreads above the lovely place, while they evermore mingle all manner of incense in far-shining fire on the altars of the gods' (frag. 129).

'By happy dispensation'! Strange, indeed, would this have sounded to the Homeric hero, and hardly less strange, it would seem, to the orthodox Greek of the 5th century. It is not easy to estimate how far the ideas to which Pindar here gives expression had affected the general body of his countrymen, but it would not appear that they had done so very deeply. The general attitude to death continues much as in Homer. A state of bliss after death is not held out as an incentive to righteousness in this world. Nor is the hope of a blessed immortality offered to comfort the dying or mitigate the grief of the bereaved. When death is spoken of as desirable, it is merely as a *κακῶν καταφυγή*, a refuge from evil, a dreamless sleep:

'Would that some fate might come, speedy, not over-painful, nor with lingering bed, bringing to us the everlasting, endless sleep!' (Æsch. *Agam.* 1448 ff.).

It does not seem probable that the conception of the state after death exercised any determining influence on the average man's conduct of his life.

When one attempts to discuss Roman views of life and death, there occurs at the outset the comparative paucity of genuinely Roman evidence. The general attitude of the Roman towards life and death presupposes the same general frame-

work as we have outlined in the case of Greece; the same conception of the goods which make up the content of human happiness; the same conception of death as the end and not the beginning; the same belief in the duty of paying solemn offerings (*parentalia*) to the dead. When we advance beyond orthodox opinion to the region of poetic fancy or philosophic speculation, we find that we are merely encountering Greek ideas in a Roman dress.

Greek and Roman alike believed in gods who had a very real regard for the sins and the virtues of mankind, rewarding the good and punishing the evil, *but in this life*, in their own persons or in those of their immediate descendants. Greek and Roman alike believed that the dead in some sense survive and that it was the duty of the living to make offerings to the dead. But for Roman as for Greek, the after-world was but a dim shadow of the present. There was no lively conviction that it would fare worse in the after-world with the bad than with the good; there was no lively conviction that there was any true after-life at all, certainly no such conviction of an immortal felicity as could prompt to martyrdom or self-sacrifice, or alleviate the hour of bereavement with the hope of a blessed reunion hereafter. When Cicero lost by death his beloved daughter Tullia, in the letter of condolence written to him by his friend Servius Sulpicius (*ad Fam.* iv. 5) the topics of consolation are drawn from practical and secular considerations: that she has been taken away from the evil to come, and that she has but shared the common lot, not of individuals only, but of cities:

'Ex Asia rediens, cum ab Ægina Megaram versus navigarem, cœpi regiones circumcirca prospicere: post me erat Ægina, ante me Megara, dextra Piræus, sinistra Corinthus; quæ oppida quodam tempore florentissima fuerunt, nunc prostrata et diruta ante oculos iacent. Cœpi egomet mecum sic cogitare: "hem! nos hominuculi indignamur, si quis nostrum interit aut occisus est, quorum vita brevior esse debet, cum uno loco tot oppidum cadavera proiecta iacent? visne tu te, Servi, cohibere et meminisse hominem te esse natum?"'

Nor in Cicero's most touching reply is there any hint of other consolation.

Nothing, perhaps, in the consideration of the conception of life and death is more significant than the attitude adopted in the question of suicide. The general feeling both in Greece and in Rome seems to have been one of pity for the suicide rather than condemnation. Thus, e.g., Pindar, who three times refers to the suicide of Ajax, in no case hints at any moral wrong in the act, nor does Sophocles in the case of Jocasta. And the fact that Aristotle, in his *Πολιτεία Θνησίων* (1553^b 31 f.), and other writers noted that suicide was condemned by the Thebans points clearly to a different attitude on the part of the Greeks in general. Naturally the Orphic-Pythagorean school, insisting on the reality of a true existence conditioned for weal or woe by the account of the present life, condemned suicide. In the *Phædo*, 61 C ff., Plato says that the good man will desire to be dead in order to free his soul from the cumbering influence of the body, which hinders him in the pursuit of truth: 'only, perhaps, he will not do violence to himself, for this, they say, is not lawful' (*οὐ θεμιτόν*); and he proceeds to refer to a 'secret doctrine' (*ἐν ἀπορρήτοις λεγόμενος λόγος*) that man is here 'in a sort of prison' (*ἐν τινι φρουρᾷ*), from which he has no right to free himself or run away' (cf. Cicero, *Cat. Maj.* 20; Plato, *Phædr.* 250 C, *Cratyl.* 400 C, *Gorgias*, 493 A). Macrobius (*Comm. in Somn. Scip.* i. 13) tells us that Plotinus objected to suicide on two grounds: (1) it implies a perturbed state of mind at the moment of dissolution; (2) it is a step which, once taken, is unretrievable. On the other hand, in the *Laws*, 854 C, Plato recognizes that in certain circum-

stances suicide is a duty. Sacrilege, he tells us, is an inherited malady.

When a man is tempted to commit such an offence, he should 'go and perform expiations, go as a suppliant to the temples of the gods who avert evils, go to the society of those who are called good men amongst you; hear them tell, and yourself try to repeat after them, that every man should honour the noble and the just. Fly from the company of the wicked—fly and turn not back; and if your disease is lightened by these remedies, well and good, but if not, then acknowledge death to be nobler than life, and depart hence.'

Similarly Cicero, *de Offic.* i. 31, holds that in the same circumstances suicide is for one man a duty, for another a crime. A man must decide in consonance with his character. Thus Cato committed suicide, as did Ajax; Ulysses did not.

This question, like the question of the life after death, seems to have been in general considered open. It is always to be remembered that religious formulæ and religious practices lag behind the true and genuine beliefs of those who practise them, and ritual is an unsafe index of the inner meaning of the worshipper. Thus we hear much of oracles in Greek history, and undoubtedly they exercised an enormous influence. Yet even so early as Homer we find it considered an open question whether one should obey an oracle or not:

'If it were some other and a child of earth that bade me this, whether some seer or of the priests that divine from sacrifice, then would we declare it false and rather turn our backs upon it' (*Il.* xxiv. 220 ff.)

In Hector's mouth is put the famous declaration that 'One omen is best—to fight for one's country' (*Il.* xii. 243). So in Rome Cæsar, while holding the office of Pontifex Maximus, delivered himself in the Senate of the doctrine that after death there was no place either for trouble or for joy:

'In luctu atque miseriis mortem ærumnarum requiem, non cruciatum, esse; eam cuncta mortalium mala dissolvere; ultra neque curæ neque gaudii locum esse' (*Sall. Catil.* li.)

So widely divorced, indeed, was outward practice from inward belief that Cato 'wondered how, when one soothsayer met another, he could help laughing' (Cicero, *de Div.* ii. 52). But the better minds, persuaded as they were that death meant either extinction or a true after-life in which the good should fare better than the wicked, prepared themselves for the great change much in the spirit of the Platonic Socrates, by setting their house in order. Thus Cicero:

'Id spero vivis nobis fore. Quamquam tempus est nos de perpetua illa iam, non de hac exigua vita cogitare' (*ad Att.* x. 8).

A. W. MAIR.

LIFE AND DEATH (Hebrew).—There are two words which in the English OT are very often translated 'life': *nephesh* and *hayyim*. *Nephesh* denotes the inner occult cause of life's activities. A *nephesh* is a concrete entity, resident in the body, which, if scarcely coming within the range of man's senses, is at any rate thinkable. It is a psychical something, endowed with many attributes, of which life is the chief, though it may also have others, physical and psychical. *Hayyim* represents life abstractly, as a state or condition—vitality, mental and moral activity.

1. *Nephesh*.—OT psychology has always been a crux for Biblical scholars, because they have too often desired (as Franz Delitzsch) to form a 'system' of Biblical psychology. They have too often expected to find everywhere the same grade of civilization and the same type of approach and outlook. They have presupposed far more uniformity of thought than is actually present, and have not (until recently) allowed for primitive, ethnic modes of conception. The word *nephesh*

is found in all Semitic languages, in much the same senses as in Hebrew; and therefore we must not be surprised if some extremely primitive beliefs, not taught—perhaps even discouraged—as doctrines by the men who were organs of revelation, have survived in occasional metaphors or modes of speech.

There were three ways in which the phenomena of life were regarded by early man: (1) objectively, by external observation, noting the manifestations of life in other men and in animals; (2) subjectively, by self-consciousness, through which man became aware of many different emotions and appetites, thoughts, and activities which were taking place within him; and (3) by the consciousness that he was being acted on by forces or beings extraneous to himself. We can scarcely point to a time when man did not fancy himself an object of interest, often of assault, to spirits good or evil, by whom he was surrounded. When the external influence came gently, the Hebrew called it *n'shamāh*, 'breath'; when violently, he called it *rūah*, 'wind'; and that part of his nature which was accessible to these gentle or violent invasions, by God or by spirits, he called respectively his *n'shamāh* and his *rūah*.

(1) *The objective method*.—Life is the antithesis of death; and from the beginning the thoughts of man were directed to the phenomena of life by their startling contrast with death. There were two ways in which death must have impressed primeval man: as the cessation of breathing, and as being caused by the shedding of blood.

(a) The universal and inevitable accompaniment of death is cessation of breathing; and this, by the force of contrast, would certainly direct the close attention of early man to the phenomena of breathing: the rising and falling of the chest, the varying rapidity of the inhalations, in rest and exercise, and the vapour visible from the mouth and nostrils at every exhalation. How did he account for this? Beyond all doubt, on principles of animism, which ascribed all internal movement, energy, and activity to an indwelling, living entity. *Nephesh* is often defined as 'the inner principle of life.' The vague term 'principle,' however, is much too modern. Early man personalized all our abstractions. The cause of breathing to him—and thus the cause of life—was a living spirit or soul, dwelling in man's chest, the breath-soul, which Semites called the *nephesh*, i.e. a semi-physical, semi-spiritual something, a potent reality, not to be identified with the breath, but the occult cause of the breathing; and, when it left the body for a considerable time, death was the result. To die, or 'yield up the ghost,' is to 'breathe out the *nephesh*' (Jer 15², Job 11²⁰). When Rachel was dying and gave a name to her infant son, 'her *nephesh* was departing' (Gn 35¹⁸). When Elijah prayed for the recovery of the Shunammite's son, he stretched himself on the child and the child's *nephesh* came into him again (1 K 17²²). When the Psalmist is sinking in a morass and in danger of drowning, he cries, 'Save me, for the waters are come in even unto my soul' (Ps 69¹).

(b) The second startling phenomenon of life was the pulse, and the beat of the heart, which ceased when the blood was shed, in battle or in any other way. The occult cause of the heart-beat was conceived to be another *nephesh*—the blood-soul, resident in the blood; and, when the blood was shed, the *nephesh* was released. The shedding of blood received much scrutiny and thought in connexion with sacrifice, and the Hebrew priests assigned the efficacy of sacrifice to the blood-soul. This is most accurately expressed in Lv 17¹¹, 'The *nephesh* of the flesh is in the blood. . . . The blood

maketh atonement by reason of the *nephesh*,¹ more laxly in Dt 12²³, 'The blood is the *nephesh*.' This is elucidated in Lv 17¹⁴, where we read, 'The *nephesh* of all flesh is its blood, by reason of its *nephesh*' (so Kn., Kal.), i.e. we may say that the blood is the *nephesh* of the flesh, if we bear in mind that there is a *nephesh* resident in the blood, which is the cause of the vitality of the blood, and therefore also of the flesh. Hence the repellent feature in eating the flesh of animals whose blood had not been shed before death was that, in eating such flesh, from which the *nephesh* had not been allowed to escape, one would eat the *nephesh*, and this is strongly forbidden in the words: 'But flesh with the *nephesh* . . . shall ye not eat' (Gn 9⁴; cf. Dt 12²³).

Human nature was not at first considered as a unity, but attention was directed to the centres of activity, where a mysterious energy was at work; and, long before man used the word *nephesh* as we use the word 'soul,' the several organs were considered separately, as so many independent centres of vitality. The heart, the liver, the kidneys, and the eye were regarded as distinct potencies,¹ endowed with life, not interrelated or unified one with another. The word *nephesh* is not used in the OT of the cause of the vitality resident in each of these organs, but it would be quite analogous to the ideas of other ancient peoples if they did ascribe to each a *nephesh*.

It was a very general belief in old times that a *nephesh* might go out from its abode without causing death for some considerable time. What is to us poetry and metaphor was in the hoary past often accepted as solid fact, as, e.g., when we read of Jacob in Gn 44³⁰, 'His life (*nephesh*) is bound up with the lad's *nephesh*'; and of Jonathan in 1 S 18¹, 'his *nephesh* was knit to the *nephesh* of David.' In the statement that the soul of Shechem clave to Dinah (Gn 34³) we have reference to the primitive belief that in love the (or a) *nephesh* leaves the body and enters into union with the soul of its beloved; and a similar belief underlies the phrase which compares peril to 'putting one's soul in one's hand' (Job 13¹⁴, Jg 12³, 1 S 19²⁶ 28²¹, Ps 119¹⁰⁹).

The consequences of the temporary departure of a soul were believed to be giddiness, mental derangement, sickness, or dotage (Tylor, *PC* i. 435 f.). There seems to be an allusion to this in the words of Saul in 2 S 1⁹, if, with Graetz, we may alter the difficult, if not impossible, words *לִי עָרַב וְלִי עָרַב* into *לִי עָרַב וְלִי עָרַב*. Saul has been wounded and is bleeding to death, and his words would then be: 'Giddiness hath taken hold of me, for my *nephesh* is no longer in me.' We have a similar underlying belief in the phrase which we use metaphorically: 'I have poured out my soul,' as Hannah said to Eli (1 S 1¹⁵); as Job also says: 'My soul is poured out upon me' (30¹⁶); and as is said of the righteous servant: 'He poured out his soul unto death' (Is 53¹²). In the first two cases the result is extreme prostration of mind and body, and in the third case death. It is the voluntary surrender of life.

The blood-soul may be 'smitten' when a wound inflicted causes bloodshed (Gn 37²¹, Dt 19¹¹); or this *nephesh* may be 'slain' in unintentional homicide (Nu 31¹⁹ 35¹¹), or in murder (2 S 4³); while in Dt 27²⁶ a curse is pronounced on one who should accept a bribe 'to slay a *nephesh* of innocent blood.' The Hebrews were forbidden to make 'an incision to the *nephesh*,¹ i.e. to incur the loss of the *nephesh* by the loss of blood (Lv 19²⁸).

(2) *The subjective method.*—It is quite certain that men practised observation long before they practised introspection. When man habituated

himself to turn his thoughts within, he became conscious of himself as a unity; the various organs were *his* organs. He was no longer an assemblage of vital organs, as observation led him to suppose; he was a unity, an organism; and the mysterious cause of his internal activities was his *nephesh*, his soul, the cause of his energies and emotions. Thus the *nephesh* in this sense is the seat of appetites, such as hunger (La 1¹¹) and thirst (Is 29³), and also of the outgoings of life in desires, longings, and wishes (1 S 20⁴ 23²⁰, 2 S 3³¹). It is also the centre of all sensibilities, as disgust (Nu 21⁵), weariness (Jg 16¹⁶), love (Gn 44³⁰), hatred (2 S 5⁸), anger (2 S 17⁸), wrath (Jg 18²⁵), and sorrow (Jer 13¹⁷); but in all these and similar cases *nephesh* approaches the meaning of our word 'soul' (*q.v.*), and is so rendered.

Most ancient peoples believed that the souls of the departed lingered some days near the corpse; and, while some peoples had no dread of the departing spirit, others, including the Hebrews, had a great terror as to the mischief it might effect; and their boisterous funeral practices were designed to scare the spirit away. We have indications of this belief in the lingering of a soul in the fact that a Nazirite is forbidden during his vow to come near the *nephesh* of a dead man (Nu 6⁹); a man rendered unclean through a *nephesh* was not allowed to eat the Passover at the statutory time, but might eat it a month later (9¹⁰). Indeed, any one, male or female, who was unclean by a *nephesh* must go and remain outside the camp until purified (5²), and a high priest was forbidden at any time to enter a room where the *nephesh* of a dead person was at large (Lv 21¹¹).

Eventually, after or before the funeral, the soul was believed to pass into Sheol, and to be gathered unto its fathers. Hebrew has a distinct word for wraiths or ghosts, *rēphāim*, but *nephesh* is also used of the soul as a disembodied psychical entity. 'Gather not my soul with the wicked,' the Psalmist prays (26⁹); 'Thou wilt not abandon my soul to Sheol,' says another (16¹⁰); 'He hath delivered my soul from Sheol,' says a third (86¹³); so Job 33¹⁸⁻²⁸, Is 38¹⁷. By this time the *nephesh* has become the man's self, his personality.

(3) *The objective-subjective method.*—Man believed himself to be the object of attack or of benign influences from other spirits, or from the one great Spirit, God. When the influence was gentle, he conceived of it as 'breath' (*neshāmāh*); and when it was violent he spoke of it as a 'wind' (*rūah*), partly, no doubt, because it caused him to pant with excitement. The stronger emotions of man were traced to the *rūah*, or spirit of man, while the gentler emotions and the inspirations from the Divine were due to the action of the Divine *neshāmāh* or the human *neshāmāh*. See SPIRIT.

2. *Hayyim.*—*Hayyim* is a plural form, for which no singular is extant (the root is חַי or חָיָה, 'to live'). It is an intensive plural, denoting diversity in unity. As the plural form *Elōhīm* seems to express the conception of one God with many manifestations, so *hayyim* expresses life in its many manifestations and modes. G. H. A. Ewald truly says that the word 'life' is 'most expressive and crowded with meaning.'¹ Its various meanings it is now our purpose to deploy.

(1) *Physical life.*—*Hayyim* is used of physical existence (*a*) in relation to time only, representing the continuance of the existence of God or man, in possession of their varied activities; thus we read of 'the days of one's life' (Dt 4⁹, 1 S 7¹⁵), 'the years of one's life' (Gn 23¹, Ex 6¹⁶), and 'the days of the years of one's life' (Gn 25⁷ 47⁹); (*b*) in relation to its antithesis, physical death (Jos 2¹³, Jer 21⁸, Ps 89⁴⁸); and (*c*) in relation to the events

¹ H. W. Robinson, *Christian Doctrine of Man*, p. 22^a

¹ *OT and NT Theology*, Eng. tr., Edinburgh, 1888, p. 183.

which occur in one's lifetime, or are the outcome of one's energies or activities, as marriage (Lv 18¹⁸), deeds of valour (Jg 16³⁰), singing God's praises (Ps 104³⁸), sensuous enjoyments (Ec 3¹²). 'They were lovely and beautiful in their lives' (2 S 1²⁸); 'My soul is weary of my life' (Job 10¹); 'Preserve my life from fear of the enemy' (Ps 64¹).

The remarkable thing as to the Hebrew usage of *hayyim* is the clear conviction that 'life' is something more than a continuance of physical existence. There is a clear recognition of the dignity of man—that man was not meant to live the life of an animal or a life of sensuous gratification. Such a life is unworthy of so dignified a creature as man is. As man's sense of dignity developed, the word 'life' became filled with deeper connotation. Roughly speaking, man's view of 'life' passed through the same three stages as we have found in regard to the word *nephesh*: (a) man's life consists in what he has, 'the abundance of the good things that he possesses'—the objective regard; (b) man's life consists in what he is, his character—the subjective regard; and (c) man's life consists in his relation to God, the influences which come to him from communion with the Divine—the objective-subjective regard. In passing through this development, Israel was subconsciously discussing the problem of the *summum bonum*—What is man's highest good? Wherein does man's true life consist? And his three answers were: (a) happiness, (b) goodness of character, and (c) fellowship with God.

(2) *Joyous life*.—Life, to be worthy of the name, must not be existence merely, but exuberant, joyous life. Life is not the humdrum of physical existence; it is the possession of goods, family, and wealth, which can contribute to man's enjoyment. It is the exhilaration of the red-letter days, when life is sublimely worth living. A life of joy and felicity is alone worthy to be called 'life.' This was always implied in the Oriental salutation: 'Let the king live' (1 K 1³, 2 S 16¹⁶). It is associated with largesses of the gold of Sheba (Ps 72¹⁵), with riches and honour (Pr 22⁴), with prosperity and large possessions (Dt 5⁸ [Heb. v. 80]). In Ec 9⁹ the Hebrew reads: 'See life with the wife whom thou lovest,' but AV and RV both correctly interpret: 'Live joyfully with the wife'; and, when a man is honoured with an invitation to the court, that is a day of days: 'In the light of the king's countenance is life' (Pr 16¹⁵).

(3) *Ethical life*.—True life consists in what a man is and not in what he has. The ideal life is a good life, a life of righteousness. 'In the way of righteousness is life' (Pr 12²⁸); 'Wisdom and discretion are life to the soul' (3²²); 'Keep her [wisdom]; for she is thy life' (4²⁸); 'The words of wisdom are life to those that find them' (4²²); 'Whoso findeth wisdom findeth life' (8³⁵). There are three things which 'tend to life': righteousness (11¹⁹), the labour of the righteous (10¹⁶), and the fear of the Lord (19²⁸). In the same pregnant sense of the word 'life' we read of 'the way of life.' 'Torah is light; the reproofs of instruction are the way of life' (6²³); 'He that heedeth instruction is in the way of life' (10¹⁷). Similarly, the sages speak of a 'fountain of life.' 'The Torah of the wise is a fountain of life' (13¹⁴); so is the 'fear of the Lord' (14²⁷) and 'understanding' disciplined by correction (16²²). In Lv 18⁵ in the Code of Holiness there is a statement, quoted in Neh 9²⁹ and developed at length by Ezk 18²¹: 'Ye shall keep my statutes, and my judgments: which if a man do, he shall live by them.' The statutes and judgments are considered, not as the rule and guide of life merely, but as providing the pabulum of the moral life. This appears more strikingly in

Dt 8³: 'Man doth not live by bread only, but by every word that proceedeth out of the mouth of the Lord doth man live.' Revealed truth is the sustenance of character—of that moral life which is acceptable to God. Similarly, Hezekiah in his Psalm, speaking of the promises of God, says: 'By these things men live, and wholly therein is the life of my spirit' (Is 38¹⁶), and in 55³ the Lord calls men through His prophet, saying: 'Incline your ear, and come unto me: hear, and your soul shall live.'

(4) *Religious life*.—The passages hitherto considered refer to the moral life nurtured by the instruction of the wise and by obedience to the revealed will of God; but the OT saints rose to a higher conception of life than even this—the life which is nourished by fellowship with God, the life concerning which the Psalmist could say: 'The Lord is the strength of my life' (27¹); 'I love thee, O Lord, my strength' (18¹); 'The Lord is my strength and my shield' (28⁷); 'My prayer shall be unto the God of my life' (42⁹). 'In God's favour is life' (30⁶); the only life fully worthy of the name is that spent in the consciousness of His favour. Deuteronomy promises repeatedly a long and prosperous life on earth as the token of God's approbation, but the mystics soar above and beyond this present sphere. 'The righteous hath hope in his death,' says one of the sages (Pr 14³²). They rejoiced that God was their 'portion' (Ps 119⁵⁷), 'in the land of the living' (Ps 142⁶), that God was their 'guest-friend' (Ps 15¹), and therefore there is an eternal covenant between Him and them. The high-water mark of a sense of unending friendship with God is found in Ps 73: 'Whom have I in heaven but thee? And there is none upon earth that I desire beside thee'; and from this the inference is drawn: 'I am continually with thee. Thou shalt guide me with thy counsel and afterward receive me to glory' (v. 23²⁷). God's friendship is the only true abiding good. This enables a man to triumph over death. 'Thou wilt show me the path of life: in thy presence is fulness of joy; in thy right hand there are pleasures for evermore' (16¹¹); 'I shall behold thy face in righteousness: I shall be satisfied, when I awake, with thy likeness' (17¹⁵).

'In all these Psalms,' says Dillmann,¹ 'there is a full sense of a ζωὴ αἰώνιος already begun in this life, which to their authors gives the assurance that Sheol cannot be the end of such a life, but only blessedness with God. But it is always expressed as a personal conviction, not as a dogma, and we need not wonder that such deep experiences are somewhat rare.'

In conclusion, we turn to the significance of the word 'life' in Ezekiel. The prophet looks forward with great expectancy to the return from exile, but it is under the glamour of vastly improved religious conditions. The Kingdom of God is to be with men. The Lord's servant David shall be the benign prince and ruler (37²⁴, 34²³). Jahweh will take people from among the nations and sprinkle clean water upon them, give them a new heart and put a new spirit within them, and cause them to walk in His statutes and keep His judgments (36²⁴). Ezekiel contemplates a new age—a Kingdom of God on earth. But, before that is established, he sees intervening a period of terrible conflict with the powers of evil, in which the wicked who are unfit to form part of the new Kingdom shall perish. Those who do wickedly shall not live, they shall surely die (18¹⁰⁻¹⁸). Those who 'do that which is lawful and right,' being endowed with the new heart and the new spirit, 'shall surely live' (18⁵⁻⁹). The Kingdom of God with its great moral and religious privileges is ever before the prophet's thoughts. To 'live' is to pass safely through the impending conflict with evil

¹ *AT Theologie*, p. 400.

and to enter on the new Kingdom, in which God's presence will be much more real and evident (48³³); to 'die' is to perish in the crisis and to be excluded from the Kingdom.

J. T. MARSHALL.

LIFE AND DEATH (Indian).—The earliest Aryans to enter India worshipped a vast number of petty spirits, but they learned, rather later, to revere a number of the greater phenomena of nature, and also laid much stress on the worship of their ancestors. This ritual formed the foundation on which all the institutions of the Aryan family were built,¹ though it may well be that the religious belief had its own ultimate origin in the natural organization of the family. At all events, the belief in the power of ancestors profoundly modified that organization. The father was the family priest, and controlled the worship of the ancestors of the family in all details. Centuries after their entry into India, when the Aryans were engaged in the imperial work of bringing all the peoples of N. India under their political and intellectual domination, the great doctrine of *karma* and re-birth took shape. With Farquhar² we may conjecture that

'among the many animistic tribes the invaders met on the broad plains of the North, there must have been some who held the common primitive belief that the souls of men may become incarnate in animals. There were probably totemistic clans who believed that at death a man became, like his totem, a tiger, an ox, a frog, or a snake.'

Whether the transmigration idea came from this source or not it is impossible to say, and, indeed, it is more probable that it was at first a deduction from the physical resemblances which were observed among kindred.

'But, even if the idea that human souls might undergo animal births came from the aborigines, that is but one element in the complex doctrine. That which gave the belief its power over the intellect, and also its value for the moral life, was the connexion of this fairy-tale idea with the powerful ethical conception of retribution; and we may be certain that that was the work of the Aryan mind.'³

The doctrine first appears in the earliest Upanisads. Thus, while transmigration has been believed in many lands, the Hindu doctrine of *karma* (*q.v.*) is, as far as we can yet say, unique.⁴

Inextricably, though by no means consistently, intertwined with this moral theory of retribution is the more primitive and far more wide-spread belief that souls are something almost material, although they may not be always palpable or tangible.

1. Vedas and Brāhmaṇas.—In the Rigveda the conceptions of death are not entirely consistent, but the principal belief relating to the *ajā bhāga*, or 'unborn part,' was as follows. When the remains of the deceased had been placed on the funeral pile and the process of cremation had begun, Agni, the god of fire, was prayed not to scorch or consume the departed, not to tear asunder his skin or limbs, but, after the flames had done their work, to convey to the fathers or ancestors the mortal who had been presented to him as an offering. His eye was bidden to go to the sun,⁵ his breath to the wind, and so on. As for his unborn part, Agni was sup-

plicated to kindle it with his heat and flame, and, assuming his most auspicious form, to convey it to the world of the righteous.¹ Before this unborn part can complete its course from earth to the third heaven, however, it has to traverse a vast gulf of darkness. Leaving behind on earth all that is evil and imperfect, and proceeding by the paths which the fathers trod,² the spirit, invested with a lustre like that of the gods, soars to the realms of eternal light in a car or on wings, on the undecaying pinions wherewith Agni slays the Rakṣasas, waited upwards by the Maruts, recovers then its ancient body in a complete and glorified form, meets with the ancestors who are living in festivity with Yama, obtains from him, when recognized as one of his own, a delectable abode, and enters upon a more perfect life.

In the Vedic era death was held 'to be the going-forth from the living of his breath, or of the thinking part, the mind, which was held to reside in the heart. . . . Heaven, a happy hereafter, was all that was looked forward to by these Vedic Aryans. Throughout the hymns there is no weariness of life, no pessimism.'³

From death there is no awakening; the shade, the breath, soul, or spirit has gone forth and returns not.

'In the "*Taittiriya Brāhmaṇa*" the souls of the deceased are said to dwell in the heavens above as stars, and again in the stars are "the lights of those righteous men who go to the celestial world." In the "*Satapatha Brāhmaṇa*" death is the sun whose rays attach to mortals their life breath, yet, as the "*Katha Upanishad*" declares: "No mortal lives by the breath that goes up and the breath that goes down. We live by another in whom these two repose." There was something which went out of man in sleep and death; something underlying the *Ego*, the *I*, the vital breath, more subtle than life. In the "*Rig Veda*," the sun, though it holds the life breath of mortals, is something more. It is the Self, or the *Ātman*, of all that moves and moves not, of all that fills the heavens and the earth. So of man there is also the *Ātman*, "the Self, smaller than small, greater than great, hidden in the heart of that creature." A man who is free from desires and free from grief sees the majesty of the Self by the grace of the Creator. It is this *Ātman*, or Self, more abstract in its conception than soul, Psyche, or "anima," that becomes also the Universal Self, the Self of the World, "bhūmivān *Ātman*," of which the "Veda" speaks: "When that which had no bones bore him who has bones, when that which was formless took shape and form." The Indian sage . . . had first to sweep away all that which had been produced, even the gods themselves, and to his gaze there remained but the neuter essence, Brahman, from which all things issued forth, and into which all things resolve themselves. There remained also the Self, the Soul, the *Ātman* of man. There was but one step further to be reached by the Indian mind, and that was taken when all duality vanished, and the Brahman became the Great Self, the "Paramātman," the Universal Self, into which was merged the *Ātman*, or Self, of man."⁴

In other words, the Hindu conception of the soul approached that of the modern monists (see, further, art. *ĀTMAN*).

2. Upanisads.—In the pre-Buddhist Upanisads the soul is supposed to exist inside each human body and to be the one sufficient explanation of life and motion. In the living body it dwells ordinarily in a cavity in the heart, and is of the size of a grain of rice or barley. In later speculation it grows to the size of a thumb and is, therefore, called 'the dwarf.' In shape it is like a man. Beliefs varied as to its appearance and as to its composition. One passage says that it consists of consciousness, mind, breath; eye and ears; earth, water, fire, and ether; heat and no heat; desire and no desire; anger and no anger; law and no law—in a word, of all things.⁵ Thus the soul was conceived as material, although it also possessed selected mental qualities. It could quit the body in dream sleep, and certain diseases were supposed

² *Ib.* x. xiv. 7.

³ E. W. Frazer, *Literary History of India*, London, 1898, pp. 86, 88.

⁴ Frazer, *op. cit.* p. 105 f.

⁵ *Bṛhadāraṇyaka Upan.*, iv. iv. 5; see also iii. vii. 14-22. Speculation in the Upanisad times was very free and it veered round even to the denial of the soul as a substance (R. G. Bhandarkar, *Vaiṣṇavism, Sāivism and Minor Religious Systems*, Strassburg, 1918, p. 2). Buddhism also practically denied the existence of the human soul as a substance, as Bhandarkar points out (p. 2). But in the end it taught a very different doctrine (see below).

⁵ In Rigveda, x. lviii. 8, the souls of the departed are said to go to the sun and to Uṣas, the dawn.

to be due to its having escaped from the body, so that charms had to be employed to bring it back. In some passages the soul is supposed to have existed before birth in some other body, and opinions varied as to how it got into its first body. We also find a curious speculation, with three variants,¹ on the transfer of the soul by generation, through the seed. One of these is the theory that certain human souls, on going to the moon, become the food of the gods as a consequence of their good deeds. When the efficacy of those deeds is exhausted, they pass from the gods to the ether, from the ether into the air, from that into the rain, thence on to the earth, and from it into plants which become food to males, whence they pass into females. At an ordinary man's death the top part of the heart is lighted up, and the soul, guided by that light, departs from the heart into the eye, and through it into some other body, exalted or not according to deeds done in the body which it is leaving. The soul of the man whose cravings have ceased goes to Brahman. The Upaniṣads are almost unanimous that the soul will not obtain release from re-birth either by sacrifice or by penance.

¹It must be by a sort of theosophic or animistic insight, by the perception, the absolute knowledge and certainty, that one's own soul is identical with the Great Soul, the only permanent reality, the ultimate basis and cause of all phenomena.²

In the *Kauṣītaki Brāhmaṇa Upan.* the belief in transmigration is combined with a notion that souls go first to the moon. All who depart from this world go to the moon. In the bright fortnight it is gladdened by their spirits, but in the dark one it sends them forth into new births. It is the door of heaven. Him who rejects it it sends on beyond, but whoso rejects it not, him it rains down upon this world; and here he is born as a worm, a grasshopper, fish, bird, lion, boar, serpent, tiger, or a man or some other creature, according to his deeds or his knowledge.³

3. Jainism.—The philosophy of Jainism, probably the oldest living Indian creed, defines the universe as not created and not controlled by any individual god. As substance it is without beginning and without end, but it is not homogeneous, since it consists of substance (*dravya*), which is either *jīva*, 'alive,' or *ajīva*, which may be translated 'inorganic.' There are five kinds of substance not alive, viz. matter, space, the two ethers, and (figuratively) time; but living beings are compounded of two kinds of substance, viz. soul and body, and the Jain belief is that nearly everything, even plants, particles of earth, fire, and wind, is possessed of life. In other words, the Jain philosophy is pure animism. *Jīva* is sometimes translated 'living being' and sometimes 'soul,' yet it is not one individual universal world-soul, but a mass of mutually exclusive, individual souls, and every soul having attained its highest state (*mokṣa*) is styled *paramātmān*, or 'great soul,' a term only very roughly translatable by the word 'god.' Jainism thus fails to draw any definable distinction between 'life' and the soul. *Dravya* may be defined from several points of view. From the standpoint of its own unchanging nature it is that which ever exists. For example, the soul now embodied as a cat may in its next life be incarnated as a dog, man, insect, or what not, yet remain, in spite of all these changes, the same individual soul all the time; and thus, while the body is merely a vast multitude of cells which come and go, the soul is a homogeneous substance whose qualities (*guṇa*) do not come and go, and which is always

itself, never becoming or merging into another, though in their modifications (*pariyāya*) the *guṇas* are ceaselessly changing. The soul in its pure state is invisible, but, when compounded in a subtle way with visible, tangible matter, it is rendered visible, and men, angels, etc., are examples of it in this impure state. We do not, however, know when these conceptions were formed by Jainism, and we cannot say that Jain philosophy evolved them unaided. They were apparently borrowed from the common stock of ideas current in India and were modified by the Jains in their own way. The earliest Indo-Aryan conception of life as a series of re-births was far more primitive, and was developed not on metaphysical lines but for ethical purposes.

4. Buddhism.—Buddhism, as an organized creed, has disappeared from India, but the ideas which it adopted or promulgated are still living and form one of the sources from which the Indian beliefs as to the origin of life are drawn. For instance, the Buddhist teaching that all life is due to a common source appears to find expression in the legend that with Buddha himself was born his horse, as well as his wife, his companions, and even the Mahābodhi tree and the four treasure-vases. These are the seven that were born simultaneously, but to make up seven one must count the four vases as one. Another legend declares that with the Bodhisattva were born 500 Śākya princes, 500 maidens, 500 servants, 500 horses, 500 elephants, and as many treasures came to light.¹ A very similar conception has survived in modern India.

Thus in the legend of Gūga, his mother is destined never to bear a son, but Bhagwān rubs some of the dirt out of his head and gives it to her. She divides it among a Brāhmaṇa woman, another of the lowest caste, a gray mare, and herself; and all four females, hitherto barren, become fruitful. In another cult-legend a Brāhmaṇa gives a Rāja three grains of rice, and each of his three queens swallows one and bears a son. A stock incident in folk-tales is the gift by a *jaṭī* of a barleycorn to a barren widow whereby she conceives. For the Buddhist doctrines see art. DEATH AND DISPOSAL OF THE DEAD (Buddhist).

5. Mediæval.—Three or four centuries before the Christian era a religion with Vāsudeva as its central figure and a school of his followers known as Bhāgavata was founded in India. According to the *Mahābhārata*, the sun is the gate, and after entrance those who are free from sin, all their material impurities being burnt, remain as atoms in him (it); then, released from him, they enter the Aniruddha (self-consciousness) form and, becoming mind, they enter the Pradyumna (mind) form. Leaving this, they enter that of Saṃkarṣaṇa, i.e. the form of the individual soul (*jīva*), and afterwards, freed from the three *guṇas*, they enter the Supreme Soul, who is everywhere and who is Vāsudeva, 'he who covers the whole world and is the resting-place (*adhivāsa*) of all beings.' Vāsudeva next became identified with Kṛṣṇa and Viṣṇu, and finally with Nārāyaṇa; and the Bhakti system or Ekāntika Dharma (monotheism) was attached to the Vaiṣṇava creeds. Its earliest exposition in the *Bhāgavad-Gītā* teaches that they who know the incarnations and the deeds of Bhagavat are released from the body and not born again. The discipline prescribed, however, for the attainment of the Brahmā condition is religious, not merely moral, and this differentiates the Bhakti doctrine from that of the *Kaṭha* and *Bṛhadāraṇyaka Upaniṣads*. Mention is made of two paths, and those who die while the sun is in his northern course (Uttarāyana) go to Brahmā, while those who die while he is in his southern course go to the orb of the moon, from which the soul returns. Again, the whole

creation (Sahsāra) is compared to a *pipal*-tree, which is to be cut by the weapon of indifference or detachment. When a soul departs from a body it takes away the *indriyas* (senses), of which *manas* (mind) is the sixth, and brings them in when it assumes another body. The soul itself is a part of Bhagavat and is eternal. By becoming *soma* (hemp) Bhagavat raises all herbs. By becoming fire he aids digestion. There are two souls in the world, one changeable, the other not, and besides these there is another, the highest or Paramātmān, who, as the unchangeable lord, supports all three worlds after entering into them. Hence it appears that it is the animal soul that goes out of the body along with the six senses and enters new ones in that condition.

6. *Modern Aryan*.—The multiplicity and, it must be confessed, inconsistencies of the older doctrines current in India regarding life and death are reflected in the countless beliefs now existing, but through all the bewildering variations which prevail a few dominant conceptions can generally be traced, and a remote and savage tribe will be found professing a creed which is based on the fundamentals of orthodox Hinduism. Even the regular terminology will reappear in forms more or less mutilated. So numerous are these beliefs that only a few of them can be given.

The basic idea of life in all India is that it is indestructible. This leads to a readiness to take life which to the European appears callous and brutal indifference to it. Thus in 1841 S. C. Macpherson was deputed to Ganjam in Madras to suppress female infanticide and human sacrifices among the Khonds, a tribe which believed that souls return to human form in the same family, but that they do not do so if the naming ceremony on the 7th day after birth has not been performed. As the Khonds ardently desire sons, they saw in this belief a perfect justification for female infanticide as a means of reducing the number of female souls to be re-born in the family.¹ A very similar belief prevails in the Panjāb, where a girl child is or was killed with rites and an incantation bidding her 'send a brother instead.' Exchange is not murder.

How far this and similar beliefs account for the reluctance to cremate young children does not appear. But the souls of those dying after infancy or childhood are very widely believed to pass into another world, at least for a term. Thus in the Panjāb the Kanets of the Kulī valley sometimes after a cremation make a small foot-bridge over running water in the neighbourhood to help the passing of the soul of the deceased.² Yet the same people practise a form of divination, which is very widely spread, to ascertain, immediately after death, what animal the soul will enter or has entered.

This belief is perfectly consistent with a belief in metempsychosis and yet compatible with the worship or propitiation of the dead, who may be benevolent or the reverse. Among the kindly dead may be numbered the spirits of ancestors, of pure ones (*siddhs*), and saints, of dutiful widows who have committed *sati*, and so on. But the propitiation of the malevolent dead is much more necessary, and therefore prevalent. For example, in the Kumaon division of the United Provinces the lowest class, the Doms, and even the lower classes of Brāhmans, the Khas Brāhmans and Rajputs—in fact, the bulk of the population—believe in the powers of the malevolent or vindictive dead. Thus, if a man has two wives and drives one to suicide, any disease afflicting the other wife's children is

ascribed to her ghost, which must be propitiated, and gradually comes to be treated as a god. If a man is killed in a quarrel, every misfortune befalling his slayer or his children is ascribed to the ghost.

There is reason to believe that the emotion caused by the dread of the effects of *karma* is much stronger in the hills than in the plains. In particular dying in debt is dreaded as the debtor will, it is believed, be re-born as the ox or pony of his creditor. If a man's son die it is believed that he was his father's creditor in a former life, and the debt being now extinguished there is no necessity of his further life.³ The latter belief is said to provide a great consolation, since the death of an ordinary son is a much more serious matter.

The certainty of the operation of *karma* is not without considerable effect on practical morality.¹ It is automatic, so that specific condemnation by Parmeswar (God) of any sin is hardly required. Similarly, the idea of forgiveness is absolutely wanting; evil done may be outweighed by meritorious deeds only so far as to ensure a better existence in the future, but it is not effaced, and must be atoned for. As to the objection raised to the theory of transmigration—that it does not follow from it that the soul remembers previous existences—such a consciousness is recognized in the case of great ascetics; and even a person born in a degraded position knows that the reason for this is his wrong-doing in a previous existence. The nature of the next incarnation can also be divined, when a man has died, by placing ashes from a potter's kiln in a shallow vessel and smoothing them. Next morning they will be found marked with human foot-prints, claws, wavy lines, and so on, according as the soul is to be re-born as a man, a bird, a tree, etc. To ensure that they shall be married to each other in a future existence, a man and his wife bathe together in the Ganges with their clothes tied together. The important difference in the teachings of theoretical Hinduism and popular religion in regard to heaven and hell is that the former declares that there are transitory stages of existence in the chain of transmigration, while in the latter there is generally an idea that the soul, when sufficiently purified, goes to dwell for ever in heaven, which is regarded as a place where the soul will enjoy material comforts. In popular Hinduism there is no idea of absorption in the deity or of recurring cycles of existence and non-existence.²

The conception of life as something impalpable, yet apparently material and certainly transferable, is extremely common in India, and may, indeed, be described as the most popular. Thus a woman who has lost a child will bathe above its grave, pouring water over herself through a sieve, in order to ensure a fresh conception. For the same reason very young children are sometimes buried under the threshold, so that the life may come back again. This idea leads to the popular belief that life may be stolen, and so on the night of the *Divāli*, or feast of lamps, male children are occasionally stolen and killed so that a barren woman may bathe over the body and conceive a son of her own.³ As in other ritual murders, it is desirable to kill the child with as much pain as possible. And during the *śrāddhas*, the ancestral fortnight when the sun is in Virgo (*Kanyā*), occurs the *Kanāgatān lārān*, or 'fighting in *Kanyāgat*,' also termed *sāñjhi pāwan* ('sharing with others'), in which women of good Hindu caste, even Khatrias and Brāhmans, of the Central Panjāb, take part. On the first day of the *śrāddhas*, the goddess Lakṣmī's image in the house or lane is painted with cow-dung, and the women belonging to it go out early in the day to a bathing-place, reviling on the way

³ No one would think a female soul worth stealing, although a girl's soul is expected to return in a boy.

women who are known to have sons. This leads to tussles in which garments are often rent to pieces, but men must not interfere. The belief is that by cursing the sons of others the female attracts the male souls to herself through the intervention of the goddess, whose image is worshipped daily and thrown into the river at the end of the fortnight which is held sacred to the spouse of Siva the destroyer as well as to the dead. Married women are also cursed to become widows, in order to prolong one's own wedlock. On the *Amāwas* day regular fights take place between large gangs of women on their way to the river, and the affair is treated as a festival.

LIFE AND DEATH (Iranian).—With their marked tendency towards optimism, the Iranians loved life (*anghu*, *gaya*, *gyātu*, *jīti*, *ustāna*) and abhorred death (*mahrka*, *merebyu*); the one is the creation of Ahura Mazda, the other of Angra Mainyu (Ys. xxx. 4), who have been at variance since 'the beginning of life' (Ys. xlv. 2). Not only was life first created by Ahura Mazda (Ys. xliii. 5, xlv. 6, xlviii. 6), and not only did he give life to the body (Ys. xxxi. 11), so that Zarathushtra asks him how the 'first [*i.e.* the earthly] life' is to be (Ys. xxviii. 11; cf. xxxiii. 1), but he is 'the lord of the deeds of life' (Ys. xxxi. 8), and from him come the joys of life (Ys. xxxiii. 10; cf. xxxiv. 14). The Amesha Spentas (*g.v.*) give aid to the life of man (Ys. xxx. 7), so that Zarathushtra fittingly presents the 'life of his own body' as a 'holy offering' (*rātā*) to Ahura Mazda and Asha (Ys. xxxiii. 14). On the other hand, the demon Wrath (Aeshma) injures the life of man, and the wicked and unbelievers mar it (Ys. xxx. 6, xxxii. 9, 11).

Life in this world is not all; indeed, though Zoroastrianism teaches that all good things are to be enjoyed in full measure, life here below is but a preparation for the richer life beyond. For this reason Zarathushtra asks from Vohu Manah and Asha the 'words of life' (*uxdā anghēus*), while the 'right ways of weal' (*erezūš savanghō padō*) are to be learned from the religious teacher in the present life (Ys. xlv. 8, xliii. 3).

If life on earth is the 'first life,' the 'second life' is in heaven, and that life the *dregvant* (the 'man of the Lie,' 'the perpetual term for those who take the devil's side in human life' [J. H. Moulton, *Early Zoroastrianism*, London, 1913, pp. 146, 131]) seeks to destroy (Ys. xlv. 1, xlv. 11, liii. 6). Heaven is the place of 'long life' (Ys. xliii. 2, 13). Most significant of all is the presence, among the Amesha Spentas, of the godling Immortality, Ameretāt (Ys. xlv. 17, xlv. 5, 10, xlvii. 1, li. 7), for in heaven life is to be for eternity (Ys. xlv. 7).

When we turn to the Younger Avesta, we find the outlook upon life unchanged. Long life in this world is a blessing and an object of prayer (Ys. lxviii. 11; *Afrinakān*, i. 18), while both Ahura Mazda and the Gāthas are honoured with life and body (Ys. v. 3, lv. 1; cf. lviii. 3). Life is twofold: 'this' or 'the corporeal' (lit. 'osseous'), and 'the spiritual' (*ahmīscā ahuyē manahyāscā*, Ys. xl. 2, xli. 6; *waēbya . . . ahubyā . . . aheca anghēus yō astvatō yasca asti manahyō*, Ys. lvii. 25), so that prayer is made to Ahura Mazda to be 'life and corporeality for both lives' (*gayascā asten-tāoscā . . . ubōyō anghvō*, Ys. xli. 3). The 'best life' (*vaēhīsta ahu*, Ys. ix. 19, and often) is actually a synonym for 'heaven,' as the 'worst life' (*acišta ahu*, e.g. *Vend.* iii. 35) is for 'hell,' and this concept still survives in the ordinary Persian term for 'heaven,' *bīhīšt*. The 'best of the best life' is the 'righteousness of Asha' (*Vend.* xviii. 6); and in the time of the final Saoshyant, Astvat-ereta, men will

live for ever, for there shall be no more death (Ys. xix. 89), even as was the case in the happy days of Yima's reign (Ys. ix. 5; Yt. xix. 33; *Vend.* ii. 5).

In the Gāthas death is seldom mentioned. The whole stress of Zarathushtra is on life, to be devoted to overcoming the powers of evil and gaining the eternal joys of heaven. Even the wicked do not die; they are damned to the everlasting torments of hell (Ys. xlv. 7, xlv. 11). In the Younger Avesta, on the contrary, death is an important feature. We need not detail the corruption wrought by the 'corpse demon' (Nasu; cf. Gr. *nekus*, 'corpse'), which forms the main theme of *Vend.* v.-xii. (see also art. DEATH AND DISPOSAL OF THE DEAD [Parsi]), and we need only mention that a standing epithet of Haoma (*g.v.*) is *dūraosa* ('from whom destruction [especially death] remains afar,' Ys. ix. 2, 19, x. 21, xi. 3, 10, xxxii. 14 [on the latter passage see Moulton, 71f., 358]). Death is one of the worst of evils (Yt. iii. 7-12; cf. ix. 10), and the first to stay it was Thrīta (*Vend.* xx. 2), while it is the Druj (the Lie, the negation of the truth of Ahura Mazda [?]) who destroys life (Ys. lvii. 15), 'life' here probably being meant in the eschatological sense. As we have seen, in the blessed future there will be no death, but in this present world only the wicked forget death; the man of piety prepares for it (*Agemadaecā*, 32ff.), for it is inevitable (*ib.* 53ff.).

According to the Pahlavi *Dīnā-ī Mānōg-ī Xraē* (viii. 20), which is not strictly orthodox, being markedly fatalistic in tone (cf. art. FATE [Iranian]), the seven planets 'pervert every creature and creation, and deliver them up to death and every evil.' According to the *Bundahīšn* (i. 7; cf. xxx. 20ff.), the creatures of Ahriman will perish at the Last Day, when the heavens and the earth shall be created anew and when the creation of Ahura Mazda shall reign supreme, after wicked men shall have been purified by the flood of molten metal which at that time will cover the world.

Of mythological concepts of life and death there is scant trace in Zoroastrianism, the sole allusion, evidently borrowed from a Semitic source, being to the tree Gōkart (the Gaokerena of Yt. i. 30, *Vend.* xx. 4, etc.), or white Hōm, which is 'the counteractor of decrepitude, the reviver of the dead, and the immortalizer of the living' (*Selections of Zāt-Sparam*, viii. 5), and from which, at the *ānkarāstōras*, is obtained one of the components of the food which will give undying life to all (*Bundahīšn*, xxx. 25; cf. ix. 6, xviii. 1, and see F. Windischmann, *Zor. Studien*, Berlin, 1863, pp. 169, 253; F. Spiegel, *Erän. Alterthumskunde*, Leipzig, 1871-78, i. 464ff.).

LOUIS H. GRAY.

LIFE AND DEATH (Japanese).—As might be expected, the early Japanese conceived of life and death as being entirely dependent on breathing. The word for 'to live,' *iku*, is associated with *iki*, 'breath'; and *i-no-chi*, the expression for life and vitality, is believed to mean *iki-no-uchi*, 'during breathing,' or *iki-no-michi*, 'the way of respiration.' Similarly, the word for 'to die,' *shinu*, seems to mean *shi-inu*, 'the wind goes' (a derivation of the word from *sugi-inu*, 'to pass away,' is disputable). These very ancient words are still in common use, though the people think little of their etymology.

The mythology opens with the primal power of production. Three deities are said to have sprung out of the primeval chaos. One of these is the Eternal-Ruling (Ame-no-minaka-nushi), and the

other two are the High-Producing (Taka-mimusubi) and the Divine- (or Mysterious-) Producing (Kamimimusubi). The last two are identified with the Divinity-Male (Kami-ro-gi) and the Divinity-Female (Kami-ro-mi), the terminations *gi* and *mi* representing 'male' and 'female' respectively. It has not unreasonably been suspected that this triad may have been borrowed from the Chinese ideas of the primal entity and the two principles, positive and negative, flowing out of it; but the Divinity-Male and the Divinity-Female are constantly invoked in the ritual or prayers, some of which are of remote origin. It is undeniable that in the pristine faith of the Japanese the generative powers played a great part, but these divinities themselves were thought to have been generated spontaneously, and the first pair are followed by a series of similar deities. They were all generated independently from one another and in turn disappeared or hid themselves.

The last of these pairs are the Male-Who-Invites (Izana-gi) and the Female-Who-Invites (Izana-mi), who are doubtless counterparts of the first pair. They were united in marriage, by order of the celestial deities, and brought forth the islands which make up the Japanese archipelago, and nearly all sorts of elements and objects (see, further, art. COSMOGONY AND COSMOLOGY [Japanese]). The stories of these births show that many objects of nature were believed to be animated, as was, in fact, whatever manifested any power, good or evil, on men. The female deity becomes ill from bearing fire as a child and consequently dies. This death, however, is not to be taken as a natural death in our modern sense of the word. After her death the goddess is found in Yomotsu-kuni, i.e. 'the dark country,' which is thought to be in a subterranean region. The male deity visits her there and, against her will, looks on her body by torchlight. Enraged at his importunity, she, accompanied by her attendants of the darkness, pursues him, in order to catch him and to make him a member of the realm where death and darkness rule. Their dialogue on the boundary of the world and the dark region tells of the life and death of human beings. The female deity, now the genius of death, threatens the male that she will take the lives of one thousand men every day, while he expresses his counter-determination that he will give birth to one thousand and five hundred men a day. Thus we see how the pair of generative powers were divided and metamorphosed into the powers of life and death. A similar antithesis is attributed to the Heaven-Shining (Ama-terasu), the goddess of light and culture, and the Swift-Impetuous (Susa-no-wo), the god of darkness and outrage. These two are said to have been born of the Male-Who-Invites, either alone or in union with his consort. These divisions, however, are not thoroughgoing. Usually, in popular belief, life is ascribed to the power of the Producing deity or deities, and death to the power of evil spirits, who are indefinite in their personalities.

The stories told of the deities, of their generation and death, and of life and death in general, show neither definite sequence nor unity of conception. They are coloured by ethnological incidents, and are also possibly mingled with foreign elements. Still it is certain that the pristine beliefs contained the ideas of spontaneous generation and generative reproduction, on the one side, and the belief in unnatural death, caused by evil forces, on the other. This idea of death as the violent cessation of life survived the belief in spontaneous generation, and still remains in the observances of purity, which are intended as a means of avoiding the contagion of pollution or to prevent evil influences of all kinds.

Life is coeval with breathing, but vitality endures longer and acts beyond bodily limitations. Soul, the source of vitality, is considered to be a thing precious and mysterious like a jewel or ball. It is called *tama* or *tama-shii*, 'subtle aerial ball.' But it is not always a unity or a homogeneous whole, for double manifestations of it, or double entities, are spoken of. They are either *nigi-tama* and *ara-tama* or *saki-mitama* and *kushi-mitama*. The *nigi*, 'mild,' 'quiet,' 'refined,' is contrasted with the *ara*, which is 'wild,' 'raging,' 'raw.' Similarly, *saki* means 'happy,' 'flourishing,' while *kushi* means 'wonderful,' 'hidden,' or 'hideous.' The latter set is believed to be the two aspects of the *ara-tama*, the active side of the soul, but in fact the relation between these two sets is not clearly defined. The existence of these double souls in every man is also obscure. We know only that in some cases one of them appears, even to the astonishment of the possessor. Whether or not the double souls were borrowed from the Chinese conception of souls, aerial and terrestrial, or of the two principles, positive and negative, is uncertain.

The soul is sometimes personified as, e.g., Uga-no-mitama, the spirit of vegetable production, or as Iki-kuni-dama, the living-land-soul. In post-Buddhist ages the souls of trees, rocks, springs, etc. are more in vogue. They appear in human form, but they are distinguished from human souls, being specially named the *sei*, or 'essence.' The double souls were almost forgotten, having been overshadowed by Buddhist ideas, and they were revived by the Shintoists of the 18th cent., but with little influence upon popular belief. Buddhism teaches that there is only one soul to one living being.

As to future conditions, there is a kind of heavenly world, Takama-no-hara ('Plain of High Heaven'), where celestial deities reign. Yomotsu-kuni, mentioned above, is the opposite pole. Besides these, there are two worlds beyond this, Hi-no-waka-miya ('Solar Young Palace') and Toko-yo ('Eternal World'). The former is mentioned only as the abode of the Male-Who-Invites, and it is sometimes explained as meaning the shrine marking the place of burial. The latter meant any place beyond the sea. Moreover, we are not told whether a deity, when he hides himself, or a human being, when he dies, is destined to be born in one of these worlds beyond. Nothing definite or detailed is told of these conditions. A definite systematization of the eschatology, after the models of Buddhist ideas, was made only by the later Shintoists.

The Japanese remained in rather primitive conditions as to the conceptions of life and death, until Buddhism introduced an elaborate system of ideas in the 6th cent. A.D. Contact with the civilization of the Asiatic continent and the importation of Confucianism with its writings may have influenced Japanese ideas in some respects, as pointed out above. But these influences did not materially change the ideas, because Confucianism was not particular in such matters. On the other hand, the Buddhist influence upon the people of the East consisted chiefly in its elaborate eschatological doctrines. It taught the composite nature of human life, made up of the five components (*skandha*), in order to convince the people of its impermanency. Life, thus made up, is only a knot in a long chain of causation, of deeds and their fruits (*karma*), which stretches out endlessly before and behind. Along this chain our souls have passed through all possible forms of existence, and will continue to transmigrate further on. There are five or six courses (*gati*) of transmigration, ranging from the highest heaven of pleasurable life to the nethermost inferno; and these are again classified accord-

ing to the three conditions of existence (*dhava*), which are subdivided into twenty-five. Beyond these courses and conditions there are the lands of eternal bliss, prepared by various Buddhas to receive believers. Every one may be born in one of these, according to his faith and merit. The Tūṣitā heaven of Maitreya and the Sukhāvātī of Amitābha were the most popular Buddha-lands (*keṣetra*) in the Buddhism brought to the East. There the soul, no longer subject to causation and transmigration, will enjoy full communion with the saints, and may come back to the earthly worlds in order to save relatives and friends. We can imagine how wonderful and attractive these teachings must have appeared to the people, simple and credulous as they were. Thus, an inscription dated A.D. 622 expresses a belief in *karma* and a devout wish to be taken to the Land of Purity by the grace of Buddha. It is questionable how much impression these ideas left upon the mind of the people at large a hundred years after their introduction; but the change and widening of thought are undeniable.

Steadily progressive Buddhist influence, first among the higher classes and then among the lower, gradually suppressed the old national ideas as well as the Confucianist conceptions of life and death. The romances, stories, and lyrical poems of the 10th cent. and later abound in ideas of *karma*, transmigration, and birth in Buddha-lands. Those ideas and beliefs became and remain to-day the most important factors of popular beliefs, in spite of hostile endeavours made by the Confucianists to depose them, ever since the 17th century. They can be detected in many songs sung by street musicians, and the words alluding to them are used in daily affairs, consciously or unconsciously.

Nevertheless, the native ideas have never died out, but have remained rather as a kind of matrix into which the adopted conceptions have been laid. The national beliefs, so to speak, look upon the sun as the source of all vitality. But here the sun is not exactly the goddess of light (*Ama-terasu*) of the mythology. It is sexless and without any other attributes than that of the life-giver. It is invoked as the Great Divinity (*Oho-mi-kami*) or the August Heavenly Way (*O-tentō-sama*), and is worshipped every morning by some, or on New Year's morning and at sunset on the equinoxes by the majority. They breathe deep breaths facing the sun, meaning to inhale thereby the vital essence (*yōki*) emanating from it. At the same time prayers, either Shintoist or Buddhist, are uttered. The power opposing life is darkness, which, however, means not merely absence of light, but an evil power or pollution (*kegare* or *yinlei*), the cause of ill and death.

This belief in the sun as the life-giver is certainly a survival of that in the Producing-Divinity, who follows the Heaven-Shining goddess as her nomenon. The ideas and practices have been influenced by the Buddhist cult of Vairocana (the Great Illuminator) and also by the Confucian dualism of the *yin* and *yang*, but we can see here a tendency to continue primitive beliefs.

These ideas have been systematized in recent times into a cult by some Shintō reformers. One section of Buddhists favours this cult, while the other disregards it, though without opposing it. To the former belong the Shingon sect, the most Hinduistic form of Buddhism, which has tried to amalgamate Shintō, and the Nichiren sect, the most Japanized Buddhism. To the latter category belong the Jōdo and the Shin sects, the Buddhist Pietists and Puritans, and the Zen sect, the school of meditation and introspection.

On an average, the prevailing conceptions of the modern Japanese are based on the Buddhistic

Shintō. *Karma* and fate are still believed in by many, but transmigration is not strictly adhered to in the details of its teaching. The majority, in fact, think little of life and of its origin; but evils and diseases are, in many cases and by many people, ascribed to spirits or devils indiscriminately. Among the educated classes and educational circles agnosticism, so common to the Japanese mind and to Confucianists in this connexion, is a recognized principle. Young Buddhists, who are now eagerly engaged in reconstructing their faith in Buddha, are not strict in the doctrines of *karma* and transmigration.

LIFE AND DEATH (Jewish).—Optimism is the keynote of post-Biblical Judaism. Everything that God does is for the best (*Berakhoth*, 60b), and this life is essentially good, to be contemplated with joy and gratitude. 'For every breath that a man draws,' say the Rabbis, 'let him praise God' (*Midr. Rab. to Gn 27*). Yet life is not an end in itself, for it must be lived under a sense of responsibility to the Giver, and all its worth resides in this aspect of it. At death a man loses the opportunity of obeying the Torah and the Commandments (*Shab. 30a*). 'Morality,' says M. Lazarus, summing up the teaching of Judaism on this subject, 'is man's vocation' (*Ethics of Judaism*, § 116), and the Rabbinical legend tells of God's saying at Sinai: 'If Israel accept not the Commandments, it is better that the earth revert to chaos' (*Shab. 88a*). 'The world,' say the Rabbis elsewhere, 'stands upon three pillars: the Torah, Worship, and Benevolence' (*Aboth*, i. 2); or, according to another maxim, 'upon Justice, Truth, and Peace' (*ib. i. 18*). 'The Torah is the medicine of life' (*Yoma*, 72b); in other words, life is made sane and efficient by religion. God, according to the Talmudic doctors, says to Israel: 'My light, the Torah, is in thy hands; thy light, the soul, is in Mine. Tend My light, and I will tend thine' (*Midr. Rab. to Lv 24*). The supreme hope of the Jew is to behold the Kingdom of God established on earth, and thus, in a notable passage of the Liturgy for the New Year Festival, he prays:

'Put Thy fear, O Lord God, we beseech Thee, upon all Thy works, so that all mankind may bow before Thee, and become one band united to do Thy will with a perfect heart; for we know, O Lord, that dominion is Thine, and that strength is in Thy right hand. And so give glory, O Lord, to Thy people, hope to those that fear Thee, and the opening of the mouth to those that trust in Thee. For then the righteous shall see and be glad, and iniquity shall shut its mouth, and all wickedness shall be wholly consumed like smoke, for the proud rule of sin shall pass away from off the earth. Then every creature shall own Thee as its Creator, and everything that hath breath shall cry, The Lord, the God of Israel, reigneth, and His dominion ruleth over all' (cf. *Sir 36*ff.).

But, though the true life is the life of service, it must be glad service, for 'the view of life taught by Judaism is serious, but cheerful' (Lazarus, § 253). The Shekinah (the Divine Presence), says the Talmud, does not come in response either to grief or to levity, but to glad performance of duty (*Shab. 30b*). This is the essence of Jewish doctrine on the subject; neither asceticism nor hedonism, but joy springing from and tempered by the religious idea, is the characteristic Jewish temper. 'There should be no unrestrained laughter in this world' (*Ber. 31a*). The history of Israel, with all its tragedy, is sufficient to forbid such mirth; and the pious Jew denies himself many a pleasure in memory of desolate Jerusalem. Moreover, unlimited enjoyment is incompatible with a religious outlook on life; the good man will conceive of himself as living under a Divine law, with which

his pleasures must be made conformable. On the other hand, the ascetic idea is alien to the true Jewish spirit. The desire for happiness is no evil thing, and its indulgence, under right conditions, is commendable. Even the impulses that make for physical pleasure are the Divine handiwork, and to gratify them is a duty; without them life would be impossible. 'If it were not for desire, the world could not stand; a man would not take a wife, nor build a house, nor plant a vineyard' (*Midr. Tehillim*, ed. S. Buber, Wilna, 1891, to Ps 37). But indulgence of these lower instincts must have as its motive, not the satisfaction which it yields, but the desire to promote the Divine purpose for which they were created. That indulgence is a duty, but a religious duty.

Thus the Rabbinical law, following the general rule laid down in *Ber. 35a*, prescribes a number of prayers to be recited by the Jew on indulging in various pleasures more or less sensuous in character—on partaking, *e.g.*, of various kinds of food, on inhaling the scent of a flower, on looking upon the sea, on beholding a rainbow, on taking possession of a new house, and on wearing new clothes for the first time. By such means physical gratification, while sanctioned, is also sanctified. The tendency to self-indulgence is not rebuked, but restrained; natural desire is tempered, not extirpated or suppressed. 'Material comfort and æsthetical pleasures are regarded as integral parts of an ethically sound life' (Lazarus, § 235). It is a Jewish boast that the Hebrew language is particularly rich in words connoting joy. The Rabbis count ten such synonyms (*Abot de Rabbi Nathan* [ed. S. Schechter, Vienna, 1887], 52a). The Feast of Tabernacles is called the 'season of our gladness' *par excellence* (see *Authorised Prayer Book*, ed. S. Singer, p. 228); 'it would seem as though the Festival was instituted for the specific purpose of gladness, as though the religiousness of joy was to be indicated by ordaining a special celebration in its honour' (M. Joseph, *Judaism as Creed and Life*², p. 185). Joy is itself service; but it must be transmuted into service by being purified. Pleasure must be dignified by piety and self-restraint. At meals, the Rabbis teach, words of Torah must be spoken, otherwise it is as if the assembled company ate of the sacrifices of the dead (*Abot*, iii. 3). A man should eat only when he is hungry, and drink only when he is thirsty, and always in moderation (*Hullin*, 84a, b). The Talmud inveighs against gluttony and luxury (*Pesachim*, 114a). In fine, Judaism commends the golden mean between unbridled self-gratification and extreme self-denial. Indulgence and renunciation must be allies, not antagonists; something of both must go to the making of the daily life; and each must find its justification in the higher utility. 'Here,' says Moses Luzatto (18th cent.), 'is the true rule on this subject:—The worldly pleasures which a man needs not it is his duty to eschew; but those which, for one reason or another, he does need he cannot renounce without sin. This is the safe rule. But its application to the various circumstances of life must be left to the intelligence and the conscience' (*Me'orai Yesharim*, ch. 13). A far older teacher, Jehudah Halevi (12th cent.), aptly says: 'Our law, as a whole, is divided between fear, love, and joy, by each of which one can approach God. Thy contrition on a fast day does nothing to bring thee nearer to God than thy joy on the Sabbath and holy days, if it [the latter] is the outcome of a devout heart' (*Kitāb al-Khazari*, tr. H. Hirschfeld, London, 1905, p. 113).

It is due partly to the difficulty of defining the *via media* of moderation, and partly to the sorrowful experiences of the Jewish race, that occasionally temperance has overstepped the safe line, and lost itself in austerity. The Talmud tells of a Rabbi (Ze'ra) who fasted a hundred days (*Baba mesia*, 85a), and of another (Mar ben Rabina) who fasted practically all the year round (*Pes.* 63b). There have been Jewish sects, like the Essenes and the Karaites (*q.v.*), which have been marked more or less strongly by austere practices. In Judaism, as in other religions, mysticism has had contempt for the world and its joys as its corollary. The disciples of Hillel and Shammai even formally discussed the question whether life is worth living (*Erubin*, 13b). This uncertainty is often visible. The devotee who gives himself to fasting is called, now a saint, and now a sinner (*Ta'anith*, 11a, 22b); a man must die for the Torah, and yet he must not (*Baba kama*, 61a; *Erubin*, 6b); to sleep on the earth is commended in one place (*Baraita* of R. Meir), and discouraged in another (*Ber.* 62b). But these contradictions are either passing or incidental phases of Jewish thought; a firmer note is the rule, and the ascetic and the

pessimist are only by-products of Judaism. It is a bad sign, say the Rabbis, to despise life (*Tana d'be Eliyahu*, ch. 14); and they account for the sin-offering brought by the Nazirite (Nu 6¹⁴) by contending that his very abstinence from strong drink was a sin (*Ta'anith*, 11a).

'According to our view,' says Jehudah Halevi (*op. cit.* p. 135), 'a servant of God is not one who detaches himself from the world, or hates life, which is one of God's bounties. On the contrary, he loves the world and a long life because it affords him the opportunity of deserving the world to come.'

According to a striking Talmudic utterance, in the next world men will be called to account for the lawful pleasures which they have refused in this life (*Jer. Kiddushin*, ch. 4). And the real Jew speaks in these maxims. Judaism fixes the thoughts of its adherents upon the future world, but not to the exclusion of this world. 'It has revealed heaven to men, but earth as well' (M. Gudemann, *Das Judenthum*, Vienna, 1902, p. 56). It has no sympathy with self-mortification for its own sake, no commendation for the temper that voluntarily courts pain and abridges life for the greater glory of God. Suffering has to be patiently endured when it comes; it has even to be welcomed as the seed of moral regeneration. 'With thy very wounds I will heal thee,' God, according to the Rabbis, cries to man (*Midr. Rab.* to Lv 15² [the reference is to Jer 30¹⁷]), and 'those whom God afflicts bear his name' (*Midr. Tehillim* to Ps 94¹); 'if thou desirest life, hope for affliction' (*ib.* to Ps 16¹¹). Such utterances betoken not a worship of sorrow, but a recognition of its disciplinary power, of its value for the character, its significance for the life. Judaism sees no merit in suffering, but only in the right bearing of it; and between its teachings and the ideas of the self-tormenting Hindu there is an impassable gulf. Suicide is a crime, and its perpetrator is not to be mourned (*Midr. Rab.* to Gn 9²; Maimonides, *Hil. Ro'se'ach*, xi. 4); but the slow suicide that comes of self-mortification or of the neglect of health is also reprehensible. 'Ye shall keep my statutes, and my judgments: which if a man do, he shall live by them' (Lv 18⁵)—'live by them,' says the Rabbinical gloss, 'not die by them' (*Yoma*, 85b).

Scattered among the motley contents of the Talmud are the materials for an entire treatise on medicine and hygiene; and the fact is itself a proof of the importance attached to the physical life by the old Jewish sages. Personal cleanliness is exalted into a religious duty. Hillel (1st cent. a.c.), on his way to the bath-house, tells his disciples that he is about to perform a sacred rite; it is a religious duty, he explains, to tend the body, upon which God has stamped a divine beauty (*Midr. Rab.* to Lv 25³⁵). Personal cleanliness, the Talmud teaches, is the avenue to spiritual purity (*Aboda Zara*, 20b). The duty of preserving life, it further declares, overrides the religious law (*Yoma*, 85b). It is not only allowable, but a duty, to extinguish a dangerous fire on the Sabbath day, and to ask permission of the religious authorities is to incur delay and to be guilty of murder. The heads of the community are to be foremost in the humane task (*ib.* 84b). For the dead, even though he be King David himself, the Sabbath must not be broken; but it may be broken for the living, even for a child a day old. 'Put out,' says the Talmud, 'the light of a lamp on the Sabbath day rather than extinguish God's light of life' (*Shab.* 30b). In a well-known passage in 1 Mac (2²⁹⁻³¹) the Jewish patriots are described as resolving to defend themselves on the Sabbath instead of passively sacrificing their lives, as their brethren had done hitherto. Self-preservation is a duty. To slay a fellow-creature at the command of another is a crime (*Pes.* 25b); but to slay him in self-defence is justifiable. If we are called upon to choose between saving our own life and that of another, we must save our own (*Baba mesia*, 62a). Self-torture is forbidden (*Baba kama*, 91b), as is the courting of needless danger to life—by sleeping, *e.g.*, on the ground, or remaining in a dilapidated house (*Ta'anith*, 20b; *Ber.* 62b). In certain ailments 'unclean' meats, usually forbidden to Jews, may be given to the patient (*Yoma*, 88a).

There are limits, however, to this regard for the physical life. A man may break every law to save his life except those which forbid the three cardinal sins, idolatry, incest, and murder (*Sanh.* 74a). Those who suffer martyrdom for the faith are justly lauded by the Talmud (*Gittin*, 57b). But, with these reservations, the duty of preserving life is paramount. Nothing must be done to abridge

the duration of life even in the case of the dying (*Shab.* 151b).

The Talmud has the story of a sage who, suffering martyrdom at the stake, is adjured by his disciples to end his agony by giving himself to the flames forthwith. He refuses. 'God,' he says, 'alone can take my life; I may not' (*Aboda Zara*, 18a).

REGARD for life is exalted into reverence. The gift of God, life must be treated with the utmost consideration. The Talmudic laws prescribing kindness to the lower animals are in part actuated by this motive. God has created the various types of animal life, and desires their perpetuation. It is man's duty to pay homage to the Divine will in this as in every other respect, and to make himself the instrument for its fulfilment (see Aaron of Barcelona, *Sepher Hahinukh* [13th cent.], §§ 284, 545).

Life, then, according to the Jewish idea, is not evil, but supremely good; it is not a burden to be shuffled off with a sigh of relief.

'This world is not a vale of tears. It is a beautiful world, and men must keep it beautiful by the inherent graciousness of their own lives and by the joy they weave into the lives of others. On the other hand, the true Israelite does not think of this world as his home. It is but a halting-place on the journey from one point in eternity to the other, "the ante-chamber to the palace" (*Aboth*, iv. 10), "a wayside inn" (*Mo'ed katon*, 9b), the port where we must equip our bark if we would fare safely on our fateful voyage in the great Beyond' (Joseph, p. 287).

Life is not to be clung to unduly, or to be yielded up grudgingly. When the Master's call comes, it must be obeyed cheerfully; for, since He does everything well, the decree that removes us is as wise and good as is the ordinance that places us here. 'Fear not,' says Ben Sira, 'the sentence of death. . . . Why dost thou refuse, when it is the good pleasure of the Most High?' (*Sir* 41st). This acceptance of death as the dispensation of Divine justice is the keynote of the ancient Jewish burial service, which takes the form of a theodicy, and, indeed, is so styled. Its distinctive name is *sidduk haddin*, 'justification of the Divine sentence,' and its essence is expressed in the following quotation:

'Righteous art Thou, O Lord, both when Thou killest and when Thou makest alive. . . . It is not for us to murmur at Thy method of judging. . . . Blessed, then, be the righteous Judge, all Whose judgments are righteous and true. . . . The Lord gave, and the Lord hath taken away; blessed be the name of the Lord' (*Authorized Prayer Book*, p. 318^t). On hearing of the death of one dear to him, the devout Jew utters the benediction: 'Blessed be the righteous Judge' (*ib.* p. 292). The Israelite, then, is taught not to desire death, but also not to fear it. If in life he sees the opportunity for service, in death he discerns the signal for ceasing his labours. He is so to live as to be ready for that signal whenever it is given; his 'garments are always to be white,' for 'who knoweth when the King may come?' (*Shab.* 153a). And, so prepared, he can await the unknown hour calmly.

G. H. Dalman is not warranted in charging the Jew, as does Max Müller also in his Gifford Lectures (*Anthropological Religion*, London, 1892, p. 869), with an undue dread of death. 'The celebration of the New Year and the Day of Atonement,' says Dalman, 'according to the notions attached to it by orthodox Judaism, instead of mitigating or banishing the fear of death, strengthens it' (*Christianity and Judaism*, Eng. tr., Oxford, 1901, p. 40). He is doubtless thinking of the passionate prayers for life which fill so large a place in the liturgy for those solemn days. But those days are essentially days of penitence; and, if the Jew supplicates for life, it is in order that by repentance and amendment he may put life to noble uses henceforth. Death itself has no greater terrors for him than it has for any other religionist. Judaism, at any rate, does not encourage such fears, but exhorts the Jew to contemplate death with a tranquil mind as the end and the climax of the well-spent life. Such a death, coming in its due season, is likened to the gathering of fully-ripened fruit or the quenching of the flame of a burnt-out lamp. The death to be dreaded is the morally premature one, which is compared to the gathering of the half-ripened fruit or the untimely extinction of the lamp (*Midr. Rab.* to Gn 25th). Death is a natural ordinance; his work finished, the worker must go and make room for his successor—Abraham for Isaac, Moses for Joshua, David for Solomon (*Midr. Tehillim* to Ps 116th). 'And God saw all that He

had made, and behold it was very good'—it is death that is meant, says a Rabbi (*Midr. Rab.* to Gn 1st). The death of the righteous is like the act of one who gently draws a hair from the surface of milk (*Ber.* 8a); this is called 'death by a kiss' (*Baba bathra*, 17a). The death of the wicked, on the other hand, is like the painful disentangling of a thorn from wool (*Ber.* 8a). Death is the liberator (*Shab.* 30a); it is like the entering into port of a well-laden vessel (*Midr. Rab.* to Ec 7th); hence it is that the Wise Man declares that 'the day of death is better than the day of one's birth' (*ib.*). It is fulfilment as compared with mere promise. Far from being the primeval curse, death is a blessing. The day that Adam died was made a holiday (*Tana d'be Eliyahu*, ch. 16). 'The death of the righteous,' God says, 'is a grief to Me, and never should they die if they did not themselves ask for death; for did not Abraham say, "I would be dust and ashes," and Jacob, "Let me die now"?' (*Midr. Tehillim* to Ps 116th).

The idea, however, that life is desirable as the opportunity for obedience persistently recurs in the Rabbinical literature. The thought of its cessation, therefore, is not welcome.

Even Abraham, who, as already indicated, prays for death, is represented (in the apocryphal *Testament of Abraham*) as being averse to it. He refuses to surrender his soul when the archangel Michael claims it; and to win his compliance the angel, at the Divine bidding, puts off his fierce aspect, and appears to the patriarch clothed in light. In like manner the Angel of Death, finding David absorbed in religious study and, therefore, invincible, has to divert his attention by a stratagem before he can perform his mission (*Shab.* 80b).

The Angel of Death is a familiar figure in the Rabbinical literature, and, as in the later Biblical writings (e.g., 1 Ch 21st), he is armed with a sword. Its point is tipped with gall, and it is this bitter drop that slays (*Aboda Zara*, 20b). Sometimes the weapon is described as a knife (*Ketuboth*, 77b); sometimes Death is pictured as strangling his victim with a cord. His presence in a town is betokened by the howling of dogs (*Baba kama*, 60b). According to some ideas, Death is a fallen angel (*Purke R. Eliezer*, ch. 13), and identical with the Serpent in Eden (*Wis* 2nd). His name, which often occurs in Rabbinical literature, is *Sammael*, i.e. 'the drug of God,' a reference to the gall on his sword. Liberal opinion, however, denied the existence of an Angel of Death, just as it scouted the idea of a personal Devil. 'Satan, the Angel of Death, and Evil Desire are one and the same' (*Baba bathra*, 16a). In other words, it is ignoble impulse alone that tempts and destroys. Death, however, is the friend of men, especially of the righteous. Benevolence disarms him (*Derekh eres zuta*, ch. 8); and he instructs the learned in religious lore (*Ber.* 51a). He respects the wishes of the just as to when and where he delivers his summons (*Mo'ed katon*, 28a).

A Talmudic legend tells how a famous sage, Joshua ben Levi, appointed to die, and permitted beforehand to see his place in paradise, seizes the knife of the destroying angel, whereupon a heavenly voice rings out the command, 'Give back the knife; the children of men have need of it' (*Ketuboth*, 77b). Longfellow has made good use of the story in his *Legend of Rabbi ben Levi*.

The necessity of death, however, applies only to the existing worldly order. In the Golden Age there will be no death; Messiah Himself will slay it (*Pesikta Rabbathi* [ed. M. Friedmann, Vienna, 1880], 161b [the Scripture proof cited is Is 25th]).

As to the origin of death, various opinions are expressed. The familiar idea that death was brought into the world by Adam's sin has its place in Rabbinical literature (see *Shab* 55b; *Erubin*, 18b; *Tana d'be Eliyahu*, ch. 5); but we find it much earlier in *Sir* 25th. Closely connected with this idea is the legend, possibly of Persian origin, that the Serpent, when tempting Eve, infected her and, through her, all mankind with his death-deal-

ing poison (*Shab. 55b, 146a; Aboda Zara, 22b; cf., further, Wis 24*). According to another view, death was ordained at creation, and the primal sin merely hastened its coming (*Tanchuma to Gn 39*). Certain sages held that sin is the cause of death, and that there cannot be death without it; but this opinion was controverted by the majority. There were saintly men, it was objected, who had died without sin; like tribulation, death is no proof of transgression (*Shab. 55a, b; Baba bathra, 17a*). But the good man, when he has finished his work, must make way, as already stated, for his successor (*ib. 30a*). The saints of old, however, did not die in the same way as did other men. Over Moses, e.g., the Angel of Death had no power; God Himself took his soul from him; and the same blessed death was vouchsafed to the patriarchs and to other Scriptural heroes (*Baba bathra, 17a*). Some great Biblical figures escaped death altogether, and went living into paradise; Enoch, Elijah, and Hiram were among them (*Derekh eretz zuta, ch. 1*). Of Elijah it was believed that he was still to be seen on earth, and there are stories in the Talmud describing his apparitions (see, e.g., *Ta'anith, 22a*). Death, moreover, has no power over the phoenix, which renews its youth every thousand years, this being its reward for refusing, alone among the creatures, to eat of the forbidden fruit offered it by Eve (*Midr. Rab. to Gn 3*).

MORRIS JOSEPH.

LIFE AND DEATH (Teutonic).—Our knowledge of the conceptions of life and death among primitive Teutonic peoples can be gleaned from three fields: (1) the fragmentary information on Teutonic beliefs and practices given by classical and early Christian writers; (2) the organized religious belief of the Norse peoples, particularly the cult of the chief gods, which embodies beliefs common to the general Teutonic stock, and reveals traces of earlier ideas; and (3) the great mass of Teutonic tradition, folklore, superstition, and custom, both in early times and in modern survivals. From a study of this material it would appear that the processes of thought on these subjects among the early Teutons were very similar to those now formulated for all primitive peoples. The early Teuton, in dividing all that affected him into animate and inanimate, probably took for his criterion the power of motion; from the confusion of this power with the faculty of volition animistic ideas would arise in connexion with active natural phenomena, and, later, even with inanimate objects, while a still further development would appear in personification, with inevitable sex-distinction, and in symbolistic beliefs. The criteria for the attribution of death would be the loss of the power of motion and the phenomena arising from it; from the observation of sleep, dreams, trances, etc., would spring animistic beliefs. A further stage would appear in the identification of the principle of life with those intangible or tangible manifestations, such as breath, warmth, colour, pulsation, or blood, with whose immanence in the body life is obviously connected; hence the belief in a material form of the soul, leading to the idea of the 'external soul.' Of the later forms of belief Teutonic folklore and myth give ample evidence, allowing one to presuppose the earlier stages.

1. The principle of life in nature.—The four elements are constantly represented as imbued with life, and as able to transmit or to produce it. The strength of the belief in running water is shown by the wide-spread Teutonic worship of streams and springs (cf. Grimm, *Teut. Mythol.*, p. 101), and the practice of bathing in magic springs testifies to the power of water to give life and health (cf. Frazer, *GB*³, pt. vii., *Balder the Beautiful*, ii. 29). The personification of the living element in water is generally feminine.

The belief in life inherent in fire is shown by the general Teutonic myth of Wieland, originally doubtless a fire demon, and by the Norse personification of fire as Logi, later confused with, and superseded by, Loki. The life-transmitting powers of fire appear in the customs still practised throughout Teutonic Europe, at the ceremonial bonfires, especially at Easter and Midsummer (*ib. ch. iv.*; note that Frazer admits the existence and significance of these customs, although he deviates [ch. v.] from Mannhardt's explanation of fire-festivals).¹ Akin to fire-beliefs is the belief in the quickening power of the sun, shown in the connexion between the summer solstice and the Midsummer fires, and in the custom of rolling fiery wheels or other sun-symbols. A curious example of belief in the generative power of lightning occurs in the superstition that mistletoe is produced by a lightning-stroke. The connexion between fire and human life appears in the representation of souls as flames or will-o'-the-wisps.

Air has always had an important connexion with the principle of life under two chief aspects: first, breath, the symbol of life (cf. *Voluspá*, 18); secondly, wind or whirlwind. Wind made known the presence of mysterious beings, and in Odin, as god of the wind, the slain, and the 'Wild Host,' is the culmination of the connexion of wind with the continuance of life in the soul.

The primitive conception of the earth as Mother of all appears widely in Teutonic belief (cf. art. EARTH, EARTH-GODS, § 6 f.). Early personifications of her occur (Nerthus, Erce), and her life-giving and restoring power appears in charms in which sods, turfs, or handfuls of earth figure; many of these, whether in Old English or in modern survivals, are Christianized, but their origin is unmistakable. The earth's living power is transferred even to inanimate objects resting on or discovered within her, such as stones and metals; we find a life-stone that heals wounds (*Laxdæla Saga*, 58 f.). Stones and metals, like plants, fire, and water, were credited with volition, as in the story of Balder, and the early idea of the conscious power of weapons (cf. 'the sword that fights of itself' [*Skirnismál*, 8 f.]) was long retained in poetry and folk-tales.

The close connexion of trees with the principle of life is proved by the well-attested Teutonic worship of trees, and by the idea of the World-Tree, with its popular parallels in the identification of trees with the guardian-spirits of peoples, tribes, families, or individuals (see HAMADRYADS [Teutonic]). The use of plants and fruits to convey life is frequent even in modern superstition, and an early instance occurs in the *Volsunga Saga* (ch. i.), where the queen becomes pregnant after eating one of Freyja's apples. The ashes of the Yule and Midsummer logs were touched and kept for the same purpose (cf. BRANCHES AND TWIGS, § 5).

Certain animals, particularly the boar, had a special connexion with the power of life and its transmission; others had an intimate connexion with individual human beings, and from this arises the power of transference or of shape-

¹ W. Mannhardt, *Baumkultus der Germanen*, Berlin, 1876, p. 521 ff.

changing. Another form of this sympathetic connexion appears in the 'external soul'; but totemistic ideas, the logical conclusion of depositing the external soul in animals, seem never to have developed among the Teutons (K. Helm, *Altgerm. Religionsgesch.*, i. 23 ff.). In heroic saga the infant hero is sometimes suckled by an animal, as were Wölfedietrich and Sigurðr Sven. The serpent, in other cults so important a symbol of life, because of the renewal of its skin, has little connexion with life-conceptions in Teutonic mythology. The tenacity of the belief in individual life in the natural world appears in frequent personification, though it is sometimes difficult to distinguish between nature-personifications and those local deities which abound in Teutonic belief, but which may be a later development.

It is a moot point whether the primitive Teuton believed in a universal life-giving spirit; without going so far as to assume a monotheistic origin for Teutonic mythology, we can yet believe that the principle of life was early personified, though whether as earth-spirit or as sky-spirit it is impossible to decide. Animistic thought generally tends to the latter, but the Nerthus evidence, the Nerthus-Freyr combination, and the Swedish worship of Freyr as a fertility deity all point to the former. All the chief gods had some connexion with productivity, and traces of phallic worship are not lacking (*ib.* i. 214-225). The origin of world-life has already been treated (see COSMOGONY AND COSMOLOGY [Teutonic]); the revival of world-life and its different phases were celebrated at the Easter, Midsummer, and Yule festivals.

2. The origin of individual life.—The Teutonic conception was prevented from becoming metaphysical by that material view of the soul which is illustrated by the ceremonies followed at birth (see BIRTH [Teutonic]); and the lack of individualism in the life-conception is shown by the importance attached to blood-kinship, heredity, and re-birth. Blood-kinship was the closest of ties, and the mingling of blood was the symbolic ceremonial for sworn brotherhood (cf. art. BROTHERHOOD [Artificial], i. 7). The power of heredity consisted in the transmission of racial qualities, especially courage and hardihood, as in the case of Sinfjotli (*Volsunga Saga*, 8). The idea of re-birth, which still persists, was deeply rooted in Norse belief, and accounts for the constant pre-Christian custom of naming children after dead ancestors; the name was of great efficacy in the attraction of ancestral qualities, and even implied the transmission of a personality. The impossibility of re-birth was considered a misfortune (cf. P. Herrmann, *Nord. Mythol.*, p. 35 ff.). Similarly, the *hamingja*, or genius in female form, could transfer itself from the dead to a beloved kinsman (*Víga Glíms Saga*, 9). The different stages of human life were little regarded; we know of no initiatory ceremonies at adolescence, although Karl Pearson (*Chances of Death*, London, 1897, vol. ii. ch. ix.) considers that the licentious character of mediæval Walpurgisnacht revels proved their origin as sexual festivities; otherwise we hear only of military ceremonies (*Tac. Germ.* 13) or of heirship feasts (*Ynglinga Saga*, 40).

The material representation of the soul was probably induced by the observation of dreams and similar phenomena, where the soul appears to have an independent existence, or by the location of the soul in various organs of the body, as the liver, heart, or head. An extension of this material representation appears in the doctrine, common to all Teutonic peoples, of the 'external soul'; the chief evidence is the story told by Paulus Diaconus (*de Gest. Langobardorum*, iii. 33) of King Gunthram, whose soul was once observed to issue 'in modum reptilis' from his mouth during sleep. Survivals

of this idea in fairy-tales show the control exercised by the individual over his external soul, generally by depositing the soul in a place of apparent safety, in an object or plant, and thereby prolonging indefinitely the body's existence (cf. Frazer, ii. 116 ff.; *CF.* ch. v.). A case of control exercised by an external and malignant power is that of Nornagestr, whose life was identified with a burning candle (*Saga af Nornagesti*, 11). The soul's power to assume animal form and to go on journeys (*hamfarir*), leaving the body sleeping, accounts for *hamramir*, or shape-changers, and confusion of such ideas with the observation of states of super-normal activity appears in accounts of *berserks-gangr* and shape-changing (see TRANSMIGRATION [Teutonic] and LYCANTHROPY, § 1).

An extensive power over the principle of life was acquired by magic, chiefly sympathetic, prophylactic, or coercive, and it was possible to induce animal and vegetable fecundity, as by the sympathetic magic of the Midsummer fires. Instances of the sacrifice of human life to ensure vegetable fecundity occur in the immolation of the kings Domaldi and Oláfr (*Ynglinga Saga*, 18, 47); a slightly different case is that of Aunn, who gained an added ten years of life for each son sacrificed (*ib.* 29). Magic use of plants, etc., and of charms could induce prolific human life, and facilitate the soul's coming (*Sigrdrífumál*, 9). Life could be protected or prolonged by various practices, such as passing the individual through a cleft tree or hollow stone (cf. Grimm, p. 1167; Frazer, ii. 168 ff.); the story of Balder exemplifies prophylactic magic to secure invulnerability. By spells poison could be rendered innocuous (*Egils Saga*, 44, 75, 79), and sickness prevented or cured, while the perpetual battle of the Hjaðninga exemplifies the power to renew life indefinitely (*Skáldskaparmál*, 47). Charms also had power to suspend life (cf. the sleepthorn), and to harm or destroy it; metamorphoses were often compulsory, the result of external magic.

3. The conception of death in nature.—The elements have all a death-dealing as well as a life-giving power, especially fire and water; water acquires a maleficent power on Midsummer Day, and demands a human victim; similarly, many vegetable and animal objects had death-dealing powers, inherent or temporarily acquired.

4. The conception of individual death.—This arose from the phenomena attending sleep, which foreshadowed the soul's departure; the soul is still materially represented as issuing from the mouth in the form of a bird or mouse, and its exit is facilitated in every way. In Norse mythology the dead made an actual journey, and needed shoes to travel the Hel road. The idea of cessation of activity after death, if it ever existed, was soon superseded, as is proved by the universal custom of providing the dead with material implements; the earliest tombs contain cups and vessels, not armour and weapons—a sign that at first feasting, not fighting, was to be the chief occupation. Activity after death could be exercised still on earth, but it was then frequently malignant, and could be prevented only by burning the corpse (*Laxdæla Saga*, 17, 24). Spirits could return in animal or in human form (*Erbyggja Saga*, 51, 53), and hauntings show the power of ghosts to affect the living; fear was probably as great an incentive to ancestor-worship as reverence. Activity in another world was materially conceived as a close parallel to mortal life, as is proved by the nature of the implements provided, and such activity was often localized in sepulchral howes (*ib.* 11). The Valhalla belief is the final poetic development of the conception of Óðinn as god of the slain; in a less warlike age a more peaceful prefigurement

arises, the *Rosengarten* of the later German poets; Saxo Grammaticus's account (*Gesta Danorum*, i. 31) of Hadding's voyage to the under world represents an intermediate stage (cf. art. BLEST, ABODE or THE [Teutonic]). The power of death was inexorable and inevitable, even the gods being doomed to perish at the world-death. Death was personified in many forms: as a messenger, or as an enemy. The Norse Hela was certainly at first a Teutonic Proserpine, however shadowy: subsequently, her personality was not distinguished from her abode. Popular and grotesque personifications of death prevailed later, and gave rise to the idea of weakening death's power by insulting or beating a tangible representation (Grimm, p. 767).

In spite of the undoubted fatalism of Teutonic peoples (see art. DOOM, DOOM MYTHS [Teutonic]), the belief, born of instinct and desire, prevailed that magic enabled man to exercise a twofold power over death: first, in retarding or hastening death; secondly, in controlling and summoning spirits (*Erbyggja Saga*, 55). Preventive magic against death might include the wide range of charms to preserve health, prevent barrenness, heal sickness, or stanch blood. Coercive magic to compel death was apparently as frequent as preventive, though naturally more secret. It was possible to foresee the doom of death upon others, and also to have the premonition of it in oneself—to be fey. The summoning of spirits (*holtrína*), performed by means of the *valgaldr*, became in Norse mythology an important branch of magic art (see MAGIC [Teutonic]).

5. The ethical aspect of life and death.—It is difficult to deduce the ethical outlook of the average Teuton on life and death because of the extremely objective character of the literature, but the non-moral aspect of world-life and world-death is proved by the fact that the end of the world comes 'automatically,' involving the gods also. Respect for the principle of life is presupposed by the importance attached to fertility and all that promotes it; but this was instinctive, and originally entirely non-moral. Respect for individual life rarely appears, except in kinship; the slaughter of kin was abhorred as violating the blood-tie (Saxo Grammaticus, *Gesta Danorum*, ii. 1; *Beowulf*, 2436 ff.); but even this was probably due more to tribal than to moral instinct. Custom rather than morality governed the sacrifice or the retention of life, as in the case of the Gothic widows (Procopius, *de Bello Goth.* ii. 14). Chivalrous sparing of life was little known, for Saxo Grammaticus's assertion to the contrary can hardly be substantiated from earlier literature (*Gesta Danorum*, v. 160). The fatalism so deeply ingrained in the Teutons coloured their whole outlook, but it was untinted by remorse for an ill-spent life or by fear of coming punishment; and the lack of a moral division after death is so general that it is tempting to explain apparent inconsistencies by the theory of Christian influence. Suicide was allowable when due to grief for a friend or kinsman, and was more honourable than an ignoble death (cf. Saxo Grammaticus, tr. O. Elton, London, 1894, p. xxxvi). The practice of human sacrifice points to little respect for human life in the abstract (see art. HUMAN SACRIFICE [Teutonic]); the fact that such sacrifices were prophylactic or propitiatory was held sufficient justification, if indeed any were necessary. There certainly seems to have been a strong idea of sacrificing the life and welfare of the one to that of the many. It would add greatly to our knowledge and the interest of the subject if, in the account of prophylactic sacrifices, the least clue were given to the mood and temper of the

victim—whether he were merely passive under compulsion or a willing and exalted sufferer.

LITERATURE.—J. G. Frazer, *GB*³, pt. vii., *Balder the Beautiful*, 2 vols., London, 1913; J. Grimm, *Teut. Mythol.*, tr. J. S. Stallybrass, do. 1882-88, chs. xix.-xxix., xxxiv.-xxxviii.; P. Herrmann, *Nord. Mythol.*, Leipzig, 1903, pp. 31-93, 538-567; K. Helm, *Altgerm. Religionsgesch.*, Heidelberg, 1913, i., sections vi.-xi.; W. Golther, *Handb. der germ. Mythol.*, Leipzig, 1895, pp. 72-116; P. D. Chantepie de la Saussaye, *Rel. of the Teutons*, Boston, 1902, chs. iii., xi., xviii., xx., xvi.; E. Mogk, 'Mythologie,' in H. Paul, *Grundr. der germ. Philologie*², iii. Strassburg, 1900, chs. v., xv.; E. H. Meyer, *Germ. Mythol.*, Berlin, 1891, ch. iv. M. E. SEATON.

LIFE, FUTURE.—See STATE OF THE DEAD.

LIFE-TOKEN.—'Life-token' or 'life-index' is the technical name given to an object the condition of which is in popular belief bound up with that of some person, and indicates his state of health or safety. The object may be an artifact, such as a tool, a weapon, or an ornament; or it may be a tree or plant, an animal, or even a well, or a vessel of water or some other liquid. The most familiar examples are found in the *Arabian Nights*. In the story of 'The Two Sisters who envied their Cadette,' with which Galland concluded his version (cf. R. F. Burton, *Supplemental Nights*, London, 1886-88, iv. 491 ff.), Prince Bahman, on departing in search of the talking bird, the golden water, and the singing tree, leaves with his sister a hunting-knife, the blade of which will remain clean and bright so long as he continues safe and sound, but will be stained with blood if he be slain. His brother, following him, leaves a string of pearls, which will run loose upon the string while he is alive, but after his death will be found fixed and adhering together.

The incident is, in fact, common in folk-tales all over the world where the hero goes on a perilous adventure, and his friends require early information, that they may in case of need sally forth to rescue or avenge him. It is necessary here to draw attention only to one wide-spread cycle—that of the modern variants of the ancient Greek story of Perseus. In these tales Perseus is often represented by three sons, born in consequence of their mother's having partaken of a magical fish. Some portion of the oil of the fish is buried in the garden; a tree grows on the spot and becomes the life-token of the children. Sometimes a portion of the fish's blood is preserved, by its direction, in phials, one for each of the children, to boil or become turbid in case of misfortune. In a story from Pisa the fish-bone is fastened to a beam in the kitchen, and sweats blood when anything untoward happens to any of the boys.

There is thus an original organic connexion between the life-token and the person whose condition it exhibits. This connexion supplies the interpretation. The life-token is derived from the doctrine of sympathetic magic, according to which any portion of a living being, though severed, remains in mystic union with the bulk, and is affected by whatever may affect the bulk. Sympathetic magic, however, is not confined to folk-tales: it has a practical bearing. It is applied in witchcraft and folk-medicine to the injury or to the benefit of human beings and every object that comes into relation with them. Accordingly, we find the life-token not only in folk-tales, but also in everyday custom and superstition.

A striking and pathetic example of a severed portion of a human being employed as his life-token is recorded in the United States. Early in the last century a boy in Grafton County, New Hampshire, was so badly scalded that a piece of his skin, fully an inch in diameter, sloughed off, and was carefully treasured by his mother. When he grew up, he left home and was never heard of after; but his mother used from time to time to examine the fragment of skin, persuaded that, so long as it was sound, her son was alive and well, and that it would not begin to decay until his death. For thirty years, until her death about the

year 1843, she kept it; and thenceforth her daughters continued to do so under the influence of the same belief (*JAFI* vi. [1893] 69).

This convenient method of providing a life-token from the substance of one's own body is, however, not always available. Fortunately, the doctrine of sympathetic magic applies equally to objects derived less directly from the person. Just as in the tale the offal of the fish buried in the garden grows up into the tree and becomes the life-token of the children who owe their birth to, or perhaps are a transformation of, the fish, so trees are in actual life planted for the purpose.

The navel-string of a Maori child was buried in a sacred place, and a young sapling planted over it expressly as the babe's 'sign of life' or life-token (R. Taylor, *Te Ika a Maui: New Zealand and its Inhabitants*, London, 1870, p. 184). Sometimes it was buried at the foot of a tree or bush. If the tree or bush afterwards 'showed signs of decay or died, the results would be similar to the child' (*Journ. Ethnol. Soc.* i. [1869] 73). In the latter case an already existing tree is appropriated as the life-token by uniting the child with it through the medium of the cord. In the same way, in Germany the afterbirth is thrown or buried at the foot of a young tree, and the child is expected to grow with the tree and thrive as it thrives (K. Bartsch, *Sagen, Märchen und Gebräuche aus Meklenburg*, Vienna, 1880, ii 43; *Am Urquell*, v. [1894] 253). Though it is not now common thus to unite the child with the tree, the practice of planting a tree at the birth of a child is still frequent in Europe. In Aargau (Switzerland) an apple-tree is planted for a boy, a pear-tree for a girl; and it is definitely believed that the babe will thrive or die like the young tree (W. Mannhardt, *Wald- und Feldkulte*, Berlin, 1876, i. 'Baumkultus', p. 50, citing Rochholz). Numerous remains of this practice and belief are found in tradition all over Europe.

The caul with which some children are born also becomes an index of their health and prosperity. For this purpose great care is taken of it.

Among the Letts of Russia to lose it betokens misfortune for the child (R. Kobert, *Hist. Studien aus dem pharmakol. Inst. der kais. Universität Dorpat*, iv. [Halle, 1894] 229). In England and Scotland its condition, whether soft and flabby or hard, dry, and stiff, indicates coming misfortune or prosperity (S. O. Addy, *Household Tales*, London, 1895, p. 120; J. G. Dalyell, *Darker Superstitions of Scotland*, Glasgow, 1835, p. 326).

But, as in the stories, the life-token is not always determined at the birth of the person whose fate is indicated by it. When a child has been passed through a young ash-tree split for the purpose, in order to cure infantile hernia, the tree is bound up and plastered, in the hope that it may grow together again; and according to the success of the treatment the child is expected to recover or not. More than this, so intimate has the connexion between the tree and the child become by the operation that, if the tree be afterwards felled, the child will die. Thus the tree is not merely dependent upon the fate of the child; the child is also dependent on the fate of the tree. This mutual dependence is sometimes expressly mentioned in the stories also. It results from the close connexion established between the human being and the object constituted as the life-token. In the stories it is often forgotten; generally in practice it is at least implicit.

On the Eastern peninsula of Maryland, opposite Baltimore, when a member of a family leaves home, a bit of hve-for-ever is stuck in the ground to indicate the fortune of the absent one. It will flourish if he prospers; otherwise it will wither and die (*JAFI* iv. [1891] 152). At Rome every Emperor solemnly planted on the Capitol a laurel, which was said to wither when he was about to die. A successful general to whom a triumph was accorded also planted on the occasion, in the shrubbery set by Livia, a laurel, similarly believed to wither when he was about to die. Two myrtle-trees grew before the temple of Quirinus, one called the Patrician tree, the other the Plebeian. So long as the Senate maintained its power as the supreme authority of the State, the Patrician tree flourished. But it began to fall at the time of the Social War, when the Plebs successfully asserted their rights, and the Plebeian tree, hitherto sickly and shrivelled, gained the superiority (Pliny, *HN* xv. 36). The Dayaks of Borneo are accustomed on certain occasions to plant a sort of palm, which is regarded, in the fullest sense of the word, as a life-token. If it grows prosperously, they can reckon on good fortune; but, when it fades or dies, the person concerned has to expect the reverse (Wilken, *Verspreide Geschiedten*, iii. 562n.). In Germany, at Hochheim, Einsingen, and other places near Gotha, two young trees are planted at a wedding by the bridal pair, on the property of the commune. If either of the trees withers, one or the other of the spouses will shortly die (Mannhardt, p. 48).

Turning now to artificial objects—an illustration may be given from a somewhat unexpected quarter.

Father George Eich, reporting in the *Annales de la Propagation de la Foi* (1898) a recent visit to Easter Island, relates that the native converts persistently inquired after another Roman Catholic missionary, Father Albert Montout, who had previously visited them. They said that he had caused the great stone cross in the cemetery of Hangaroa to be set up, and told them: 'When you see this cross fall, you will say, Father Albert has just died; let us pray for him.' Father Eich went to see the cross, and found that it had in fact fallen, but had been set up again, and bore traces of its fall. On questioning them to ascertain the precise date of its fall, he found that it coincided exactly with that of Father Albert's death in Spain, 25th Feb. 1894 (*PL* xi. [1900] 436, quoting the *Annales* at length).

This kind of life-token easily lends itself to divination concerning the health or prosperity of absent friends, or even the prospects of life of actual members of the household.

In Thuringia, when it is desired to know whether absent children or other kinsmen are still living, all that is necessary is to stick a loaf of bread with ears of corn before putting it into the oven. Each of the ears is designated by the name of one of the absent persons concerning whom inquiry is made, and, if any of them be scorched in the process of baking, the person symbolized is assuredly dead (A. Witzschel, *Sagen, Sitten und Gebräuche aus Thuringen*, Vienna, 1878, i. 251). Zulu women, when their husbands go to war, hang the conjugal sleeping-mat on the wall of their hut. So long as it casts a shadow on the wall, the husband is safe; when it ceases to do so, he is believed to be dead (T. Arboüset and F. Daumas, *Exploratory Tour*, Cape Town, 1846, p. 145; cf. H. Callaway, *Rel. System of the Amazulu*, Natal, 1870, p. 126). Fire or a candle is often employed. In Brittany a sailor's wife who has been long without tidings of her husband makes a pilgrimage to some shrine and lights a taper before the saint. If her husband is yet alive and well, it burns well; otherwise the flame will be poor and intermittent, and will go out (A. Le Braz, *Légende de la mort en Basse-Bretagne*, Paris, 1893, p. 6). The Kei Islanders in the Moluccas perform a similar ceremony. When men are absent on a voyage, rude lamps, consisting of sea-shells filled with oil and containing wicks, are lighted with a sort of solemn ritual at the sacred fire. Each lamp represents one of the absent man. A straight and steady flame indicates that the man represented is well in body and soul; but, if the flame wavers or burns badly, an evil augury is drawn (*Anthropos*, v. [1910] 354). When the men go from Yule Island, off the coast of New Guinea, to the Papuan Gulf for sago, a fire is lit; if it goes out, 'there will be bad luck for the voyagers, consequently care is taken to keep the fire alight during the whole time the men are away' (A. C. Haddon, *Head-hunters*, London, 1901, p. 259). A Shawnee prophet tried to persuade Tanner, when living among the Indians, that the fire in his lodge was intimately connected with his life. At all seasons and in all weathers it was to remain alight; for, if he suffered it to be extinguished, his life would be at an end (J. Tanner, *Captivity and Adventures*, New York, 1830, p. 155).

The last two cases are interesting examples of the ambiguity already noticed in the relation between the object and the person with whose life it is bound up. They naturally act and react upon one another. Whatever affects the one affects the other also. The object thus connected by a mystic bond with a human life has sometimes been called the 'external soul.' It is perfectly true that in the stories the life of ogre or hero is frequently said to depend on an object hidden safely away, and that this object is occasionally described as the owner's soul. Sometimes, as in the ancient Egyptian story of 'The Two Brothers,' it is called by the equivalent name of his heart. More commonly it is referred to simply as his life. It is also true that in savage belief the soul is separable from the body: it goes forth in dreams; sickness is caused by its absence; a complete severance is death. Care is taken on important occasions, as at marriage or change of dwelling, or at a funeral, to cage and retain the soul, and in sickness to recall it from wandering and restore it to the patient's body. But, as in the stories, so in the practices and superstitions, the object in mystic relation with a man is by no means always called his soul, or said to contain his soul. It seems, therefore, to be going somewhat beyond the facts to apply to it a word expressing a definite conception when it is not applied by the people holding the superstition or exercising the custom. Ideas

are often vague, and, where they are so, to affix terms to them which connote to us something definite is to darken counsel.

In Nigeria a great tree frequently stands in a village, and is hung with medicine and votive offerings. It is described by the villagers as 'our Life,' and it is in some sense worshipped as a god (C. Partridge, *Cross River Natives*, London, 1905, pp. 194, 205). The Ibo-speaking Negroes of Awka declared that such a tree had 'the life or breath of the priest in it.' Not long ago the tree died and the priest 'died at the same time because the tree had died' (N. W. Thomas, *Ibo-speaking Peoples*, London, 1913, i. 29). The Montols of Northern Nigeria believe that at the birth of every individual of their race, male or female, a snake of a certain non-poisonous species which haunts the dwellings is also born. From the moment of birth the snake and the man share a life of common duration, and the measure of the one is the measure of the other. Hence every care is taken to protect these animals from injury; and it is said that they are quite harmless to human beings (*Journ. Afr. Soc.* x. [1910] 30). So at Rome every man was deemed to be accompanied throughout life by a *genius*, to which he owed all his gifts and good fortune. The *genius* was represented by, or incorporated in, a snake, which was never killed, but encouraged in the house, and even in the sleeping-chamber. The result was, according to Pliny, that snakes multiplied to such an extent that, if they had not been kept down by frequent fires, it would have been impossible to make headway against their fecundity (L. Preller, *Rom. Myth.*, Berlin, 1893, ii. 196-198; Pliny, *HN* xxix. 22). Tiberius Gracchus once caught a pair of snakes upon his bed, and was advised by the soothsayers to kill one of them, but warned that his life was bound up with that of the one, and his wife's with that of the other. Rather than put an end to his wife's life, he killed the male and himself died in a short time (Plutarch, *Tiberius Gracchus*). At the monastery of Saint Maurice, on the borders of Burgundy, near the Rhone, was a fishpond stocked with as many fish as there were monks. When any of the monks fell sick, one of the fish floated on the surface of the water, half-dead; and, if the monk was going to die, the fish would die three days before him (J. W. Wolf, *Niederl. Sagen*, Leipzig, 1847, p. 259, citing Leonard Vair, *Trois Livres des charmes*, Paris, 1583, p. 337). On the island of Buru, one of the Moluccas, the same belief seems to be attached to the cayman. No Burunese, we are told, would dare kill a cayman, lest he should unwittingly cause the death of one of his nearest kinsmen (Wilken, iii. 82). In fact, the belief that the lives of human beings are bound up with those of certain of the lower animals as well as of trees and plants is very wide-spread; and the latter are not necessarily viewed as the guardians or incarnations of the souls of the former.

Lakes and streams also serve as life-tokens, independently of the animals that haunt or inhabit them.

On a mountain in Franconia a fountain issues near the ancestral home of an ancient noble family. The clear stream gushes forth incessantly the whole year round; and it was believed to fail only when one of the family was about to die (J. Grimm, *Deutsche Sagen*, Berlin, 1816-18, i. 182). The waters of the crater-lake of Tririvra in Madagascar are of a deep green colour, almost black. It is believed that, when a member of the neighbouring tribe, the Zanatsara, is taken ill, if the water is troubled and becomes of a brown colour, his death is pressed; if it remains clear, he will have a chance of life (*RTP* vii. [1892] 760, quoting J. Sibree).

The present writer has elsewhere (*LP* ii. [1895] 13 ff.) pointed out that the custom of srying or crystal-gazing (*q.v.*) is intimately related to those of looking into the depths of a well or a pool of water or ink, and into a magical mirror, for the purpose of gaining tidings of absent friends or distant events. It will suffice to say here that the hallucination on which it is founded is equally capable of being produced by gazing intently on any dark and polished surface like that of standing water, a mirror, or a piece of stone, and that the superstition is practically world-wide.

The march between the life-token and the belief in omens drawn from objects not specially connected with any individual is ill-defined. It is by no means necessary to appoint one's own life-token: the health or prosperity of the absent may be divined by the condition of a life-token arbitrarily appointed by anxious relatives or friends at home. There is but a step between this and the drawing of auguries from events and objects not appointed at all. The step is often taken both in tales and in real life.

In an Icelandic tale three drops of blood appearing on the knife while eating are a token to one brother of another's peril or death (*Am Urquell*, iii. [1892] 5, citing Arnason). The sudden falling of three drops of blood from the nose is recorded in

recent years in countries as wide apart as Scotland and Transylvania to be regarded as an omen of the death of a near relative (W. Gregor, *Folklore of N.E. of Scotland*, London, 1881, p. 204; H. von Wisslock, *Volks Glaube und Volksbrauch der Siebenbürger Sachsen*, Berlin, 1893, p. 190). At Rauen, about 30 miles from Frankfurt-on-the-Oder, a crack in a newly-baked loaf portends the death of one of the family (A. Kuhn and W. Schwartz, *Norddeutsche Sagen*, Leipzig, 1843, p. 436). In Thuringia, if an altar-light goes out, one of the clergy will die (Witzschel, ii. 251). In Brunswick, when a plant in the garden, usually green, puts forth white leaves, it betokens the speedy death of some one in the house (L. Andree, *Braunschweig. Volkskunde*, Brunswick, 1896, p. 224). The list of such omens might be continued indefinitely.

Further, if my life be united to any external object, whether physically (so to speak), as in the case of an ailing child passed through a split sapling, or by the arbitrary appointment of myself or another, it is obvious that injuries intentionally inflicted on the object in question will react upon me. The felling of the sapling causes the death of the child. In the classic story of Meleager the hero's life came to an end with the burning and extinction of the fateful brand. This belief is the foundation of that department of magic which is used for injuring others by damaging or destroying things which have been closely attached to them, or to which identity with them is imputed. Fragments of the hair, nails, food, or clothing, portions of the blood or saliva, and earth from the footprints of the victim are all impregnated with his life, are still a portion of himself, though detached; and he may be injured or even done to death by the appropriate treatment of any of these objects. So also to stick pins or daggers into, or to burn, the effigy of a man is to wound or kill the person represented. These are all well-known magical rites. Parallel with them is the treatment of such objects for the purpose of benefiting the person to whom they belong.

The navel-string of an infant, taken by a mother to church at her churthing, and laid down behind the altar or in some other suitable place, is deemed in Mecklenburg and Thuringia to be effectual 'in surrounding the child with such holy influences that he will grow up God-fearing and pious' (Witzschel, ii. 249; Bartsch, ii. 46). For some such reason Athenian women who became pregnant for the first time hung up their girdles in the temple of Artemis. Probably for a similar purpose fragments of clothing and other things are hung by votaries on a sacred tree, and pins are deposited in sacred walls. To the same order of thought belongs the sympathetic treatment of wounds by means of the instrument inflicting them. This treatment, formerly accepted by physicians and philosophers, is now left in Europe to the peasantry. It originates in savagery. The Lkungen or Songish of Vancouver Island are very careful to keep concealed the arrow that has wounded a friend, and not to bring it near the fire; for he would become very ill if the weapon, while still covered with his blood, were thrown into the flame (F. Boas, *Rep. Brit. Assoc.*, London, 1890, p. 577). Melanesians keep the arrow, when extracted, in a damp place or in cool leaves, believing that the inflammation will then be slight and will soon subside. But, if the enemy who has shot another can get back his arrow, he puts it into the fire, with intent to irritate the wound and cause fatal results (R. H. Codrington, *The Melanesians*, Oxford, 1891, p. 310). Similar practices are very wide-spread among the European peasantry, and not least in our own island.

By a very natural extension of the idea of the life-token the cognate idea of the faith-token has been evolved. It is not enough for one of a pair of lovers to know that the other is living; there must be constant assurance of the absent one's fidelity. The token of fidelity is, therefore, a common incident both in tales and in actual life.

It is well-known in India. In the *Kathā-sarīt-sāgara*, or 'Ocean of the Streams of Story,' a famous collection of Indian tales, the god Śiva appears in a dream to Guhasena and his wife Devasmitā when they are about to part, and gives each of them a red lotus, saying: 'Take each of you one of these lotuses in your hand. And, if either of you shall be unfaithful during your separation, the lotus in the hand of the other shall fade, but not otherwise.' When they awoke, each beheld in the other's hand a red lotus; 'and it seemed if they had got one another's hearts' (C. H. Tawney's tr., Calcutta, 1880, i. 86). In European folk-tales, ballads, and romances the faith-token is by no means an unusual piece of machinery. It has found its way on to the stage. Among other dramas, the plot of F. Massinger's play of *The Picture* (1629) turns upon it. Nor is its vogue in practice less wide. The Mech are a Mongoloid tribe in Bengal. Every Mech has in the court-yard of his house a *si* plant (*Euphorbia*

Indica), which is carefully tended as the abode of Siva and the emblem of conjugal fidelity. If its leaves wither, something is wrong with one of the women of the household (H. H. Risley, *TC*, Calcutta, 1892, ii. 89). In Peru the husband knots a branch of Euphorbia before going on a journey. If on his return he finds the knots withered up, his wife has been unfaithful; if they are fresh and living, she has been true (*ZE* xxxvii. [1905] 439). At Siena formerly a maiden who wished to know how her love progressed kept and tended a plant of rue. While it flourished, all went well; but, if it withered, it was a sign that the love she desired had failed her (*Archivio*, x. [1891] 90). Losing a garter in the street means, according to belief in some districts of England and Germany, that the owner's lover is unfaithful (Addy, p. 98; J. Grimm, *Teut. Myth.*, tr. J. S. Stallybrass, London, 1882-88, pp. 1782, 1824). Elsewhere, on the contrary, he is thinking of her (Andree, p. 215; cf. F. D. Bergen, *Current Superstitions*, Boston, 1896, p. 63). Certain sacred wells in France have or had the property of certifying the loved one's fidelity to a jealous lover. All that was necessary was to abstract a pin (which was often nothing but a thorn) from her dress and lay it on the surface of the water. If it floated, all was well; if it sank to the bottom, she was unfaithful (P. Sébillot, *Folklore de France*, ii.

[Paris, 1905] 252). In all such cases the faith-token exactly corresponds with the life-token.

LITERATURE.—René Basset, *Nouveaux Contes berbères*, Paris, 1897, gives in a note (pp. 309-316) an extensive list of stories in which the incident occurs. Many of these are abstracted and discussed by F. J. Child, *English and Scottish Popular Ballads*, 5 vols., Boston, 1882-98, in the introductions to the ballads of Hind Horn (i. 187), and Bonny Bee Hom (ii. 317), and by W. A. Clouston, *Popular Tales and Fictions*, 2 vols., Edinburgh, 1887, i. 169, and in his dissertation appended to *John Lane's Continuation of Chaucer's 'Squire's Tale'* (published by the Chaucer Society, London, 1888-90), 299, 334. Discussions will be found on the incident and its relation to custom and superstition by G. A. Wilken in his monographs on 'Het Animisme bij de volken van den Indischen Archipel,' 'De betrekking tusschen menschen-, dieren- en plantenleven naar het volksgelooft,' and 'De Simsonsage,' collected in his *Verspreide Geschriften*, 4 vols., The Hague, 1912, iii.; and E. S. Hartland, *The Legend of Perseus*, 3 vols., London, 1894-96, ii. ch. viii. See also art. LIFE AND DEATH (Primitive), § 4.

LIGHT AND DARKNESS (Primitive).—Among the lower races the nature and origin of light and darkness gave rise to many questions, and the answers to these are found in a great variety of myths. Frequently light and darkness are assumed to be substances—e.g., 'a hard darkness,' as in an Australian myth¹—or the sun, often regarded as the cause of light, is thought of as a fire or fiery substance, larger or smaller. Among the primitive peoples the dualism of light and darkness or of beings representing these—so frequently found at higher stages of civilization—can hardly be said to exist.

1. **Primordial darkness.**—A wide-spread idea seems to be that night precedes or gives rise to day, darkness precedes or gives rise to light. Light, the light of day, appears to come gradually out of the darkness of night, whereas darkness falls over the light of day and extinguishes it, but does not come from it. Man also, asleep and inert during darkness, rises to fresh activity with the light. A pre-existing state of darkness, out of which light and life have proceeded, is thus usually presupposed. Many Australian tribes believe that long ago darkness or semi-darkness prevailed, until the sun was made or released. An emu's egg was thrown up to the sky, and either itself gave a great light or set fire to a wood-pile belonging to a sky-being. The latter sees how beautiful earth now is, and therefore he makes a fire every day. There is little warmth in the morning, because it is not fully kindled, and it is cold at night when the fire dies out. The jackass rouses men to the light. If he did not, or if children imitated him, there would be nothing but darkness. Or the sun is created as the result of certain obscene rites performed by men who complained of having no heat or light; or there is darkness until the magpie props up the sky and so sets free the sun.² The last-mentioned myth, that heaven and earth are close together, and that, until they are separated, their offspring are in perpetual and universal night, prevails over Oceania. The children, or gods, or a serpent, or trees force them apart and so let in light and air.³

Maori mythology relates that the Atua o te po, gods of Hades or darkness, existed before heaven was lifted up, and were more ancient than the Atua o te ra, gods of light, because darkness precedes light. Their chief was Hine nui te po, great mother night, or Hades. Light and life are represented by Tama mir te ra, the great son of day. A creation epic describes the cosmogonic periods, the first of which is that of thought, the second that of night or darkness:

'The word became fruitful:
It dwelt with the feeble glimmering;
It brought forth night,
The great night, the long night,
The lowest night, the loftiest night,
The thick night, to be felt,
The night to be touched, the night unseen,
The night following on,
The night ending in death.'

Then follows the third period, that of light, and the fourth, in which sun, moon, and stars are created, 'thrown up as the eyes of Heaven, then the heaven became light.'¹ This idea that chaos and darkness—the state of Po, Hades, or night—precede all gods and all things is wide-spread in Polynesia. Even a heaven-god like Taaroa, creator of sun, moon, etc., springs from it;² or he sprang out of an egg and so brought light to the world.³

The Garos say that earth was at first a huge watery plain, and darkness lay over all. Tataara-Rabuga created earth through a lesser spirit and, at the latter's request, placed sun and moon in the sky to give light.⁴

The myth of Heaven and Earth as a divine pair is common in W. Africa, but its most significant expression is found among the Yorubas, who say that Obutala and Odudua, their chief god and goddess, were shut up in darkness in a calabash in the beginning. She blamed him for this, whereupon he blinded her.⁵

Among the Eskimos, a people dwelling for a great part of the year in darkness, many myths deal with this subject. According to one of these, men came out of the earth, lived in perpetual darkness, and knew no death. There came a flood which destroyed all but two old women, one of whom desired both light and death. Death came,

and with it sun, moon, and stars.¹ Another widespread myth is that of the brother who, in the time when darkness covered the earth, ravished his sister. In her anger at his brutal conduct, she pursued him to the sky with a brand. He became the moon and she the sun, ever pursuing the moon, except in winter, when she remains in her house and there is darkness. The stars are sparks from the brand.²

A well-known Chinese myth relates that in the beginning all was darkness. From a great mundane egg, which divided in two, came Poon-Koo Wong, who made the sky out of the upper and earth out of the lower half. He also made sun and moon.⁴ Chinese philosophy speaks of T'ai-Kih, the 'Most Ultimate,' which produced the cosmic souls Yang and Yin, male and female, heaven and earth, warmth and cold, light and darkness.⁶ In Japan an old myth in the *Kojiki* speaks of a time when Heaven and Earth were not separated and the In and Yo (= Yin and Yang) not yet divided. All was chaos and presumably darkness.⁶

A Finnish cosmogonic myth in the *Kalevala* relates that from the upper and lower parts of an egg which fell into the primeval waters were formed heaven and earth, from the yolk the sun, from the white the moon, and from the darkness in the egg the clouds.⁷

Scandinavian mythology contains an elaborate myth of beginnings. There was first a void world of mist, *ginnunga-gap*. On its southern extremity was *muspell*, fire, on its northern, *nifl*, fog; from the one proceeded light and warmth, from the other darkness and cold. According to Grimm, *ginnunga-gap* is the equivalent of the Gr. *χάος*, meaning both 'abyss' and 'darkness.'⁸ In the Edda, Day personified is the son of Night, each of them having a horse and car, in which they journey round the earth. The primitive method of counting time with Scandinavians, Teutons, and Celts was on the principle that night preceded day, the moon, which 'governs the night,' being the measurer of time. Tacitus says of the Teutons that they count the number of nights, not of days, for the night seems to precede the day. Caesar writes of the Celts that they define the divisions of seasons not by days but by nights, and observe times in such an order that day follows night.⁹ A Celtic myth embodying these ideas has not come down to us.

2. Origin of light.—In some of the myths just cited the origin of light from darkness, or from the creation of sun and moon, is already found. As in the Maori myth, light is sometimes prior to the sun (cf. Gn 1³, 14). Some other examples of such myths may be cited. In Bushman belief the sun was a mortal on earth from whose body light radiated for a short distance round his house. Some children were sent to throw him up to the sky as he slept, and now he lightens the earth.¹⁰

The Baronga think that the reflexion of light on the sea after the sun's rising is a kind of source of light whence the sun is renewed daily. It is 'cut out from the provision of fire,' and dies in the West nightly. Light is also called 'that which makes to appear.'¹ An E. African myth tells how two men came to a cave, looked in, and saw the sun. One of them removed a stone, and was burned up. Then the sun ascended on high to light the world.² According to the Ja-Luo, Apötho, father of mankind, appeared from heaven on earth together with the sun, moon, and wind, which fled to the sky when he was angry, and have remained there ever since. The heaven-land has people as bright as fire, and men will go there when they die.³

3. Succession of light and darkness, day and night.—In some instances light, not darkness, is primordial; or after creation, while day exists, night is still unknown. Numerous myths relate how darkness is produced and the regular alternation of day and night follows. The Wumbaio, an Australian tribe, say that at one time the sun never moved. Nurelli, tired of eternal day, bade it go down by the west.⁴ In Banks Island, Qat, after making all things, did not know how to make night, and it was always day. He heard that there was night at Vava, and went there to get it from I Qong, Night. Returning with it, he bade his brothers prepare for night. The sun now moved westwards; he let go the night, and it was dark. After a time he cut it with a knife, and daylight again shone out. In Lepers' Island this is told of Tagaro.⁵ The Meitheiis say that at first there were two suns which rose and set alternately. A slave, tired of getting no rest, shot one of them. There was now always darkness. The other sun refused to come forth, but at last did so as a result of certain ceremonies.⁶ The savage Malays of Malacca have a myth of three suns, one of which was always left in the sky. The female sun was induced to swallow her husband and child, and now there was night.⁷ A native Brazilian myth tells that at first there was no night. Night, or a cobra who owned night, slept at the bottom of the waters. His daughter would not sleep with her husband till he procured darkness from her father. Servants were sent to bring a *tucuman* fruit from him. In spite of all warnings, they opened it, and all grew dark. The daughter now separated day from night.⁸ In Santa Cruz sun and moon are said to have travelled together, but by a trick the sun caused the moon to fall into a marsh and went on before her. Night is the result of a part of the moon becoming black through this trick.⁹ A Finnish myth says that in the beginning there was nothing but water and light—an unusual version of the cosmogonic idea.¹⁰ In some instances night is formed as the result of a dualism. The Yezidis say that God made the world beautiful. Then Malik-Taüs appeared before Him and said that there could be no light without darkness, no day without night, and accordingly He caused night to follow day.¹¹ In a Wallachian Märchen God sends a bee to inquire of the devil, the master of night,

whether there should be one sun or more. The bee rests on the devil's head and hears his cogitations to the effect that, if there are several suns, men will get so accustomed to heat that there will be no fear of hell; night will be as clear as day; and the works of darkness will be brought to an end.¹ In Breton folk-belief God created the day, and the devil made night as an offset to it.² The same dualism is found in a Melanesian story in which all that Tagaro makes is good. Suqe, who makes evil things, wished to have six nights to one day, but Tagaro sent him underground to rule the souls of the dead.³ An extremely naive Macedonian *Marchen* tells how all creation, grateful to the sun for his light and warmth, proposed to reward him with a wife. But the lion said that several suns would be born and all would be burned up. All agreed that it was better for the sun not to marry. In disgust he hid himself in the sea, and all became dark, to the consternation of the animals. But the hen, persuading him that marriage was a disgrace, caused him to rise from the sea every morning.⁴ This myth obviously originates from the apparent disappearance of the sun into the sea at night, and his apparent rising from it in the morning. An Eskimo myth relates that sun and moon were once removed, causing darkness which no shaman could dispel. A boy is sent by his aunt to go south, where he will find the light. He arrives at a hut where light like a ball of fire is lying, but it is hidden by a man shovelling snow, which causes obscurity. He steals the light and is pursued. He breaks off pieces, each of which produces day, which is then followed by night. They are of unequal lengths because sometimes he travels a longer time without throwing out light, sometimes a shorter time.⁵ This myth exactly reproduces the phenomena of the Arctic dark winter, and the phenomena of days and nights of varying lengths.

4. Gods of light and darkness; sun and moon. —Day and night or their rulers or representatives, sun and moon, are often personified as male and female, or as husband and wife, as in the Eskimo myths already cited (§ 1). This is found in American Indian mythology; and in Australian belief, e.g. among the Arunta, the sun is female, the moon male.⁶ It is also found among the Andaman Islanders (the sun is the wife of the moon), the Indians of Guatemala, in Central Celebes, in Cumana, among the Ewe and Yoruba, in Tahiti, among the Pitues, among the Ainus, and among the peasants of Oberpfalz.⁷ In another American myth day and night are two wives who produce light and darkness by sitting alternately at the door of their tent.⁸

In New Britain sun and moon, to whom belong respectively day and night, are children of Ilu and Mamao, and, having gone up to the sky, have stayed there ever since.⁹

In a Tongan myth Vatea and Tonga-iti quarrel about the parentage of the first-born of Papa, each claiming it as his own. The child is cut in two. Vatea throws one part up to the sky, where it becomes the sun; Tonga-iti throws the other to the dark sky, whence the moon. This is explained

as Day and Night alternately embracing Earth, their joint offspring being sun and moon.¹

In Norse mythology Night and Day are mother and son, set in the sky by All-Father, who gives each a horse and chariot to drive round the earth. The sun also has a chariot.²

In many of the myths just cited sun and moon are not always regarded as causing light and darkness, or rather day and night. These exist apart from them, though the two are associated together. A clear connexion between them, however, is seen in another group of myths—those of the sun-catcher. In some of these the sun is tied down, as in a Toda instance, by a demi-god. There is at once darkness on the earth and in the under world, whither the sun goes at night. The people of both implore the demi-god for the sun's release.³ More usually the sun is captured because his course is far too rapid and darkness comes too soon—found in many Polynesian myths—or too erratic, as in a Ute myth.⁴ Sometimes, however, he is captured in order to lengthen the ordinary day, and this group is then connected with magical rites which have also this for their purpose.⁵ Again, he is captured by some persons who wish to amuse themselves, but it becomes so hot that the captors run away.⁶ The second group of myths is obviously suggested in answer to such a question as was raised by the Inca prince: Why cannot the sun wander freely about? Clearly because he obeys the will of a superior being. This is an idea found also in the mythologies of the higher culture.

For further examples see *Mélusine*, ii. [1884–85] 558; Lang, *Myth, Rit. and Rel.* i. 124 f.; E. B. Tylor, *Early Hist. of Man-kind*², London, 1870, p. 846 ff.

Light and darkness, day and night, sun, moon, and stars are often personified or worshipped as gods, or the sun, moon, and stars, as sources of light, are the dwellings of gods. Thus the Ainus believe in a spirit of light who lives in the sun or animates it (*ERE* i. 242^a). Many African tribes have a high god, often the sky personified, and many of them worship the heavenly bodies as sources of light. Loba, the high god of the Bakwiri, has a name signifying originally Heaven or Sun, and so in many other instances.⁷ Shango of the Yoruba is the sun, dwelling in a flaming house of brass; one of his train is Biri, the darkness.⁸ The Kavirondo worship the moon and the sun, the latter regarded as apathetic, occasionally beneficent, but usually malignant.⁹ Among the ancient Teutons and Celts sun and moon were also divinities to whom a cult was paid.¹⁰ Among the Polynesians Ka-ne is the sunlight and Tangaloa is the lord of light, his brother being Rongo, god of dark and night.¹¹ The Andaman Islanders connect Puluga, their high god, with the sky, where he set the sun and moon, who give light by his command and have their meals near his house.¹² Among the Hottentots Tsuni-Goam, the red dawn, is opposed to the dark sky personified as Gaunah.¹³ With the

Fijians Ndauthina is god of light and fire, whose love of light in his infancy was so great that his mother bound lighted reeds to his head.¹

5. Regions of light and darkness.—As in the higher religions the beneficent or loftier gods are connected with light or dwell in the sky (cf. 1 Ti 6¹⁶, 'dwelling in the light which no man can approach unto'), so it is also in savage belief. The Australian high gods, Būnjl, Mūngun-ngaur, and Baiame, dwell in the sky or in Keladi, 'eternal brightness,' and the Nurali of the Murray River tribes is an embodiment of light.² The higher Polynesian gods, Tangaroa, Tangaloa, Tii, etc., dwell in the light heavens, seven or ten in number.³ The Khonds reverence Būra Pennu, god of light, or Bella Poona, the sun-god, whose dwellings are the sun and the place where it rises. Puluga, the Andaman high god, lives in the sky. This is true also of many African gods; e.g., the Zulus hold that the creator lives in heaven, and Nzambi Mpingu of the Fiot dwells behind the firmament.⁴ Similarly one of the names of the supreme being of the Indians of Guiana signifies 'the Ancient One in Skyland.'⁵ Many of the Teutonic gods, some of them gods of light, dwelt in the sky, where Valhalla was situated.

¹ From the sky the gods descend to earth, along the sky they make their journeys, and through the sky they survey unseen the doings of men.⁶

So also Elysium, the abode of the blest, whether it is in the sky or on or below the earth, is always a region of light and brightness. In contradistinction to this, the abode of unhappy spirits in all mythologies is dark and gloomy, in this resembling the abode of the shades in religions where no distinction had yet been made between good and bad spirits—the Bab. Arallu, the Heb. Shēl, the Greek Hades (see the series of artt. on BLEST, ABODE OF THE).

The subterranean Pueliko or Tartarus of the Caroline Islanders is cold and dark.⁷ In Polynesia, as Po, or darkness, was the primal source of light and of the gods of light, so it is also conceived as the subterranean place of night whither departed spirits go.⁸ In Nanumes the wicked go to a place of mud and darkness.⁹ The Japanese Yomi, or Hades, means 'darkness,' and it is presided over by Susa-no-wo, a personification of the rain-storm, and a moon-god, ruling also the darkness of night.¹⁰ The Scandinavian Niflhel is a place of darkness surrounded by fogs and gloom (see BLEST, ABODE OF THE).

6. Evil powers and darkness.—Evil gods, gods of death, etc., are often associated with darkness, or divinities who are not evil have often acquired a sinister aspect in so far as they are associated with the night or even with the moon, the ruler of the night. The Sakai believe that the lord of hell, a cavern in the interior of the earth, is a friend of darkness and cannot bear the light.¹¹ In Polynesia Rongo, brother of Tangaroa, is god of darkness and night; Hine-nui-te-po, the great mother night, into which all must fall, is a personification of night and death.¹² Some Australian divinities to whom evil powers are ascribed are connected with darkness and night.¹³ The Japanese Susa-no-wo, already referred to, is another instance. Much more generally all evil spirits, demons, ghosts, and the like are associated with darkness, which men's fears peopled with them.¹⁴

In S.E. Guinea evil spirits called *werabana* inhabit dark places and wander about at night; and in New Britain Kaia, a spirit causing disease, earthquake, etc., lives in craters and dark places.¹ The Tasmanians thought that lower spirits concealed themselves in dark ravines by day and came forth at night to do harm.² The Australians also peopled the darkness with a variety of horrible beings ready to pounce upon men.³ Innumerable other examples from savage belief might be cited. Similarly, among the Celts and Teutons a variety of demoniac and supernatural beings were associated with the darkness, and in folk-superstition generally fairies, witches, demons, werewolves, vampires, and ghosts are most powerful in the hours of darkness, especially 'at the lone midnight hour when had spirits have power.'⁴ See artt. DEMONS AND SPIRITS, FAIRY, LYCANTHROPY, VAMPIRE.

Among savages, as also among higher races, there is a wide-spread fear of the darkness. Many savages will not travel or even leave their huts or camp at night; or, if they do so, they must be armed with firebrands and the like to keep evil spirits at a distance, since these fear the light. Thus we find magical rites to overcome the terror of darkness; e.g., in New Caledonia the priest, when cutting the umbilical cord of a boy, had a vessel of water before him, dyed black as ink, in order that when the child grew up he might not fear to go anywhere on a dark night.⁵ For similar reasons an eclipse of the sun or the moon is universally feared. Generally a monster is supposed to be destroying these bodies, and, since they are so often regarded as the sources of light, it is feared that their destruction would mean a return to the primordial darkness. Every precaution is therefore taken to scare off the destroying monster or to bring to an end whatever other mythical cause is attributed to an eclipse.⁶ In connexion with the belief that evil spirits have power in the dark must be noted the wide-spread idea that their power ceases at dawn, or that, if they are surprised by daylight, they are destroyed. This applies to all evil beings, demons, witches, fairies, etc. See art. FAIRY.

7. Dualism of light and darkness.—The contrary nature of light and darkness, the qualities instinctively associated with each—life with light,⁷ death and terror with darkness—might easily suggest to primitive minds a species of natural dualism. The day seems to be swallowed up by night, again to appear and drive it away; at an eclipse sun or moon is wholly or partially concealed by darkness, figured as a beast or demon, but again emerges victorious. Hence in some instances on the lower levels of culture light, or day, and darkness, or night, may be personified and regarded as in conflict. That this was the case is obvious from such a dualistic system as the Parsi, which is fundamentally concerned with an older natural dualism of light and darkness, giving rise to a moral dualism of good and evil. The same dualism is found sporadically in other higher religions, and in faiths in which the influence of Parsiism was felt,⁸ also perhaps in such a dualism as exists in the religion of the Buriats (*q.v.*). On the other hand, since light, day, sun, seem to rise out of night, they are perhaps more often regarded as produced by darkness, rather than hostile to it, as in Polynesian mythology and elsewhere (*§ 1*). It is also probable that modern inquirers into savage myths have too readily assumed that mythical personages represented, on the one hand, light, sun, or dawn, and, on the other, darkness and night, and that myths of a contest between a hero and a demoniac being necessarily meant a contest between light and dark-

ness. While it is possible that certain American myths adumbrate such a contest, it is likely that, on arbitrary philological grounds, such an interpretation has been too easily applied to them.¹ One aspect of such a mythic strife may be seen in the beings associated with light and darkness rather than in these themselves personified. Thus the demoniac beings who have power in the darkness are generally powerless and are not feared by day (§ 6), or those connected with gloom and darkness are often regarded as opposite in nature or opposed to divinities or spirits of light—e.g., gods residing in the heavens. In primitive religion decisive examples of a conflict between light and darkness are few in number, but the mythic method is seen in the words of a Basuto who described nature as given up to perpetual strife—the wind chasing the clouds, darkness pursuing night, winter summer, etc.² If, as has been supposed, the Polynesian Maui is the sun (though, as has been seen, Maui captures the sun), then the story of how he intended to pass through the body of Hine-nui-te-po, but was unsuccessful and died, and so brought death into the world, might be a myth of the sun or light being swallowed up by darkness.³ In Khond belief the supreme creator, Būra Pennu, the light- or sun-god, is opposed, not by darkness, but by Tāri Pennu, the earth-goddess, the bringer of disease, death, and other evils.⁴ Japanese mythology preserves a story of the retirement of the sun-goddess to the rock cave of heaven, leaving the world to darkness, because of the misconduct of her brother Susa-no-wo, the storm-god and later ruler of Yomi (the dark Hades). The gods dance in front of the cave, and she comes out to see them and is prevented from re-entering. Light is thus restored to the world. This suggests a myth of the strife between light and darkness. Later Shinto theologians allegorize the goddess's retirement as emblematic of the darkness of sin, and the renewal of light as signifying repentance.⁵ Grimm has suggested that many phrases in Teutonic languages used of light and darkness, day and night, show the one as a hostile, evil power in contrast to the kindly character of the other, and that there is perennial strife between the two.⁶

LIGHT AND DARKNESS (Chinese).—The Chinese outlook on life and attitude towards religion give more prominence to light than to darkness.

The two principles which pervade all nature and to which everything is assigned—the *yin* and *yang* principles, the dualistic elements of Chinese philosophy—are also the two headings into which light and darkness are differentiated. *Yin*, it may be said, is darkness, and *yang* light. The latter stands for the upper world of light; the former for the nether world of gloom and semi-darkness.

It is difficult to classify as gods of darkness any of the gods of the Chinese, unless Yāma (Yen-ma, Yen-lo), the ruler of Hades, with his entourage of officials and demons, be considered as such. The light of the sun is wanting in the Chinese nether

world; it is a land of shades and of the shadow of death, for a twilight gloom prevails. The idea of hells in Taoism was derived from Buddhism; but the conception was developed on different lines. Utter darkness reigns in eight hells out of the millions of various abodes of punishment in the future world of Chinese Buddhism.¹

In the primitive religion of the ancient Chinese nature-worship was prominently apparent, and remnants of this are still found: in the erstwhile Forbidden City, or Inner City, of Peking there is a splendid altar to Light. The sun, according to the Chinese, is the source of all brightness, and the masculine principle in nature is embodied in it, while the moon is considered to be the essence of the female principle. The philosopher Chu Hsi said:

'In the beginning heaven and earth were just the light and dark air. . . . The subtle portion of the air . . . became heaven and the sun, moon, and stars. . . . Light and darkness have no beginning.'²

The 'visible darkness' that engulfs the sun and moon at an eclipse is supposed popularly to be the effect of a monster swallowing them. Mandarins under the old regime offered worship as an official duty during an eclipse, soldiers fired muskets, and priests clanged cymbals and chanted prayers to the sun and moon. While all this was going on, the populace fired crackers and clashed pots and pans to frighten the monster away.³

There is an altar to the sun to the east of the Tatar City of Peking. That to the moon is outside the west wall.⁴

In that ancient Chinese classic, the *Yi King*, or *Book of Changes*, one of the trigrams is an emblem of light or brightness.⁵ Light and brightness are the symbols of, or attributes applied to, goodness and virtue.⁶ The rising of the brightest object in the sky is suggestive of advancing, and Hsi Ping-wān of the Yuan dynasty (A.D. 1280-1367) thus applies it:

'Of bright things there is none so bright as the sun, and after its pattern he [the superior man] makes himself bright.'⁷

These instances show that the Chinese early seized on the striking symbolism of light and darkness to represent a mental or moral condition as well as a physical one; and this expressive language has continued in use. It appears now and again in the *Tao Teh Ching*:

'We should attempt our brightness, and bring ourselves into agreement with the obscurity of others.'⁸ 'Use the light that is within you to revert to your natural cleanness of sight.'⁹

There is the goddess of lightning, worshipped by both Buddhists and Taoists, who, according to the popular mythology, was appointed to accompany the god of thunder on his expeditions to prevent his making a mistake, for on one occasion, finding the white rind of a melon flung away, in the darkness of a smoke-begrimed Chinese kitchen, he mistook it for rice and killed with his chisel and hammer the supposed waster of good food. To prevent the recurrence of such an event the goddess carries a mirror in each hand, or one in her two hands, and flashes light on objects before the god strikes. This is the explanation of 'the lightning's fiery wing.'

The god of fire is another of the gods connected with light. His name, Hwa Kwang, may be rendered 'Beautiful Light.' Unlike the majority of the popular gods, he was not originally a human

being, but a lamp, of which the snuffings of the wick were turned into a man by the recital of a charm. He is the form and soul of fire.¹ Both Buddhists and Taoists claim him.

The Buddhists deify light by personification in the *bodhisattva* Marichi Dēva. The Chinese represent her with eight arms. In two of her hands she holds up emblems of the sun and moon. She is the goddess of light, and protects nations from war. Among her other titles is that of Queen of Heaven. The Taoists also claim her as one of their deities, and fix her residence in a star in the constellation of Sagittarius.²

Buddha after Buddha, commencing with Śākya-muni Buddha, has light as one of his attributes, or some manifestation of light appears in the course of his life in connexion with him. Five-coloured lights flashed at his birth, and flame burst from his dead body.³ Every Buddha has, among his characteristics, a circle of hairs between his eyebrows by which he can illuminate the universes.⁴

'Light' and 'Brightness' often appear in the names given to different Buddhas, as well as occasionally to others, and to different objects. Among these names of Buddhas, present or to come, supposed to be real or fictitious, are such as 'Brightness of the Law,' 'One whose feet display myriads of Luminous Figures,' 'The Buddha of Fixed Light,' 'Light and Bright,' 'The Bright Effulgence of Sun and Moon,' 'The Clear and Bright Efficacy of Sun and Moon.' The 930th Buddha of the present *kalpa* is called 'The Buddha of Wonderful Light.' Some twenty billions of Buddhas have the title of 'Cloud Sovereign Illuminating King.' Five hundred *arhats* will reappear as Buddhas with the name of 'Wide-spreading Brightness.'⁵ Some of the demons in which Buddhism believes shed a glare of light.⁶ A realm mentioned in Buddhism is 'The Realm of Great Light.'⁷ One of the sixteen (or eighteen in Northern Buddhism) celestial worlds is that of 'Light and Sound,'⁸ and another is that of 'Unlimited Light.'⁹ Buddhism has five 'Luminous Treatises.'¹⁰ A fictitious degree of *samādhi* is also called 'Pure Light and Brightness,' and another 'Pure Light.'¹¹

In Northern Buddhism the 'Buddha of Boundless Light,' diffusing great light, Amitā (Amitābha), originated in the ideal of boundless light, and was thought of at first as impersonal. He is the most popular of all the Buddhas among the Chinese people. In his heaven, the wonderful and glorious Paradise of the West, two Buddhas 'radiate light over three thousand great worlds.'¹² Amitā Buddha himself, in the words of the Chinese poem singing his praises, has a

... halo of light that encircles his head,

The sun at noonday is less glorious than he.¹³

As to those who enter that heaven,

'The material body of men while on earth

Is exchanged for another ethereal and bright,

That is seen from afar to be glowing with light.'¹⁴

This new mystical school makes use of the sym-

bolism of light in its description of religious states of its devotees.¹ In some cases light plays an important part in the advent to earth of a god on his incarnation, and even one of the mythical emperors of China, the Yellow Emperor (2698 B.C.), owed his origin to this.

With the Taoist gods, a ray of light shoots down arrow-like from heaven to the future mother shortly to be delivered of a child, and thus the divine is blended with the human in the infant, who has sometimes to expiate some sin from which his godlike nature has not saved him, or to cure or to eradicate some infirmity still inherent in his moral nature.

We find a brilliant light in connexion with the preparations for the birth of the Taoist Gemmeous Sovereign, the Supreme Ruler, and in his later incarnations a golden light or a glimmering light² descends. Somewhat similar experiences occurred when the Taoist Aged Sire united with light, and became dust and was born on earth.³ A Taoist writer of the Yuan dynasty says that light broke forth spontaneously in the primordial void, springing from itself in the heart of the void, and his idea would appear to be that to attain illumination one must empty oneself as the primordial void of which he speaks was empty.⁴

The word 'Light' is used as one of the Chinese clan-names or surnames, as it is in English, but it also appears sometimes as an individual name bestowed on an infant, and occasionally in union with some other character in a name selected later in life.

LITERATURE.—This is sufficiently cited in the footnotes.
J. DYER BALL.

LIGHT AND DARKNESS (Christian).—The symbolical use of the words 'light' and 'darkness' is very common in early Christian literature, and in the main was derived from the OT, as will be seen by the references given below. As time went on, the metaphor of light served as one method of expressing the theological conception of the Persons of the Holy Trinity.

1. The symbolism in the NT.—We may pass by the obvious metaphor by which to speak or act 'in the light' is to do so 'openly,' and to speak or act 'in the darkness' is to do so 'secretly,' as in Mt 10²⁶, Lk 12³ (cf. Jn 18²⁰, and Eph 3⁹, 1 Co 4¹³). More to our purpose are the numerous passages where 'light' denotes knowledge, truth, and holiness, and 'darkness' denotes ignorance and sin—ignorance in all its phases being included in the latter simile: absence of knowledge, spiritual blindness, error, and wickedness; for blindness, if wilful, becomes sin. The opposition between light and darkness is expressed in Jn 3¹⁹; men had the opportunity, for light is come into the world, but they loved the darkness rather than the light, for their works were evil—'every one that doeth ill hateth the light.' 'Darkness' expresses the state of the world before the Incarnation (Jn 1⁵, Lk 1⁷⁹); the idea is taken from Is 9², where it is said that 'the people that walked in darkness have seen a great light.' To be in a state of sin and ignorance is to walk, or sit, or be in darkness (1 Jn 1⁵, 2⁹, Jn 8¹², 1 Th 5⁴, Ro 2¹³, Lk 1⁷⁹). In Jn 8¹² the 'light of life' is the light 'which both springs from life and issues in life' (B. F. Westcott, *Gospel according to St. John*, London, 1908, in loc.). The metaphor is very common in the Johannine writings, but it is frequently found elsewhere. In Mt 6²² the 'body full of light' (*φωρεῖν*) denotes purity and holiness, and the 'body full of darkness' (*σκορεῖν*) denotes evil; so Lk 11³⁴ (cf. Pr 14¹⁸).

¹ See T. Richards, *The New Test. of Higher Buddhism*, Edinburgh, 1910, pp. 65, 149, 151, etc.

² Dyer Ball, 'Scraps from Chinese Mythology,' in *China Review*, xi. 72 ff., 207, 213, 232, 237.

³ *Ib.* p. 861.

⁴ See L. Wiegand, *Le Canon taoïste*, Paris, 1911, i. 65, no. 246.

In Ac 26¹⁸ the preaching of the gospel is to turn the people from darkness to light and from the power of Satan unto God. St. Paul uses the metaphor freely. The 'works of darkness' are the evil deeds of the present 'night,' and the 'armour of light' is to be put on in view of the approach of the day (Ro 13¹²; cf. Eph 5¹¹; for 'night' and 'day' in this connexion see 1 Th 5⁴⁻⁸). We are partakers of the inheritance of the saints in light, and have been delivered out of the power of darkness (Col 1¹²). The fruit of the light is in all goodness, righteousness, and truth (Eph 5⁹ RV). Light has no communion with darkness, and therefore Christians are not to be unequally yoked with unbelievers (2 Co 6¹⁴, quoted in *Apost. Const.* viii. 34, to forbid Christians to pray with heretics). So St. Paul uses the verb 'to darken' (σκορίζω or σκορώ) in Ro 1²¹ 11¹⁰ and Eph 4¹⁸ metaphorically of the hardening of the heart or the blinding of the eyes by ignorance, just as he uses 'to enlighten' (φωρίζω) in a metaphorical sense in Eph 1¹⁸ (cf. Jn 1⁹; see below, § 4). St. Peter speaks of our being called out of darkness into God's marvellous light (1 P 2⁹). The curious passage 2 P 1¹⁹, where prophecy is as 'a lamp shining in a squalid (ἀσχημικῶ) place,' may be compared with Mic 3⁶, where 'darkness' is used of want of spiritual perception in a prophet.¹

The name 'Light' is given to God. Not only is light a gift of God, but God is by nature 'light' (1 Jn 1⁵ φῶς ἀνάρθρωτος); therefore He can be known by His creatures, and is all-holy, for in Him is no darkness at all. This goes much further than Is 10¹⁷, where God is called 'the light of Israel,' or Ja 1⁷, where He is called the 'Father of lights' (τῶν φῶτων—the heavenly bodies [?]).

This divine attribute is claimed by or ascribed to our Lord in Jn 8¹² ('I am the light of the world') 9⁵ 12³⁵⁻⁴⁶, Lk 2²², Mt 4¹⁶ (from Is 9¹). St. John says that in the Word was life, and the life was the light of men, shining in the darkness; He was 'the true light which lighteth every man, coming into the world,' i.e. by His Incarnation (but see Westcott's note), in contrast to the Baptist, who was but a witness of the light (Jn 1⁴⁻⁹). Because He is the light, He will shine (ἐπιφάνει) on the awakened sleeper (Eph 5¹⁴). He is to be a light to all men (Ac 13⁴⁷, quoting Is 49⁶ [the reference is to Jesus, not to St. Paul, though the Apostle identifies his mission with that of his Master]; cf. Is 42⁶, where the Servant of Jahweh is to be a light of the Gentiles—a phrase repeated of the 'Son of Man' in *Ethiopic Enoch*, xlvi. 4 [1st cent. B.C.]). The phrase 'dwelling in light unapproachable' (1 Ti 6¹⁶) might be applied to the Son (so Chrysostom, *Hom. xviii. in 1 Tim.*, in loc.) or to the Father, but probably it refers to the Father (cf. Ps 104², Dn 2²²). See also § 3, below.

In an inferior sense the servants of the Incarnate are 'lights.' The Baptist (see above) is 'a lamp that burneth and shineth,' in whose light the disciples were willing to rejoice for a season (Jn 5³⁵). All Christians are the light of the world (Mt 5¹⁴ φῶς, cf. Ph 2¹⁵ φωστῆρες), and are sons or children of light (Lk 16⁸, Jn 12³⁶, 1 Th 5⁵, Eph 5⁸ ['once darkness . . . now light in the Lord']). The angels are angels of light (2 Co 11¹⁴; we may compare the light which shone when the angel released St. Peter, Ac 12⁷). In contrast to this, the devil and his angels are 'world-rulers of this darkness' (Eph 6¹²), i.e., as the Peshitta paraphrases,

¹ The metaphor from the contrast between the dimness of a reflected light and the clearness of an open vision, a metaphor which was more obvious, no doubt, in the days of unscientific reflectors than it is now, is used by St. Paul in 1 Co 13¹², where he describes our partial knowledge in the present world as seeing 'in a mirror' instead of 'face to face'; but the words which we translate 'darkly' (lit. 'in a riddle') do not carry on the simile.

'rulers of the world of this darkness' (meaning 'of this dark world'), and their realm is the 'outer darkness' mentioned in Mt 8¹² (for Jewish parallels see W. C. Allen's note in loc., ICC [31912]) 22¹⁸ 25³⁰; this is the place of punishment of sinners, and we may compare Jude⁸, where the fallen angels are said to be 'kept in everlasting bonds under darkness (ζόφον) unto the judgement of the great day,' and 2 P 2¹⁷, where the 'blackness of the darkness' (ὁ ὀσφός τοῦ σκότους) is said to have been kept for evil men. The same idea of punishment is found in *Eth. Enoch*, lxiii. 6, where the wicked say: 'Light has vanished from before us, and darkness is our dwelling-place for ever and ever'; on the other hand, God will for the elect 'transform the heaven and make it an eternal blessing and light' (xiv. 4).

2. The same symbolism in the Fathers.—The symbolism of light and darkness is not so common in Patristic writings as in the NT, but a few examples may be given from the first four or five centuries. At the close of the Apostolic period the *Epistle of Barnabas* (§§ 18-20) describes the two ways, of light and darkness, i.e. of good and evil (cf. Dt 30¹⁶); over the former are stationed the light-giving (φωταγωγοί) angels of God, over the latter the angels of Satan. In the 3rd cent. Origen calls Celsus's arguments darkness, the truth light (c. *Cels.* vi. 67). Lecturing A.D. 348, Cyril of Jerusalem says (*Cat.* vi. 9) that the Father is eternal light, beaming inexhaustibly. The metaphor is found in the Ancient Church Orders—e.g., in the *Egyptian* (Coptic) *Church Order* (§ 62), the *Verona Fragments of the Didascalia*, etc. (ed. E. Hauler, Leipzig, 1900, p. 119), and the *Testament of our Lord*, ii. 24: 'The Father hath sent His Word [and Wisdom] to enlighten the saints.' In the last-mentioned work (Eng. tr., J. Cooper and A. J. Maclean, Edinburgh, 1902) the symbolism is very common, both in the apocalyptic prologue (where it probably comes from an original apocalypse, perhaps of the 2nd cent.; see *JThSt* xiv. [1913] 601-604) and in the Church Order proper. Christians are children of light (i. pref., 1, 3, 12, 37). In the liturgy of this work (i. 23) God is called 'the Father of lights' (Ja 1¹⁷), 'King of the treasures of light,' 'Illuminator of the perfect,' 'Giver of light eternal.' Elsewhere in the book He is called 'Giver or Maker of light' (i. 26, 43), 'God of the lights . . . Whose veil is the light' (ii. 7). Our Lord is 'Begetter of light . . . Guardian of light eternal,' who has 'shed light on the darkness within us' (i. 26). Jesus is the name of light (ii. 27). The illumination of the heart is frequently referred to (i. 15, 21, 23, 31, 32, 38, ii. 5, 7, 9). Somewhat more sparingly the simile is used in the *Apostolic Constitutions*. Christians are 'children of light' (i. 2, ii. 32, 46, 54), as in the parallel passages of the *Older Didascalia* (see these, arranged on opposite pages, in F. X. Funk, *Didasc. et Const. Apostolorum*, Paderborn, 1905). The Father inhabits light inaccessible (*Apost. Const.* vi. 11, viii. 16, from 1 Ti 6¹⁶). Jesus is the true light (v. 16), and the bishop must be a student, and enlighten himself with the light of knowledge (ii. 5; cf. viii. 37). These phrases (except v. 16) are not in the *Older Didascalia*. In *Sarapion's Sacramentary* God is called the 'Fount of light,' and is prayed to give us the (or a) Spirit of light (§ 1; *JThSt* i. [1899] 105, in Funk [*op. cit.* ii. 172], numbered § 13). Gregory of Nazianzus (*Orat.* xl. 5 f. [A.D. 381]) calls angels and men 'light' in an inferior sense, though in the highest sense God alone is light.

In the *Clementine Recognitions*, now thought to be of the 4th cent., Simon Magus, denying that God has a Son, says that there is a power of infinite and ineffable light (i.e. God), of which power even the Demiurge, Moses, and Jesus are ignorant (ii. 49).

3. Light as describing the relation of the Father and the Son.—We may now investigate the use of the phrase 'Light of Light' (*φῶς ἐκ φωτός*) applied to our Lord. In the NT the Father is Light, and the Son is Light; but the above phrase is not used, though in He 1^s our Lord is the effulgence (*ἀπαύρασμα*) of the Father's glory and the very image of His substance; the reference seems to be to Wis 7²³, where Wisdom is 'an effulgence from everlasting light . . . and an image of [God's] goodness.' (For various Patristic comments on He 1^s see Westcott's note, *Epistle to the Hebrews*, London, 1889, p. 11.)

An early approximation to the phrase 'Light of Light' is found in Origen (*de Prin.* i. 1), who says that God is light, illuminating man, and interprets 'thy light' in Ps 36⁹ of the Son. In the 2nd cent. Justin had used the illustration of fire kindled from fire with reference to the Son and the Father (*Dial.* 11, 128); and Tatian (*c. Græc.* 5) re-echoes his words. So also Tertullian (*Apol.* 21) says that a ray of the sun is still part of the sun; there is no division of substance, but only an extension; thus Christ is Spirit of Spirit, and God of God, as light of light is kindled. But Athanasius sees a danger in the metaphor of fire. He says (*de Decretis*, v. 23) that the Son is not as fire kindled from the heat of the sun, which is commonly put out again, but is 'effulgence' (*ἀπαύρασμα*), signifying that He is from the essence, proper and indivisible, of the Father, and is one with Him (see A. Robertson's note on the passage in *Nicene and Post-Nicene Fathers*, iv. [1892] 165). Arius in his letter to Alexander had quoted Hieracas as saying that the Son was from the Father as a light from a light (*ἀπὸ φωτός ἀπὸ φωτός*), or a lamp divided into two (quoted by Epiphanius, *Hær.* lxix. 7). In the small treatise *In illud 'Omnia'*, 3 (on Lk 10²²), Athanasius says that Christ, the Light, can never be separated from the Father. In *Orat. c. Arian.* iv. 2 the writer speaks of the Word as 'Light from Fire,' and in iv. 10 compares the Father and the Son to fire and the effulgence from it, 'which are two in being and in appearance, but one in that its effulgence is from it indivisibly'; but it is uncertain if this fourth Oration is by Athanasius.

Later in the 4th cent. (A.D. 381), Ambrose says that 'the Father is Light, and the Son is Light, and the Holy Ghost is Light, and the Holy Ghost is both Light and Fire,' referring to Is 10¹⁷ (*de Spir. Sanct.* i. 14 [160 ff.]). The well-known hymn *φῶς λαμπρὸν* ('Hail, gladdening Light'), sung at the Lamp-lighting, calls the Son the 'gladdening Light of the holy glory of the immortal, heavenly Father'; it is older than Basil, who apparently quotes it (*de Spir. Sanct.* xxix. [73], A.D. 374).

The phrase 'Light of Light' is found in the creed of Nicæa and in the enlarged creed (called the creed 'of Constantinople') which came into general use. It was derived by the former from the creed of Eusebius of Cæsarea, which, as Eusebius told the Nicene Fathers, had been handed down from preceding bishops of that see, and used in the baptismal catechesis; this creed had 'God of God, Light of Light, Life of Life' (Socrates, *HE* i. 8). On the other hand, the phrase 'Light of Light' is not in the creed of Gregory Thaumaturgus (c. A.D. 265), which has only 'Sole of Sole (*μὶνος ἐκ μίνου*), God of God' (it is given in *Ante-Nicene Chr. Lib.* xx. [1882] 5). In Cyril of Jerusalem (*Cat.* iv. 7) the Son is called 'begotten Life of Life, begotten Light of Light'; in xi. 4 Cyril repeats this phrase and adds 'Truth of Truth, and Wisdom of Wisdom, and King of King, and God of God, and Power of Power' (cf. xi. 18). The phrase 'Light of Light' occurs in R. H. Connolly's reconstruction of Aphraates' creed (4th cent.; *JThSt* ix. [1908] 280), but not in the creeds of the various

Church Orders, though those of the *Apost. Const.* (vii. 41) and of the *Egyptian* (Coptic) and *Ethiopic Church Orders* are of the Eastern type (those of the *Testament of our Lord*, the *Canons of Hippolytus*, and the *Verona Fragments* are the Western or Roman creed). It is instructive to note the different creeds of the Council of Antioch in Encænii, A.D. 341. The second creed has 'God of God, Whole of Whole, Sole of Sole, Perfect of Perfect, King of King, Lord of Lord, the living Word, the living Wisdom, [Life], the true Light,' etc. The third creed has merely 'perfect God of perfect God.' The fourth creed, drawn up by a continuation of the Synod, has 'God of God, Light of Light . . . who is the Word and Wisdom and Power and Life, and the true Light' (these creeds are given in Athanasius, *de Synodis*, 23, 24, 25, and the second and fourth in Socrates, *HE* ii. 10, 18; see them also in Hefele, *Councils*, Eng. tr., Edinburgh, 1876, ii. 77-80). With reference to the phrase in question Basil, when dealing with the relation of the Son to the Father, and speaking of the phrase 'like in substance' (*ὁμοιον κατ' οὐσίαν*), says that he will accept the phrase if the word *ἀπαράλλατος* ('without any difference') be added, as equivalent to the Homousion:

'Being of this mind the Fathers at Nicæa spoke of the Only-begotten as "Light of Light," "Very God of Very God," and so on, and then consistently added the Homousion. It is impossible for any one to entertain the idea of variability of light in relation to light, of truth in relation to truth, or of the essence of the Only-begotten in relation to that of the Father' (*Ep.* ix. 3, to Maximus).

Passing to later times, we note the curious fact that the phrase does not occur in the present Nestorian Creed (F. E. Brightman, *Lit. East. and West.*, Oxford, 1896, p. 270), though it is in that of the Nestorian Catholicos Ishuyaw (Ishō'yahbh) i., A.D. 595, which is given by W. A. Wigram, *The Assyrian Church*, London, 1910, p. 291.

Reviewing the evidence, we conclude that the appearance of the phrase in a creed cannot be affirmed before the 3rd cent., though perhaps (in view of Eusebius's word 'bishops' in the plural as above) it was so used early in that century; Cæsarea was perhaps its first home. But before this there is earlier evidence (in the 2nd cent.) of the use of the symbolism of 'Light of Light,' though not of the phrase itself. Even after Nicæa it was not by any means universally adopted into creeds. It will be remembered that the creed of Nicæa was a test of orthodoxy, and was not at first used liturgically; it was not, apparently, for some time used at baptisms, and was not introduced into the Eucharistic service till the end of the 5th century. It is not surprising therefore that, in spite of the great authority of the Council of Nicæa, the phrase in question did not at once spread very rapidly.

4. Baptism and light.—In the early Church the symbolism of light was closely connected with the sacrament of initiation. Baptism was, especially by the Greeks, called 'illumination,' *φωτισμός* or *φωτίσμα*, as in Justin (*Apol.* i. 61), in Gregory of Nazianzus (*Orat.* xl. 1; cf. ii. 38), once in the *Apost. Const.* (ii. 32, where it expressly includes the laying on of hands; in vi. 1 and viii. 12 the word is used literally, of the pillar of fire, and in ii. 5, v. 1 metaphorically, of knowledge; cf. 2 Co 4⁴⁻⁵), and in the *Older Didascalia* (*Verona Latin Fragments*, ed. Hauler, p. 87: 'postilluminationem quod dicit Græcus fotisma,' with reference to He 6⁴ [not in the corresponding passage of *Apost. Const.*]). Similarly the selected candidates for baptism were called *φωτισμένοι*, 'those who are in process of being illuminated' (Lat. *competentes*), and the baptized were called 'the illuminated' (*οἱ φωτισθέντες*)—as in Justin (*Apol.* i. 61, 65, *Dial.* 122), Clement of Alexandria (*Pæd.* i. 6), who quotes Eph 5⁸ of baptism, and wrongly derives *φῶς*,

'man,' from φῶς, 'light,' Cyril of Jerusalem (*Cat.*, Introd. i. xi. 1, xii. 21), and the *Apost. Const.* (viii. 8 and 35); Eusebius says that Constantine at his baptism 'was filled with heavenly light' (*Vit. Const.* iv. 62). For this reason the baptismery was often called in Greek φωτιστήριον; the *Arabic Didascalia* (§ 35), which derives its account of the church buildings from the *Testament of our Lord*, i. 19, transliterates this name into Arabic (Funk, *Did. et Const. Ap.* ii. 124 f.).

This symbolism is found also in the NT. In He 6⁴ 10²² the aorist participle φωτισθέντες ('illuminated'), denoting a definite act, clearly refers to the Christian act of initiation, and the Syriac versions, both the Peshitta and the Harqleian, in translating these passages, explicitly refer them to baptism. The metaphor has been thought to have been derived from the Greek mysteries, though the NT φωτιστήρια are quite unlike the heathen ones in that in the former the revelation of the unknown is what is emphasized (cf. Mk 4¹, 1 Co 4¹ 13² 14², and Col 1²⁶, where see Lightfoot's note).

The custom of the candidates for baptism carrying torches probably came from the metaphor, not the metaphor from the custom, which is perhaps alluded to by Cyril of Jerusalem (*Cat.*, Introd. and i. 1) and certainly in pseudo-Ambrose (*de Laps. Virg.* v. [19], A.D. 374 [?]).

There is a 2nd cent. legend, mentioned by Justin (*Dial.* 88), that, when Jesus was baptized, 'a fire was kindled in Jordan.' It is mentioned in the apocryphal *Preaching of Paul*, in the Ebionite Gospel, and in the Old Latin codices 'a' 'g' (in Mt 3¹⁶ they read 'lumen ingens' or 'magnum'; see H. B. Swete, *Holy Spirit in NT*, London, 1910, p. 43 n.), and is a commonplace of Syriac literature. In the Diatessaron it was related that a light flashed on Jordan and the river was girdled with white clouds. This reading is attested by Barsalibi and Isho'dādāh (see F. C. Burkitt, *Evangelion dampharreshe*, Cambridge, 1904, p. 115).

From the baptismal metaphor, Epiphany was called 'The Holy Lights' (cf. Greg. Naz. *Orat.* xxxix. and xl. 1); our Lord's baptism is the event principally commemorated at that festival in the East (see, further, art. EPIPHANY).

5. Liturgical use of lights.—There are many traces of the symbolic use of lights in Christian services, from the 4th cent. onwards. Perhaps the earliest is in connexion with funerals. At the Spanish Council of Elvira (c. A.D. 305, can. 34) the custom of burning candles in the day-time in a cemetery was forbidden, lest the spirits of the saints should be disturbed—a custom probably borrowed from the heathen (see Hefele, *op. cit.* i. 150). But in some form the custom continued. Lights were carried, as in heathen, so in Christian, funeral processions; see Gregory of Nyssa, *de Vita S. Macrinae* (near the end, ed. Paris, 1633, ii. 201 A; c. A.D. 380), and *Funeral Oration on Meletius* (near the end; A.D. 381). Eusebius says (*Vit. Const.* iv. 66) that Constantine's body lay in state 'surrounded by candles burning in candlesticks of gold, presenting a marvellous spectacle'; and Gregory the Great (*Ep.* ix. 3, to Januarius, A.D. 598) speaks of relatives at a funeral offering lights for churches.

About the 4th cent. we find the symbolic use of lights in other Christian services. In the *Testament of our Lord* (i. 19) it is directed that all parts of the church 'be lighted, both for a type, and also for reading.' The derived *Arabic Didascalia* expands this phrase thus: 'Let them be lighted with many lights as a figure of heavenly things, especially in the reading of the pericopae of the sacred books' (§ 35; Funk, *op. cit.* ii. 125). It has been suggested that lights had necessarily been in use in the catacombs and in the assemblies before dawn

in times of persecution, and that, when churches were built above ground in times of peace, the usage was continued and was given a symbolic turn (W. E. Scudamore, in *DCA* ii. 993 f.). This may be partly true, though it does not explain all the circumstances of the case. For we find lights also used as a decoration at festivals, as when Paulinus of Nola (c. A.D. 407; † A.D. 431) describes the innumerable festal lights burning night and day as a sign of rejoicing (*Poem.* xiv. [*de S. Felicitis Natalit.*, carm. iii.] line 99 ff.). 'Etheria,' or 'Silvia' (whose *Peregrinatio* has usually been dated at the very end of the 4th cent., though many scholars think it is somewhat later), describes the same thing as happening daily at Jerusalem (part of this work is given in App. 5 of L. Duchesne, *Christian Worship*, Eng. tr.³, London, 1912; see pp. 493, 498). This was also a heathen custom (Juvenal, *Sat.* xii. 92). Again, we find lights carried processionally in front of a person, as in the *Ordo Romanus Primus* (c. A.D. 770), where seven candles are carried before the pope before mass (ed. E. G. C. F. Atchley, *Ordo Rom. Prim.* §§ 7 f., 21). In the *Ordo* in the MS of St. Amand (Duchesne, p. 457) two candles are lighted when the pope says mass, and are placed behind the altar in candlesticks, right and left. A 5th cent. ivory at Trèves exhibits candles carried in procession (W. C. Bishop, in the *Prayer Book Dictionary*, p. 435). In these cases the Christian custom comes straight from the heathen—in the case of the processional lights from the custom of carrying lights before the emperor—and we cannot trace them to the usage in the catacombs.

Three other symbolical usages in connexion with lights may be noticed. (a) *Gospel lights*, i.e. lights used at the reading of the liturgical Gospel at the Eucharist, are mentioned by Jerome (c. *Vigilant.* 7; A.D. 378), and are said by him to have been universal in the East, 'not so as to put darkness to flight, but by way of showing our joy' (he also attests the use of lighted tapers in honour of martyrs). Later on these lights at the Gospel are often mentioned—e.g., in the *Ordo Rom. Prim.* § 11. (b) *The Paschal candle* was blessed on Easter Even ('benedictio cerei'), and is alluded to, perhaps by Augustine (*de Civ. Dei*, xv. 22; A.D. 413–426: read 'in laude . . . cerei'), certainly by Gregory of Nazianzus (*Orat.* xlv. 2) and Gregory the Great: 'the prayers . . . said over the wax taper, and the exposition of the Gospels given by priests about the time of the Paschal solemnity' (*Ep.* xi. 38).

The candle was carried before the *competentes* to the font (cf. § 4, above), and denoted the rising of the Sun of righteousness. The *Liber Pontificalis* says that Pope Zosimus (A.D. 417) extended the custom of blessing the Paschal candle to the parish churches of Rome. (c) The office of *Tenebrae* is found from the 7th or 8th cent. onwards—an extremely symbolic service on the night which ushers in Good Friday. After each of the three nocturns one-third of the lights were extinguished, except that seven remained, which were gradually put out during matins, the last when the Gospel was read (*DCA* ii. 994^a).

We may ask what is the meaning of this symbolism of lights when transferred to Christianity, and used in its services. Putting aside the lights carried before a dignitary, we gather that the general idea was that, on the one hand, Christ is the Light of the world, and that, on the other, Christianity is the religion of light and Christians are children of light. Theirs is an open religion, not confined to the few, like the Greek mysteries, not hiding itself, as those cults which became so common in the heathen world, and loved darkness rather than light. Such seems to be the symbolism of the liturgical use of lights.

LITERATURE.—(1) For the subject of light as expressing the relation of the Father and the Son see especially the works of Athanasius, and the edition of A. Robertson, *Select Writings and Letters of Athanasius*, tr. and notes, Oxford, 1892 (the Index, s.v. 'Light' and 'Simile,' gives a useful list of passages); see also E. C. S. Gibson, *The Three Creeds*, London, 1908, iii. 1. (2) For the liturgical use of lights see W. E. Scudamore, *Notitia Eucharistica*², London, 1876, and art. 'Lights, Ceremonial Use of,' in *DCA*; E. G. C. F. Atchley, *Ordo Romanus Primus*, London, 1905; W. C. Bishop, art. 'Lights' in the *Prayer Book Dictionary*, do 1912; C. E. Hammond, art. 'Paschal Taper' in *DCA*. (3) The symbolism of the NT is treated by F. H. Woods in *HDB* and J. Moffatt in *DCG*, art. 'Light.' On the whole subject see also the works mentioned in the course of the article.

A. J. MACLEAN.

LIGHT AND DARKNESS (Greek and Roman).

—In the fields of the Hellenic and the Italic civilizations we have in historic times a divinity recognized as supreme, Zeus or Jupiter, who is a personification of the sky and the daylight that fills it. He has counterparts in the religious systems of kindred races. Among Greeks and Romans and peoples subjected to their influence there are two groups of contrasted divinities, those of the upper world (*θεοὶ οὐράνιοι, di superi*) and those of the under world (*θεοὶ χθόνιοι, di inferi*), the former the authors of life and increase and prosperity, the latter of death and waning and misery to mortal creatures.

1. Greek.—Certain varying waves of tendency, changing the behaviour of believers towards these two classes, may be discerned in the history of the Greeks. There was a time when the chief sacred centres had mysterious connexion with the realms of darkness, when the fear of obscurity had more power over the religious consciousness than the delight in heavenly radiance. The spots at which there were reputed entrances to the domain of Hades and darkness were numerous in early Greek days. In many instances, subterranean phenomena, earthquakes, sulphurous or mephitic emanations, disappearing rivers, or medicinal waters had much to do with the superstitions that gathered round such places. Even in historic Greece practices of a primitive character were maintained in such localities, for in religions the new never entirely drives out the old; there is always superposition of strata. At Tanarum, a promontory of Laconia, there was a cleft through which Herakles and Orpheus had both passed when they visited the infernal shades. In the *Frogs* (186), Aristophanes puts an absurd speech in the mouth of Charon, the ferryman of the Styx, ridiculing these popular ideas. Most of the ancient oracles were connected with sites where there was communication with the nether darkness. This is illustrated by the story of the visit of Æneas to the Cumæan Sibyl, as told by Virgil, and by the behaviour at Delphi of the Pythian priestess, the mouthpiece of the oracular Apollo. The secrets of the future have been supposed in all ages to be in the keeping of spirits below, while in Greek literature the sun has knowledge of all the secrets of the present. The name 'necromancer' indicates the persistence of the belief about the dwellers in the regions of darkness.

As time went on, many of the places which had been principally associated with the powers of darkness passed into the possession of divinities who were mostly of the light. This was strikingly the case with Delphi, where, as the later Greeks said, the worship of the chthonian deity Earth (*Gē* or *Gaia*) was succeeded by that of Apollo, god of brightness. As civilization and culture strengthened, the reverence paid to the gods beneath was apt to be left to the uninstructed, and to pass into the backwater of superstition. Some of the figures of the dark were partially transformed into figures of the light. Thus it was with Demeter and Persephone as they appeared in the historic age in

the mysteries celebrated at Eleusis. Hades, the consort of Persephone, underwent a like change, indicated by his later name Plouton (Pluto), i.e. god of wealth or prosperity. The change of view was sometimes aided by euphemism, causing dreaded deities to be propitiated by well-sounding titles. So the avenging spirits of gloom, the Furies, were venerated as 'Eumenides,' 'benevolent ones' (cf. artt. EUMENIDES, ERINYES; EUPHEMISM).

A profound alteration was wrought in the religious conceptions of the Greeks by the rein given to their myth-making fancy and to their artistic genius, working on things divine. As human traits were inwrought into the texture of dimly apprehended superhuman existences, and were enwrapped by the clouds of poetry and the dreams of art, their original connexion with natural objects became veiled, and in some cases was forgotten. The process had already been carried far when the Homeric poetry arose in its glory. Some figures that did not very readily lend themselves to transformation received little notice in later worship. Eos, the dawn-goddess, is prominent in Homer, but, as she is also too obviously the dawn, she is present but little in later ritual. Ovid remarked that her temples were the rarest in the world (*Metam.* xiii. 588). But the divine being who is wreathed in poetry and art does not generally lose that particular contact with nature which gave him his origin. Zeus remained the actual source of events in the sky. Where we say 'it rains' or 'it snows,' the Greek said 'he rains,' or 'he snows,' and sometimes mentioned the name of Zeus. Horace speaks of the hunter camping at night 'under the chilling Jove' (*Od.* i. i. 25). Apollo was always connected with the sunlight, Artemis with the moon, and so with many others. When the overgrowth of legend became abundant, there was an impulse to return to the veneration of actual heavenly bodies. Thus the worship of Helios, the sun, went on side by side with that of Apollo. Naturally, in historic times the development of mythology produced a mixture of attributes, and the interference of many divinities with one and the same function. The appearance and disappearance of the heavenly bodies suggested that the realms of light and darkness had intercommunication. Hermes, in the main a god of brightness, becomes a conductor of souls to regions below. Moreover, light was sometimes really baneful and at other times was thought so. Therefore Apollo, the sun-god, has a mission to destroy life, as well as to preserve it by medicine and to enhance its value by poetry and music. Dionysos, whose connexion with the sun is clear, also has to do with the shades; and so with other divinities. The bad effects of heat led to the idea that Pan, the god of the open country, is most to be dreaded at noon-day, for then he can inflict madness. The mild gleams of the moon and the divinities who guide them were usually beneficent, but sometimes had the contrary activity. The waxing moon is of good intent, the waning moon brings sickness and death. Hekate, a moon-goddess, kindly and supernal in the earlier age of Greece, became later a malignant power of darkness. It may be remarked that the reverence paid, with clear consciousness, to astral bodies as such was never at any time so marked in historic Hellas as among Babylonians and Semites. As a religious motive it belongs rather to the late Hellenic age, and the age of Græco-Roman civilization, and even then, as we shall see, it affected the outer fringes of Greek civilization, where it was wrestling with barbarism, rather than its heart and centre.

Besides the light of heavenly luminaries, great and small, there is the irregular and alarming fire

from heaven, the lightning. The deities who rule the regular light also send lightning, especially Zeus, one of whose chief emblems is the thunder-bolt, and also Athene and Apollo. It is sometimes a sign of divine anger, as when Semele died by its stroke, sometimes an indication that the god has signified his will and given a presage of the future. To interpret the sign is, of course, a matter for an expert. Lightning was thus connected with divination and prophecy, and spots struck by the sacred bolt were revered.

The fire which is of use to men on earth could not but be regarded as in its origin divine, and as venerable, being a symbol of the eternal. The apparent everlastingness of the fire of which sun, moon, and stars are the manifestations doubtless contributed to the importance of fire in the ritual of worship. A vein of thought which lies deep in the nature of men in the earlier stages of religion, that the gods are envious of human beings and grudge them the things of which they wish to possess themselves, is illustrated by the legends of which Prometheus was the centre. The gift of fire was one which the gods would fain have withheld, and they punished him who outwitted them. A number of Greek divinities have relations with the earthly fire. Hephaistos, the great metal-worker, uses the fierce subterranean flames which find vent in the crests of Aetna and the Lipari Isles. In Homer and the poets generally he is the maker of all the weapons, emblems, and equipments of the Olympians, of the sceptre of Zeus, of the arrows of Apollo and Artemis. Hestia, goddess of the family hearth, has an especial connexion with earthly fire. She is the only one of the greater divine beings whose name has a transparent significance in life, equivalent to the hearth of the house, always regarded as in some sense an altar. As every house had this altar, so the great State family had its central hearth-altar for all the burgesses. When a city sent out some of its sons to found a colony afar, the central fire of the new community was lighted from the central fire of the old home. When a city was under a monarch or despot, its common hearth was in his dwelling; in a republican community it was in the town-hall (*πολιτεῖον*) (see, further, art. HEARTH, HEARTH-GODS [Greek]). The conception of Hestia remained one of the clearest and simplest in the range of Greek religion. Where the name of a divinity retains an obvious meaning, he does not lend himself to a covering of myth. Another divinity in whose ritual fire was conspicuous was Dionysos or Bacchus. The pine-tree and the torches that it provides figure in the Bacchic revels, as depicted, for instance, by Euripides in his *Bacchæ*. What we call the St. Elmo's fire was connected with the great twin-gods, the Dioscuri, Castor and Pollux.

The gods of light and darkness must have a potent influence on life, and especially on the beginnings of life. The hearth-fire itself was treated as a symbol of the generation of the human being, and a growth of legend and ritual was developed from this idea. The light-bringing divinities are very naturally those who bring the child out of the prenatal darkness into the light of life, and many deities were at different times and in different places supposed to exercise this function (cf. art. BIRTH [Greek and Roman]). Zeus himself to the latest age was a god of birth; but the powers that guide the milder radiance of the moon rather than those that wield the fiercer splendour of the sun had chiefly this duty, and the greatest among them was Artemis.

The mysteries of the darkness beyond the grave, in which departed souls were hidden, gave rise to multifarious practices and beliefs. There were

many divine beings who either ruled the dead or guarded souls against the perils of the passage from this world to the next. There is no portion of the field of Greek religion in which the development of ideas from Homer's age to the time of the latest Greek philosophic speculation was more complex. The notion of a possible deliverance from the bonds of death prompted a series of beautiful tales, such as that of the restoration of Alcestis to Admetus, the theme of the fine tragedy of Euripides, the recovery of Eurydice by Orpheus, or of Persephone by Demeter. In this connexion the most interesting evolution, from a religious and social point of view, is to be found in the Greek mysteries. They represent the striving of souls on earth to be assured of safety in the perilous passage from the bed of death to a happy abiding-place in the world beyond. Starting from gross forms, in which enchantment had a great part, the mysteries were refined and moralized so as to satisfy the higher yearnings of the spirit, and to instil that better hope in death which, Cicero says, was given by initiation at Eleusis (*de Legibus*, II. 36).

During the great age of Greece there was among the Hellenes no wide-spread conception of such a mysterious influence of heavenly bodies on human life as was systematized by the Chaldaean astrologers. This lore came from Eastern lands, especially Babylon, and was only in loose contact with religion; it was devotedly followed only in a later time, and then more in the sphere of Roman than in that of Greek civilization. The same is true of the real religious veneration of sun, moon, and stars. But mystic ideas concerning these entered into the earliest Greek thought—that of the Orphic and Pythagorean schools. The express attribution, however, of divinity to the heavenly bodies appears comparatively late in the history of Greek philosophy. Plato, in his *Timæus* (p. 38 f.), describes the fixed stars as divine existences brought into being by the 'Workman' (Demiurgus) of the universe at the bidding of the supreme god. In other passages he assigns divine character to the sun, moon, and planets. He was followed, with variations, by later thinkers—Xenokrates, Hera-kleides of Pontos, and many others. Aristotle described the celestial bodies as containing a great divine element, and pointed out that this belief, now explicitly declared by philosophers, was implicit, in an obscure form, in the popular mythology. Like doctrine was taught by the Stoics and particularly by Cleanthes, who considered that in the sun lay the guiding principle (*ἡγεμονικόν*) of the universe. It was common to call the heavenly bodies 'visible gods' as opposed to the unseen divine power. These notions were prevalent among the Neo-Pythagoreans. Apollonius of Tyana (*q.v.*), the seer and wonder-worker of the late 1st cent. A.D., venerated the sun at dawn, like many an Oriental of to-day. That the practice was popular in Greece is shown by the salute which Sokrates offers to the rising luminary, at the end of his great drinking-bout, in the *Symposium* of Plato. The Neo-Platonists, who powerfully affected the thought and religion of the Roman imperial period, embraced and developed beliefs like those that have been cited. Philo, the great Alexandrian Jewish philosopher, was in this respect fully in accord with the Greeks. An idea that was wide-spread in the philosophic schools, and especially favoured by the Stoics, was that the contemplation of the heavenly bodies in their purity and in the regularity of their operations had an ethical value for the regulation of human conduct.

2. Roman.—Among the Romans notions concerning the regions of light and darkness were clothed in some distinctive forms. The dread of evil that might befall if the inhabitants of the nether world,

the departed spirits of mortals, did not receive their due from the living was much more marked than in Hellenic communities. In the historic time, till Christianity prevailed, the bodies of the dead were cremated, but some of the attendant ceremonies pointed to a remote age when inhumation was the rule (cf. art. DEATH AND DISPOSAL OF THE DEAD [Greek]). In primitive days the tomb must have been regarded as the only place haunted by the ghosts, and down to the latest age it was so treated in many ceremonial practices. But quite early a conception must have sprung up of a general habitation for those who were colloquially called 'the majority.' The Romans, however, never imagined for themselves a judgment beyond the tomb, which should assign one dwelling-place for the good, another for the bad. The great scheme pictured by Virgil in *Aeneid* vi., which has stimulated the imagination not only of poets but of many religionists ever since, was drawn after Greek patterns. The genuine Roman underworld was a tract of gloom, and the spirits were minded to do harm to the living unless their wants were supplied, though to avoid offence they were called 'good people' (*manes*). The ritual for the foundation of a new city required that somewhere near its centre an underground chamber called *mundus* should be provided, into which were cast fruits of the earth, probably to satisfy the hunger of the dead, though that may not have been the only purpose of the *mundus*. This chamber was opened at stated times mentioned in the calendar, when fresh offerings were made to the departed, who were thus kept in order and restricted to appearances on the days set apart. These gifts, presented by the nation as a whole to the nation's dead, were parallel to the private presentations at each of the family tombs. Special days for the service of the dead existed in Greece, but they were never so general or so precisely ordered as among the Romans. There was one *mundus* on the Palatine Hill supposed to have been the work of Romulus when he founded Rome; there was another in the Forum, and others elsewhere. Offerings at these places were made to all the *di inferi*—a phrase in which dead mortals are included, as being in some sort divine. Every Roman tombstone was inscribed 'Dis manibus,' 'to the divine spirits.' The *Larvae* and *Lemures*, to whom propitiatory offerings were made, are merely the ghosts regarded collectively, in their unsatisfied and therefore terrifying aspect.

As to special divinities of the realms beneath, the earliest worshipped at Rome seems to have been Tellus, Mother Earth, 'the parent of all things and their common tomb,' as Lucretius calls her (v. 259). In the later age she was less and less regarded, in consequence of the attractiveness of Greek invasions in the sphere of religion. Names like Genita Mana, Lara, and others invoked in the *indigitamenta* (*q.v.*), appear to have been epithets of Earth. So, in Greece, Gaia was in some sense a goddess of the dead, and the same attribute was, of course, given to the divinized figure of Earth in other mythologies (cf. art. EARTH, EARTH-GODS, § 8).

A curious place of communication with the infernal regions was a spot called 'Terentus' in the Campus Martius, where probably at one time mephitic vapours escaped. This became in 249 B.C. the centre for a cult newly imported from Greece—that of Dis (whose name is a rendering of Pluto or Plouton) and Proserpina. The cult was probably grafted on to more ancient and purely Roman ceremonial. The blend gave rise to the characteristically Roman 'secular games,' celebrated theoretically, but not always in practice, at intervals of a century, to ensure the safety of the city. The most famous celebration is that ordered by Augustus in 17 B.C.,

when Horace acted as laureate and supplied the *Carmen Sæculare*.

The idea of a communication with the realms of darkness through an opening in the earth can be traced in other directions. The *devotio*, whereby a citizen could give himself up to the powers of gloom and thereby secure a favour for his country, is an example. Livy (vii. 6) and other ancient writers have told how, in 362 B.C., Curtius, riding in full armour, made his horse jump with him into a chasm in the Forum, which closed up after him. The spot retained the name of 'the pool of Curtius.' Here in the reign of Augustus the populace cast down coins every year on the emperor's birthday, to secure his welfare (Suetonius, *Aug.* 57). The *devotio* of the Decii, who vowed themselves to death by the enemy, thereby binding the powers to favour the safety of the country, was somewhat different. But, should the devoted man fail to find his death, the terms of his vow were satisfied by burying a lay figure in the earth with due ceremony—a curious example of the ease with which the gods might be cheated in Roman ritual. The walling up of the erring Vestal Virgin is an instance of the penal application of the *devotio*.

It is hard to discover in Roman religion the worship of divinities clearly connected with heavenly objects before the time when Greek and Oriental influences became powerful. Even the relation of Jupiter to the light of the sun does not come out with distinctness. The word 'Leucesie' addressed to him in the very primitive hymn that survived in the ritual of the 'Arval Brothers' (*q.v.*) refers to him as god of light, and a corresponding epithet 'Lucetia' was applied to Juno, indicating a connexion between her and the moon. The antiquarian scholars of the late Republic declared that Titus Tatius, the Sabine king of Rome, had introduced the worship of the sun and moon into Rome from his own country, and that a temple of the sun on the Aventine was founded by him. This was the opinion of Varro (*de Ling. Lat.* v. 74), and Tacitus (*Ann.* xv. 41) attributed a temple of the moon (Luna) on the Capitol to Servius Tullius. But the official Roman calendar of festivals, which is known to enshrine very ancient usage, gives no sign of official reverence paid to sun or moon, nor have we any sound evidence of a public priesthood devoted to them either at Rome or elsewhere among Italic peoples, though Varro assigned such an office in old days to the *gens* of the Aurelii. They were supposed to have come from the country of the Sabines, in whose tongue *arsel* denoted the sun. The Aventine, as is well known, was a home of cults introduced from Greece. The existence of a deity called Noctiluca (the 'night-shining one') on the Palatine is hard to explain. The situation implies high antiquity, for no god realized as foreign was allowed to take up an abode within the *pomerium* of the city before the age of the Second Punic War. The name may have been an epithet of Juno, who was connected with the sky. In a ceremony connected with the fixing of the calendar she was addressed as Juno Covella, 'Juno, goddess of the sky.' The name Lucina (closely connected with *lux*) was attached to her as the power which brought the child to light and birth. When the ancient Italic goddess Diana was equated with Artemis, the function of the Greek goddess, as superintending human birth, was transferred to Diana.

The veneration of Volcanus as god of fire belongs to an old stratum in Roman religion; but, unlike Hephaistos, he was worshipped, it seems exclusively, as protector against danger to men from fire. He was a popular divinity, and his cult was one of those which longest survived the introduction of Christianity. The forms with which

another divinity, Vesta, was venerated were remarkably characteristic of the Roman people. Her affinity with fire and her kinship with the Greek Hestia are obvious; but the worship of Vesta among Romans is far more conspicuous than that of Hestia among Greeks, possibly because the structure of the Roman family resisted the assaults of time more stoutly than that of the Greek family. A great feature of Roman religion is the parallelism in many respects of the religious ceremonial of the family and that of the State. And the private and public worships of Vesta resemble each other not a little. Every house had a cult of Vesta, and the name was restricted to the divinity; it had no connotation like the name Hestia, which meant 'hearth' as well as goddess. So thoroughly is Vesta a Latin deity that outside Latium hardly any signs of her existence have been found—a surprising fact when the similarity between Hestia and Vesta is remembered. In the home the cult of the goddess belonged to the matron and the virgin daughters, whose duty it was to see that the fire on the hearth was not extinguished. The centre of worship for the great State family was the ancient shrine of Vesta in the Forum, and no other public temple or altar devoted to her service existed before the end of the Republican period. The temple of Vesta was of the antique round shape derived from that of the earliest Roman house. Close by dwelt her priestesses, the Vestals, of whose abode important remains have come to light in recent days. The temple never contained an image, for Vesta was the one ancient divinity in Rome who never succumbed to the anthropomorphic impulses of her worshippers. The only symbol of the goddess was the eternal fire, whose extinction imported calamity to the land. Lapse of duty or impurity of life on the part of a Vestal was an omen of disaster, only to be averted by the sacrifice of the sinner. The Vestals were the daughters of the community, regarded as one vast family. Augustus, who loved to present himself as the restorer and maintainer of the most ancient Roman rites, connected Vesta with the dwelling-place of the imperial family on the Palatine. The Pontifex Maximus had a public residence close to the house of the Vestals. Augustus made this office an appanage of the emperor, and made over the official house to the Vestals. He then set aside with proper ceremony a portion of his palace on the Palatine to replace it and established there a second State temple of the goddess (see, further, art. HEARTH, HEARTH-GODS [Roman]).

We turn now to the later age of Rome. The conscious worship of the sun marked distinctively the dying days of Roman paganism. The oldest shrine dedicated to the sun was on the Quirinal, and seems to belong to the time of the Second Punic War, and to be a result of the mighty tide of religious influence which then invaded Rome from Hellas. A desire to venerate the sun was manifested, however, earlier, when he appeared with his attributes on the Roman coinage. Augustus placed in Rome two Egyptian obelisks before the temple of Caesar, and they were supposed to be devoted to the sun. Vespasian transformed into a representation of the sun a great colossal figure erected by Nero in his own honour. Several influences contributed to increase Roman reverence for the luminary, to which inscriptions from the end of the 1st cent. A.D. bear increasing evidence. Some of the most powerful divine invaders who came from the East to conquer the West were solar divinities. Also, as mentioned above, philosophers and mystics had preached the divine nature of the sun and other celestial bodies. Immigrants from the East, and Romans, especi-

ally soldiers, who had resided there, brought the religion of the sun with them. The notable drift of sentiment towards monotheism aided the movement, for the one god was often, and not unnaturally, identified with the sun. It was not, however, till after Caracalla, by his universal gift of Roman citizenship to the inhabitants of the cities of the empire, had cut away the ground for fencing off the civic gods of Rome from those of other communities that public and formal recognition was given to these Oriental beliefs. A remarkable event in the history of Roman religion was the accession to the throne of Elagabalus, who bore the name of an eastern solar god, whose priest he had been, like his ancestors before him. This was the divinity of the Syrian city of Emesa. The boy-emperor deposed Jupiter from his supremacy among Roman deities, and, placing his own god in the vacant seat, brought to Rome the round black stone which was the symbol (*κύρος*) of the god. In his array of titles the emperor made his office as 'priest of the unconquerable sun Elagabalus' (*Sacerdos invicti solis Elagabali*) take precedence of the ancient designation of Pontifex Maximus. This was done in spite of the fact that the divine ruler of Emesa was sometimes correlated with Jupiter, probably because the eagle was an emblem of both. A temple was built contiguous to the Palatine residence of the emperor, and to it were removed the fire of Vesta and other venerable possessions, the Palladium that came from Troy, the shields of the Salii, archaic priests of Mars, and the stone which symbolized the Great Mother (*Magna Mater*), whose essentially Oriental divinity had been, curiously, recognized four centuries earlier than that of any other immigrant from the East. To give completeness to his innovation, Elagabalus made the foundation-day of the temple the same as the traditional foundation-day of Rome itself, the twenty-first day of April. He also ousted Vesta from the Palatine, where Augustus had planted her, and gave her place to the god Elagabalus. The ritual of the usurping god contained Oriental features revolting to the Roman mind. Among the emperor's pranks was a marriage between his divinity and the goddess of Carthage, sometimes identified with Juno and called 'the heavenly,' sometimes with Venus. It was about this time that 'Juno Cælestis' came to be widely venerated in the West, as connected with the moon. The religious revolution of Elagabalus found some favour in the army, always a nursery of Orientalism. But, when his memory was laid under condemnation, the divinity of Emesa suffered with him and was exiled from Rome.

The sun-god was to be glorified again, but in a saner fashion, in a later part of the same century, by Aurelian. He erected a fine temple in honour of 'the unconquerable god of the sun.' His biographer (*Hist. Aug.* 25) narrates a miracle which occurred when Aurelian defeated Zenobia and her host under the walls of Emesa. At a critical moment he was encouraged by a divine form, which appeared again to him in the temple of Elagabalus within the city and was identified with that divinity. The writer supposed that the god established at Rome by Aurelian was Elagabalus; but the condemnation that this divinity had undergone makes the idea improbable. Some scholars have thought that Aurelian's god was the god of Palmyra, also connected with the sun. But it is most likely that the emperor did not wish to correlate him with any particular Oriental manifestation. The only indication connected with the East is the epithet 'unconquerable' (*invictus*). Aurelian specially associated the god with old Roman practice by denominating the new College of priests as 'Pontifices.' The sun was selected by

the emperor as embodying the monotheistic conception; and, in so far as that is concerned, he may be said to have borrowed from the East. An interesting inscription recently discovered in Moesia records how Licinius the elder and Licinius the younger ordered the consecration of an image of the sun and the establishment of a ceremony in his honour just before the great crowning victory of Constantine, won near Adrianople in 323 B.C. Some years before, Constantine had ceased to place the sun on his coins, a practice common since Aurelian's time.

We come now to the most dominant of all the representatives of the sun in the Roman sphere—Mithra, who is named 'Mithra the unconquerable sun' in many inscriptions. The Mithraic system was complex and many-sided, however, and this is only one aspect of the god. His cult embraced elements derived from many sources, not only from the Persian religion in which his origin is to be found, but from Babylon and elsewhere. Sun, moon, and stars were prominent in the ritual. The extraordinary spread of Mithraism in the Roman empire was mainly the result of tendencies which we have noted in other directions. The vogue of Mithra was especially notable on the frontiers of the empire and in the camps situated there. But many of his shrines have been found in the inner lands, especially on the sites of sea-ports. At Rome he was venerated on the Janiculum, where M. Gauckler a few years ago discovered a remarkable shrine. Another lies under the church of San Clemente, and memorials have been found also where the Vatican now stands. The popularity of the Mithraic worship was specially due to the provision which it made for satisfying some yearnings which afterwards found a fuller gratification in Christianity. So many were the resemblances between the religion of Christ and that of Mithra that Christians attributed them to the subtle malevolence of evil demons. The religion spread rapidly among the freedmen and soldiers, but also attracted the educated and the officials, and found favour with princes. Its close-knit organization, with its official priests and its ascending grades of illumination, kept believers together in the manner of the Christian rites. It owed much of its hold over the West to the moral element which its mysteries embodied. It instilled into its votaries a higher aim in life and a better hope in death than any other form of pagan creed. The conversion of Constantine, however, gave it its deathblow. Like other heathen cults, it lingered on to the end of the 4th cent., revived a little in the intervening time through the restoration of the forbidden gods by Julian, who himself entertained a religious veneration for the sun. It may be observed that Mithraism never took any great hold on Greek lands where the Greek culture had been long established. It is found in contact with Hellenism chiefly on the outskirts of Greek civilization in the East and on the Danube (see, further, art. MITHRAISM).

In conclusion, we may note that the evil associated with the darkness left its mark on some usages connected with the administration of the Roman State. The taking of augury, which preceded the carrying out of many public affairs, originally took place at dawn. It was just as the sun was rising that Romulus saw the flight of eagles which gave him the kingship. No public business was valid unless conducted between sunrise and sunset—neither meetings of assemblies or of the Senate, nor the administration of justice. Cicero reproached Mark Antony for having carried through decrees of the Senate after the sun had sunk ('Senatus consulta vespertina,' *Phil.* iii. 24). Something of the same usage can be seen

in Greece, but the rules there were never so rigid.

LITERATURE.—All information in matters connected with this article can be found in a few publications, in which the results of recent investigation are put together. W. H. Roscher's *Lexicon*, now approaching completion, is invaluable. O. Gruppe, *Griechische Mythologie und Religionsgeschichte*, Munich, 1906, is important on the Greek side, and G. Wissowa, *Religion und Kultus der Römer*, do. 1912, on the Roman. Roman religion has been interestingly treated by W. Warde Fowler, *Roman Festivals*, London, 1908, and *Religious Experience of the Roman People*, do. 1911. Many illustrations of the topics here treated will be found in *GB*.

J. S. REID.

LIGHT AND DARKNESS (Hindu).—The great contrast between light and darkness with their life-stirring and life-suppressing influence has naturally in all ages taken deep root in the human mind, which welcomed the reappearance of light as the release from the night or the long darkness of winter, and transformed the contrast of light and dark into one of life and death, freedom and bondage, good and evil, virtue and sin. The great representative of light, life, freedom, and goodness was to the mind of ancient India *Uṣas*, the goddess of dawn, and her rival *Rātri*, the night, or, in a sense more averse to human life, *tamas*, the darkness. The imperishability of light found its expression in the personification of *Aditi*, which other scholars explain merely as eternity (cf. Hillebrandt, *Ved. Myth.* iii. 105 ff.).

Uṣas is not only a goddess of the dawn of every day; in many songs that glorify her reappearance the turn of the year is alluded to, and *Uṣas* means the first dawn of the New Year (cf. A. Ludwig, *Der Rigveda*, Prague, 1876–88, iv. p. xi, vi. 173^a; Hillebrandt, *Ved. Myth.* ii. 25 ff.). *Uṣas* is partly the *Oṣṭara* of the *Rigveda* poems (F. Kluge, *Zeitschrift für deutsche Wortforschung*, ii. [1901] 42). She brings back the sun, the fire, the sacrifice which has been discontinued during the decaying period of the year; sometimes she is also called *sūryā* or *ekāstakā*, and under the name *sāramā* she became the mother of the two heavenly dogs, the *sārameyas*.

The Indians divide the year into two periods, the *Uttarāyana*, when the sun proceeds towards the north, and the *Dakṣiṇāyana*, when he goes towards the south, the light half of the year being sacred to the gods, the dark half to the dead. Sometimes (e.g., *Satupatha Brāhmaṇa*, II. i. 3. 1) it is said that spring, summer, and the rains are the god-seasons, while autumn, winter, and the cold season are the *pitarah*-seasons, sacred to the *manes*. We may begin the New Year with the winter solstice or with Easter time, according as we lay greater stress upon an astronomical or a practical point of view. Indian writers also oscillated between the two possibilities, and faced the problem in the same manner as their brothers did among Teutonic, Slavic, and Italian tribes (cf., e.g., F. M. Müller, *Contributions to the Science of Mythology*, London, 1897, ii. 715). The Vedic authors speak of the dark half of the year as *tamas*, and originally meant thereby the winter, the personification of which was *Vṛtra*, not the retainer of the heavenly rain, as has generally been believed, but the demon of winter, who was slain by Indra, and who regains the light and sets free the streams bound by the fetters of frost and ice. This idea was inherited from pre-historic times, and formed under the influences of a more northern climate than that of the Indian plains. The farther the Aryan tribes advanced towards the south, and the longer they settled under a milder climate, the less that idea harmonized with the surroundings and the actual climate; the notion of *tamas* was transferred to the really dark season of India—the rains; and the residue of the past and the germ of a new time were thus equally precipitated in the ancient

literature. In later times the Holi festival seems to have absorbed most of the customs connected with the New Year festival, though even now the celebration of the Saṁkrānti is by no means forgotten in India; and the splendid spectacle of the bathing festival held about the 12th of January on the banks of the Ganges in Benares will not be forgotten by any one who has happened to witness it.

A. HILLEBRANDT.

LIGHT AND DARKNESS (Iranian).—The antithesis between light and darkness among the Iranians was closely connected with the antagonism between Ahura Mazda and Ahriman. This feature attracted the attention of Plutarch, who says (*de Is. et Osir.* xlv.) that Ahura Mazda was born of purest light and Angra Mainyu of darkness, so that τὸν μὲν εὐκείνῃ φωτὶ μάλιστα τῶν ἀσθητῶν, τὸν δὲ ἐμπαλιν σκότῳ καὶ ἀγνοίᾳ (cf. Porphyry, *Vit. Pythag.*, p. 41, ed. A. Nauck, Leipzig, 1860; Hippol. *Refut.* i. 2, iv. 43; A. Rapp, *ZDMG* xix. [1865] 48 f.). This view recurs not only in the late 'Ulamā-i-Islām (tr. E. Blochet, *RHR* xxxvii. [1898] 41) and in al-Shahrastānī's *Kitāb al-milal w'al-nihal* (tr. T. Haarbrücker, Halle, 1850-51, i. 275), but also in the Armenian writers (e.g. Thomas Artsruni, i. 3), while Dio Chrysostom (*Orat.* xxxvi.) goes so far as to make the assertion—not thus far substantiated elsewhere—that, in order to create, Ahura Mazda had to surrender much of his light.

In the Gāthās we find the striking statement that Ahura, 'well-working, created both light(s) and darkness(es)' (*Ys.* xlv. 5). This at once recalls the passage in *Is* 45, 'I [the Lord] form the light, and create darkness,' but it seems advisable to assume, with J. H. Moulton (*Early Zoroastrianism*, London, 1913, p. 291), that the Iranian and the Hebrew developments are only parallel and not connected (cf., further, E. Stave, *Einfluss des Parsismus auf das Judentum*, Haarlem, 1898, pp. 46 ff., 64 ff., and the 'Semitic and Egyptian' section below, p. 65^a, note 3).

Be the origin of the two what it may—and the true explanation of the Gāthic passage doubtless is, as Moulton maintains, that it is the protest of Zarathushtra against Magian dualism—light is, as is but natural, associated with Ahura Mazda and his supporters, while darkness is connected with Angra Mainyu and his rabble. It was Ahura Mazda who in the beginning filled the blessed realms (*avābrā*) with light (*Ys.* xxxi. 7), and in the realms of light (*raocēbis*) beatitude will be beheld by him whose thought is right (*Ys.* xxx. 1), while the light of the sun is one of the things that glorify Ahura Mazda (*Ys.* i. 11). Apart from the passage already noted, darkness (*temah*) is mentioned only once in the Gāthās, in *Ys.* xxxi. 20, where it refers to the blackness of hell (on the blackness of hell see Moulton, p. 172 f.; F. Spiegel, *Erän. Alterthumskunde*, Leipzig, 1871-78, ii. 121).

In the Younger Avesta the dualism between light and darkness appears in full vigour, so that Spiegel is amply justified (ii. 20 ff.) in dividing his discussion of the Iranian theology and demonology into 'the light side' and 'the dark side' respectively. A phrase which constantly recurs in beginning the laudation of all good deities is 'fo- his magnificence and his glory' (*ahē rayā*

avarenanghaca; for an admirable discussion of the latter word see E. Wilhelm, 'Hvarenā,' in *Jubilee Vol. of the Sir Jamsetjee Jeejeebhoy Zarthoshti Madressa*, Bombay, 1914). Light was created by Ahura Mazda (*Ys.* v. 1, xxxvii. 1), and is one of his prerogatives (*Ys.* xii. 1); hence prayer is made to behold 'the creative light of the creative Creator' (*Ys.* lviii. 6), and the light of the sun praises him (*Ys.* lxiv. 6). Together with Asha, Ahura Mazda created 'the shining light and sunny abodes' (*Yt.* iii. 1 f.), so that the abodes of Asha are light (*Ys.* xvi. 7). In these abodes the souls of the righteous dead dwell (*Ys.* xvi. 7; cf. lxviii. 11; *Afrinakān*, i. 18; *Vend.* xix. 36), for paradise (*vahishta ahu*; see art. LIFE AND DEATH [Iranian]) is light (*Ys.* lxii. 6, lxviii. 11), and, as such, receives worship (*Visprat*, xxiii. 1; *Sih rocak*, ii. 27). Indeed, 'light' (*raocāo*) is a synonym for 'heaven' (*Ys.* xix. 6), another synonym being 'the shining house of praise' (*raocāna garō-nmāna* [*Yt.* x. 124, xix. 44]) to which worship is paid (*Sih rocak*, ii. 30). Still another synonym is 'the light without beginning' (*anayra raocāo* [*Ys.* lxxi. 9; *Yt.* xxii. 15; *Vend.* xi. 1 f., 13, xix. 35; *Pursišnāh*, xxxviii. 1]), which is likewise an object of veneration (*Gāh*, iii. 6, *Sih rocak*, ii. 30; cf. Spiegel, ii. 17 f.). Accordingly, in the *Patēt Irānī* (ed. E. K. Antā, *Pāzand Texts*, Bombay, 1909, p. 145, tr. J. Darmesteter, *Zend-Avesta*, Paris, 1892-93, iii. 178), the righteous man hopes to attain to 'the place of light' (*rāšn-jāē*), not to 'the place of darkness' (*tārūk-jāē*).

The good creation is given the epithet of 'bright'—Asha (*Ys.* v. 4), the Amesha Spentas and their paths (*Yt.* xiii. 82, 84, xix. 15, 17), Ashi (*Yt.* xvii. 1, 6), Apām Napāt (*Yt.* xix. 52; *Sih rocak*, ii. 30), the 'glory' (*avarenah* [*Yt.* xix. 35]), and especially Yima, whose conventional epithet *asaēta* ('shining') is so completely blended with his name that in modern Persian he is known only as Jamshīd.

The sun, moon, and stars are bidden to give light (*Vend.* xxi. 5, 9, 13), and the light of the moon is lauded (*Nyāyishn*, iii. 7), while so great are the blessings of the light of the sun that, if the sun no longer rose, 'the demons would destroy everything that is in the seven regions [of the world], and the spiritual angels would find no tarrying place and no abiding place in this corporeal existence' (*Yt.* vi. 3; *Nyāyishn*, i. 13; cf. in general *Nyāyishn*, i.-iii.; *Yt.* vi.-viii.). Indeed, the fairest of the forms of Ahura Mazda are the earthly and the heavenly light, i.e. the fire and the sun (*Ys.* xxxvi. 6, lviii. 8); and in the palace which Ahura Mazda built for Mithra there is neither night nor darkness (*Yt.* x. 50).

Darkness is a special attribute of hell (*Vend.* iii. 35; *Aogemadaēcā*, xxviii.), for which 'darkness without beginning' is a synonym (*Yt.* xxii. 33; cf. Spiegel, ii. 18 f.). The demons are 'spawn of darkness' (or, perhaps, 'possess the seed of darkness,' *temascibra* [*Yt.* vi. 4; *Nyāyishn*, i. 14; *Vend.* viii. 80]), and seek refuge in darkness (*Ys.* lvii. 18), or hide in the earth (*zemare-gūz* [*Ys.* ix. 15; *Yt.* xix. 81; *Westergaard Frag.* iv. 3]) or in caverns (*Vend.* iii. 7, 10)—a phrase which may possibly point to survivals of an old chthonic cult (cf. Moulton, pp. 57, 128 f., 132, 399). Properly enough, therefore, divine aid is sought to resist 'darkness, woe, and suffering' (*Ys.* lxxi. 17; cf. *Nyāyishn*, i. 14).

Turning to the Pahlavi texts, we are told that 'the region of light is the place of Aūharmazd, which they call "endless light"' (*Bundahishn*, i. 2), and that the place of the Amesha Spentas is 'in that best existence of light' (*Dāristān-i-Dīnāk*, lxxiv. 2), while Artā-i-Vīrāf, when in the presence of Ahura Mazda, perceived only brilliant light (*Artā-i-Vīrāf Nāmak*, ci.), and the radiance of

Zarathushtra within his mother, during the three days before his birth, was so great as to illumine his father's whole village (*Dinkart*, v. ii. 2, vii. ii. 56-58).

According to the same texts, hell is full of darkness (*Dāristān-i-Dīnik*, xxvii. 2, 6, xxxiii. 2, 4, xxxvii. 28, 45), so intense that it 'is fit to grasp with the hand' (*Bundahishn*, xxviii. 47; cf. *Dinā-i-Mainōg-i-Xrat*, vii. 31). This 'endlessly dark' is the abode of Angra Mainyu (*Bundahishn*, i. 3), and when, in his fruitless endeavour to destroy the light of Ahura Mazda, he emerged from hell, he made the world at mid-day as dark as midnight, returning, after his defeat, to the darkness, where he formed many demons (*ib.* i. 10, iii. 14). In fact, 'the most steadfast quality of the demon himself is darkness, the evil of which is so complete that they shall call the demons also those of a gloomy race' (*Dāristān-i-Dīnik*, xxxvii. 85). In contrast, although sun, moon, and stars will continue to exist after the renovation of the world, they will no longer be necessary, 'for the world is a dispenser of all light, and all creatures, too, are brilliant' (*ib.* xxxvii. 126). The power of the demons during the darkness has already been noted. Therefore, 'when in the dark it is not allowable to eat food; for the demons and fiends seize upon one-third of the wisdom and glory of him who eats food in the dark' (*Sāyast-lā-Sāyast*, ix. 8; two-thirds are taken if one also eats with unwashed hands); and the eighteenth section of the lost *Sūktar Nash* of the Avesta dealt, among other topics, with 'the hussy who spills anything after sunset, or who scatters a morsel of food to the north, at night, without a recital of the Ahunavair' (*Dinkart*, ix. xix. 2). To the same category of concepts belongs a short Parsi poem contained in the second volume of the collection of Rivāyats of Dārāb Hormazdyār (ed. M. R. Unwallā, 207. 19-208. 4; the edition is not yet published, but the writer has a set of the proofs through the courtesy of the editor and J. J. Modi). According to this 'Rivāyat on the Lighting of a Lamp,' the lamp-light drives away all demons, and it adds:

'From that light of the Fire the world is bright, since it is hostile to the demons of Ahriman; if there were not always the light of the Fire, there would not be a single man in the world.' This little poem is immediately followed, it may be remarked, by another of nine distichs, recounting the miraculous cure of a dying child by the lighting of a lamp on the roof of the house.

The problem of the relation of light and darkness was even more vital than the extant Iranian texts would lead one to suppose; for it gave rise to philosophical speculations which materially helped to form the leading Zoroastrian sects.

Al-Shahrastāni goes so far as to declare (i. 275) that 'all problems of the Magians turn upon two main points: why the light mingled with darkness, and why the light cleansed itself from darkness; they posit the mingling as the beginning, and the cleansing as the aim.'

The Gayōmartian sect maintained, according to al-Shahrastāni, that light had no beginning, but that darkness was created. Whence, was their problem—whether from light, which, however, could not produce anything even partially evil, or from something else, though there was nothing which shared with light the properties of creation and eternity. Their rather lame solution was that Ahura Mazda thought to himself: 'If I had an opponent, how would he be formed?' From this thought, which did not harmonize with the goodness of light, Angra Mainyu was produced. The mingling of light and darkness was due to the fact that the light gave men, before they were embodied, the choice of degradation to the realms of Angra Mainyu or battle with him. They chose corporeal existence and battle, on condition that they were aided by the light to eventual victory and to the final resurrection at his defeat.

The Zarvanite sect held that the light produced

a number of creatures of bright, divine nature, the most important of whom was Zarvan (Time), who, after murmuring prayers for a son during 9999 years, entertained the thought: 'Perchance this world is nothing.' From this evil doubt Angra Mainyu was born, and from Zarvan's wisdom sprang Ahura Mazda. There were a number of minor speculations among this sect—e.g., that Angra Mainyu was originally in heaven, but meditated upon treachery until, like Satan, he fell. The Mashites thought that a portion of light had transformed itself into darkness.

The Zarathushtrians (Zoroastrians) entertained, according to al-Shahrastāni, the views of light and darkness which we would naturally infer from the Avesta and Pahlavi texts. Both light and darkness had existed from the beginning. Good and evil, purity and impurity, etc., had arisen from the mingling of light and darkness; and, had there been no such mingling, the world would not have existed. God was the source of both (cf. *Ys.* xlv. 5, cited above), and in His wisdom had mingled them; but light alone is real, darkness being, in fact, only its necessary antithesis; and, since they are antithetic, they must war against one another until the light shall be victorious over darkness.

Thus in Zoroastrianism the problem of the relation between light and darkness becomes part of the greater question of the origin of good and evil; and from this point of view the antithesis of light and darkness is found again—whether independent or derived—in several Gnostic systems (cf. *ERE*, vol. vi. p. 238 f.), as well as in Mandæanism (A. J. H. V. Brandt, *Mandäische Religion*, Leipzig, 1889, p. 39 ff.) and Manichæism (K. Kessler, *PRE*³ xii. [1903] 205 ff.). See art. MĀZANDARĀN.

LITERATURE.—In addition to the references given in the art., other citations from the Avesta may be gathered from C. Bartholomae, *Altiran. Wörterbuch*, Strassburg, 1904, s.vv. 'Raok-', 'Raoksha-', 'Raocah-', and 'Tadra-', 'Remah-', etc. (coll. 1487-1492, 648-650). No special treatise on the subject has as yet been written.

LOUIS H. GRAY.

LIGHT AND DARKNESS (Semitic and Egyptian).—I. Peoples and period.—Babylonian (Assyrian), Egyptian, and Hebrew beliefs on the subject of light and darkness may all be taken together. Although in course of time they became widely divergent, at the outset and for a considerable period they showed many points of similarity—a fact to be ascribed to the contact and the common origin, in part if not in whole, of the peoples inhabiting the countries of the Near East. For the Babylonians and the Hebrews this affinity is generally admitted, both being of the Semitic stock. Further, in the words of Cheyne, 'a primitive contact between the early Egyptian race and the Babylonians has been made extremely probable by Hommel. Winckler, too, remarks with justice that the cultus of the Horus-child belongs to the same religion as the Babylonian, and is in this sense Semitic.'¹ Sayce, while tracing many analogies of the same kind between Babylonian and Egyptian beliefs, takes a further step, and sees in 'the triumph of the gods of light and order over the monsters of chaos not only the birth of the present creation, but also the theological victory of the Semite over the Sumerian.'² Without going so far as this, other scholars admit that the mythological compositions of the Babylonians were derived from Sumerian sources.³ The upper limit of the period to be considered may therefore be placed in Sumerian times, about the middle of the

¹ T. K. Cheyne, *Bible Problems*, London, 1904, p. 200. Linguistic affinities are worked out by C. J. Ball in the *Hilprecht Anniversary Volume*, Leipzig, 1909. For 'darkness' see p. 84, and for 'light,' pp. 87 f., 47 f., and 51.

fourth millennium B.C., and the lower limit may with propriety be fixed about the time of the Hebrew Exile, before the influence of Persia, followed by Greece, could have been felt.¹ Throughout this period of three millennia the predominant feature of religion in Babylonia and Egypt is the cult of the sun-god. We should therefore expect to find in the records that have survived much that is cognate to at least the first member of our subject. Owing to syncretistic tendencies always present, and the ease with which those ancient peoples tolerated antinomies in belief, no uniform presentation of their views about light and darkness can be given.

2. Various relationships of light and darkness.—While the words 'light' and 'darkness' appear to stand in a co-ordinate relation, in reality they are contrasted terms, to be compared with 'day' and 'night,' 'life' and 'death,' 'good' and 'evil.' In all these cases the co-ordinate relation holds good in the sense that light and darkness, etc., can be regarded as complementary terms, conveying the idea of the whole—e.g., the daily round, the sum-total of existence, and the ethical contents of life. The exceptional view whereby both light and darkness are traced to the same creative source (as in Is 45⁷) may also be brought into this connexion. In general, however, the relation between light and darkness continues to be regarded in Semitic thought as adversative, slightly veiling a dualism which perhaps has been inherited from pre-historic times, and which is not resolved (Jahwism excluded), even theoretically, into a monism until the limit of our period has been passed.² We have throughout to reckon with that 'Oriental resignation to the contrasts in life' which marked all the peoples of the Ancient East.³ The theory that prevailed might at best be termed 'optimistic dualism.'⁴ With special reference to light and darkness there was a contest present in the beginning (cosmology), and this is daily and yearly renewed, with every day and night, every spring and autumn (or summer and winter), and it may even extend through the course of the world cycle.⁵ While light and darkness have, therefore, each a separate kingdom, the one being for day and for life, the other for night and for death, there is evidence in the development of religious thought in Egypt of an invasion of each upon the other's domain, resulting in a measure of fusion. This is concisely summed up by saying that the solar cult was osirianized and the Osiris myth was celestialized.⁶ A subtle theory of a similar kind has been formulated for Babylonia, as an instance of which we may quote the representation of the sun as under-world divinity, 'because in his light the stars disappear and perish.'⁷ There is much less warrant for such crossing over of the ideas of light and darkness in Babylonian thought. Regarding the 'Astral Theory' as a whole, it may be remarked that, were it accepted, it would greatly extend the possibilities of our subject. It requires, however, more agreement than at present exists as to the date of the origin of scientific astronomy among the Babylonians before its findings can be used with any measure of confidence.

3. No science of light.—Judging from present

data, the likelihood is that the peoples of antiquity were not conscious of the fact that the universe is under the dominion of natural law. Theirs was 'the cosmography of appearances'¹—a view of the world resting at the empirical stage. They had no scientific theory of light; darkness was not merely the absence of light. Both were 'material entities':²

'The matter of light issues forth from its place and spreads over the earth; at night it withdraws, and darkness comes forth from its place, each in a hidden, mysterious way.'³

The 'substantiality of darkness'⁴ may be specially remarked in Ex 10²¹ 14²⁰. A higher conception of the quality of light was indeed reached. According to Hehn, in the later parts of the OT light is used as a symbol of deity because it is the finest and most immaterial substance known, and there is no danger of corporeal form being attached to it.

'The deity as light gives the transition to the deity as spirit.'⁵

Bearing in mind that the peoples of the Ancient East were accustomed to concrete views of what are accepted by us as abstract qualities, we shall understand how they received the phenomena of light and darkness mainly according to their physical effects and their bearing upon life. Light was of service to them; darkness formed a hindrance. This was transferred to the realm of feeling: light they rejoiced in; darkness they dreaded. Love of the light and hatred of the darkness lie at the root of many of the myths of antiquity, and are evident in the metaphorical usage of the two terms. By an inevitable transition light is associated with warmth, and darkness is linked with cold. This applies to the cycle of the year, which is of more importance in ancient belief and practice, as appears in the Tammuz-cult, than the cycle of the day. From warmth again there is an easy passage to life and growth, and from cold to decay and death.

4. Light and darkness as associated with deities.—Like great natural forces, such as thunder and tempest, light and darkness were seen to lie beyond human control, and thus they came to be associated with deity or deities, and with beings more than human. Light is the creation of good gods, although it has also a hurtful side, when found in conjunction with the scorching heat of summer, and when bound up with lightning and fire. Darkness is viewed less as a creation of the gods than as an environment for monsters and evil spirits, who could not exercise their baneful power apart from darkness. Still there are gods specially associated with darkness, both in Babylonia and in Egypt. Many deities bear names and attributes compounded with words signifying 'light,' and their temples are similarly termed (e.g. E-Babbara, 'the shining house' [sun-temple at Sippar]). In addition to Shamash, the sun-god (and other deities who in their original function are merely aspects of the sun), Nannar or Sin, the moon-god, and Ishtar, 'the light of the heavens,' the foremost place must here be given to Marduk or Merodach (Amar-Ud, or Amar-Uduk), 'son of the sun,' or 'child of the day,' as being the god of light by pre-eminence. He, too, is generally regarded as a solar deity, although an attempt has been made to prove that he is independent of the sun, being simply the god of light.⁶ Although appearing at the summit of the Babylonian pantheon, he

certainly did not hold undisputed sway, either at the beginning or afterwards, and the fight between light and darkness, typified by Marduk (or Bel) and the Dragon, was continued down the ages.¹ How this should be is perhaps best explained on the theory of Radau,² who contends that Marduk is the god of light considered not as an illuminative power, but as a life-giving principle, which appears in the warmth of the spring. His fight with Tiamat is a fight of the light, i.e. the warmth, against the darkness, i.e. the cold. By this line of argument Marduk comes into relation to the Tammuz-Adonis (and Ishtar) cycle of myths, and is also to be placed in opposition to Nabu, the god of the darker half of the year.³ Viewed as a solar deity, then, Marduk stands for the sun-god of spring, who brings 'blessing and favours after the sorrows and tribulations of the stormy season.'⁴ Before Marduk was exalted to the chief place, Anu, Ninib, Enlil, and Ea fulfilled a similar rôle in the myths of creation,⁵ and in later times Ashur arose to dispute the glory. The nearest approach to a god of darkness, energizing in the world of nature, is Ramman, or Addu (Adad, in West Semitic), 'the thunderer.'⁶ The darkness which he causes (c.f., in the Flood Story, ii. 46 f.) is relieved by the lighting, in virtue of which he has some title to be regarded as a god of light also. With him may be classed Girru (Gibil)—Nusku, the god of fire,⁷ whose symbol, a lighted lamp, is as old as the 14th cent. B.C.⁸

Of the evil spirits that love the darkness, mention may be made of the seven evil demons who, aided by certain of the great gods, were thought to be responsible for the darkening of the moon by eclipse or storm, and even for the disappearance of the orb of night at the end of the month.

'From city to city darkness work they,
A hurricane, which mightily hunts in the heavens, are they,
Thick clouds, that bring darkness in heaven, are they,
Gusts of wind rising, which cast gloom over the bright day,
are they. . . .'⁹

In the official cults of Egypt sun-worship was all-important. Less is said about the moon, although it finds a place.¹⁰ Within his own domain, which is the upper world, Rā (Amon-Rā), the sun, figures as a life-giving power, a set-off to the equally great power of death and darkness in the under world, to which so much importance was attached in Egypt. Here, it would seem, light and darkness are concomitants of the fuller notions of life and death. We must include in this even the apparent exception of the 'Aton' cult of the XVIIIth dynasty (in the reign of Ikhnaton). In the 'Solar universalism' of that period, which finds expression in a series of magnificent hymns,¹¹ while the whole activity and beneficence of the sun are rehearsed, its life-giving power is still in the forefront. In Egypt the part of Marduk is taken by Horus the elder.¹² An equivalent to Ishtar is found in Hathor, who by some scholars is

called 'the goddess of light.'¹³ Specific gods of darkness appear in Set² (or Set-Apōpi), and in one member of the Hermopolitan ennead, Kek (fem. Keket).³ (For the gods of the under world see below, § 7.) In Egypt the demons of darkness were, like those of Babylonia, an awful power for evil to the living, and conspicuously active in the realm of the dead.⁴

The Hebrew conception of God is frequently conveyed by means of language (much of which is metaphorical and poetical) drawn from the realm of light (see Hehn, *loc. cit.*; cf. Ex 24¹⁰, Ps 104², Is 10¹⁷ 51⁴ 60¹⁻⁵ 12²⁰ Ezk 1² 22³ Hos 6⁵).⁵ But, while light is readily employed as a symbol of Jahweh, from first to last there is no idea of identifying Him with this manifestation of nature (as in the case of Marduk). While God is conceived of as luminous above measure, He is at the same time thought of as hidden, and His ways are reckoned to be mysterious. For this reason darkness, the 'natural antithesis' of light, also enters into the imagery of the OT (Ex 20²¹, Dt 4¹¹ 5²², 1 K 8¹², Ps 18⁹, 11⁹ 7⁷, Am 5¹⁸, Zeph 1¹²).⁶

It is surprising that, though the Hebrews were surrounded by races more or less allied to them, who shared the Babylonian and Egyptian belief in demons and evil spirits, hardly a trace of such powers of darkness is evident in the religious literature of ancient Israel.⁷

5. Light and darkness in cosmology.—According to the main version of the Babylonian Story of Creation, Marduk, the god of light, prevails over Tiamat, the personification of chaos, of which darkness presumably forms part.⁸ Sayce finds in Mammu (tablet I. 4) 'the flood,' or chaos, the equivalent of 'the "darkness" which in Gn 1² is said to have been "upon the face of the deep."'⁹ In both the Hebrew and the Babylonian accounts of what was in the beginning, darkness is reckoned as primeval, i.e. before the cosmos. It is an element not to be reckoned as good. While this may be asserted of darkness as diffused through space, it does not hold true of darkness as a division of time, when darkness means no more than night (Gn 1⁴⁻⁵).¹⁰ According to Hebrew cosmology, one function of the heavenly orbs was to divide the light from the darkness; 'and God saw that it was good' (Gn 1⁴; cf. Ps 104²⁰). In the Babylonian account there is no mention of the creation of light, perhaps to be explained by the fact that Marduk is himself the god of light and consequently its creator¹¹—a view which might well have been entertained in spite of the contradiction, as we see it, that the 'son of the sun' is also made the creator of the sun and all the other orbs of light. In the Hebrew account light is given as the first act in the creation of the world, wrought by the word of God. This, Cheyne thinks, formed no part of the traditional Hebrew cosmogony, but is due to the priestly writer's reflective turn of mind.¹² Be that as it may, this light, which is diffused through space, wherever darkness is not present, is evidently to be distinguished from the 'lights'—sun, moon, and stars—in which light is, as it were, localized (Gn 1⁴⁻⁵). In Egypt there is no detailed account of creation.¹³ Sayce¹⁴ and

Jeremias¹ remark on sectional parallels to the Babylonian main version. Different conceptions of the origin of light appear. According to one, primeval chaos is an ocean from which the sun-god (Atum) arises, bringing his own light with him; according to another, light is laid up in the world-egg, waiting to be revealed.

The story of a second creation would seem to be found in the narrative of Berossus, according to whom the animals apparently were not able to bear the light of the first creation, and a second was rendered necessary of such a kind that they could bear the light.²

Deutero-Isaiah's exalted conception (45⁷), whereby the creation of light and darkness is referred to the same divine source, is the logical outcome of monotheism.³ It has an anthropomorphic parallel in the words ascribed to Ra: 'When I open my eyes, there is light; when I close them, there is darkness.'⁴ This, of course, applies to the daily renewal of light and its withdrawal every night.

A reduction of earth to primeval conditions would involve among other things the extinction of light and by inference the return of the darkness of chaos (Jer 4²³). An Egyptian myth, found in the *Book of the Dead*, represents Atum (see above) as defacing what he had made, bringing a return of water, as it was at the beginning. Over this Osiris (lord of darkness) is to rule.⁵

6. Light and darkness in human experience.—The cosmology, although relating to what is first in the order of things, is itself the product of reflexion upon the phenomena of the present. The processes of thought which give origin to the myths connected with the world's beginning, and to mythology in general, may be placed in times antecedent to the Semitic period. The myths, having been invented and reduced to writing, were now exercising a certain counter-influence on current ideas. They were never absent from the background of thought, and in a way they hindered development. We may suppose that light and darkness, especially light, would in time have been accepted as in the course of nature, and have ceased to attract attention. But there came interruptions of the usual order—e.g., in the eclipse of moon or of sun—and on such occasions the mythology was speedily recalled. The cults also were of such a kind that they kept the mythology alive. The great hymns to Shamash, Sin, Ishtar, etc.; the transcription and frequent recitation of funerary literature in Egypt, much of which had been handed down from very early times; the festivals attending new moon, full moon, and the new year, and every occasion of national or local assembly—all must have exercised much influence towards the preservation of traditional beliefs. There was thus but slight opportunity of escaping from the legacy of the past. When the Egyptians looked upon the fiery clouds that attended the rising sun, their minds reverted to the pits of fire that were supposed to mark the eleventh division of the Tuat.⁶ The multiform representations on cylinder seals of the orbs of night and day, especially of the figure of the sun-god rising between the mountains of the East, depicted with streams of light flowing from both sides, or with rays of light protruding

from his shoulders,¹ give a vivid conception of the ideas constantly at work in the minds of the Semites and their neighbours. In addition to anthropomorphic representations of the deities of light, their symbols, especially the sun's disk, winged or unwinged, abounded both in Egypt and in Babylonia. More telling still were the obelisks and pyramids of Egypt, which were symbols of the sun in addition to their other uses. Temples to these deities of light were also present to bear their witness. Very impressive was the thought current so long in Egypt that the sun died every evening, and every morning was resurrected. In the interval he moved with difficulty through the realm of darkness, and, as a passive body, had to be lighted through the under world by other creatures of light.² In Babylonia the phases of the moon seem to have attracted attention even more than the daily course of the sun. As king of the night, Sin (Nannar), 'the bright one,' may have had an even older sovereignty than Shamash, who was reckoned to be his son. This sequence has been explained in various ways,³ but it would seem that the rejoicing which attended the moon's appearance every month, and the lamentation which accompanied its disappearance, point to the belief that in the presence and ascendancy of light, by night no less than by day, the ancient Babylonians found safety and happiness, whereas in darkness there lurked danger and woe. In this connexion it is curious to note that Saturn was regarded as a second sun, to whom (apart from the moon) the illumination of the night was due.⁴

In spite of these efforts to extend the sovereignty of light, there remained a sufficiently terrifying residuum of darkness. To overcome this, resort was had to other agencies, viz. magical rites and a due fulfilment of the duties owing to the dead. Darkness both of earth and of the underground being the *milieu* of demons and the spirits of the deceased, contrariwise they could not have their dwelling in the light. Inasmuch as natural light was not always available, artificial means had to be adopted to overcome the disabilities attaching to darkness. The energy of fire was here of great significance. It is noteworthy that a certain part of the temple where purification was wrought was termed 'the house of light' (Assyr. *bît nûri*). The light is associated with Girru or Nusku, the fire-god, which may be taken to mean that the purification was by fire.⁵ The subject of artificial lights is closely related to this branch of our subject. The peoples of antiquity being obsessed by the terror of darkness, it was natural that they should have safeguarded themselves, so far as they could, by having lights in their dwellings and out-of-doors. From the number of lamps found during excavation, notably in Palestine, many of them belonging to the Semitic period, it has been inferred that these were in general use. Out-of-doors torches served the purpose. The torches of the Anunnaki (gods of a lower order) are mentioned in the Babylonian Flood Story (col. ii. 44). A graphic description of the festival 'illumination' of New Year's Eve and days following, given by Breasted,⁶ affords an excellent idea of the part played by artificial lights in the ritual of Egypt. One of the duties of the priests and ministrants in the temples was to attend to the fires and lamps (cf. 1 S 3², 1 K 7⁴⁰).

Thoughts of light and darkness were further kept in the minds of these ancient peoples by the terms assigned to the

day (Assyr. *urru*, Heb. *ôr*, 'light'); to the morning, or East (Assyr. *šit Samši*, Heb. *mizrah*, 'the rising of the sun'); to the evening, or West (Assyr. *erēb Samši*, Heb. *m'bo hush-shemesh*, 'the setting of the sun'); and by certain Babylonian month names (Aru, Ajaru, the second or 'bright' month; Addaru, the eleventh, the 'dark' or 'gloomy' month). One series of directions in Hebrew gives north (= *šafôn*) as the 'obscure' or 'dark' place, and south (= *dûrôm*) as the 'bright' or 'illuminated' place.¹

7. Light and darkness in relation to the state after death.—The contrast between light and darkness in the idea of the ancients is most strikingly revealed in their views about the state of the living and of the dead. 'Darkness without light' is one of the curses invoked by Hammurabi on any one who should venture to deface his stele. This is synonymous with death. The grave to which the dead are consigned is 'the dark dwelling' (Sumerian *Unugi*), which in its extended meaning is applied to the under world, the abode of the shades (cf. Ps 88^{6, 12, 18}).² The departed soul itself is a 'creation of darkness' (Sumerian, *gidim*, Semitic, *edimmu*).³ The darkness attending death was to some extent relieved in the practice of the living by the use of artificial lights in the preliminaries to burial and by occasional illuminations in proximity to the tomb. From Palestinian excavation it has been ascertained that lamps are exceedingly common in graves, where their intention is evidently symbolical. Their purpose has been variously explained, and one and the same interpretation will hardly suit every era. The readiest explanation would place them—at least in the earlier period—on a level with food and drink vessels deposited with the dead. Whatever was of service to the living might also serve the dead.⁴

Among the Babylonians the general idea was that it was a misfortune for the dead again to be brought to the light of day. Unless decent burial were given, their spirits would return to earth, but only to plague the living.⁵ In the under world (or preferably the other world) was their home, and there their spirits found rest. The classic description of this abode of the dead is found in the myth of Ishtar's Descent to Hades, to the land of no-return (cf. *Gilgamesh Epic*, ii. 4³⁰²):

'To the house of darkness, Irkalla's dwelling-place,
To the house from which he who enters never returns,
To the road whose path turns not back,
To the house where he who enters is deprived of light,
Where dust is their sustenance, their food clay,
Light they see not, in darkness do they sit. . . .'⁶

Over this gloomy realm of the Babylonian dead the god Nergal presides, with his consort Ereshkigal, the 'dark' goddess. In Egypt Osiris was lord of the under world, and there held his court. This also was a world lying in darkness, which was relieved one hour in twenty-four, during the passage of the sun-god and his train through each division of the Tuat.⁷ The entrance to this realm of the dead lay, for both Babylonians and Egyptians, in the west, where the sun goes down. On the other hand, the east, as the point of sunrise, is the abode of life; but this has an interest only for the sun-god and the privileged few who shared his daily recurring glory. Although the point of departure to the under world and the point of return therefrom are clear, there is doubt as to the location, relatively to earth, of the region of the dead. The Egyptians placed it beyond the circle of mountains girding the earth, perhaps on the same plane with earth, perhaps at a lower level. In the Babylonian and Hebrew conception it seems to have lain beneath earth, even lower than the

waters of the abyss (*apsû*), themselves associated with darkness.¹ This was a region which the sun, living or dead, could not pierce.

A better fate for departed spirits, some if not all, was also conceived of—symbolized, *e.g.*, in the recovery of Tammuz from the under world and in the sun-bark with its occupants who returned to the region of day. Light here plays the principal part, although the obstacle of darkness has to be surmounted before the goal of light can be reached. One of the charms in the *Book of the Dead* is for making the transformation into the god that giveth light (in) the darkness, or light for darkness.² The 'island of the blessed,' in the *Gilgamesh Epic*, is cut off from mortals by many barriers, including twelve double-hours of travelling through thick darkness.

The Babylonian heaven was the reserve of the gods, save in exceptional cases. In Egypt, at an early date, the king shared in the delights of heaven, and was exalted to life with the gods in the sky. Later this was qualified by the Osirian doctrine, whereby the realm of the blessed could be attained only by redemption from the under world through faith in Osiris or Amon-Râ. This other world is a realm of light for the most part. The crested ibis, whose name is equivalent to 'light,' is used as a symbol of the soul, including that of the sun-god.³ The *khu*, or beatified spirits, feed upon the divine grain (*i.e.* the body of Osiris) in the land of the Light-god.⁴ Later, 'the followers of the Sun-god, who travelled with him in the Boat of Millions of Years, eventually became beings consisting of nothing but light'⁵ (cf. Is 60²⁰).

Hebrew thought about the state of the dead in the under world shows close kinship to the Babylonian, and is less developed than that of Egypt. The utmost allowed, even in the later books of the OT, falling within our period, is that the shades may emerge from She'ol back to the light of the upper world (Is 26¹⁹).⁶

LITERATURE.—This is sufficiently given in the footnotes.

LIGHTNING.—See PRODIGES AND PORTENTS.

LIGUORI.—Saint Alfonso Maria di Liguori was born 27 Sept. 1806 at Marianella, near Naples. He was the eldest son of a rather impoverished noble family, and, according to his biographers, was from earliest youth remarkable for his piety, his charm of manner, and his precocious ability. A strain of Spanish blood seems to have lent him a greater seriousness of mind and tenacity of purpose than are common among natives of Southern Italy. He devoted himself to the law, and took the degree of Doctor of Laws at the age of sixteen, being then so small of stature that, to the amusement of the spectators, his doctor's gown hid him almost completely from view. He afterwards practised in the courts of Naples for nearly eight years with extraordinary success; but it would seem that in 1723, in a case in which large pecuniary interests were at stake, Liguori, in the interpretation of an important document, was guilty of an oversight which, when brought home to him, covered him with confusion, and disgusted him with his career and with all worldly ambition. He had always led a most innocent life, and now, giving himself up to solitude and prayer, he had what he believed to be a

supernatural intimation to consecrate the rest of his days to God in the ecclesiastical state. He wished to become an Oratorian, but his father, who had already been much distressed on two different occasions by his son's unwillingness to fall in with an advantageous project of marriage that had been suggested, obstinately opposed his design. Yielding eventually to his father's entreaties, and acting on the advice of his confessor, himself an Oratorian, the young lawyer gave up his idea of leaving home, but began to study for an ecclesiastical career, and in December 1726 was ordained priest. In the first six years of his ministry Alfonso worked under the direction of an association of missionary priests, and devoted himself at Naples to the care of the *lazzaroni*, among whom his labours bore extraordinary fruit. He converted many hundreds from a life of sin, and formed a sort of confraternity, the 'Association of the Chapels,' for these poor outcasts, to ensure their perseverance in good. In 1729 Liguori was brought into relation with a certain Father Thomas Falcoia of the 'Pii Operarii,' who conceived a deep respect for the young man, and, when he himself was shortly afterwards made bishop of Castellamare, he was led to the conviction that Alfonso was an instrument divinely sent him to carry out a project which he had long secretly cherished of founding a preaching Order to evangelize the goat-herds and peasants of that part of Italy. The scheme eventually took shape in the little town of Scala, near Amalfi, twenty miles from Naples. There the 'Congregation of the Most Holy Redeemer,' from which name the members are most commonly called Redemptorists, was founded in 1732. Bishop Falcoia was at first its nominal superior, but he lived at a distance, while Alfonso resided with the community. Hence, on the bishop's death in 1743, Alfonso was formally elected to preside over his brethren. In 1749 the rule was authoritatively approved by Pope Benedict XIV., and the rule of an Order of nuns, which had been closely associated with the Redemptorist congregation from the beginning, was approved in the following year. But this measure of success was not achieved without numerous disappointments, and several of Liguori's first companions broke away from the Institute. A document drawn up in those very early days by the hand of Alfonso himself in the vain hope of obtaining the approbation of the king of Naples, Don Carlos (afterwards Charles III. of Spain), supplies a concise account of the special characteristics of the new Order.

'The principal aim of the priests so associated is to imitate as closely as possible . . . the life and virtues of Our Lord Jesus Christ. In this they set before themselves their own spiritual advantage and that of the people of this kingdom—especially the most forsaken of these, to whom they render spiritual aid.

In their houses they lead a perfect community life, under obedience to their superior, and perform the functions of the sacred ministry, such as instructions, confessions, the superintendence of schools, confraternities, and other devout gatherings.

They go about the dioceses in which they are established, giving missions, and, as a means of preserving the good results which they have been enabled by the grace of God to effect, they return from time to time to the districts which have been evangelized, to hear confessions and confirm the people in their good resolutions by another series of instructions and sermons as well as by spiritual advice and so forth.

In the monastery as well as abroad they endeavour, with the help of divine grace, to follow closely in the footsteps of the Most Holy Redeemer, Jesus Crucified, in order to instruct the people by example as well as by precept.

As a means of attaining this end, there are twelve points of rule set forth in their constitutions. The headings of these are: Faith, Hope, Love of God, Concord and Charity among themselves, Poverty, Purity of Heart, Obedience, Meekness and Humility of Heart, Mortification, Recollection, Prayer, Abnegation of Self, and Love of the Cross.

Each of the associates passes one day every week [now one day every month] in retreat, thus treating alone with God in the interests of his soul, in order to be able to employ himself

afterwards with more ardour in securing the spiritual welfare of his neighbour.

In their houses they consecrate a large part of each day to silence, recollection, the choir, mortification, and to meditation, which is practised three times a day. . . .

Their houses are to contain but a small number of subjects. As for their subsistence, they endeavour not to be a burden on anybody; they live on their family resources, which they have handed over to their superiors, and on such offerings as may be made spontaneously for the love of Jesus Christ, by the piety of the faithful' (Berthe, *Saint Alphonse de Liguori*, Eng. tr., i. 166).

Despite domestic anxieties and contradictions in the government of the new Institute, Liguori, down to about the year 1752, devoted himself indefatigably to the actual work of preaching, while leading at the same time a life of extreme abnegation and austerity. At that period his health began somewhat to fail, and henceforward he devoted more time to literary activities, composing a number of books of piety and instruction, as well as the comprehensive work on moral theology by which he is especially remembered. As early as 1747 the king had wished to make Alfonso archbishop of Palermo, but by earnest representations he had succeeded in evading the proffered honour. The Redemptorists, in point of fact, take a special vow to accept no ecclesiastical dignities, but in 1762 influence was used with the Holy See to dispense the saint from his vow, and, sorely against his will, he was compelled by the pope to accept the bishopric of Sant' Agata dei Goti, a tiny see to the north of Naples, among a peasant population unpleasantly notorious for their barbarism and irreligion. Here he worked wonders for the reform of morals, but after an episcopate of more than thirteen years he persuaded Pope Pius VI. in 1775 to allow him to resign in order that he might end his days among a community of his own Order. Broken with years, with apostolic labours, and with the incredible austerities which he practised, he retired to Nocera dei Pagani, but twelve years were still to pass before he was called to his reward. In the meantime he was destined to endure trials which probably cost him more severe mental suffering than any of the difficulties which he had previously encountered. For forty years and more, mainly owing to the influence of the anti-clerical but all-powerful minister Bernard Tanucci, who was the virtual ruler of Naples, the formal recognition of the Redemptorists as a religious Order had been withheld by the Government. This had always been an obstacle in the way of its expansion, reducing it, as it did, to the position of an illegal association. At the time of Tanucci's downfall in 1776, the Order numbered only nine houses—four in Naples, one in Sicily, and four in the States of the Church. In 1779, under a different administration, everything seemed to point to the adoption of a more generous policy. Promises of favour were made on behalf of the Government, and in response the Redemptorist rule was formally submitted for State approval. From the point of view of the aged founder, the result was disastrous. The rule was approved, indeed, but in a fundamentally modified form (known in the controversies which followed as the 'Regolamento'), which set at naught many of the most essential features of the constitutions as hitherto observed, and which practically reduced it from the status of a religious Order to that of a mere pious association. Liguori, who was now 85, decrepit, deaf, and almost blind, was induced to sign the *Regolamento*, and it was for the time adopted in the Neapolitan dominions, but the Redemptorists belonging to the houses founded within the States of the Church energetically protested against the acceptance of any such caricature of their rule. The Holy See pronounced in their favour, and the unfortunate schism thus

caused in the Order had not been healed when, on 1 Aug. 1787, the saint died at Nocera dei Pagani. His death, together with the outburst of popular enthusiasm which it evoked and the marvellous events that followed, brought about a happier state of feeling. The Government of Charles III. in Oct. 1790 approved the original Redemptorist rule, and in Aug. 1791, under papal sanction, the different houses of the Order were once more reconciled with each other. From this time forward, and especially after the subsidence of the disturbances caused by the French Revolution and the Napoleonic wars, the development of the Order was rapid. In 1786 the first Redemptorist house north of the Alps was founded at Warsaw by Clement Hofbauer, afterwards beatified. From there the Congregation gradually spread to Austria and through Europe, while a beginning was made in the United States in 1832 and in England in 1843. The Redemptorists have since made foundations in Ireland (1851), Kinnoull, near Perth, in Scotland (1869), in Brazil, Dutch Guiana, the Congo, Australia, New Zealand, and many other distant countries. At present the Order numbers rather over 4000 members, half of whom are priests, the rest lay-brothers and students preparing for ordination. The strict ultramontane views distinctive of the followers of St. Alfonso di Liguori have often brought them into disfavour with State officials, and, like the Jesuits, they have several times been banished from different European countries. Still no serious attempt has been made to connect them with any kind of political intrigue. The Redemptorists have remained steadily faithful to their primary work of giving missions and retreats, especially among the poor and uninstructed, and the severe rule of the Order has suffered no relaxation.

Alfonso di Liguori was beatified in 1816, canonized in 1839, and declared 'Doctor of the Universal Church' by Pius IX. in 1871. The terms of this last pronouncement, though somewhat vague, may be held to constitute a guarantee of orthodoxy for the saint's writings, at least when taken as a whole. Moreover, it may fairly be inferred from the language used that he is commended for holding a golden mean in his moral teaching between a Jansenistic rigorism on the one hand and dangerous laxity on the other. A full bibliography of Liguori's writings may be found in Berthe, *Eng. tr.*, ii. 766 ff. Two works especially in this long catalogue have been subjected to much adverse criticism. Against the *Le Glorie di Maria*, first published at Naples in 1750, and since translated into every European language, many objections have been raised on the ground of its alleged extravagant 'Mariolatry' (see, e.g., E. B. Pusey, *Eirenicon*, Oxford, 1865, *passim*). But it is to be remembered, as Newman points out, that 'St. Alfonso wrote for Neapolitans, whom he knew, and whom we do not know' (see the whole context in J. H. Newman, *Letter to Pusey on the Eirenicon*, London, 1866, p. 103 ff.). The character and traditions of the people are very different from ours, and he was writing to protest against what he considered to be a veiled attack on that simple and childlike devotion to the Blessed Virgin which he shared, and which is a very important factor in the religion of his countrymen. It is, however, the *Theologia Moralis* that more than anything else has been made the object of fierce invective. Liguori originally (*i.e.* in 1748) published his views on moral questions in the form of a commentary on a well-known text-book for students, the *Medulla* of the Jesuit Hermann Busenbaum. But the second edition in two volumes (Naples, 1753 and 1755) appeared as an original work, and the author continued to revise and enlarge it as the successive issues were exhausted. The eighth edi-

tion, which was printed in 1779, was the last to receive his personal attention. Seeing that not only has Alfonso been declared a doctor of the Church, but that earlier authoritative decrees in 1803 and 1831 pronounced that there was 'nothing worthy of censure' in his writings (on this cf. Newman, *History of my Religious Opinions*, note G, p. 353), and that all his opinions might safely be followed by confessors, it is fair to conclude that by the theology of Liguori the moral teaching of the Roman Church must stand or fall. But, while we admit this, it must be said that few indeed of the exoteric critics who have inveighed against his teaching have taken the trouble to understand it. It is easy to denounce the 'shocking laxity' of this or that isolated proposition set out, often inaccurately, and always apart from the context, as, e.g., in the notorious pamphlet of Robert Grassmann (*Auszüge aus der Moraltheologie*, etc.), but the man who does this is most commonly a publicist who knows nothing of ethical systems and who has never considered the difficulties which follow from the acceptance of a contrary principle. Nothing can produce a better impression than to lay down the rule that under no possible circumstances must the truth be departed from, but those who most positively commit themselves to this are also those who have never attempted to think out the extremely difficult problems which arise in practical life, and who have never attempted to square their own conduct by any consistent principle.

They believe, as Newman well says, 'that on a great or cruel occasion a man cannot help telling a lie, and that he would not be a man did he not tell it, but still it is wrong and he ought not to do it, and he must trust that the sin will be forgiven him, though he goes about to commit it. It is a frailty, and had better not be anticipated, and not thought of again after "it is once over."'

Now Liguori, like all his fellow-bishops, believed that for those whose duty it was to hear confessions and instruct their flock it was necessary that these and other moral questions should be thought out. Moreover, it must be said, in answer to such criticisms as those of R. Grassmann and those contained in art. CASUISTRY (vol. iii. p. 240), that priests administer a code of law in the tribunal penance and, like lawyers, doctors, and magistrates, they have to acquaint themselves with technicalities which, in the case of certain offences, often involve unsavoury details quite unfit for public discussion.

One of the special grounds of reproach against Liguori's moral system is his adoption or defence of probabilism (*q.v.*). This charge is only partially justified and would be repudiated by all his own disciples. The principle which he enunciated, at least in his later years, was that of 'equiprobabilism' (*q.v.*). The difference between this and probabilism, rightly explained, is not very momentous, and many modern writers on the subject, especially the theologians of the Jesuit school, have maintained that St. Alfonso's views diverged but slightly from those of approved probabilists. According to the probabilist system, starting with the admitted axiom that a doubtful law does not bind (*lex dubia non obligat*), a man is not held in conscience to obey as long as there is a sound probability against the law—as long as, e.g., in a matter of extrinsic testimony, where doctors disagree, one unexceptionable authority teaches that a particular precept has no binding force. The probabiliorists, on the other hand, held that, unless the authorities who maintained the binding force of the law or precept were notably less weighty than those who excused from it, such a precept could not be set aside without sin. Between these rival views comes that of Liguori, who held that, when the reasons or authorities were

equally balanced for and against the law, then a man without peril to his soul was free to use his liberty.

'A doubtful law does not bind. But when two opposite opinions are equally or nearly equally probable, you have a strict doubt as to the existence of the law. Therefore the law, being only doubtfully promulgated, has no binding force. Therefore it is true that you can follow an equally probable opinion in favour of liberty' (Berthe, Eng. tr., i. 143)

A critical and definitive edition of the *Theologia Moralis*, equipped with adequate notes, has only recently been brought to completion: *Theologia Moralis S. Alphonsi Mariae de Liguori*, ed. Leonardi Gaudé, 4 vols., Rome, 1905-12. The editor in his preface gives a satisfactory explanation of the inaccuracy of so many of the saint's quotations as printed in the current editions.

LITERATURE.—The fullest life of St. Alfonso di Liguori is that by A. Berthe, 2 vols., Paris, 1900, Eng. tr., H. Castle, 2 vols., Dublin, 1908 (the translation has been subjected to careful revision and is in many respects superior to the original). Other noteworthy biographies are those of A. Tannoia, *Della Vita ed istituto del venerabile Alfonso Maria Liguori*, 3 vols., Naples, 1798-1802 (a valuable source written by a devoted disciple of the saint). See also C. Villecourt, *Vie et institut de S. Alphonse Marie de Liguori*, 4 vols., Tournai, 1883; K. Dilgskron, *Leben des heil. Bischofs und Kirchenlehrers Alfonsus Maria de Liguori*, Regensburg, 1887; A. Capecelatro, *La Vita di S. Alfonso Maria de Liguori*, Rome, 1879. A good account of the Order with full bibliography will be found in M. Heimbucher, *Die Orden und Kongregationen der kathol. Kirche*, Paderborn, 1908, iii. 313-333.

On the Probabilist and Equiprobabilist controversy see the anonymous *Vindiciae Alphonsianæ*, Brussels, 1874, and *Vindiciae Balleriniæ*, Bruges, 1873; J. de Caigny, *Apologetica de Aequiprobabilismo Alphonsiano*, do. 1894, and *De genuino Probabilismo lato*, do. 1904; J. Arendt, *Critica Aequiprobabilismi*, Brussels, 1902; J. Wouters, *De Minusprobabilismo*, Paris, 1905; A. Lehmkühl, *Probabilismus Vindicatus*, Freiburg, 1906. A severe indictment of the moral teaching of St. Alfonso di Liguori will be found in A. Harnack, *Lehrbuch der Dogmengeschichte*, Freiburg, 1898, iii. 591, 644 ff.; P. von Hoensbroech, *Die ultramontane Moral*, Berlin, 1902; J. J. Döllinger and F. H. Reusch, *Geschichte der Moralströmungen*, Munich, 1889, and the pamphlet of R. Grassmann, *Auszüge aus der Moraltheologie des heil. Alphons v. Liguori*, Stettin, 1895, which has been widely distributed as a controversial tract. In reply see, *inter alia*, J. H. Newman, *History of my Religious Opinions*, London, 1865, pp. 278 ff. and 343 ff.; A. Keller, *St. Alphons v. Liguori oder Robert Grassmann?*, Wiesbaden, 1901; 'Pilatus,' *Was ist Wahrheit?*, do. 1902, and *Quos Ego?*, do. 1903; F. ter Haar, *Das Decret des Papstes Innocenz XI über den Probabilismus*, Paderborn, 1904; V. Cathrein, *Moralphilosophie*, Freiburg, 1899, i. 397 ff.; H. Ryder, *Catholica Controversia*, London, 1890.

H. THURSTON.

LIGURIAN RELIGION.—Solittle is certainly known of the early history and geographical distribution of the Ligurians that any attempt to give a general account of their religion is impossible. Some of the deities that were worshipped in Roman times in the Ligurian area strictly so called may be mentioned. The most noteworthy are those closely attached to a particular spot, such as Mars Cemenelus (*CIL* v. 7871), sometimes worshipped without the first name, and clearly connected with the town of Cemenelum; and Bormanus, who was probably, like his namesake in the north of Gallia Transpadana, from whom the modern town of Bormio takes its name, a god of hot springs, and who gave the name to the Lucus Bormani on the coast to the east of (Album) Intimelum, the modern Ventimiglia. Not less local was the worship of Mars Leucimalacus at Peda (*ib.* 7862), possibly an apple-ripening deity, the dedication to whom was made on some festival of waggoners or muleteers (*plostratibus*). Local, too, was the cult of the Matronæ Veditantiæ, where the plural is interesting, also honoured at Cemenelum in the district of the Veditanti. The worship of Matronæ with some local epithet or epithets was fairly common in N. Italy, sometimes combined with Genii, as in an inscription from Tremezina on Lake Como (*ib.* 5277), generally with a local epithet, as *Deruonnæ* (*ib.* 5791, found at Milan) or *Veclasiæ Concanaunæ* (*ib.* 5584, found at Corbetta, north of Milan). They are often

joined with Jupiter Optimus Maximus, and sometimes themselves called Iunones—a plural form which never appears in pure Latin inscriptions. It would be exceedingly unsafe, without other evidence, to see in this a trace of any polygamous strain in the Ligurian conception of Olympus; a nearer parallel is the (presumably) generalizing plural in such animistic figures as Nymphæ, Fauni, or the 'Clouds' and 'Dawns' of the Tabula Agnensis (see ITALY [ANCIENT]); or the Angitiæ of the Marsians—not to speak of the Parcæ of Græco-Roman fable or the Σεμραι at Athens.

Other Ligurian examples of these 'Great Mothers' will be found in the Index to *CIL* (p. 1180). The other deities of the locality are all of common occurrence in Italian communities.

On the important question of the ethnic character and connexions of the Ligures, reference must be made to *EBR*¹, art. 'Ligurians,' and the authorities there cited. If, and in so far as, the view of W. Ridgeway ('Who were the Romans?' *Brit. Acad. Trans.* iii. [1907] 42, with the comments of the present writer, *ib.*) may be accepted as sound, the early history of Ligurian religion would be the same thing as that of the pre-Tuscan population of Western Italy, in particular of the Aurunci and other early dwellers on the soil of what afterwards was Latium (see ITALY [ANCIENT]), especially the paragraph on the archaic cult of Arica).

R. S. CONWAY.

LINGAYATS.—The Lingayats are a religious community in India, numbering nearly three millions at the census of 1911, of whom more than half are found in the southern districts of the Bombay Presidency. In the Bombay districts of Belgaum and Bijapur one-third of the population is Lingayat, and in the adjacent district of Dharwar they constitute nearly 50 per cent of the total. Beyond the limits of the Bombay Presidency, Lingayats are numerous in the Mysore and Hyderabad States. They also form an important element in the population of the north-west corner of the Madras Presidency.¹

1. Description.—The Lingayats, who are also known as Lingawants, Lingangis, Sivabhaktas, and Virasaivas, derive their name from the Skt. word *linga*, the phallic emblem, with the affix *āya*, and are 'the people who bear the *linga*' habitually. Their name literally describes them; for the true Lingayat wears on his body a small silver box containing a stone phallus, which is the symbol of his faith, and the loss of which is equivalent to spiritual death. The emblem is worn by both sexes. The men carry the box on a red silk scarf or a thread tied round the neck, while the women wear it inside their costume, on a neck-string. When working, the male wearer sometimes shifts it to his left arm.

The Lingayats are Dravidian, that is to say, they belong to a stock that was established in India before the arrival of the so-called Aryans. They are dark in complexion, in common with the races of Southern India, and speak Kanarese, a Dravidian language. They have been not inaptly described as a peaceable race of Hindu puritans, though it may be questioned how far their rejection of many of the chief dogmas of Brāhmanic Hinduism leaves them the right to be styled Hindus at all. Of the Brāhmanic triad—Brahmā, Viṣṇu, and Śiva—they acknowledge only the god Śiva, whose emblem, the *linga*, they bear on their persons. They reverence the Vedas, but disregard the later commentaries on which the Brāhmins rely. Originally they seem to have been the product of one of the numerous reformations in India that have been

¹ The census of 1911 gives the following figures for Lingayats: Bombay Presidency, 729,481; Mysore, 1,339,243; Madras Presidency, 134,592; total India, 2,976,293.

aimed against the supremacy and doctrines of the Brāhmins, whose selfish exploitation of the lower castes has frequently led to the rise of new sects essentially anti-Brahmanic in origin. It seems clear that, in its inception, Lingayatism not only rested largely on a denial of the Brāhman claim to supremacy over all other castes, but attempted to abolish all caste distinctions. All wearers of the *linga* were proclaimed equal in the eyes of God. The traditional Lingayat teacher, Basava, proclaimed all men holy in proportion as they are temples of the great spirit, and thus, in his view, all men are born equal. The denial of the supremacy of the Brāhmins, coupled with the assertion of the essential equality of all men, constituted a vital departure from the doctrines of orthodox Hinduism. Other important innovations were: the prohibition of child-marriage; the removal of all restriction on widows remarrying; the burial, instead of burning, of the dead; and the abolition of the chief Hindu rites for the removal of ceremonial impurity. The founders of the religion could scarcely have forged more potent weapons for severing the bonds between their proselytes and the followers of the doctrines preached by contemporary Brāhmanic Hinduism.

The reader must not assume that this brief description of the fundamental doctrines of a religious movement which dates from the 12th cent. A.D. conveys an accurate picture of the prevalent Lingayatism of the present day. In connexion with the attitude originally assumed towards caste distinctions, there has been a very noticeable departure from Basava's teaching. The origin of caste in India is as yet a subject requiring much elucidation. In its development no mean influence must be allotted to function, religion, and political boundaries. Nor can differences of race have failed materially to assist the formation of Indian society on its present basis. One of the most interesting phenomena connected with the evolution of modern caste is the working of a religious reformation in which caste finds no place on the previously existing social structure of caste units. If caste is largely a manifestation of deep-rooted prejudices tending to raise and preserve barriers between the social intercourse of different sections of the human race, it would seem not unnatural to expect that it would tend to reassert itself within the fold of an essentially casteless religion so soon as the enthusiasm of the founders had spent itself; and it is not unlikely that the mere fact of converts having joined the movement at an early stage in its history would generate a claim to social precedence over the later converts, and thus in time reconstitute the old caste barrier that the reformers spent themselves in endeavouring to destroy. One of the most interesting pages in the history of caste evolution, therefore, must be that which deals with the evolution of caste inside the fold of a religious community originally formed on a non-caste basis. A remarkable instance of such evolution will be found in the history of Lingayatism. The Lingayats of the present day are divided into three well-defined groups, including numerous true castes, of which a description will be found in the section dealing with their social organization (see p. 72). With the rise of caste distinctions, numerous other changes occurred in the nature of the Lingayat religion. The *caryas* or *jaṅgams*, the priests of the community, devised in time a ritual and ceremonies in which the influence of the rival Brāhman aristocracy can freely be traced. The more important of these ceremonies are described in § 4 below. But it is essential to a thorough understanding of the nature of Lingayatism that the most important ceremony of all, known as the *aṣṭavarṇa*, or the eightfold

sacrament, should be understood by the reader. It is commonly asserted nowadays by prominent members of the Lingayat community that the true test of a Lingayat is the right to receive the full *aṣṭavarṇa*, and that the possession of a few of these eight rites only does not entitle the possessor to be styled a member of the community. The contention seems scarcely in harmony with the popular usage of the term 'Lingayat.'

The *aṣṭavarṇa* consists of eight rites known as

- | | |
|--------------|------------|
| 1. Gura. | 5. Mantra. |
| 2. Liṅga. | 6. Jaṅgam. |
| 3. Vibhūti. | 7. Tirth. |
| 4. Rudrākṣa. | 8. Prasād. |

On the birth of a Lingayat the parents send for the *guru*, or spiritual adviser, of the family, who is the representative of one of the five *āchāryas*, or holy men, from whom the father claims descent. The *guru* binds the *linga* on the child, besmears it with *vibhūti* (ashes), places a garland of *rudrākṣa* (seeds of the bastard cedar) round its neck, and teaches it the mystic *mantra*, or prayer, known as *Namah Sivitya*—i.e. 'Obeisance to the god Siva.' The child being incapable of acquiring a knowledge of the sacred text at this early stage of its existence, the prayer is merely recited in its ear by the *guru*. The child has then to be presented to the god Siva in the person of a *jaṅgam*, or Lingayat priest, who is summoned for this purpose. On his arrival the parents wash his feet, and the water in which the feet are washed is described as the *tirtha* or *charaṇatirtha* of Siva. This water is next poured over the *linga* attached to the infant. The *jaṅgam* is fed, and a portion of the food from the dish is placed in the child's mouth. This final ceremony is known as *prasād*. Occasionally the double characters of *guru* and *jaṅgam* are combined in one person. When the child attains the age of eight or ten, the ceremony is repeated with slight modifications.

It will be seen that this eightfold ceremony forms a very concise test of a Lingayat's religious status, and may be not unfitly compared to the rites of baptism and confirmation which are outward and visible signs of admission to the Catholic Church. But not all Christians are confirmed, and in the same way not all members of the Lingayat community undergo the full ceremony of initiation. It would probably be safer to apply the term 'Lingayat' to all wearers of the *linga*, whether they are entitled to the full *aṣṭavarṇa* on birth or conversion, or to a few only of the eight sacraments. In so doing, the lower orders, from a social standpoint, of the Lingayat community will not be excluded, as they would otherwise be, from the fold.

Lingayats are not permitted to touch meat or to drink any kind of liquor. The greater number of them are either occupied in agriculture or are traders. They are generally reputed to be peaceful and law-abiding; but at times they are capable of dividing into violent factions with such rancour and hostility that the dispute culminates in riots, and occasionally in murder. Among the educated members of the community there is a strong spirit of rivalry with the Brāhmins, whose intellect and capacity have secured them a preponderating share of Government appointments. Except for these defects, the community may be described as steady and industrious, devoted to honest toil, whether in professional employment or occupied in trading or the cultivation of the soil.

2. History.—Until the recent publication of two inscriptions, which have been deciphered and edited by J. F. Fleet, and throw an entirely new light on the probable origin of the Lingayat religion, the movement in favour of this special form of Siva-worship was commonly supposed to

have been set on foot by the great Lingayat saint, Basava, in the latter half of the 12th century. The acts and doctrines of Basava and of his nephew Channabasava are set forth in two *purāṇas*, or sacred books, named, after them, the *Basavapurāṇa* (ed. Poona, 1905) and the *Channabasavapurāṇa* (ed. Mangalore, 1851). But these works were not written until some centuries had elapsed since the death of the saints; and it seems certain that the substratum of fact which they contain had by that time become so overlaid with tradition and miraculous occurrences as to render them of little historical value. The *Basavapurāṇa* describes Basava as the son of Brāhman parents, Madiraja and Madalambika, residents of Bagevadi, usually held to be the town of that name in the Bijapur district of the Bombay Presidency. Basava is the Kanarese name for 'bull,' an animal sacred to Siva, and thus a connexion is traced between Basava and the god Siva. At the age of eight, Basava refused to be invested with the sacred thread of the twice-born caste, to which he belonged by birth, declaring himself a worshipper of Siva, and stating that he had come to destroy the distinctions of caste. By his knowledge of the Saiva scriptures he attracted the attention of his uncle Baladeva, then prime minister to the king of Kalyan, Bijjala. Baladeva gave him his daughter Gangadevi in marriage. Subsequently Bijjala, a Kalchurya by race, who usurped the Chalukyan kingdom of Kalyana in the middle of the 12th cent., installed Basava as his prime minister, and gave him his younger sister Nilalochana to wife. The *purāṇas* further recount the birth of Channabasava from Basava's unmarried sister Nagalambika, by the working of the spirit of the god Siva. The myth in connexion with this miraculous conception is interesting. Basava, while engaged in prayer, saw an ant emerge from the ground with a small seed in its mouth. He took the seed to his home, where his sister swallowed it and became pregnant. The issue of this unique conception was Channabasava. Uncle and nephew both preached the new doctrines, and in so doing encountered the hostility of the Jains, whom they ruthlessly persecuted. A revolution, the outcome of these religious factions, led to the assassination of king Bijjala and to the flight of Basava and his nephew. Basava is said to have been finally absorbed into the *linga* at Kudal Sangameswar, and Channabasava to have lost his life at Ulvi in North Kanara, a district in the Bombay Presidency. An annual pilgrimage of Lingayats to the shrine of the latter at Ulvi takes place to this day.

Two important inscriptions bearing on these traditions of the origin of the Lingayats deserve consideration. The first was discovered at the village of Managoli, a few miles from Bagevadi, the traditional birthplace of Basava. This record (as also many others) shows that king Bijjala gained the kingdom of Kalyan in A.D. 1156. It also states that a certain Basava was the builder of the temple in which the inscription was first put, and that Madiraja was *mahāprabhu*, or head of the village, when the grants in aid of the temple were made. Basava is further described as the grandson of Revadasa and son of Chandiraja, and as a man of great sanctity and virtue. The second inscription was found at Ablur in the Dharwar district of the Bombay Presidency, and belongs to about A.D. 1200. It relates the fortunes of a certain Ekantada-Ramayya, an ardent worshipper of the god Siva. Ramayya came into conflict with the Jains, and defeated them, both in dispute and, the inscription says, by performing a miracle—we may venture to say, by arranging matters so that he seemed to perform it—which consisted in cutting off his own head and having

it restored to him, safe and sound, by the grace of Siva, seven days later. All this came to the notice of King Bijjala, who summoned Ramayya into his presence. And Ramayya, making his cause good before the king, won his support, and was presented with gifts of lands for the temple founded by him at Ablur in the new faith. The incidents related of Ramayya are placed shortly before A.D. 1162, so that he would have been a contemporary of Basava. No mention, however, of the latter or of his nephew is found in this record.

If we accept the contemporary inscriptions as more entitled to credit than the tradition overlaid with myth recorded at a later date, it seems clear that both Basava and Ekantada-Ramayya were reformers who had much to do with the rise of the Lingayat doctrine, and that the event is to be placed in the 12th century. Lingayat scholars of the present day, indeed, claim a far earlier date for the origin of their faith. But their contention that its origin is contemporaneous with that of Brāhmanic Hinduism has yet to be established by adequate evidence. The best opinion seems to be that of Fleet, who considers that there is no doubt that the present Lingayat sect is more or less a development of the gild (mentioned in many inscriptions) of the 500 Swamis of Aihole, a village in the Bijapur district, the protectors of the Vira-Bananju religion, who were always more or less strictly Saivas, but, with a free-mindedness which is not now common, patronized also Buddhism. The movement, however, in which the 500 Swamis of Aihole joined seems certainly to have originated with Ekantada-Ramayya at Ablur. And probably the prevalent tradition of the present day, that Basava was the originator of it and the founder of the community, must only be attributed to his having quickly become acquainted with the new development of Saivism started by Ramayya, and to his having taken a leading part in encouraging and propagating it in circumstances which rendered him more conspicuous than the real founder. Basava happened to be a member of the body of village elders at Managoli, and so to occupy a recognizable position in local matters, administrative as well as religious. Consequently, it seems likely that, when the first literary account of the rise of Lingayatism came to be written, which was unquestionably an appreciable time after the event, his name had survived, to the exclusion of Ramayya's. Accordingly, the writer of that account was unable to tell us anything particular about Ramayya, beyond duly recording the miracle performed by him, and attributed the movement entirely to Basava, assigning to him an assistant, his nephew Channabasava, who is perhaps only a mythical person. But it must be also admitted that the early history of the movement may be capable of further elucidation, and that the present-day claims of the leading Lingayats for a very early origin for their religion, though lacking the support of historical evidence, have this much to rely on, that it is essentially probable that the Dravidian races of Southern India, whose primitive deities were absorbed by the Aryan invaders into the personality of their god Siva, always leant towards the special worship of Siva to the exclusion of the other members of the Brāhmanic triad, and combined with this preference a dislike of Brāhmanic ritual and caste ascendancy which is the real substratum of the movement ending in the recognition of Lingayatism.

In dismissing the question of the origin of the Lingayat religion, it seems desirable to give an instance of the claims advanced by learned members of the community for a greater antiquity for their religion than historical evidence would afford

it. Mr. Karibasavashastri, Professor of Sanskrit and Kanarese in the State College of Mysore, contends that the Saiva sect of Hindus has always been divided into two groups, the one comprising the wearers of the *linga*, and the other those who do not wear it. The former he designates Virāṣaiva, and declares that the Virāṣaivas consist of Brāhman, Kṣatriya, Vaiśya, and Śūdra, the fourfold caste division of Manu. Quoting from the 17th chapter of the *Parameśvar āgama*, he declares that the Virāṣaiva Brāhmanas are also known as Suddha Virāṣaivas, Virāṣaiva kings as Marga Virāṣaivas, Virāṣaiva Vaiśyas as Misra Virāṣaivas, and the Śūdras of the community as Anteve Virāṣaivas. In his opinion, the duties and penances imposed on the first of these classes are (1) the *aṣṭavarna* (see p. 70), (2) penances and bodily emaciation, (3) the worship of Śiva without sacrifice, (4) the recital of the Vedas. He further asserts that the Hindu *āśramas*, or conditions of life of *brahmachāri*, *gṛhastha*, and *sannyāsi*, i.e. student, householder, and ascetic, are binding on Virāṣaivas, and quotes, from various Sanskrit works, texts in support of this view. He furnishes a mythical account of the origin of Lingayats at the time of the creation of the world. The importance of this summary of his views lies in the fact that it is completely typical of the claims that many members of the Lingayat community have recently commenced to advance to be included, in a sense, within the fold of orthodox Hinduism, with the mistaken notion of thereby improving their social standing. They endeavour to divide themselves into Manu's fourfold caste scheme of Brāhman, Kṣatriya, Vaiśya, and Śūdra, regardless of the fact that theirs is in origin a non-caste religion, and that Manu's scheme, which can only with great inaccuracy be applied to the more orthodox Hindu castes, is totally unsuited to the Lingayats. A sign of this movement towards Brāhmanic Hinduism among Lingayats is to be found in the organized attempt made by certain Lingayats at recent censuses to enter themselves as Virāṣaiva Brāhmanas; and it seems probable that these claims to a great antiquity for their religion and for a caste scheme based on Manu's model are chiefly significant as signs of the social ambitions of the educated members, who are jealous of the precedence of the Brāhmanas.

3. Social organization.—The results of investigations undertaken in the Bombay Presidency in 1900 by committees of Lingayat gentlemen entrusted with the duty of preparing a classification of the numerous social subdivisions of the Lingayat community tend to show that the relation of these various groups to each other is one of some complexity. Broadly speaking, Lingayats appear to consist of three groups of subdivisions.

(1) The first, which for convenience may be named 'Panchamsalis with full *aṣṭavarna* rites' (see p. 70 above), contains the priests of the community, known as *ayyas* or *jaṅgams*, and the leading trader castes, or *banyigs*. It is probable that this group is the nearest approximation to the original converts, who, it will be remembered, could interdine and intermarry without restriction. The seven subdivisions of this group may still dine together, but for purposes of marriage the subdivisions rank one above the other, and it is permissible for a bridegroom of one subdivision to take a bride only from the divisions below his. The reverse process, namely, of a bride marrying a youth of a lower division, is strictly forbidden. Members of the lower subdivisions of this group may rise to the higher by performing certain rites and ceremonies. The marrying of a boy to a girl beneath him in social rank and of a girl to a boy above her is part of a system of isogamy and hypergamy, and is not at

all uncommon in many Indian castes. It is a probable speculation that the early converts in course of time came to rank themselves as superior to the more recent converts of the community, and the growth of this feeling would lead, in harmony with the ideas that prevail in all societies, to the early converts declining to wed their daughters to the newcomers, though they would accept brides from the latter as socially inferior, if only slightly so. The Panchamsalis, as they may be called for lack of a better name, are all entitled to the *aṣṭavarna* rites, and rank socially above the remaining groups. In BG xxiii. 218 they are described as 'Pure Lingayats.'

(2) The next group is that of the 'non-Panchamsalis with *aṣṭavarna* rites.' This group contains over 70 subdivisions, which are functional groups, such as weavers, oil-pressers, bricklayers, dyers, cultivators, shepherds, and the like. It seems probable that they represent converts of a much later date than those whom we have styled Panchamsalis, and were never permitted to interdine or intermarry with the latter. In this group each subdivision is self-contained in regard to marriage; that is to say, a *jāḍar*, or weaver, may marry only a *jāḍar* girl, a *bādig*, or carpenter, may marry only a *bādig* girl, and so on, resembling in this respect the ordinary Hindu castes, which are usually endogamous. Members of one subdivision may not pass to another. The names of the subdivisions are commonly indicative of the calling of the members, and it is of special interest to note here how the barriers erected by specialization of function have proved too strong for the original communal theories of equality which the Lingayats of early days adopted.

It is interesting to observe that considerable diversity of practice exists in connexion with the relations of the subdivisions of this group to the parent Hindu castes from which they separated to become Lingayats. In most cases it is found that, when a portion of an original Hindu caste has been converted to Lingayatism, both intermarriage and interdining with the unconverted members are finally abandoned, and the caste is broken into two divisions, of which one is to be recognized by the members wearing the *linga*, and the other by their wearing the sacred thread of the twice-born. But in some instances—e.g., the Jeers of the Belgaum district—the Lingayat members continue to take brides from the non-Lingayat section, though they will not marry their daughters to them; it is usual to invest the bride with the *linga* at the marriage ceremony, thus formally receiving her into the Lingayat community. In other cases the Lingayat and non-Lingayat sections live side by side and dine together at caste functions, intermarriage being forbidden. In this case, however, the former call in a *jaṅgam* to perform their religious ceremonies, and the latter employ a Brāhman. The more typical case seems to be that of a caste subdivision given in the Indian Census Report (*Bombay Census Report, 1901*, ch. viii. p. 182). In the last century a Lingayat priest of Ujjini converted a number of weavers in the village of Tuminkatti, Dharwar district, Bombay. These converts abandoned all social intercourse with their former caste brethren, and took their place as a new subdivision in the non-Panchamsal group under the name of Kurvinaras.

This second group of subdivisions, therefore, differs essentially from the Panchamsalis, though the members also have the *aṣṭavarna* rites. It is described in BG under the name of 'Affiliated Lingayats.'

(3) The third group of subdivisions is the 'non-Panchamsalis without *aṣṭavarna* rites.' It contains washermen, tanners, shoemakers, fishermen, etc., which would rank as unclean castes among Brāhmanic Hindus. It is the practice among Lingayats of the present day to deny that the members of this third group are entitled to be classed as Lingayats at all. They maintain that, since the possession of the full *aṣṭavarna* rites is the mark of a Lingayat, these lower divisions, who at most can claim three or four of the eight sacraments, are only the followers or servants of Lingayats. The contention is not unreasonable; yet it seems that these lower orders would be styled Lingayats by the other Hindus of the neighbourhood, and would describe themselves as such. A classification of the Lingayat community would not there-

fore be complete unless they were included. On this point the evidence of J. A. Dubois is of interest. He writes:

'If even a Pariah joins the sect he is considered in no way inferior to a Brahmin. Wherever the *lingam* is found, there, they say, is the throne of the deity, without distinction of class or rank' (*Hindu Manners, Customs, and Ceremonies*³, p. 117).

Lingayats of this description marry only within their subdivision. They are described as 'Half-Lingayats' in BG.

Within the subdivisions just described smaller groups are found, known as exogamous sections, that is to say, groups of which the members are held to be so closely connected that, like blood-relations, they must marry outside their section. Little accurate information is available regarding the nature and origin of these sections; but it appears that in the higher ranks they are named after five Lingayat sages, Nandi, Bhṛngi, Vira, Vṛṣa, and Skanda, and in this respect closely resemble the ordinary Brāhmanic *gotras* (q.v.). The Lingayats do not allow the children of brothers to intermarry, nor may sisters' children marry together. Marriage with the children of a paternal uncle or maternal aunt is similarly forbidden. A man may marry his sister's daughter; but, if the sister be a younger sister, such a marriage is looked on with disfavour. Marriage is both infant and adult. Sexual licence is neither recognized nor tolerated, but is punished, if need be, by excommunication. Polygamy is permitted, but is usual only when the first wife fails to bear a son. The disputes that arise on social or religious questions are settled by the *pañchāyat*, or committee of five elders, an appeal lying to the head of the *math*, or religious house. These *maths* are found scattered over the tract of country in which Lingayats predominate; but there are five of special sanctity and importance, namely, at Ujjini, Śrisailla, Kollepaka, Balehalli, and Benares. From these, decisions on vexed questions of doctrine and ritual issue from time to time.

4. **Beliefs and customs.**—It has been seen that the Lingayats are believers in the god Siva, the third person of the Hindu triad, signifying the creative and destructive forces in the universe. Thence they derive the phallus, or *linga*, emblematic of reproduction, and the sacred bull, Nandi or Basava, found in all their temples, and in all probability the emblem of strength. The ceremonies in vogue at birth, betrothal, marriage, and death have been accurately described by R. C. Carr in his monograph on the Lingayat community (Madras Government Press, 1906), and are given below.

One principal Lingayat ceremony known as the *aṣṭavarna*, or eightfold sacrament, has been already referred to in some detail (p. 70 above). The essentially Lingayat beliefs and ceremonies, such as the wearing of the *linga*, the worship of the *jaṅgam*, and the administration of *aṣṭavarna* rites, are, however, as is usual in India, constantly mingled with many commonplace Hindu beliefs and customs. It is a common practice in India for Hindus to worship at the shrine of Musalmān *pirs*, or saints, and in the same way Lingayats will combine the worship of the special objects prescribed by Basava with the worship of purely Hindu deities such as Hanuman, Ganapati, Yellamma, Maruti, and many others. The investigations hitherto conducted do not clearly show how far Lingayat and Hindu ritual are liable to be combined; but it can be confidently predicted that the lower orders of the community, who still keep in touch with the unconverted section of the caste to which, professionally speaking, they belong, will be found to adhere in many instances to the beliefs and customs of their unconverted fellow castemen, despite the teaching and influence of the *jaṅgams*.

The specially Lingayat ceremonies described by Carr are:

(1) *Birth*.—It is customary for the female relatives attending a confinement to bathe both mother and child. On the second or third day boiled turmeric and water is applied to the mother, and a ceremony known as *virala*, or the worship of the afterbirth, is performed. The propitiation of the afterbirth by the offering of food, *nīm* leaves, turmeric, and a coco-nut, is considered necessary for the safe suckling of the child. When the child receives the *tirth*, or water in which the *jaṅgam*'s feet have been washed (see above, p. 70^b), the mother also partakes of it.

(2) *Betrothal*.—For a betrothal the bridegroom's family come to the bride's house on an auspicious day in company with a *jaṅgam*. They bring a woman's cloth, a jacket, two coco-nuts, five pieces of turmeric, five limes, and betel-leaf and areca-nut. They also bring flowers for the *sīsaka* (a cap of flowers made for the bride), gold and silver ornaments, and sugar and betel-nut for distribution to guests. The bride puts on the new clothes with the ornaments and flowers, and sits on a folded blanket on which fantastic devices have been made with rice. Some married women fill her lap with coco-nuts and other things brought by the bridegroom's party. Music is played, and the women sing. Five of them pick up the rice on the blanket and gently drop it on to the bride's knees, shoulders, and head. They do this three times with both hands; sugar and betel are then distributed, and one of the bride's family proclaims the fact that the bride has been given to the bridegroom. One of the bridegroom's family then states that the bride is accepted. That night the bride's family feed the visitors on sweet things; dishes made of hot or pungent things are strictly prohibited.

(3) *Marriage*.—The marriage ceremony occupies from one to four days, according to circumstances. In the case of a four-day marriage, the first day is spent in worshipping ancestors. On the second day rice and oil are sent to the local *math*, or religious house, and oil alone to the relatives. New pots are brought with much shouting, and deposited in the god's room. A marriage booth is erected, and the bridegroom sits under it side by side with a married female relative, and goes through a performance which is called *surige*. An enclosure is made round them with cotton thread passed ten times round four earthen pitchers placed at the four corners. Five married women come with boiled water and wash off the oil and turmeric with which the bride and the bridegroom and his companions have been anointed. The matrons then clothe them with the new clothes offered to the ancestors on the first day. After some ceremonial the thread forming the enclosure is removed and given to a *jaṅgam*. The *surige* being now over, the bridegroom and his relative are taken back to the god's room. The bride and her relative are then taken to the *pandal*, and another *surige* is gone through. When this is over, the bride is taken to her room and is decorated with flowers. At the same time the bridegroom is decorated in the god's room, and, mounting on a bullock, goes to the village temple, where he offers a coco-nut. A chaplet of flowers called *bāṅga* is tied to his forehead, and he returns to the house. In the god's room a *pañchkalas*, consisting of five metal vases with betel and ashes, has been arranged, one vase being placed at each corner of a square and one in the middle. By each *kalas* is a coco-nut, a date fruit, a betel-leaf, an areca-nut, and one pice tied in a handkerchief. A cotton thread is passed round the square, and round the centre *kalas* another thread, one end of which is held by the family *guru* and the other by the bridegroom, who sits opposite to him. The *guru* wears a ring

made of *kusa* grass on the big toe of his right foot. The bride sits on the left-hand side of the bridegroom, and the *guru* ties their right and left hands respectively with *kusa* grass. The joined hands of the bride and bridegroom are washed, and *bilva* (*Agile marmelos*) leaves and flowers are offered. The officiating priest then consecrates the neck ornament and the thread, ties the latter on the wrists of the joined hands, and gives the former to the bridegroom, who ties it round the bride's neck, repeating some words after the priest.

The tying of the *tālī* is the binding portion of the ceremony. Before the *tālī* is given to the bridegroom, it is passed round the assembly to be touched by all and blessed. As soon as the bridegroom ties it on the bride, all those present throw over the pair a shower of rice. The bridegroom places some cummin seed and *jāgri*, or unrefined sugar, on the bride's head, and the bride does the same to the bridegroom. Small quantities of these articles are tied in a corner of the cloth of each, and the cloths are then knotted together. The bride worships the bridegroom's feet, and he throws rice on her head. The newly married couple offer fruits to five *jaṅgams*, and present them with five pice. The relatives worship the bride and bridegroom, wash their feet, and offer presents, and the proceedings of the day terminate.

On the third day, friends and relatives are fed. On the fourth day, bride and bridegroom ride in procession through the village on the same bullock, the bride in front. On returning to the house they throw scented powder at each other, and the guests join in the fun. Then follows the wedding breakfast, to which only the near relatives are admitted. The married couple worship *jaṅgams* and the elders, and take off the consecration thread from their wrists and tie it at the doorway. The five matrons who have assisted are given presents and dismissed, and the marriage is now complete.

In a one-day marriage the above ceremonies are crowded into the short time allotted.

The remarriage of widows was one of the points on which Basava insisted, and was probably one of the biggest bones of contention with the Brāhmins. Widow remarriage is allowed at the present day, but the authorities at Ujjini see fit to disregard it. They say that among *jaṅgams* it is prohibited, and that among the other classes of Lingayats it is the growth of custom.

(4) *Death*.—The dead are buried in a sitting posture facing towards the north; but an exception is made in the case of unmarried people, who are buried in a reclining position.

Before the sick man dies, the ceremony called *viśhūti-velai* is performed. He is given a bath, and is made to drink holy water in which the *jaṅgam's* feet have been washed. He is made to give the *jaṅgam* a handkerchief with *viśhūti* (ashes), *rudrākṣa* (seeds of the bastard cedar), *daśiṇa* (coin), and *tāmbūla* (betel-leaf). This is followed by a meal, of which all the *jaṅgams* present and the relatives and friends of the patient partake. It appears to be immaterial whether the patient is still alive or not. It is stated that, if the invalid survives this ceremony, he must take to the jungles and disappear; but in practice this is not observed. The death party resembles in some respects an Irish 'wake,' though the latter does not commence until the deceased is well on his way to the next world.

After death the corpse is placed in a sitting posture, and the *jaṅgam*, who has received the offering before death, places his left hand on the right thigh of the body. The people present worship the corpse, and the usual distribution of coins and betel to *jaṅgams* follows. The body is then carried in a *vimān*, or bamboo chair, to the burial-

ground. The grave should be a cube of 9 feet dimensions, with a niche on one side in which the corpse is to sit. The *linga* is untied and placed in the left hand, *bilva* leaves and *viśhūti* are placed at the side, the body is wrapped in an orange-coloured cloth, and the grave is filled in. A *jaṅgam* stands on the grave, and, after receiving the usual *douceur*, shouts out the name of the deceased, and says that he has gone to Kailāsa, or heaven.

Memorial ceremonies are contrary to Lingayat tenets; but in this, as in other matters, the influence of the Brāhmins appears, and among some sections an annual ceremony is performed. The performance of *śrāddha*, or the funeral ceremonies common to other Hindus, is unknown. Dubois tells us that a Lingayat is no sooner buried than he is forgotten.

'The point in the creed of the Sivaites which appears to me to be most remarkable is their entire rejection of that fundamental principle of the Hindu religion, *marīyānma*, or metempsychosis' (p. 116).

From this it would follow that they do not believe in ghosts. But there is a generally accepted idea that evil spirits sometimes take possession of females. This may be a rude way of expressing the fact that the gentle sex is 'uncertain, coy, and hard to please.' Although the ceremony of *śrāddha* is unknown, once in a year on the new moon day of the month Bhādrapada or in Āśvina, they offer clothes and food to (a) ancestors in general, (b) childless ancestors, and (c) men who have died a violent death.

Among Lingayats widow remarriage is common, and divorce is permissible. The ordinary law of Hindus is followed in regard to inheritance. Lingayats regard their *jaṅgams*, or priests, as incarnations of Śiva, and will bathe their *lingas* in the water in which the *jaṅgam* has washed his feet and thus rendered holy. They have numerous superstitions regarding good and bad omens. Thus, it is lucky to meet a deer or a dog going from right to left, whereas the same animals passing from left to right will bring ill luck (monograph on Lingayats by R. C. Carr). They do not observe the pollution periods of the Hindus, and their indifference to the ordinary Hindu purification ceremonies is notorious (Dubois, pt. i. ch. ix.).

Members of other religious communities who wish to become Lingayats are called on to undergo a three days' ceremony of purification. On the first day they allow their face and head to be shaved, and bathe in the products of the cow, which alone they may feed on and drink that day. The second day they bathe in water in which the feet of a *jaṅgam* have been washed, and which is therefore holy water. They eat sugar and drink milk. On the third day they take a bath described as *pañcāmṛt*, i.e. they apply to the head and body a paste made up of plantains, cow's milk, clarified butter, curds, and honey, and wash it off with water; they again drink the *tīrth*, or water in which the feet of a *jaṅgam* have been washed, and are then invested with the *linga*, after which they are allowed to dine with Lingayats, and are considered members of the community. Women undergo the same ceremony, except the head-shaving.

5. *General remarks*.—It will be gathered from the foregoing sketch of the origin and present-day social organization and customs of the Lingayats that the community is virtually an original casteless section in process of reversion to a congeries of castes holding a common religion. It has been seen how, in the 12th cent., a movement was set on foot and spread abroad by two Brāhmins, Ekantada-Ramayya and Basava, devotees of Śiva, to abolish the ceremonies and restrictions that fettered the intercourse between the different ranks of orthodox Hindu society of the period, and to

establish a community on a basis of the equality of its members, irrespective of sex, by means of the purifying worship of the one god Siva. It seems clear that the movement found special favour in the eyes of the Jain traders of the period, who would have ranked, as Vaiśyas, below both Brāhmaṇ priest and Kṣatriya warrior under the Hindu scheme of social precedence. The community encountered the hostility of the Jains, who remained unconverted, but clung tenaciously to its simple faith in the worship of Siva, and in his emblem, the *linga*. We must assume the probability that the Brāhmaṇ converts, of whose existence we possess historical evidence, tended by degrees to assert for themselves social precedence as *ayyas* or *jaṅgams*, i.e. the priests of the community, for which position their knowledge and descent would give them special fitness. In time, indeed, they came to be regarded as the very incarnations of the god Siva, and thus they were holy, imparting holiness in a special degree to the water in which they had bathed their feet, known as *tirth*, so that it plays a prominent part to this day in the Lingayat ceremonies. Once the original notion of universal equality of rank had yielded to the priests a precedence incompatible with such equality, the way was prepared for the introduction of further social gradations, and the older members of the community commenced to claim over the later converts a precedence modelled on that which the priests had established against them. In such a manner the essential doctrine of equality became completely undermined, and in the end gave place to certain rites and ceremonies as the test of Lingayat orthodoxy. Thus, when the more recent cases of caste conversion occurred, a section of a Hindu caste became Lingayat, not, as the founders of the religion would have wished, by being admitted to a footing of equality on the common ground of the worship of Siva and of his emblem the *linga*, but by investiture through certain rites and ceremonies with the *linga*, retaining their distinctive social status as a functional caste, with which other Lingayats would neither marry nor dine. It must be admitted that in the case of most of the Lingayat subdivisions the *jaṅgam* will take food in the house of the members, but here all trace of the original equality ceases; and the Lingayats of to-day present the curious and interesting spectacle of a religious sect broken in the course of centuries into social fragments, of which the older sections remain essentially sectarian, and the more recent in origin possess the typical attributes of ordinary Hindu castes. As in the case of Christianity in some parts of India, the social barriers of caste have proved too strong for the communal basis of the orthodox religion.

R. E. ENTHOVEN.

gLING CHOS.—The *gLing chos* (*gLing*-mythology, or *gLing glu* (*gLing*-song)),¹ is the mythology contained in Tibetan folk-lore, and is perhaps the most ancient religion of that country. It is distinguished from the ancient mythology of countries such as Finland and Russia by the fact that it has not to be pieced together from fragmentary allusions scattered through the whole range of Tibetan folk-lore, but can be gathered from com-

plete hymnals and catechisms, in which the *gLing chos* has been preserved for us almost untouched.

1. Is the *gLing chos* the ancient religion of West Tibet only or of the whole of Tibet?—Although the present writer's materials were collected exclusively in West Tibet, it is probable that the *gLing chos* was the ancient religion of the whole country. (1) We are informed by a lāma of Tashilhunpo (in Central Tibet) that an endless variety of versions of the Kesar-saga (not the Kesar-epic, which belongs to the subject of Lāmaism) are current, just as is the case in Ladākḥ (Western Tibet), where each village has one or even more versions of its own. (2) In the legends of Milaraspa there are embodied several *gLing glu*.¹ Milaraspa seems to have been extremely clever in building a bridge from the *gLing chos* to Lāmaism. He was a native of Eastern Tibet, Khang chen ābyung lngā (or the Kanchanjanga) being his native country. But, even if the *gLing chos* can be proved to be, territorially, a real Tibetan religion, the question still remains whether it is the original property of the Tibetan (Indo-Chinese) race or belongs to the Mon and Bedha population, who are the principal preservers of it at the present day, and who are not of Indo-Chinese, but possibly of Aryan and Mundari, stock.

2. Cosmology of the *gLing chos*.—In all the sources mentioned below, in the literature, three large realms are spoken of:

(1) *sTang lha*, heaven (literally, 'the upper gods,' or 'the gods above').—A king reigns in *sTang lha* called *sKyer rdzong snyanpo*.² He is also called *dBangpo rgyabzhin*, and *āBum khri rgyalpo*. The name of his wife, the queen of heaven, is *bKur dman rgyalmo*, *Ane bkur dmanmo*, or *āBum khri rgyalmo*. They have three sons, *Don yod*, *Don ldan*, and *Don grub*. The youngest is the most prominent figure. 'Lightning flashes from his sword out of the middle of black clouds.' *Don grub* descends to the earth and becomes king Kesar of *gLing*. According to one theory, thunder seems to be caused by the walking of the gods, and, according to another, it is the groaning of the dragon-shaped *ābrug*, dwelling in the dark clouds, when it is assailed by Kesar with his sword of lightning. Three daughters of the king of heaven are also mentioned.

The life of the gods is an idealized form of man's life. They constitute a State, with king, ministers, servants, and subjects. They abide in perfect happiness, and live, free from illness, to a good old age. They tend, apparently on the earth, certain goats known as *lha ra*. These they must defend against the devil *bDud*. Kesar later on discovers many of the *lha ra* in the latter's realm. The king and the queen often change their shape. The former becomes a white bird or a yak, and the latter takes the shape of a woman, a *dzo* (hybrid between a cow and a yak), a golden or turquoise fly, or a dove.

(2) *Bar btsan*, the earth (literally, 'the firm place in the middle').—Other names are *mi yul*, 'land of men,' and *gLing*, 'the continent.' The principal deity of this earth is mother Skyabs *bdun* (or Skyabs *mdun*). It is probable that she is identical with *brTanma*, the goddess of the earth (H. A. Jäschke, *Tibetan-English Dictionary*, London, 1881). She rides a horse called *bTsan rta dmar chung*. Of her subjects, the human race, we do not hear much in the saga. The

¹ Some of these *gLing glu* will be found in B. Lanter's 'Zwei Legenden des Milaraspa,' in *ARW* iv. [1901] 100-123, *nga nī ngar seng ākarmot bū*, etc.; 131-142, *seng āgungsa āgyangba spar mī ākhyag*, etc.; 194-211, *ābus rībo mchog rub mchod rīntla*, etc.

² This is the actual pronunciation. In literature the name is spelt *brgya sbyin* (Satakratu or Indra).

¹ The term *gLing chos* was first employed by the present writer. Among natives of Tibet the name *gLing glu* ('songs of *gLing*') is in more general use. In a hymnal discovered in Upper Kanāwār the words *lha chos* and *bon chos* are used for this type of religion.

eighteen *agus* (see below) take the part of human beings.

(3) *Yog klu*, the under world (literally, 'the *nāgas* below').—Like *sTang lha*, *Yog klu* is also a State. There is a king called *lJogspo* (probably *lCogpo* is meant), with his servants and his subjects, who are remarkable for the large number of their children. The *klumo*, or *nāginī* (female *nāgas*), are famous for their beauty, and *Kesar* is warned not to fall in love with them. For this reason, at the present day, the *Ladākhi* women still desire to look like *klumo*, and wear the *perag* or *berag*, a leather strap set with turquoises. This *perag* represents a snake growing out of the neck of a human body, which, according to Indian Buddhist art, is the characteristic mark of *nāgas*.

3. The colours of these realms.—The most original system of colours seems to be contained in the *Sheh* version of the *Kesar-saga*. According to it, the colour of *sTang lha* is white—perhaps the colour of light; *Bar btsan* is red—perhaps on account of the reddish colour of the ground;¹ and *Yog klu* is blue—this may be due to the deep blue colour of many Tibetan lakes. The *klu* generally live in the water.

According to the Lower *Ladākhi* version of the *Kesar-saga*, the colour system is as follows: *sTang lha* is white; *Bar btsan* is red; and *Yog klu* is black. A still more advanced stage is represented in the Mongolian version (which is without doubt based on that of Tibet). Here *sTang lha* is white; *Bar btsan* is yellow; and *Yog klu* is black. The change from red to yellow has probably something to do with *Tsong-kha-pa* and his reformation of *Lāmaism*.

4. The devil *bDud*.—Occasionally, to the three realms of the world a fourth is added, that of the devil *bDud*, and then all the three realms become united in opposition to this new realm. The colour of the devil and of his realm is black (*Sheh* version) or violet (*Lower Ladākhi* version). It is situated in the north. The devil tries to carry away the goats of the gods. He is in possession of a beautiful castle, great treasures, and a girl who is kept in a cage. Near his castle is the well of milk and nectar. In size, appetite, and stupidity he closely resembles the giants of European mythology and folk-lore. There seems to be a close connexion between *Yog klu* and the devil's realm, as they both appear to go back to similar ideas. But gradually the devil developed into a morally detestable character, while the *klu* did not. Other names of the devil *bDud* are *āDre lha btsan bog*, *Curulugu*, *Srinpo* ('ogre'), and *sDiḡpa* ('sinful').

Of a very similar nature is *agu Za*. He is probably a mountain- or cloud-giant. He devours not only *Kesar*, but also sun and moon.

5. The seven and the eighteen *agus*.—Next to *Kesar*, the greatest heroes of the *Kesar-saga* are the eighteen *agus*. *Kesar* is their leader, and together with him they form a group of nineteen beings, in whom the present writer is inclined to see personifications of the twelve months plus the seven days of the week. Just as India had a group of seven *ādityas* before there were twelve, we find occasionally a group of seven *agus* who act by themselves, the others being forgotten. There is a female *agu* among the group of seven, and there is always a traitor among the *agus*. They are described as having non-human heads on human bodies, thus being similar in shape to the Chinese representations of the zodiac. The list of the eighteen is as follows:

1. *Paṣang ldan ru skyes*, with a goat's head.
2. *Anggar rtsangspo*, with a lizard's head.
3. *Khrai mgo khrai thung*, with a falcon's head.

¹ The word *dmarmo*, 'red,' is also used for 'brown.' Cf. the traditional interpretation of the word 'Adam.'

4. *Kha rgan* [d]gani, with a white beard.
5. *sKya rgoḡpo*, with a soup-spoon for a head.
6. *zLaba bzangpo*, with a moon for a head.
7. *mDa dpon gongma*, with an arrow-blade for a head.
8. *Ala jong gōl*, with the sole of a boot for a head.
9. *āBu dmar lam bstan*, with a worm's head.
10. *Shelgyi buzhung*, with a concave mirror for a head.
11. [d]Gani gongba, with a collar for a head.
12. *Lag lag rings*, with a hand for a head.
13. *rKang rKang rings*, with a foot for a head.
14. *Bong nag ldumbu*, with a donkey's head.
15. *bKa blon ldanpa*, with a man's head.
16. *dPalle rgoḡpo*, with an old man's head.
17. *rNa yu rna āthsal*, with a turquoise for a head.
18. *zLaba dkarpo*, with a white shell for a head.

The following is the list of the seven *agus*: (1) *dPalle*, (2) [d]Gani, (3) *Gongma luthsa*, (4) *lTaba miggi rab*, (5) *rNa yu rna āthsal*, (6) *mDa dpon gongma*, (7) *dPalmoī astag*.

Both lists are from the Lower *Ladākhi* version. Certain names will be found to differ in other villages. It looks as if there were not much hope of finding the clue to this ancient zodiac.

6. The *Lokapālas*.—There is some likelihood that the *gLing chos* has always had deities for each of the four cardinal points. It is quite possible that the Indian *Amoghasiddha*, *Vajrasattva*, *Ratnasambhava*, and *Amitābha* were deities of the four quarters before they became *Dhyanibuddhas*. In close correspondence with them we find in the *gLing chos* the following deities of the four quarters: *Don yod grubpa*, North; *rDorje sems dpa*, East; *Rinchen byung ldan*, South; *sNangba mthā yas*, West. It is not necessary to assume that these deities were introduced from India together with Buddhism. It is more likely that the names represent an instance of mutual influence between pre-Buddhist Tibetan and Indian mythology. The name *Don grub*, which corresponds exactly to the Indian *Siddhārtha*, was not necessarily introduced with Buddhism. *Siddhārtha* was a common name in India long before Buddha's time, and may belong to a deity similar to *Don grub* and *Don yod grubpa* of Tibet. There are also four 'kings' of the four quarters, who correspond more closely to their Indian equivalents, and may therefore have been received from India; but even these have nothing to do with Buddhism. Like the deities mentioned above, they belong to the four quarters, and to nothing else in the *gLing chos*.

7. The Tree of the World.—It is called the 'king-willow,' or the 'far-spreading willow.' It has its roots in *Yog klu*, its middle part in *Bar btsan*, and its top in *sTang lha*. It has six branches, and on each branch a bird with a nest and an egg. On the first branch there is the huge bird *Khyung* with a golden egg; on the second, the wild eagle with a turquoise egg; on the third, the bird 'white-head' with a pearl-white egg; on the fourth, the eagle 'white-kidney' with a silver egg; on the fifth, a snow-pheasant with a coral egg; and, on the sixth, the white falcon with an iron egg.

8. Outline of the *Kesar-saga*.—

(1) *Prologue to the saga: the creation of the earth*.—The 'fore-father and his wife' sow some seed which grows into a huge tree, the fruits of which are gathered into a barn. There the fruits become changed into worms, which eat one another until one huge worm is left. This worm becomes the child *Dong ysum mila*. The child kills an ogre with nine heads, and builds the world (*gLing*) out of its body in seven days. *Dong ysum mila* is married to eighteen girls, to whom are born the eighteen *agus*. The *agus*, eager to gain riches, start for the castle *Pachi dpaḡ dong*. *Agū dPalle* arrives there first of all, receives the riches, and hears the prophecy about what will happen in the course of the *Kesar* story.

(2) *Birth of Kesar*.—*Agū dPalle* assists the king of heaven in his fight with the devil, in the shape either of yaks or of birds. He is allowed to ask a boon, and asks that one of the three sons of the king of heaven may be sent to the earth as king. All the sons are asked, and *Don grub*, who is the ablest in spite of his youth, decides to go. He dies in heaven, and is reborn on earth to *Gog bzang lhamo*. (The name *Kesar* or *Kyesar* is spelt in full *skye ysar*, and is said to have been given with reference to this story; it means the 'reborn one'.) The conception arises from *Gog bzang lhamo*'s eating a hailstone, and the child is born

through the ribs. It is of a most ugly shape, but at pleasure exchanges this for a beautiful shape, with sun and moon as attributes. The traitor among the *agus* makes some unsuccessful attempts to kill the child, and has to suffer himself. Together with Kesar, sun and moon and all kinds of animals are born.

(3) *Kesar's marriage to Ābruguma*.—Kesar meets Ābruguma on a plain where she is gathering roots. There are a great number of stories as to how he teases her. Ābruguma is to be married to the traitor among the *agus*, but Kesar wins her through his skill in games. Her parents are disgusted when they see him in his ugly shape, and treat him with contempt. He runs away, and Ābruguma has to seek him. She is pleased to find him in his beautiful shape, but at once he throws it off and sends hail and rain. Her parents say that their daughter will be given to him who brings the skin of the huge yak Rim (this yak looks almost like a cloud), and who will bring a wing of the bird Nyima khyung byung (this bird looks almost like the sun). The *agus* try; but only Kesar succeeds. Now he is accepted as son-in-law, and the wedding is celebrated. (Here Kesar is praised even as the inventor of firearms.)

(4) *Kesar's victory over the giant of the north*.—After religious preparations Kesar decides to start for the north to kill the devil. He finds it hard to have to leave Ābruguma, and allows her to accompany him, but the queen of heaven sends her back. In the castle of the devil he finds a girl in an iron cage, whom he delivers. They have an enjoyable time together until the devil returns. Before his arrival Kesar is hidden in a pit which is dug inside the room in a miraculous way. Although the devil smells the presence of a human being, and although his book of magic assures him of it, he is soon persuaded of the contrary by the girl, and goes to sleep. Then Kesar is dug out again and kills the devil. The girl gives Kesar the food and drink of forgetfulness, and in consequence of this he forgets Ābruguma, the land of gLing, and everything.

(5) *Ābruguma abducted by the king of Hor*.—Because Kesar does not return, the king of Hor starts to carry off Ābruguma. The traitor among the *agus* sits on the throne of gLing, and the other *agus* offer only feeble resistance. The most plucky among the *agus* is the youngest, ĀBu dmar lam bstan. Ābruguma herself goes to fight, but is sent back with ridicule. She has to submit and become the wife of the king of Hor. Still she refuses to leave the land of gLing unless the king of Hor solves three difficult problems. Then Ābruguma hides herself in a stable, but she is discovered and carried away. She begins to love the king of Hor. ĀBu dmar lam bstan makes a successful attempt to retake her, but he is killed through the treachery of Ābruguma and the traitor among the *agus*. (This is the *Siegfried* story.) Āgu dPalte sends two storks with a message towards the north to Kesar. He leaves the north and soon reaches the land of gLing. The horse arrives there before him, and together with the horse's adventure spring sets in.

(6) *Defeat of the king of Hor*.—The road to Hor, with its many obstacles, is described. First Kesar is led by a fox, then he gains the service of a dwarf. There is the door of rocks which opens and closes of its own accord; there are the stones flying about between heaven and earth; and the watchmen of Hor, who are killed in the same manner as Samson killed the Philistines in the hall. Kesar arrives in the shape of a beggar, and pretends to be the son of the smith of Hor. He is accepted after some difficulties and learns the trade of the smith. At a tournament he shows his superior power, and gains the victory in every contest. He is therefore sent with a force against the approaching *agus* of gLing. On this occasion he drowns all his followers from Hor, and sends the *agus* home again. He compels the smith to assist him in the fabrication of an iron chain, which is to be thrown on to the top of the castle of Hor. When it is finished, Kesar climbs to the top of the castle by means of the chain, kills the king of Hor, and regains Ābruguma. On their way back to gLing, Ābruguma's children, whom she had borne to the king of Hor, are offered to the door of rocks to induce it to open. In gLing, Ābruguma is first punished for her treachery, then she is restored to her former position, and another wedding is celebrated.

(7) *Kesar's journey to China*.—(The Tibetan word for China—*rgya nag*—means 'the black expanse.') Kesar practises sorcery until the castle of the king of China falls to pieces and the king of China becomes ill. Kesar is entreated to go to China and heal the king. He sends the traitor *agu*, Khrai thung, in his place. Then he starts himself. The journey is one chain of obstacles (ice and snow, hills, lakes, an ogre and an ogress, etc.). All are overcome, and on Kesar's approach the king of China becomes better. Now he refuses to keep his word, and give Kesar his daughter (yYui dkon mchogmo). But the girl runs away with Kesar. He is, however, induced to go back again. Then the Chinese throw him into a pit with three dragons, which he does not mind much. He escapes in the shape of a fly, goes back to gLing, and smites the land of China with leprosy (snow apparently). The traitor among the *agus* has meanwhile gone back to gLing, turned Ābruguma out of the castle, and seized the throne. He is punished, and Kesar lives in happiness with his two wives. The leprosy in China is stopped by another journey made by Kesar to that country.

(8) *Epilogue to the Kesar-saga: the story of Kesar's boy*.—Kesar and Ābruguma have a boy called ySerri buzhang (or Shelli buzhang). He is married to Pimo (or Phymo?) ySerralcen, but the ogre dPallega carries this girl off. ySerri buzhang starts to seek her, and takes service at the ogre's castle. He is soon recognized, because the dogs, horses, and other domestic animals increase in an extraordinary way under his care. Before the ogres have succeeded in killing him, they are invited by Pimo ySerralcen to a feast. On this occasion the girl places nine try-

ing pans, in which the lives (hearts) of the nine ogres dwell, outside the door. ySerri buzhang shoots with his arrow through eight of them, and thus eight ogres are killed. Then he runs away with Pimo ySerralcen and all the other girls of the ogres. dPallega pursues him, but is destroyed with his army. Then the wedding is celebrated.

9. Is the Kesar-saga a myth of the seasons?—This was the present writer's idea from the first. As he was, however, assailed by several critics on account of it, he did his best to abandon it. But, when editing the 'Lower Ladākhī version of the Kesar-saga' for the *Bibliotheca Indica*, he was driven back to his former position. At any rate, he cannot help believing that myths of the seasons (mixed up, perhaps, with other materials) are contained in the Kesar-saga. Only a few instances may be noted: sun and moon are attributes of Kesar's beautiful shape, rain and hail of his ugly shape; he wields the sword of lightning 'in the middle of black clouds'; there is a full description of spring given on the occasion of Kesar's return to gLing (see above, § 8 (5)); the *agus* seem to point to an ancient zodiac; winter is apparently compared to leprosy; together with Kesar's departure (probably in winter) the male animals leave the female ones, but leave them with the hope of new offspring; Kesar's enemies are powers of darkness; the giant of the north; the king of Hor, also in the north; China is 'the black expanse.'

10. Relationship to other mythologies.—As has become evident, there are great similarities between the gLing chos and the mythologies of various Aryan nations. This, however, does not mean much, for even the mythologies of North American Indian tribes have much in common with European mythologies. But we must call attention to one particularly striking incident. The story of the Tibetan hero with the vulnerable spot, ĀBu dmar lam bstan, who is Kesar's representative, is very similar to the German story of *Siegfried*. The similarities are the following: both heroes have the vulnerable spot on the shoulder; both wear invisible caps; both are killed when drinking water; with both of them the vulnerable spot is pointed out by a woman who belongs to the side of the hero. All this is remarkable, because the corresponding Greek story, for instance, is greatly at variance with both of them, although there is an ethnic relationship between the Greeks and the Teutons.

11. gLing chos and Lāmaism.—It is not at all impossible that the gLing chos should have exercised an influence on Lāmaism. The following are a few instances. (1) With regard to the colours, white, red, and blue, there is a certain correspondence between the realms of heaven, earth, and under world on one side, and sPyan ras yzigs, āJam dbyangs, and Phyag rdor on the other. But with regard to their characters it is difficult to see a closer agreement. The three *mchod rten* of three different colours, white, red, and blue, seem originally to represent the three realms of the gLing chos, but are at the present time explained as having been erected in honour of the three Bodhisattvas. If this explanation is really true, it remains a strange fact that the *mchod rten* in the middle was always painted red, and not yellow; for yellow is the correct colour of āJam dbyangs. Thus the custom of erecting three *mchod rten* of three different colours seems to have its roots in the gLing chos, and in the Kesar-saga we often hear of the existence of three *lha tho* of the same colours, the prototypes of these *mchod rten* of the present day. (2) The story of Srong-btsan Gam-po with his two wives, the green and the white sGrolma, may have been influenced by the story of Kesar with his two wives. Thus Ābruguma is addressed, 'Oh, thou milk-white fairy!' and Kesar's bride from China is called yYui dkon mchogmo, the turquoise goddess. Kesar is

even called, in historical works, a suitor to the white sGrolma. (3) There can be hardly any doubt that the system of colours as we find it in the *gLing chos* has influenced the pantheon of Lāmaism with its white, red, blue, green, yellow, and golden-faced occupants. Still, it cannot account for all the different shades of colours. Some of them were probably introduced from India. (4) Most of the deities of the *gLing chos*, dBangpo rgyabzhin included, have been incorporated into the pantheon of Lāmaism, where they have to be satisfied with an inferior rank.

12. *gLing chos* and *Bon chos*.—The *gLing chos* was perhaps not such a pure religion of nature as it appears to have been from the preceding pages. It probably had its dark side of superstitions and sorcery. This dark side seems to have had its development down to the present day in the garb of the *Bon chos*.

13. Sacred numbers in the *gLing chos*.—Holy numbers in the *gLing chos* are 3, 7, 9, and 18. But it is remarkable that, whilst the first three of these numbers are quoted without a following number, the 18 is often followed up by 19; e.g., 'They digged a pit of 18, 19 yards,' 'There appeared 18, 19 priests.' The 19 is favoured apparently as the sum of 12+7, the months of the year plus the days of the week.

14. Animism in the *gLing chos*.—Here we may mention the following personifications: *sKyeser*, the wind; *shang char zilbu*, the rain; *sengge dkar-mo rgyu ralecan*, the glacier; *bya Khyung dkrung nyima*, (apparently) the sun; *byamo dkar-mo*, the moon; *bya so mig dmar*, the morning-star; *γYan*, spirits living in rocks and trees. It is remarkable that several of these personifications are mentioned together with the representatives of the animal world. Some of such representatives are: *nyamo rser mig*, for fishes; *bya rgyal rgodpo*, for birds; *rKyang byung kha dkar*, for horses; *āBrong byung roppo*, for yaks.

15. Festivals of the *gLing chos*.—(1) The *Lo ryar*, or New Year's festival. It is the festival of lamps and lights. Pencil-cedars are used for the decoration of houses. There are horse-races, and a goat is offered before a white *lha tho* (altar of the *gLing chos*). The heart is torn out of the living animal and offered to the *lha*. In the monasteries mask-dances are held, which were probably intended originally to show the victory of the coming spring over the demons of winter. Only at Hemis do the mask-dances take place in June, perhaps as a last remnant of a former festival to celebrate the highest point reached by the sun. (2) *Storma phangces*. This is the spring festival of driving out winter. At Khalatse a clay figure of human shape is carried outside the village and destroyed there. At other places the spirits of winter and disease are banished into magic squares of sticks and strings (*dosmo*) and destroyed outside the village. (3) The Kesar-festival. The festival is called 'Kesar-festival' only in Upper Kanāwār. In Ladākh it is called *mDā phangces*, 'arrow-shooting.' It is celebrated in spring. The *gLing glu* is played and sung; and the boys amuse themselves with arrow-shooting. There are processions round the fields to bless them, the *lha tho* (altars) are decorated with fresh twigs, and pencil-cedars are burnt. (4) The *Srub lha*, or harvest festival. In Skyurbuchan the boys dance with poles covered with fragrant alpine flowers. Offerings of grain are carried to the monasteries. The dates of all these festivals are fixed by the lāmas, and the lāmas take part in them.

16. The names of the *gLing chos*.—In the course of this article some of the names of the *gLing chos* are given with their English translation. The author has not ventured to translate all these

names, because scholars are at variance with regard to the meanings of certain of them. In the names of the eighteen *agus* there is always contained the distinguishing mark of the *agu* which forms his head; thus in no. 2, *rsangspo* means 'lizard'; in no. 4, *khu rgan* means 'old mouth,' i.e. a mouth surrounded by a white beard; in no. 1, *ru skyes* means 'horn-producer,' or goat. As for the group of seven *agus*, which has much in common with the heroes of such folk-lore as, e.g., 'Sechse kommen durch die ganze Welt,' in the name of no. 4 the ability to see clearly is indicated; in the name of no. 5, the ability to hear clearly; in no. 6, to shoot well. There are certain names occurring in the *gLing chos* which are not of Tibetan origin: thus in the word *sengge* in the name *sengge dkar-mo rgyu ralecan*, 'white lioness with the turquoise locks,' the personification of the glacier has something to do with the Indian word *simha*. In the name of the smith Hemis, who teaches Kesar, the first part *hem* seems to be the Indian word *himn*, 'snow.' We find the word *hem* in the sense of 'snow' also in the name Hemababs, which means 'snow-falling,' and such Indian words as *rākṣasa*, 'monster,' *Sitā-rām*, *Sitā* and *Rāma*, and *Indra* occur occasionally in the *gLing chos*—which shows what an important part India has played in the shaping of certain tales of this ancient religion.

LITERATURE.—It must be admitted that all the following publications are one man's work. They have all passed through the present author's hands. It may, however, be pointed out that in no case did he write down the texts to the dictation of a native; he always employed natives to record them from the dictation of such other natives as were famous for their knowledge of this ancient literature.

LITANY.—A litany, according to the modern use of the word, may be described as a devotion consisting of a number of short petitions or invocations, to each of which a response is made by the people. It may be either said or sung, it may be either processional or stationary, it may be liturgical, i.e. connected with the celebration of the Holy Eucharist, or independent, and it may be for regular use or used only on special occasions. Processional psalmody which is not of the responsive form is not now usually called a litany, but at one time the word was applied to anything sung in procession. The modern use of the term is the result of a long and somewhat complicated history. It is especially necessary to trace the growth of two forms of devotion which were originally distinct, but which have coalesced to form the modern litany. These are the liturgical responsive prayer and the procession.

1. Earliest use of the word.—The word *litavela* is not common in classical Greek, and it seems to be used in the quite general sense of a supplication. The earliest mention of the word in connexion with Christian services appears to be by Basil (c. A.D. 375; *Ep. c. vii.* 'ad Cler. Neocæs.' [*Opera*, iii. 311 D]).

Objections had been raised to some innovations which Basil had made. 'These things were not,' the objector says, 'in the days of the great Gregory' (i.e. Gregory Thaumaturgus, c. 254). 'Neither,' replies Basil, 'were the litanies which you now use. And I do not say this by way of accusing you; for I would that you all should live in tears, and in continual repentance.'

These litanies were, therefore, penitential devotions of some kind, but there is nothing to indicate their precise character. The word *rogatio* was used in a similar general sense in the West.

2. The liturgical litany.—The earliest description of Eucharistic worship is that contained in the *Apologies* of Justin Martyr (A.D. 148). Here common prayers are spoken of 'for ourselves . . . and for all others in every place,' immediately before the Kiss of Peace and the Offertory, and therefore after the lessons and homily (*Apol.* i. 65). Whether these already took the form of the later litany there is nothing to show, and the response 'Kyrie Eleison' is not yet mentioned. And there is no further detailed information about the form of service until the liturgies which date from about the end of the 4th century. Here, however, the liturgical litany is found in the form which it has preserved in the Eastern Church ever since. It consists of a number of short petitions offered by the deacon, to each of which the people respond 'Kyrie Eleison,' and the most usual place for it is after the Gospel, but this is not invariable. Some litany of this kind appears to be almost universal in the Eastern liturgies. Many examples will be found in Brightman (*Liturgies Eastern and Western*, esp. pp. 4, 471, 521 for the most ancient forms, all belonging to the 4th cent.). The usual name for these devotions in the East is not *litaveta*, but *ἐκτενή* (lit. 'stretched out,' i.e. the earnest prayer), or *συναντή* ('continuous'). There is nothing to show when Kyrie Eleison was first used in the services of the Church, but as its use is almost universal in the Eastern liturgies it must have been very early, and the expression is so natural, and would be so easily suggested by passages of the OT, that no explanation of its introduction is necessary. It was also in use among the heathen, as was pointed out by Claude de Vert (*Explication simple, littérale et historique des cérémonies de l'église*, Paris, 1706-13, i. 94; cf. Epictetus, *Diss. ab Arriano digestæ*, ii. 7). The *Peregrinatio Silviæ* (ed. G. F. Gamurrini, Rome, 1888, p. 47) mentions the Kyrie as the response made at Jerusalem to the deacon's list of names, and it appears in the litanies mentioned above as belonging to the 4th century.

3. The liturgical litany in the West.—It is probable that the Western liturgies originally contained litanies closely similar to those of the East. This was certainly the case, as far as can be judged from their scanty remains, with the liturgies of the Gallican (or non-Roman) type. The extant forms bear the closest resemblance to the Eastern litanies, and may in some cases be translations from the Greek (see some examples in L. Duchesne, *Christian Worship*, pp. 198-201; F. E. Warren, *Liturgy and Ritual of the Celtic Church*, p. 229). There is little doubt that there was originally a litany of the same character in the Roman liturgy also, and that the Kyries at the beginning of Mass are a relic of it. There is also another place in the service which should be noted. After the Gospel the priest says 'Oremus,' but no prayer or response follows; and this was so at least as long ago as the 8th cent., as appears from the *Ordines Romani*. Some prayers had evidently fallen out of the service even at that early date, and these were undoubtedly the Prayers of the Faithful, which occur in this place in the Eastern liturgies, and which are still preserved in the Roman rite in the prayers used on Good Friday. Probably these prayers dropped out of use because they were transferred, in substance at least, to the litany which came at the beginning of the service. St. Gregory the Great (*Ep.* ix. 12), when speaking of the use of the Kyrie, mentions other devotions that accompanied it, and which were no doubt a litany. In the present

service only the Kyrie remains, and this is curious because the Kyrie was probably an addition made to the original litany from the East, so that it would seem that the original prayers have disappeared, while the exotic response has remained. There is nothing to show when the Kyrie was first used in Rome. It was not used, as in the East, as the regular response to the petitions, but at the beginning and end of the service, and it was alternated with *Christe Eleison*, which was never used in the East. Gregory says:

'We have neither said nor do we say Kyrie Eleison as it is said among the Greeks, because in Grecian countries all say it together, but with us it is said by the clerics and the people respond; and *Christe Eleison* is said as many times, and this is not said at all among the Greeks' (*loc. cit.*).

The Kyrie was, therefore, in use in Rome in Gregory's time, but for how long before that we do not know. The Council of Vaison (c. iii. [A.D. 519]), in ordering its use in the province of Arles, implies that it had been introduced into Italy at a not very distant date. The rest of the liturgical litany disappeared, as has been said, from the Roman service at some unknown date, but that the Kyrie was still regarded as part of a litany is shown by the fact that in the 8th cent. the Kyrie was omitted when there was a processional litany to the church. The natural conclusion of the introductory litany, whether processional or not, was the prayer in which the Bishop 'collected' the petitions of the people, and which was therefore called *Collectio* or *Collecta*. But, as the Kyrie was omitted when there was a procession, the collect on these occasions was the first thing that was said after the people reached the church, and hence ritualists came to regard it as the prayer 'ad *Collectam* plebis'—when the people are gathered together. Thus there arose a double derivation of the word 'collect' (*q.v.*).

4. Processions in the East.—During the centuries of persecution it was not likely that forms of devotion so conspicuous as processions would be used by Christians. The first historical mention of them appears to be in A.D. 398, in connexion with the Arian controversy. The Arians, not being allowed to hold their assemblies in the city of Constantinople, used to meet in the public squares during the night, and to march out at dawn to their places of worship, singing antiphonally. Fearing lest the orthodox should be attracted by this ceremonial, St. John Chrysostom instituted counter-processions on a more magnificent scale, in which silver crosses and lights given by the empress Eudoxia were carried. These particular processions were prohibited by the emperor in consequence of the disorders which they caused, but the custom of using processions, especially in times of emergency, continued. Socrates mentions a legend to the effect that the antiphonal singing used at such times had its origin in a vision of Ignatius of Antioch, the third bishop from St. Peter, in which he saw angels singing responsive hymns to the Holy Trinity (*HE* vi. 8; *Soz.* *HE* viii. 8). These occasional processions were, however, quite distinct from the litany in the Eucharist.

5. Processions in the West.—Processions became common in the Western Church at about the same time as in the East, but their origin appears to have been independent. They were probably at first transformations of pagan processions. The Roman festival of the *Robigalia*, intended to secure the crops from blight, was kept on the 25th of April, and the procession called the *Litania Major*, which took place on the same day, St. Mark's Day, seems to be a direct descendant of this. Even the actual routes of the heathen and the Christian processions were nearly the same. The institution of the Greater Litany of St. Mark's Day has been generally ascribed to Gregory I., but it was prob-

ably earlier, and perhaps dates from the pontificate of Liberius (352-366). The litany ordered by Gregory on St. Mark's Eve, A.D. 490, in order to avert a pestilence, seems to have been distinct from the Litania Major. Another ancient Roman festival, the Ambarvalia, was observed on three successive days in the month of May, and also had the fertility of the fields as its object. There is here a close resemblance to the Rogation processions on the three days before Ascension Day. These are said to have been instituted by Mamertus, bishop of Vienne (c. 470), on the occasion of various public disasters (Sid. Apoll. *Ep.* v. 14, vii. 1; Gregory of Tours, *Hist. Franc.* ii. 34); but such processions had probably been practised at an earlier date, and were only revived on this occasion. These rogations or litanies, called *Litaniae Minores* to distinguish them from those of St. Mark's Day, spread rapidly through Gaul, and were adopted and reorganized at Rome by Leo III. (795-816). Both the Greater and the Lesser Litanies were ordered to be used in England at the Council of Cloveshoe (A.D. 747 [A. W. Haddan and W. Stubbs, *Councils and Ecclesiastical Documents relating to Great Britain and Ireland*, Oxford, 1869-71, iii. 368]). It may be noted that in the decree of this council, and elsewhere, *rogatio* and *litania* are regarded as equivalent terms ('*lætanie, id est, rogationes*'), and also that the terms seem to include all the devotions connected with those days. There is no allusion to responsive prayer, and the only reference to processions is a mention of relics being carried about. The words 'litany' and 'rogation' were still used in quite a comprehensive sense.

6. *Mediæval litanies.*—Hitherto the liturgical litanies in the Mass and processions have been regarded as distinct. But it is easy to see how they would coalesce. Various kinds of singing have always been used in processions, but that particular form of responsorial singing in which the people answer with an unvarying refrain was so naturally adapted for processional use, owing to the ease with which the refrain could be taken up by a moving crowd, that litanies of the type of the Eucharistic ectene came to be very commonly used in processions not only in the Mass, but on all sorts of occasions. And so the word 'litany' came to mean a form of prayer with a response, either processional or stationary, and either regular or occasional. As the processional use was the most conspicuous and popular, the word 'procession' came to be used as almost an equivalent term, and the book which contained the mediæval litanies was called the Processional. The litanies in most common use also assumed a regular structure. They consisted, as a rule, of the following parts: (1) the Kyrie Eleison, alternated with Christe Eleison; (2) a number of invocations of saints by name, with the response 'Ora pro nobis'; (3) a series of short prayers against various evils, called Deprecations, with the response 'Libera nos Domine'; (4) prayers on behalf of various people and for various objects, called the Supplications, with the response 'Audi nos Domine'; (5) the Agnus and the Kyrie, and a collect. Such litanies became very popular, and Cardinal Baronius estimated in 1601 that there were then 80 different forms in use. The invocations of the saints just mentioned formed a conspicuous part of most of these litanies. It is not clear when these invocations were first introduced; it was certainly before the 8th cent.; they are to be found in the Stowe Missal, and in a litany which probably belongs to the 8th cent. printed in Warren, *Lit. Celt. Ch.* (p. 179), but they may be much older. Some of the later litanies became little more than a string of invocations. It has been suggested that these lists of saints originally grew out of a heathen formula

recited by the Pontifex Maximus, but there appears to be little or no evidence for this.

It has been noted that litanies, in the sense of responsive prayers, were often, though not necessarily, sung in procession, and so were commonly called processions. On the other hand, devotions sung in procession were often called litanies even though they were not responsive prayers. Psalms and anthems were also frequently used. For instance, Bede says (*HE* i. 25) that at the first meeting of St. Augustine with king Ethelbert the missionaries approached the king in procession, bearing the image of our Lord upon the Cross, and singing litanies; and then he specifies what they sang, and it was clearly an anthem, and not a litany in the usual modern sense. Again, the processions before High Mass on Sundays became, during the Middle Ages, a very popular and conspicuous devotion, but the psalmody was not usually in form a litany. In the 8th cent. at Rome it was so, or it was regarded as such; for, when there was a procession, as has been mentioned, the Kyrie at the beginning of Mass was omitted. Later on the Kyries became a fixed part of the service, and the processional psalmody took a different form. From the 12th cent., however, there was a tendency to use the term 'procession' of whatever was sung in procession, and to confine the term 'litany' to the Kyries, the Greater and Lesser Litanies of St. Mark's Day and the Rogation Days, and other similar forms.

7. *Litanies in the Roman Church.*—As has been mentioned, a large number of litanies came into use in the later Middle Ages. But by a decree of the Holy Office, dated 6 Sept. 1601, Clement VIII. forbade the use of any litany except that usually known as the Litany of the Saints, which had been included in the liturgical books. The Litany of Loreto had already been sanctioned in 1587. All others were forbidden to be used without the approbation of the Congregation of Rites. It is probable that this decree was never very strictly enforced, but it was renewed in 1727 and in 1821. A decree, however, of the Congregation of Rites, dated 23 April 1860, allowed the private use of litanies sanctioned by the Ordinary. The Litany of the Blessed Virgin or of Loreto mentioned above was probably used in some form at a very early date at Loreto, but in its present form it perhaps dates from the early 15th cent., and the earliest printed copy known belongs to the year 1576. Another popular litany was that of the Most Holy Name of Jesus. This was perhaps also composed in the early 15th century. It was not included in the decree of 1601, but later on it received some sanction from the Congregation of Rites, and it was finally allowed by Pius IX. in 1852 for certain dioceses, and for universal use by Leo XIII. in 1886. The Litany of the Sacred Heart was sanctioned in 1899.

8. *The Anglican litany.*—As the procession was a popular form of devotion, it was natural that it should be one of the first parts of the public services to be translated into English. The *Prymers* of the 15th cent., books of devotion for lay people, commonly contain a litany in English. The form now used in the English Church appeared in 1544, and it is no doubt the work of Cranmer, and perhaps the happiest example of his literary style. The occasion of its production was given by public calamities. In 1543 the harvest was bad, and Henry VIII. wrote to Cranmer to desire that 'rogations and processions' should be made. In the following year there was war with France and Scotland, so that the English Litany was produced in similar circumstances to those of the early litanies mentioned above. It was, however, also intended for regular use, and was printed in the *Prymer* of 1545 and in the first English *Book of*

Common Prayer of 1549. This litany was constructed with great care, and several sources were used. The chief portion was taken from the Sarum Rogationtide litany, and the main structure of this was adhered to, but the invocations of the saints were greatly shortened, being reduced to three clauses, which were themselves omitted in the First Prayer Book. Passages were also introduced from a Sarum litany for the dying, called *Commendatio Animæ* (also omitted in the First Prayer Book), and a considerable part of the Supplications was taken from a mediæval German litany which was revised by Luther in 1529, and published in German and Latin. This litany was included in the *Consultatio* of Archbishop Hermann of Cologne, and so came to England, and it was used for the litany in Marshall's *Prymer* of 1535. It must be noted that the English litany falls into two main sections: the first ends with the collect that follows the Lord's Prayer—a collect being the natural ending of a litany. What follows is a translation of suffrages which were added to the Sarum litany in time of war. The reason for their insertion was no doubt that war was going on in 1544, but they were appropriate for use at other times, and were retained. These suffrages are preceded by the antiphon and Psalm verse which began the Sarum Procession on Rogation Monday. Unfortunately, the accidental omission of the Amen at the end of the collect has led to the ridiculous custom of using the antiphon ('O Lord, arise, help us') as a sort of response to the collect. Until 1661 the conclusions of most of the collects were not printed in the *Book of Common Prayer*; in the revision of that year the Amens were printed, but most of the endings were omitted by mistake.

Although in his adaptation of the old litanies Cranmer added little or nothing of his own, he made a noticeable change in the rhythm: the old petitions were short and simple; Cranmer, either with a view to compression or, more probably, because he preferred sonorous periods, grouped several petitions together, and enriched them with epithets and synonyms. For instance, the Deprecations of the Sarum litany begin thus:

'From all evil—Deliver us, Lord.
From the crafts of the devil—Deliver us, Lord.
From thy wrath—Deliver us, Lord.
From everlasting damnation—Deliver us, Lord.'

In the new version this becomes:

'From all evil and mischief; from sin, from the crafts and assaults of the devil; from thy wrath, and from everlasting damnation—Good Lord, deliver us.'

At about the same time Cranmer intended to translate other processional hymns, such as 'Salve Festa Dies,' for he wrote to Henry VIII. in 1545 to say that he had done so. The attempt was probably relinquished because he became aware that he did not write so skilfully in verse as he did in prose.

The English litany has remained substantially unchanged since its first appearance in 1544. In 1549 the invocations of the saints were omitted, and in 1559 a petition about 'the tyranny of the Bishop of Rome.' 'The grace of our Lord' was

added at the end in the same year. In 1661 the words 'and rebellion,' 'and schism,' were added, and 'Bishops, Pastors, and Ministers of the Church' was changed to 'Bishops, Priests, and Deacons.' The collection of collects at the end of the litany was altered more than once, and most of them were removed to other places in the *Book of Common Prayer*.

This litany was intended to be used for all the purposes for which the ancient litanies were employed. It was issued for occasional use at a time of distress, and it was sung in procession in the usual manner. Later on royal injunctions ordered it to be sung kneeling before Mass, and this became the usual, but not universal, practice. The present rubric allows either the stationary or the processional use. It was also related to the Rogationtide processions, being derived mainly from them, and it took the place of the Eastern ectene as a preparation for Mass. It was ordered from the first to be said on Wednesdays and Fridays, the ancient 'Station' days, on which especially Mass was anciently said, and, although its use on Sundays was not specified in the rubric until 1552, this was probably taken for granted from the first. Unfortunately, this special characteristic of the litany as a preparation for Mass was obscured later on, partly by the placing of the 'Grace' at the end, and partly by the rubric of 1661, which directs it to be said 'after Morning Prayer.' This made no practical difference so long as Matins, Litany, and Mass continued to be said in their natural order, but in recent years it has caused the litany to be regarded as a sort of appendage to Matins, and in many churches has led to its being altogether separated from the Mass.

9. *Lutheran litanies.*—As has been mentioned above, Luther published a revision of a mediæval litany in German and Latin in 1529. The original edition does not appear to be extant, but the litany was printed in the Psalm-books, and it was used in both languages for some time. The use of the Latin form seems to have died out in the 17th cent., and the German form, although it continued to be used on various occasions in North Germany, never became a popular form of devotion. The Calvinistic bodies objected to this form of service altogether, and the litany was one of the parts of the English *Book of Common Prayer* which were most disliked by the Puritans.

LITERATURE.—For Eastern litanies see F. E. Brightman, *Liturgies Eastern and Western*, Oxford, 1896. For Western litanies, F. E. Warren, *Liturgy and Ritual of the Celtic Church*, do. 1881; C. ous literary expression, and works produced under Caucasian influence.

1. *Autochthonous literature.*—This group in-

cludes songs, orations, stories, legends and myths, rituals and possibly dramas, and chronicles. The sources of this literature are mainly oral tradition, though this tradition is fortified in many cases by mnemonic records, the most curious of which are the *quipus*—knotted and coloured cords—employed by the Peruvians. Petroglyphs and pictographs were wide-spread, and reached a considerable development in the direction of abstract symbolism, while among the Mayas, Aztecs, and other Mexican tribes they clearly gained the stage of hieroglyphic writing. Little progress has been made, however, towards the decipherment of the Mexican codices, except perhaps with respect to calendric computations, while the pictographic records of other Indian peoples depend for their interpretation upon individual initiation into the meanings intended. Such records as we have, therefore, are mainly transcriptions from oral expression.

American Indian songs are so intimately connected with American Indian music that they will be treated under art. MUSIC (American). Similarly, American Indian rituals, which are largely composed of cycles of songs and chants, will be treated under SECRET SOCIETIES (American) and PRAYER (American). Oratory was an art of prime importance among the many tribes who conducted their internal affairs by means of councils where the spoken word decided tribal policies. Gravity of mien and strict decorum characterized the orator, but his expression was often intensely passionate, and there is abundant testimony from white hearers to the power and eloquence of American Indian oratory, of which many fragments are preserved in scattered reports. More systematic records have been made of myths and legends, which are often documents of considerable length and no mean artistry. Their comparative stability of form under oral transmission may be studied in records of identical myths taken from different tribes (e.g., the three versions of the 'Iroquoian Cosmology,' recorded by J. N. B. Hewitt, *21 RBEW* [1899-1900]). Legends of a historical character (as, e.g., the legend of Hiawatha) give place in some tribes to conscious chronicles, or year-counts (see esp. G. Mallory, *10 RBEW* [1888-89], ch. x.; J. Mooney, *17 RBEW* [1895-96], 'Calendar History of the Kiowa'). Mooney (*19 RBEW* [1897-98], 'Myths of the Cherokee') classifies Cherokee myths as sacred myths, animal stories, local legends, and historical traditions. He traces many animal stories that have passed as of Negro origin to American Indian sources (notably the 'Brer Rabbit' stories of Joel Chandler Harris), and it is certain that the American Indians possessed tales designed for entertainment, often of a humorous character, as well as others intended for edification.

The artistic quality of which American Indian expression is capable may be suggested by a few examples. A. C. Fletcher (*27 RBEW* [1905-06], p. 431) records an Omaha song of four verses (or, with repetitions, seven), which she translates:

'No one has found a way to avoid death, to pass around it; those old men who have met it, who have reached the place where death stands waiting, have not pointed out a way to circumvent it. Death is difficult to face!'

This song is set to a moving native melody, which has been harmonized by Harvey Worthington Loomis ('Lyrics of the Red Man,' Newton Center, Mass., 1908, vol. ii. no. 2).

An impressive example of Indian eloquence is the speech of Smohalla recorded by Mooney (*14 RBEW* [1892-93], p. 720 f.), uttered in reply to the white commissioner's request that the Wanapum settle down to agriculture. The following is a fragment of Smohalla's peroration:

'You ask me to plough the ground! Shall I take a knife and tear my mother's bosom? Then when I die she will not take me to her bosom to rest.

You ask me to dig for stone! Shall I dig under her skin for her bones? Then when I die I cannot enter her body to be born again.

You ask me to cut grass and make hay and sell it, and be rich like white men! But how dare I cut off my mother's hair?'

In the Iroquoian creation myth, there is a somewhat subtle humour in the account of the fall of Atlatensic, the demiurgic Titaness, from the Sky-world to the chaos of nether waters:

'So now, verily, her body continued to fall. Her body was falling some time before it emerged. Now, she was surprised, seemingly, that there was light below, of a blue color. She looked, and there seemed to be a lake at the spot toward which she was falling. There was nowhere any earth. There she saw many ducks on the lake, whereon they, being waterfowl of all their kinds, floated severally about. Without interruption the body of the woman-being continued to fall.

Now, at that time the waterfowl called the Loon shouted, saying: "Do ye look, a woman-being is coming in the depths of the water, her body is floating up hither." They said: "Verily, it is even so." Now, verily, in a short time the waterfowl called Bittern said: "It is true that ye believe that her body is floating up from the depths of the water. Do ye, however, look upward." All looked upward, and all, moreover, said: "Verily, it is true" (*21 RBEW*, p. 179 f.).

With this may be contrasted a fragment of the Navaho myth of the creation of the sun (*8 RBEW* [1886-87], pp. 275-277), which is not without a touch of grandeur:

'The people then said, "Let us stretch the world"; so the twelve men at each point expanded the world. The sun continued to rise as the world expanded, and began to shine with less heat, but when it reached the meridian the heat became great and the people suffered much. They crawled everywhere to find shade. Then the voice of Darkness went four times around the world telling the men at the cardinal points to go on expanding the world. "I want all this trouble stopped," said Darkness; "the people are suffering and all is burning; you must continue stretching."

The more civilized Indian peoples of Mexico, Central America, and Peru show a corresponding advance in formal literary composition. The Aztec rituals recorded by B. Sahagun (*Historia general de las cosas de Nueva España*, Mexico, 1829) are dignified and ornate, and often imbued with a sombre and haunting beauty. The assembled lore of these more advanced peoples must have comprised a considerable body of legends, chronicles, oracles, spells, calendric computations, laws, etc., judging from the fragments which are preserved, while the existence of a secular artistic literature is probable. Brinton is of the opinion that the Central Americans possessed an autochthonous dramatic art (see *Library of Aboriginal American Literature*, no. iii., 'The Güegüence, a Comedy Ballet in the Nahuatl-Spanish Dialect of Nicaragua,' Philadelphia, 1883); and Clements Markham regards the 'Ollantay' as an example of a pre-Spanish dramatic literature (see Markham, *The Incas of Peru*, London, 1910, which contains a translation of this drama). For this literature of the semi-civilized nations see the art. ANDEANS, CHILAN BALAM, DRAMA (American), POPOL VUH.

2. Literature produced under white influence.--

This class consists of (1) works in the native languages, and (2) works by American Indian authors in European languages. (1) Works of the first type include translations of the Bible and other works by white missionaries and teachers, and native records of native ideas made after a system of writing had been acquired. Of the latter, perhaps the most notable instance is the Cherokee literature in the native alphabet invented by Sequoya. A large number of periodicals—some under native, some under missionary, editorship, some in the native tongues exclusively, some part English, some wholly English—have appeared or are now appearing for the expression of American Indian ideas. For the growing body of aboriginal records—chiefly myths, rites, and chronicles—appearing in the *Reports of the American Bureau of Ethnology* and elsewhere special modifications of the Roman alphabetic signs have been invented and systematized for the expression of the native tongues.

(2) A certain number of Indians or part-Indians have distinguished themselves in their literary mastery of European tongues. The names of Garcilasso de la Vega, Inca-Spanish in blood, and of Fernando de Alva Ixtilxochitl, descendant of the caciques of Tezcuco, are notable as authorities for the native customs and histories of Peru and

Mexico respectively. To these might be added the names of Tezozomac, Chimalpahin Quauhtlehuanitzin, Nakuk Pech, and Fernando Hernandez Arana Xahila, Mexican and Central American post-conquest chroniclers of native history (see respectively E. K. Kingsborough, *Antiquities of Mexico*, ix., 'Cronica Mexicana'; R. Siméon, *Annales de San Anton Munon Chimalpahin Quauhtlehuanitzin*, Paris, 1889; D. G. Brinton, *Library of Aboriginal American Literature*, i., 'The Maya Chronicles,' vi. 'The Annals of the Cakchiquels'). In N. America, George Copway (Kagigegabo, 1818-63) was the author of several books, dealing chiefly with his own people, the Ojibwa, while Charles A. Eastman (Ohiyesa, b. 1858) is the author of essays and stories portraying the native life and ideals of his Siouan kinsfolk.

LITERATURE.—Bibliographical details are given in the *Handbook of American Indians*, Bull. 30 of the American Bureau of Ethnology, Washington, 1907-10, under 'Books in Indian Languages,' 'Bible Translations,' 'Dictionaries,' 'Periodicals'; see also 'Copway,' 'Eastman,' 'Sequoya.' Scattered through the *Reports* and *Bulletins* of the Bureau are many texts and translations of myths, songs, and rites; the files of the *JAFI* are rich in similar material. Other collections of importance include E. K. Kingsborough, *Antiquities of Mexico*, 9 vols., London, 1830-48; D. G. Brinton, *Library of Aboriginal American Literature*, 8 vols., Philadelphia, 1882-90; J. G. Icazbalceta, *Nueva Colección de documentos para la Historia de México*, 5 vols., Mexico, 1886-92; E. Seler, *Gesammelte Abhandlungen zur amerikanischen Sprach- und Altertums-kunde*, 3 vols., Berlin, 1902-08. Yearly increasing material is to be found in the *Comptes rendus du Congrès international des Américanistes*, Paris, etc.; the *Memoirs and Papers of the Peabody Museum*, Cambridge, Mass.; the *Memoirs of the American Museum of Natural History*, New York; the *Memoirs of the American Folklore Society*, New York; the *Publications of the Field Columbian Museum*, Chicago; of the *University of California*, Berkeley, Cal.; of the *University of Pennsylvania Museum*, Philadelphia; the *Contributions of Columbia University*, New York, etc. Of the nature of bibliographical guides are H. H. Bancroft, *Native Races of the Pacific Coast*, New York, 1875, vol. i. p. xvii ff., 'Authorities quoted' (cf. also vol. iii. 'Myths and Languages'); Justin Winsor, *Narrative and Critical History of America*, Boston, 1836-89, vol. i. 'Biographical Appendix'; *The Literature of American History*, ed. J. N. Larned, Boston, 1902; L. Farrand, *The Basis of American History, 1500-1900*, New York, 1904, pp. 272-289; H. Benchat, *Manuel d'archéologie américaine*, Paris, 1912. See 'Literature' under artt. ANDÉANS, CHILIAN BALAM, MUSIC (American), POPOLO VUH.

H. B. ALEXANDER.

LITERATURE (Babylonian).—Our knowledge of Babylonian-Assyrian literature has been gained chiefly by excavations. Only a few monuments are extant on rocks, among them the famous bilingual inscriptions of the Achæmenian kings, from the study of which the decipherment of the Babylonian script and language started. The statues of kings and deities, the colossi of bulls and lions, slabs, prismoids, cylinders, and various smaller objects of art inscribed with Babylonian legends are, as far as hitherto disinterred, not very numerous in comparison with the thousands of clay tablets which served the ancient Babylonian and Assyrian priests to record the deeds of the rulers of those Empires, to chronicle their historical events, to fix the common prayers, incantations, and religious rites, to place the outcomes of their superstitious belief in certain systems, and to transmit very ancient myths and legends to posterity.

As a matter of fact, these documents are not throughout conceived in the Semitic tongue of Babylonia. It is now well known that in the third millennium before our era the fertile alluvial plain of the twin rivers enclosing Mesopotamia, the Euphrates and the Tigris, was inhabited by a non-Semitic race called the Sumerians, and to them must be attributed the primitive culture of that country, the building of its earliest cities, the first works of art in Western Asia, and the invention of the cuneiform script, the development of which out of a picture writing can still be traced. At what time Semitic, i.e. Babylonian, tribes invaded

Sumerian territory, and how the process of amalgamation between the two races developed, cannot as yet be ascertained. It may be fairly assumed, however, that at the time of the Babylonian king Hammurabi, who replaced the various feudal governments of his predecessors by a vast Babylonian Empire under one sceptre (c. 2000 B.C.), that process had come to a standstill, and subsequently the Sumerian literature was gradually superseded by that of the Babylonian-Assyrians. As, however, the religious hymns and psalms composed by the Sumerian writers were adopted by the Semites, forming part of their liturgy and subsequently translated by the priests into their native tongue, Sumerian was studied as a sacred language by the Babylonians and Assyrians, and its literature was carefully preserved and handed down to posterity, just as in mediæval and modern times the Latin language is treated and used as the language of the Church.

Sumerian literature is dealt with in this art. in so far as it forms part of the Babylonian-Assyrian incorporated therein. Babylonian literature actually begins in the time of Hammurabi, whose inscriptions (with one exception) and whose famous collection of laws (see LAW [Babylonian and Assyrian]) are conceived in pure Semitic Babylonian. Before entering into a detailed enumeration of the various branches of that literature, attention must also be called to the fact that the difference between the Babylonian and the Assyrian languages consists merely in dialectic varieties, so that Babylonian and Assyrian literature, practically speaking, are to be considered as identical, and are differentiated only by the respective time of their origin during one of the great monarchies of Western Asia—the Old Babylonian Empire, the Assyrian Empire, and the Neo-Babylonian Empire.

The history of the ancient East can now be authentically reconstructed from the historical inscriptions of the Babylonian-Assyrian literature. To the great kings of those monarchies the gaining of immortality by means of a careful tradition of their exploits, their successful campaigns, and building operations appeared most desirable, and so they caused the records of those deeds to be inscribed on a number of clay prisms, on cylinders and tablets, and on the animal colossi at the entrances of their palaces. The great extent of such texts is illustrated by a recently discovered tablet, on which the events of a single year (714 B.C.) are recorded so minutely that an English translation of the text would fill five columns of the *London Times*. Long prayers supplement the historical contents of these inscriptions, interspersed with the enumeration of the titles and abilities, virtues and religiousness, of the royal personages therein glorified. As a rule, the contents are arranged according to the years of reign or the campaigns, in chronological order, followed by an account of the building operations and, in some cases, of the hunting matches of the respective kings, while, at the end of the inscriptions, the blessing of the great gods is invoked upon a successor preserving the document, and their wrath upon its destroyer. To the historical documents must also be assigned the branch of the epistolary literature dealing with public affairs. It is from an extended correspondence between Hammurabi and one of his highest officials that an exact knowledge of the reign of the first Semitic ruler in the united Babylonian kingdom is gained—his personal care for the welfare of his vast dominion, the building of corn-houses and dykes under his auspices, the regulation of the temple-taxes, and the use of intercalary months by order of the crown. Of no less importance are the documents of a correspondence carried on in the middle of the second millennium between

the Pharaohs of Egypt, then rulers of the whole civilized world, and the kings of Western Asia, including Palestine, the Phœnician ports, and the island of Cyprus, which have become generally known as the Tell el-Amarna find. Letters, proclamations, petitions, accounts of building operations, and short notes accompanying requisites for war were in constant use down to the end of the Neo-Babylonian Empire, and are of a historical value similar to that of the royal inscriptions mentioned above and various so-called 'epigraphs' which were added to the numerous bas-reliefs on the walls of the palaces, illustrating the kings' campaigns and other achievements.

Babylonian-Assyrian literature in the narrower sense of the word has become known chiefly from the documents preserved in a great Royal Library founded at Nineveh by Ashurbanipal, the last great king of the Assyrian Empire, who reigned from 668 to 626 B.C. and was called Sardanapalos by the Greek writers. This Library, generally known as the Kouyunjik Collection, the various portions of which have been secured since the middle of last century for the Trustees of the British Museum by Sir Henry Rawlinson and other English scholars, consists of copies and translations of ancient Babylonian and Sumerian works, and deals with every branch of wisdom and learning then appreciated by the Assyrian priests, who, by command of their royal patron, collected and catalogued, revised and re-copied, the various texts which had been gathered from the oldest cities and temple archives of the whole land. Recent excavations have in some instances also brought to light a number of hymns and prayers, certain omen-texts, and a few astrological inscriptions which must be attributed to an earlier period than that of Ashurbanipal, and apparently belonged to the mass of original documents from which the copies in the Library were made; and the same may be said of certain collections of the Neo-Babylonian time, in which, again, copies from the Kouyunjik Collection have been found. An exact idea of the literary achievements of the Babylonian-Assyrians, however, can be formed only by a perusal of the contents of the Library itself. Such a perusal yields the following results.

Apart from the epistolary literature, a few drafts for royal inscriptions, and numerous commercial texts—the last extending from early Babylonian times down to the beginning of our own era—Assyrian literature was devoted chiefly to superstitious belief, to religious rites and ceremonies, incantations and prayers, and, in close connexion with both branches, to medicine, astrology, and philology.

A large proportion of the documents here concerned deal with the appearance and actions of various animals, and it has been justly remarked that in these inscriptions survivals may be seen of a very ancient animal-cult—reminding one of certain parallels in Egypt—which in later times seems to have been superseded by an exquisitely astral religion. Closely connected with these animal omens are the numerous and systematically arranged texts bearing on monstrosities and other unusual features of births, as well as the large collections of documents dealing with the inspection of the liver of an immolated wether. The movements of various birds, the actions of dogs and pigs, the hissing of a snake, and the invasion of locusts were especially observed for the compilation of such omen-texts. Another means of divination used by the Babylonians was pure water, into which a small quantity of sesame-oil was poured, so as to produce the well-known interference-colours, re-discovered by Newton, and certain structures of rings and bubbles, from which

the events of the future were predicted. The link between these forecasts and the religious texts must be sought in the medical prescriptions, which were laid down and redacted into a kind of pharmacopœia. Various diseases, arranged according to the limbs and members attacked, are enumerated in these collections, and the draughts, decoctions, and other therapeutics are described in detail. Mental disorder was attributed to the influence of evil spirits, and on this account the medical texts are frequently interspersed with incantation formulæ which otherwise constitute a class of literature by themselves. Three or four 'series' of tablets containing such incantation-texts, accompanied by directions for the respective ceremonies, have become known to us. They are chiefly directed against the pernicious actions of witches and sorcerers, supposed to be neutralized by destroying the images of these witches, mostly by burning. In the majority of cases the text of these incantations is in the interlinear bilingual style, i.e. in Assyrian and Sumerian; and in several instances it can be proved that the Sumerian original has been taken over from ancient sources, portions of which still exist. On the other hand, it can hardly be denied that the Semitic Assyrian priests themselves also composed such interlinear texts, using the Sumerian language, then long extinct, in much the same way as mediæval monks used Latin. Moreover, even pure Sumerian texts without an interlinear Assyrian version are preserved in Ashurbanipal's Library—a fact from which it may be concluded that such incantations even at his time were recited in the old sacred language. And the same holds good of the psalms, litanies, and other forms of prayers which are written either in Sumerian only or accompanied, in Assyrian times, by a Semitic version. Whilst the incantation-texts, however, are mostly preserved as parts of certain literary compositions or 'series,' the prayers and similar religious documents stand for the most part isolated, and only by their style can they be recognized as belonging to various classes. Of such, the prayers called after 'the lifting of the hand,' the hymns exhibiting a parallelism of members, the litanies addressed to certain deities, and the compositions showing acrostics may be mentioned as specimens.

Of special interest among the religious texts are the legends and myths, of which a number of 'series' have been discovered. A few of them, as, e.g., the Babylonian Creation Legend and the Deluge Story, both of which have parallels in the OT, can be proved to reach as far back as the Old Babylonian period. It cannot be ascertained at present, however, at what time the account of the Deluge was incorporated in a great national epic, the so-called Gilgamesh Epic, which is founded on astral religion and seems to refer to the life in the nether world. Similarly the 'Descent of the goddess Ishtar to Hades,' an isolated poem preserved in Ashurbanipal's Library only, appears to depict nature's death in the autumn and its resuscitation in the spring, and the story of Nergal, the lord of tombs, and his consort, the goddess Erishkigal, likewise contains a description of the abode of the dead. Immortality was not granted to mankind, as we learn from another myth, the story of a pious man called Adapa, who, being misled by chance, refused to partake of the food of life and the water of life, which were offered to him in heaven.

As has already been remarked, it may be concluded from the Gilgamesh Epic and from other mythological texts that in the Assyrian time at least an astral religion was reigning in the valley of the Euphrates and Tigris. This appears to be borne out by another branch of Babylonian-Assyrian

literature, viz. the astrological texts. A large composition, comprising at least 70 tablets, is devoted to observations of the movements of the celestial bodies, including atmospheric phenomena, such as thunder-storms, hurricanes, and earthquakes, and to the forecasts taken from such observations and referring to the welfare of the king, the devastation of temples and palaces, the growth of vegetation, and the increase of cattle and other animals. As early as in the 7th cent. B.C. these astrological documents were paralleled by purely astronomical texts, dealing with the heliacal risings and the culminations of luminous fixed stars and constellations, while of the Neo-Babylonian time documents with astronomical observations and calculations have been found which bear witness to the highly developed faculties of the later Babylonians for determining the velocity of the sun and moon, the length of the year, and the revolution of the five planets then known.

An equally high standard was attained by the Babylonian and Assyrian priests in grammar and lexicography. Those sacred Sumerian incantation-texts, hymns, and prayers must have early prompted the protectors of religious traditions to collect helps for studying the extinct sacred tongue, and in course of time such investigations necessarily involved a study of the Semitic native language of those priests as well. Paradigms of verb-forms, lists of synonymous words, and, above all, large collections of Sumerian ideographs explained according to their pronunciation and meaning have thus been handed down. And the numerous lists of names of animals, stones, plants, and wooden objects, of stars, temples, and deities, afford a clear insight into the wisdom and work of the philologists, by whom the oldest colleges on earth were founded and literary tradition was first carried on.

Babylonian literature was deeply influenced, as has been shown, by its older Sumerian sister, and the Assyrians, in developing it, seem to have played a rôle similar to that played in later centuries by the Syrians who conveyed Greek learning to the nearer East. On the other hand, the cuneiform Babylonian script spread all over Western Asia, and the Hittite and Mitanni nations, the Chaldæan tribes, and the Canaanites appear to have adopted it in one or other form, and certainly became familiar to some extent with the literary documents of the Babylonian people. Babylonian legends found their way to the ancestors of the Israelite tribes, and similar Babylonian documents were studied in the middle of the second millennium by the learned priests of the Egyptian Pharaohs. Finally, the late Assyrian omen and astrological texts wandered to the East as far as China, left remarkable traces in the Indian literature, and were transmitted to Greece, where actual translations of such texts have been found. In this way also Babylonian literature has in the last instance influenced Christianity, and has left its marks throughout mediæval times down to the present day.

C. BEZOLD.

LITERATURE (Buddhist).—The sacred canon of Buddhism has been handed down in two forms. One, written in Pāli and preserved in Ceylon,

Burma, and Siam, contains the doctrine of the older school, the Hinayāna ('Little Vehicle'; see art. HINAYĀNA), the chief aim of which is to attain *arhat*-ship or the release of the individual from suffering. It is the canon of one sect only. The other, the Sanskrit canon, which is later, is not extant in any complete example, but is known only from fragments found during recent years in Central Asia by M. A. Stein, A. Grünwedel, and A. von le Coq, partly also from quotations in other Buddhist Sanskrit texts, as well as from Chinese and Tibetan translations. The chief texts of the Sanskrit Māla-sarvāstivādin, who belonged to the older Buddhism, were translated from Sanskrit into Chinese in the years A.D. 700-712. This canon agrees largely with the Pāli canon both in wording and in arrangement. But there are also various divergences. These are to be explained by the descent of both from a common original in the Māgadhī dialect, from which the Pāli canon was derived in one part of the country, and the Sanskrit canon, later, in another. While the other sects had no complete canon, each regarded as specially sacred one or more texts, which either incorporated parts of or replaced a theoretically acknowledged canon. The great bulk of these Sanskrit Buddhists belonged to the new school of the Mahāyāna ('Great Vehicle'; see art. MAHĀYĀNA), the chief aim of which was the attainment of the condition of a Bodhisattva, or future Buddha, who brings *nirvāṇa* within the reach of the entire human race.

The forms of Buddhism preserved in Pāli and in Sanskrit have commonly been called 'Southern' and 'Northern' respectively because the former prevails in Ceylon, Burma, and Siam, and the latter in Nepāl, Tibet, China, and Japan. The distinction thus made is misleading, since all Buddhist canonical literature arose in the North of India. The Pāli canon contains no reference to the South, and the term 'Northern' confuses sects by the erroneous implication that it excludes the older school of the Hinayāna. It is, therefore, more appropriate to speak of 'Pāli Buddhism' and 'Sanskrit Buddhism.'

The languages in which the two canons were composed require to be more precisely defined. Pāli is the sacred language common to the Buddhists of Ceylon, Burma, Siam, and Cambodia, but Pāli MSS are written in the four different alphabets of those countries, while it has become the regular practice to print European editions of Pāli texts in Roman characters. The Pāli language in which the texts have been handed down cannot be identical with the dialect in which the canon of the 3rd cent. B.C. was composed; the latter could only have been the language of Māgadhā (Bihār), in which Buddha first preached and which must have been used by the monks of Pāṭaliputra who put together the canon. Traces of such a Māgadhī canon may be found in the Pāli texts. In this connexion it is noteworthy that the titles of the canonical texts enumerated in Aśoka's Bairāt inscription appear in a Māgadhī form. But Pāli differs from the Māgadhī which is known to us from inscriptions, literary works, and grammarians. Nor is it identical with any other dialect. It is, in fact, an exclusively Buddhist literary language, which, like other literary languages, is the result of a mixture of dialects. Its basis is, however, in all likelihood Māgadhī—a conclusion supported by the tradition that even identifies Māgadhī and Pāli. The language of the other canon is either correct Sanskrit or a Middle Indian dialect which, approximating to Sanskrit, is best termed 'mixed Sanskrit' (formerly as a rule called the 'Gāhā dialect').

No work of Buddhist literature goes back to Buddha's time. But much contained in the canon may very well hand down the words spoken by the Master, such as the famous sermon of Benares, especially if we consider the tenacity of the verbal memory in Indian oral tradition.

Almost the whole of the oldest Buddhist literature consists of short collections containing speeches, sayings, poems, tales, or rules of conduct, which are combined into larger collections, called *piṭaka*, or 'basket,' in a manner somewhat analogous to the formation of the *saṃhitā* of the Vedas (cf. HYMNS [Vedic]). Three such aggregate collections, called the *Tipitaka*, form the Pāli canon.

The canon as constituted in Aśoka's reign must have undergone appreciable changes between then and the time when it was fixed in the 1st cent. B.C. in Ceylon. But thenceforward it has been handed down with great care. Some modifications, indeed,

must have taken place even after the 1st cent., because it is otherwise difficult to account for the numerous contradictions appearing in the canon. Taken as a whole, however, the Pāli *Tipitaka* may be regarded as not very different from the Māgadhī canon of the 3rd cent. B.C. For the quotations occurring in the Aśoka inscriptions diverge only slightly from the extant text, while the titles of seven texts mentioned in one of these inscriptions are partly identical with, and partly similar to, those which are found in the extant *Sutta-piṭaka*. Moreover, the sculptures and inscriptions of the monuments at Sāñchi and Bhārhut (c. 200 B.C.) afford corroborative evidence of the existence of a collection not unlike the extant *Sutta-piṭaka*. But the earliest direct evidence that the *Tipitaka* as a whole had already assumed its present form is furnished by the *Mūlinda-parīkṣā*, which dates from the 1st cent. A.D. The age and authenticity of the Pāli tradition are confirmed by the Sanskrit canon, which, as already stated, is so closely allied to it as necessarily to be derived from the same original.

The texts which the sacred literature comprises will now be summarily described in regard to their chief contents.

1. *THE PĀLI CANON*.—I. *Vinaya-piṭaka*.—The first of the three main divisions is the *Vinaya-piṭaka*, the 'Basket of Discipline,' which supplies the regulations for the management of the Order (*sangha*), and for the conduct of the daily life of monks and nuns. It includes rules for reception into the Order, for the periodical confession of sins, for life during the rainy season, for housing, clothing, medicinal remedies, and legal procedure in cases of schism. Here and there are also to be found stories, some of which contain the oldest fragments of the Buddha legend, while others are valuable for the light that they throw on the daily life of ancient India.

2. *Sutta-piṭaka*.—The second 'basket' is the *Sutta-piṭaka*, our best source for the *dharmā*, or religion of Buddha and his earliest disciples. It contains, in prose and verse, the most important products of Buddhist literature grouped in five minor collections named *nikāyas*. The first four of these consist of *suttas*, or 'lectures,' being either speeches of Buddha or dialogues in prose occasionally interspersed with verses. These four are cognate and homogeneous in character. For a number of *suttas* reappear in two or more of them; there is no difference in the doctrines that they contain; and they all show a similar mode of discussion, probably preserving a reminiscence of Buddha's actual method as good as that which the Platonic dialogues preserve of Socrates' method. One of the features of the method of argument in these *suttas* is the very extensive use of parables and similes, which, though lacking in cogency, are valuable as throwing much light on the daily life of the artisans, cultivators, and merchants of the day. Since each of these *nikāyas* contains old along with more recent elements of a similar character, there is no reason to doubt that all of them were formed into collections about the same time.

(a) The *Dīgha-nikāya*, or 'Collection of long lectures,' consists of 34 *suttas*, each of which deals fully with one or more points of Buddhist doctrine. The very first, entitled *Brahmajāla-sutta*, or 'Lecture on the Brāhman net,' is of very great importance for the history not only of Buddhism, but of the whole religious life of ancient India. The Buddha enumerates a large number of the occupations of Brāhmins and ascetics from which the Buddhist monk should refrain. The second, the *Sāmaññaphala-sutta*, or 'Lecture on the reward of asceticism,' furnishes valuable information about the views of a number of non-Buddhist

teachers and founders of sects. The *Ambaṭṭha-sutta* illustrates the history of caste and Buddha's attitude to that system. The *Kāṭṭhanta-sutta*, 'Lecture on the sharp tooth (of the Brāhmins),' displays the relations between Brāhmanism and Buddhism, while the *Terijja-sutta*, 'Lecture on the followers of the three Vedas,' contrasts the Brāhman cult with Buddhist ideals. The fundamental doctrine of Buddhism is treated in the *Mahānidāna-sutta*, or 'Great lecture on causation.' One of the most noteworthy texts of the Pāli canon is the *Sigālōvāda-sutta*, or 'Admonition of Sigāla,' describing fully the duties of the Buddhist layman. But the most important text in the *Dīgha-nikāya* is the *Mahāparinibbāna-sutta*, or 'Great lecture on the complete Nirvāṇa,' a continuous account of the last days of Buddha. It is one of the oldest parts of the *Tipitaka*, as supplying the earliest beginnings of a biography of Buddha. It does not, however, all date from the same period, for in some passages Buddha appears entirely as a human being, while in others he is represented as a demi-god or magician. This text resembles the Gospels more than any other in the *Tipitaka*. On the other hand, the very title of the *Mahāpadāna-sutta*, or 'Great lecture on the miracles (of Buddha),' indicates its lateness. It already contains the dogma of six Buddhas as precursors of Gautama, and presupposes the whole Buddha legend.

(b) The *Majjhima-nikāya*, or 'Collection of (lectures of) middle (length),' consists of 152 sermons and dialogues dealing with almost all points of Buddhist religion. Thus Buddha is represented as admitting that a man may obtain *nirvāṇa* even without being a monk, or may commit suicide if he acts solely for the purpose of obtaining release; and as refuting the claim of Brāhmins to be the only pure caste and asserting the purity of all four castes. These *suttas* throw light not only on the life of Buddhist monks, but on such matters as Brāhman sacrifices, various forms of asceticism, and the relation of Buddha to the Jains, as well as superstitious, social, and legal conditions prevailing at the time. The difference in age of the *suttas* is indicated by the fact that here too Buddha sometimes appears as a purely human character and sometimes as a miracle-worker.

(c) Of the 58 divisions into which the *Saṃyutta-nikāya*, or 'Collection of combined lectures,' is divided the last is most noteworthy, as treating of the four truths (*sacca*), and containing the famous *Dhamma-cakka-ppavattana-sutta*, the 'Lecture on setting in motion the wheel of the law,' usually described as the 'Sermon of Benares.' Of the *suttas* in one of its sections some contain a large admixture of stanzas, while others consist entirely of verse forming short ballads of great poetic merit.

(d) The *Āṅguttara-nikāya*, or 'Collection of lectures arranged according to increasing number,' consists of over 2300 *suttas* in 11 sections, so arranged that in the first are treated objects of which there is only one kind, in the second those of which there are two kinds, and so on. Thus, the second deals with the two kinds of Buddhas. In this collection are found a large number of *suttas* and stanzas which occur in other texts of the canon, and which here even sometimes appear as quotations. This alone points to a late date. But internal evidence also shows that it was composed at a time when Buddha was already regarded as an omniscient demi-god, if not an actual deity.

(e) The *Khudda-nikāya*, or 'Collection of small pieces,' is a late compilation added after the previous ones were complete. Its contents date from very different times; for, while several of its parts belong to the latest stratum of the Pāli

canon, some go back to the earliest period. It is composed for the most part in verse, and, in fact, contains all the most important works of Buddhist Indian poetry. Of the works which it embraces the following may be mentioned. The *Khudda-pāṭha*, or 'Short reader,' comprises nine brief texts to be used by the novice or as prayers in the Buddhist cult. The first is the Buddhist creed; the second gives the ten commandments enjoined on monks; and the ninth is the fine *Metta-sutta*, in which kindness towards all creatures is praised as the true Buddhist cult. The *Dhamma-pada*, or 'Words of religion,' the most familiar and longest known work of Buddhist literature, is an anthology of maxims chiefly expressing the ethical doctrines of Buddhism. More than one-half of its 423 stanzas are found in other texts of the Pāli canon. The *Udāna*, or 'Solemn utterances,' consisting of old verses and prose stories (probably later additions), is a glorification of the Buddhist ideal of life and of the endless bliss of *nirvāṇa*. The *Itivuttaka*, or 'Sayings of Buddha,' is composed in prose and verse used in such a way that the same idea is expressed in both. Very often the verse simply repeats the statement of the preceding prose. The oldest parts of the work probably date from the time of Buddha himself. The *Sutta-nipāta* is a collection of poetical *suttas*, many of which, as shown by internal evidence, must go back to the beginnings of Buddhism, and have arisen at least among the first disciples of Buddha. They are important as supplying information about the original doctrine of Buddha, besides representing an early, though not the earliest, stage of the Buddha-legend. The *Thera-gāthā* and *Theri-gāthā*, or 'Songs of monks and nuns,' are poems of great literary merit exalting mental calm as the religious ideal, and describing the value of Buddhist ethical doctrine from personal experience. It is quite possible that here may be included poems composed by some of the earliest disciples of Buddha, but several are much later, since they represent a Buddha cult like that of the Mahāyāna. The *Jātaka* is a book consisting of about 550 stories of former 'births' of Buddha in the character of a Bodhisattva, or future Buddha. It consists partly of poetry and partly of prose, but only the verse portions have canonical value. For a discussion of the work see art. JĀTAKA.

3. *Abhidhamma-piṭaka*.—The *Abhidhamma-piṭaka*, or 'Basket of higher religion,' treats of the same subject as the *Sutta-piṭaka*, differing from that collection only in being more scholastic. It is composed chiefly in the form of question and answer, like a catechism. The starting-point of this collection appears to have been the *Sutta-piṭaka*, one of the texts of which, the *Āṅguttara-nikāya*, may be regarded as its precursor. Its first beginnings seem to have been certain lists called *mātikās*, which are already mentioned in the *Vinaya-piṭaka*.

While the Pāli canon (apart from additions) was entirely composed in India, the non-canonical literature was the work of monks in Ceylon. There is only one important exception, the *Milinda-pañha*, which must have been written in the north-west of India. It represents a dialogue supposed to have taken place between a Buddhist teacher and Menander (Milinda), the Greek king who from about 125 to 95 B.C. ruled over the Indus territory, Gujārat, and the valley of the Ganges. The author, whose name is unknown, must have lived at a time when the memory of this king was still fresh. As the Greek domination came to an end soon after Menander, he could hardly have been remembered for more than a century. That the original portion of the work, books ii. and iii. with parts of i., is thus as old as

the beginning of our era is supported by the fact that it bears comparison with the very best dialogues in the *Sutta-nipāta*. Books iv.-vii., besides differing in character from the rest, are wanting in the Chinese translation made between A.D. 317 and 420. These and the other spurious parts are the work of learned monks in Ceylon.

II. *SANSKRIT BUDDHIST LITERATURE*.—While one ancient sect created the Pāli canon, various later sects produced a Buddhist literature in pure or mixed Sanskrit, of which many extensive works have been preserved, though others are known only through Tibetan and Chinese translations. The great bulk of this Buddhist Sanskrit literature belongs to, or has been greatly influenced by, the later Mahāyāna school. That school, though acknowledging that the *Theravāda*, or 'Doctrine of the Elders,' went back to Buddha, regarded it as inadequate, because it made *nirvāṇa* attainable to the few only through the life of a monk. In order to bring salvation to all humanity, the Mahāyāna taught that every man could aim at being born as a Bodhisattva (*g.v.*); and any ordinary man, even a Pariah, could attain salvation by the practice of virtue and by devotion to Buddha. The Buddhas are now regarded as divine beings from the beginning, their earthly life and their *nirvāṇa* being nothing but an illusion. The Buddhas preceding Gautama, instead of being six, are now believed to be thousands or even thousands of millions in number; and an innumerable host of Bodhisattvas is revered as having for the salvation of mankind refrained from entering *nirvāṇa*. Under the influence of Hinduism a new mythology grew up in which a number of Hindu deities were added to the Buddhas and Bodhisattvas, and a much stronger devotion to Buddha, analogous to that of the Brāhman *Bhagavad-Gītā* (*g.v.*) to Kṛṣṇa. Brāhman doctrine influenced the development of Mahāyānism on the philosophical side also. For, while the old Buddhism denied the existence of the ego only, the Mahāyāna doctrine also denied the existence of everything (expressed by the formula *sarvaṃ śūnyam*, 'everything is void'), either as complete nihilism or as ideal nihilism (*vijñāna-vāda*, or 'doctrine' that nothing exists except 'in consciousness').

1. *Hinayāna*.—The large realist sect of the Sarvāstivādins ('followers of the doctrine that everything is'), besides having an extensive literature, possessed a Sanskrit canon, of which, however, only fragmentary parts of the *Udāna-varga*, *Dharmapada*, and *Ekottarāgama* (corresponding to the Pāli *Udāna*, *Dhammapada*, and *Āṅguttara-nikāya*) have as yet been discovered. The *Mahāvastu*, or 'Book of great events,' is a text of the Lokottaravādins ('followers of the doctrine' that the Buddhas are 'supernatural beings'), a subdivision of the old schismatic sect, the Mahāsāṅghikas, or 'adherents of the great community.' Its chief content is a miraculous biography of Buddha, written in mixed Sanskrit. It is of great importance as containing many old versions of texts that also occur in the Pāli canon, such as the 'Sermon of Benares' and a section of the *Dhamma-pada*. About half of it consists of *jātakas*, many of which do not occur in Pāli. Though belonging to the Hinayāna, it contains much that is akin to the Mahāyāna, as that the adoration of Buddha is alone sufficient for the attainment of *nirvāṇa*. There is, however, only a slight admixture of regular Mahāyāna doctrine, and nothing of Mahāyāna mythology. Some of the elements which it contains point to the 4th cent. A.D., but the nucleus of the book probably dates from the 2nd cent. B.C. (see MAHĀVASTU).

The *Laṭita-vistara*, or 'Detailed account of the play (of Buddha),' though it seems to have origin-

ally been a Buddha biography of the Sarvāstivādin, has been extended in the sense of the Mahāyāna, of which it bears all the characteristics. It is a continuous narrative in Sanskrit prose, with long metrical pieces in 'mixed Sanskrit.' Containing old and new elements side by side, it is valuable for the development of the Buddha legend from its earliest beginnings to the deification of Buddha as a god above all gods.

The *Buddha-charita*, or 'Life of Buddha,' is an epic composed in pure Sanskrit. It is the work of Aśvaghoṣa (g.v.), a genuine poet, who, as one of the pioneers of the Mahāyāna and a contemporary of Kanīṣka, must have composed it about A.D. 100. Originally a Brāhman, he joined the Sarvāstivādin sect, but laid great stress on devotion to Buddha. His epic, however, contains no pronounced Mahāyāna doctrine.

Another work of the same school, dating probably from the 4th cent. A.D., is the *Jātaka-mālā*, or 'Garland of birth stories,' by Aryaśūra. It is composed in a mixture of verse and prose, conforming to the style of classical Sanskrit literature. It contains 34 *jātakas*, illustrating the *pāramitās*, or 'perfections,' of a Bodhisattva, and nearly all occurring in the Pāli Jātaka Book.

Cognate with the preceding works are a number of collections of *avadānas*, or 'stories of great deeds,' being practically *jātakas* in which the hero is a Bodhisattva (not Buddha). The older ones still belong to the Hinayāna, though attaching special importance to the veneration of Buddha. Such is the *Avadāna-sataka*, or 'Century of great deeds,' which, dating probably from the 2nd cent. A.D., contains pieces from the Sanskrit canon of the Sarvāstivādins, and nothing connected with the cult of Bodhisattvas or with Mahāyāna mythology. Dating from about a century later, but including very old texts, is the *Divyāvadāna*, or 'Heavenly *avadānas*,' which often mentions the Sanskrit canon and quotes individual canonical texts, besides having several legends in common with the Pāli canon. Most of the stories are written in good simple Sanskrit with occasional *gāthās*, but others show the elaborate metres and long compounds of the artificial classical style.

2. Mahāyāna.—The Mahāyāna, not representing a homogeneous sect, possesses no canon. But there are nine *dharma*s, or 'religious texts,' which, composed at different times and belonging to different sects, are also called *Vaipulya sūtras*. The most important and most characteristic work of the Mahāyāna school is the *Saddharma-puṇḍarīka*, or 'Lotus of good religion.' It contains matter of different date represented by Sanskrit prose and by *gāthās* in 'mixed Sanskrit.' Its original form dates perhaps from about A.D. 200. Śākyamuni is here no longer a man, the mendicant of the Pāli *suttas*, but a god above all gods, who has lived for countless ages and will live for ever. His doctrine is that every one can become a Buddha who has heard the preaching of Buddha, performed meritorious works, and led a moral life. Even those who adore relics, erect *stūpas*, or make Buddha images obtain the highest enlightenment (see LOTUS OF THE TRUE LAW).

A whole *sūtra*, the *Kāraṇa-vyūha*, akin in language and style to the later Hindu *purāṇas*, is devoted to the exaltation of Avalokiteśvara, the 'Lord who looks down' with compassion on all beings, here the typical Bodhisattva who, in the exercise of infinite pity, refuses Buddhahood till all beings are saved. The yearning for salvation has probably never been more powerfully expressed than in the figure of Avalokiteśvara (g.v.). The cult of this Bodhisattva is known to have been in existence before A.D. 400. More mythological is the *Sukhāvatī-vyūha* (c. A.D. 100),

or 'Detailed account of the Land of Bliss,' which is devoted to the praise of the Buddha Amitābha ('of unmeasured splendour'). The *Gaṇḍa-vyūha* (a still unpublished *dharma*) celebrates the Bodhisattva Mañjuśrī (g.v.), who occupies a prominent position in Mahāyāna cult and art.

Other Mahāyāna *sūtras* are of a philosophic and dogmatic character. The *Laṅkāvatāra-sūtra* (a *dharma*) describes a visit paid to the demon Rāvaṇa in Ceylon by Buddha, who answers a number of questions about religion according to the doctrines of the Yogācāra school (founded by Asaṅga). The tenets of a number of philosophical schools are also discussed here. The *Daśabhūmiśvara* (a *dharma*) represents a lecture by Buddha in Indra's heaven, about the ten stages by which Buddhahood is to be reached. It dates from before A.D. 400, when it was translated into Chinese. The *Samādhi-rāja* (a *dharma*), or 'King of meditations,' is a dialogue in which Buddha shows how a Bodhisattva can attain the highest enlightenment by various stages of contemplation. The *Suvarṇa-prabhāsa* (a *dharma*), dating from not later than the 6th cent. A.D., is partly philosophical, partly legendary, and partly ritualistic in its contents. The Hindu goddesses Sarasvatī and Mahādevī are introduced, and magical formulae and Tantra practices are dealt with. The *Rāṣṭrapāla-sūtra* (before A.D. 800), besides containing Buddha's description of the qualities of a Bodhisattva, introduces a number of *jātakas*. Its main interest lies in its prophecy of the future decay of religion; for its realistic descriptions must largely reflect the lax morality of the Buddhist monks of the 6th century. The most important of all the *sūtras* of the Mahāyāna are the *Prajñā-pāramitās*, or *sūtras* on the 'perfection of wisdom.' They deal with the six perfections of a Bodhisattva, but especially with the highest, *prajñā*, 'wisdom,' the knowledge of the doctrine of nothingness, which denies not only being, but also not-being. The doctrine of the Mahāyāna *sūtras* was systematized by Nāgārjuna, originally a Brāhman who flourished about A.D. 200 and founded the Mādhyamika school, one of the main branches of the Mahāyāna. In order to remove the otherwise insoluble contradictions of complete nihilism, he lays down in his Mādhyamika *sūtras* that the doctrine of Buddha rests on two kinds of truth. The one is the conventional truth of everyday life (in which the higher truth is latent), and the other is truth in the highest sense. It is only through the lower that the higher truth can be taught, and it is only through the latter that *nirvāṇa* can be attained. This distinction resembles that between the higher and the lower knowledge in the Vedānta system of the Brāhmins (see MĀDHYAMAKA, MĀDHYAMIKAS).

Nāgārjuna cannot be regarded as the originator of the Mahāyāna doctrine itself. There must have been teachers and texts of that doctrine more than a century before his time; for Mahāyāna texts were translated into Chinese in the 3rd cent. A.D., and the Gandhāra type of Buddhist art, which represents the Mahāyāna doctrine, came into being about the beginning of our era.

Asaṅga (g.v.), the eldest of the three sons of a Brāhman from Peshāwar, probably flourished in the first half of the 4th century. Originally an adherent of the Sarvāstivāda school, he became the main exponent of the Mahāyānist Yogācāra school, which recognizes existence in consciousness (*vijñāna*) only, denying the reality of the phenomenal world. The only absolute entity is truth (*bodhi*), which is manifested in the Buddhas, and which is attainable solely by those who practise *yoga* in ten stages. *Yoga* (g.v.) was thus brought into systematic connexion with the Mahāyāna doctrine. Asaṅga expounds the tenets of this

school in his *Mahāyāna-Sūtrālaṅkāra*, a work consisting of memorial verses (*kārikās*) in various metres and a commentary written by himself. Asaṅga's brother, Vasubandhu, one of the most important figures in Buddhist literature, distinguished for profound learning and great powers of independent philosophic thought, is remarkable as having written authoritative works representing both the great divisions of Buddhism. His most important work, belonging to his earlier and Hinayāna period, was his *Abhidharma-kośa*, which deals with ethics, psychology, and metaphysics, but is known only through a Sanskrit commentary and Chinese and Tibetan translations. In later life he was converted by his brother Asaṅga to the Mahāyāna doctrine, when he composed a number of commentaries on various Mahāyāna sūtras, which have, however, been preserved in Chinese and Tibetan translations only. The most important of the later Mahāyānists was Śāntideva, who probably lived in the 7th cent. and was the author of two works. The first, *Śikṣā-samuccaya*, or 'Summary of the Doctrine,' is a manual of the Mahāyāna teaching, consisting of memorial verses (*kārikās*) and a commentary. The other is the *Bodhicaryāvatāra*, or 'Entry into the practice of enlightenment,' a religious poem of great literary merit, inculcating the pursuit of the highest moral perfection. The aim in both works is the attainment of enlightenment as a Bodhisattva by means of infinite compassion and the veneration of Buddhas, the highest wisdom being the belief in nothingness (*śūnyatā*).

An indication of the decay of Buddhism in India is the approximation of its later literature to that of Hinduism. Thus the Mahāyāna sūtras show striking resemblances to the Brāhmanic *purāṇas*, containing, like these, *māhātmyas*, or glorifications of particular localities, and *stotras*, or hymns addressed to various deities. There are also separate *stotras*, like those addressed to Viṣṇu and Śiva; many of them glorify the goddess Tārā, the female counterpart of the Bodhisattva Avalokiteśvara.

A further sign of degeneracy is the increasingly important position which the *dhāraṇīs*, or 'spells,' begin to occupy in Mahāyānist literature. They appear to have existed from the 3rd cent. A.D. They were probably in their earliest form intelligible sūtras containing Buddhist doctrine, but unintelligible mystic syllables gradually began to prevail as the 'kernel' of magic powers. Finally, under the influence of the Śaivite *tantras* they became pure gibberish and entered as essential elements into the Buddhist *tantras*.

The *Tantras* (*q.v.*), which probably date from the 9th to the 11th cent., and are composed in barbarous Sanskrit, represent the final stage in the degradation of Indian Buddhism. They are treatises partly concerned with ritual (*kriyā-tantra*) or rules of conduct (*charyā-tantra*), partly with the esoteric doctrine of the Yogis (*yoga-tantra*). The former class is a revival of the old Brāhman ritual of the *Gṛhyasūtras*, and the mystical syllables contained in them are addressed not only to Buddhas and Bodhisattvas, but also to Śaivite deities. Most of the *tantras*, however, are connected with *yoga*, starting from the mysticism of the Mādhyamika and the Yogācāra schools. The *yogī* here aims at the highest knowledge of nothingness (*śūnyatā*), not only by asceticism and meditation, but by magical rites, hypnotism, and other expedients. The teaching and practice of this *yoga* are a mixture of mysticism, sorcery, and erotics, accompanied by disgusting orgies. Nothing of Buddhism remains in them, for they differ in no respect, except in being described as 'promulgated by Buddha,' from the Śaivite *tantras*, inculcating as they do the

worship of the *linga* and Śaivite gods, and introducing numerous female deities into their cult.

LITERATURE.—H. Kern, *Manual of Indian Buddhism*, Strassburg, 1896, pp. 1-8; L. de la Vallée Poussin, *Bouddhisme: Études et matériaux*, Brussels, 1897; F. W. Rhys Davids, *Buddhism*, London, 1904, Lect. II., *Buddhist India*, do. 1903, chs. ix.-xi.; M. Winternitz, *Gesch. der ind. Literatur*, vol. II, pt. I, 'Die buddh. Literatur,' Leipzig, 1913 (contains very full bibliographical notes on editions, translations, books, and articles on questions of detail—e.g., on the history and authenticity of the Pāli canon, p. 1). A. A. MACDONELL.

LITERATURE (Chinese).—The vast mass of Chinese literature is divided by Chinese scholars into four classes—classics, histories, writings of philosophers, and belles lettres. The term *king*, translated 'classic,' means originally the warp of a web, and by metaphorical extension comes to mean what is invariable, a rule. The Chinese classics are, therefore, those books which are regarded by the Chinese as canonical. Taoism and Buddhism as well as Confucianism have their classics; but in speaking of the Chinese classics one has in view the books of the Confucian canon only. If we speak of them as 'sacred,' we expose ourselves to misleading associations. We do, indeed, meet with the phrase *Sheng King* as designating the Confucian canon, where *Sheng* is the word which is used in Christian literature to express the idea of holiness. Originally, however, it refers to perfection of wisdom ('sage,' 'sagely'), and does not of itself suggest any relation to the divine. Of the perfect Sage it is said:

'He is seen, and the people all reverence him; he speaks, and the people all believe him; he acts, and the people all are pleased with him' (*Doct. of the Mean*, xxxi. 3).

The authority of the classics is due not to any special inspiration, but to their connexion with sages or sagely men who possessed this ideal development of human nature. Degrees of authority are recognized; Mencius, e.g., in some of his pronouncements is held to have fallen short of the perfect balance of Confucius. In so far as education was founded on and almost confined to the classics, their influence has been enormous. Less legitimately their connexion with the sages has given them a pre-eminent share in that reverence, passing into superstition, with which all written and printed paper is regarded by the Chinese. Among the commentators on the classics, Chu Hsi (A.D. 1130-1200) has long been considered to be the standard of orthodoxy. The number of books embraced in the Confucian canon has varied. The Imperial edition of the T'ang dynasty included thirteen books. The present canon, taken in the strictest sense, includes the Five Classics and the Four Books.

1. The 'Five Classics.'—(1) *I King*, 'The Book of Changes.'—The germ of this is the Eight Trigrams, further elaborated into sixty-four, alleged to have been copied by Fu Hsi, a legendary ruler of early China, from the back of a mysterious creature which appeared from the waters of the Yellow River. The diagrams are combinations of whole and broken lines, and are supposed to correspond to the powers of nature—heaven, earth, fire, water, etc. Wen Wang added to the diagrams his 'Definitions'; Chou Kung supplemented these with his 'Observations'; and, finally, Confucius added 'Ten Chapters of Commentary,' and the classic was complete. As being the joint work of these four sages, it enjoys a great reputation. It is a compound of obscure and fanciful speculation and of a system of divination. But with regard to its meaning and its origin, whether it is native to China or may be connected with Babylonia or elsewhere, various opinions have been held by scholars.

(2) *Shu King*, 'The Book of Historical Documents.'—We read of a canon of one hundred

historical documents, ascribed on inadequate evidence to Confucius, with a preface the Confucian authorship of which is even more doubtful. What now exists is this preface and fifty-eight books of documents, the tradition of which is traced back to two scholars, Fu Sheng and An Kuo. The twenty-five books which rest on the sole authority of the latter are gravely suspect. The whole collection of documents, which by no means forms a continuous history, falls into five divisions—the books of T'ang, of Yü, of Hsia, of Shang, and of Chou. The earliest documents refer to a period about 2000 B.C., the latest to 627 or 624 B.C. Whatever be the admixture of legendary matter, the documents are of much historical interest. As a record of early moral and religious ideas their value is also great. The political ideal is a benevolent autocracy, and sovereignty is conferred or withdrawn according to the righteous judgment of God, who raises up the instruments of His providence.

(3) *Shi King*, 'The Book of Odes.'—This comprises three hundred and five odes, with the titles only of six more, traditionally said to have been selected by Confucius from the numerous pieces extant in his time. This account greatly exaggerates his share in the making of the classic. Confucius attached great educational value to the odes. He claims that their design is summed up in this: 'Have no depraved thoughts'; but, while they are free from indecencies, a number of them spring from irregular passion. The subject-matter of the odes is various—praise of virtuous kings and ministers, and of chaste and submissive wives; longing for absent friends, and the joy of reunion; the griefs of neglected officers and forsaken wives; complaints of injustice, remonstrances with careless or wicked rulers; celebration of State banquets and sacrifices. The odes are not arranged in chronological order, but in four classes: (1) 'Lessons from the States,' 15 books of odes from various feudal States; (2) 'Minor Odes of the Kingdom,' 8 books; (3) 'Greater Odes of the Kingdom,' 3 books; and (4) 'Odes of the Temple and the Altar,' 3 books. The earliest odes date from the Shang dynasty (1765–1122 B.C.), and the latest from the time of King Ting (605–585 B.C.) of the Chou dynasty. Much can be gathered from the odes illustrating early Chinese civilization.

(4) *Li Ki*, 'Collection of Treatises on the Rules of Propriety or Ceremonial Usages.'—Of the 'Three Rituals,' the *I Li*, the *Chou Li*, and the *Li Ki*, the last only has a place among the Five Classics. It is a collection condensed from a larger group of documents in the 1st cent. B.C., and augmented and finally fixed in the 2nd cent. A.D. The various treatises, which are not arranged in any logical order, cover a great variety of subjects—birth, capping, marriage, death, mourning, sacrifices, education, and intercourse between persons of different grades and ages. There is much wearisome detail, but it is from this classic that we learn the genius of the Chinese race as embodied in religious and social usages.

(5) *Ch'un Ch'iu*, 'Annals.'—*Ch'un Ch'iu*, lit. 'Spring and Autumn,' a common name for annals, is the only one of the Five Classics ascribed to Confucius himself; but it falls so far short of Mencius's eulogy of the *Ch'un Ch'iu* which he knew that doubt—not supported by other evidence—has been expressed as to whether our *Ch'un Ch'iu* is indeed the Sage's work. It seems to be founded on, and may be merely transcribed from, the annals of Lu, Confucius's native State. It is an absolutely bald record of such things as the beginnings of the seasons, State covenants, wars, deaths of persons in high estate, and extraordinary events. The notices of eclipses are important as affording chronological data. The record runs from 721 B.C.

to the 14th year of Duke Ai, when Confucius's work ends, and is supplemented by his disciples up to the time of his death, 16th year of Duke Ai (478 B.C.). Even Chinese scholars admit that the record is not impartial, and is guilty of concealing the truth. An unfortunate cloud thus rests on the character of its author. The best known commentary on the *Ch'un Ch'iu* is the *Tso Chuan*, which supplements it in a lively style and carries the record to 467 B.C., with one entry of a slightly later date.

2. The 'Four Books.'—(1) *Lun Yü*, 'Analects.'—These were probably compiled by Confucian scholars of the second generation. Conversations with Confucius and disconnected sayings of his, mostly quite brief, form the staple of the work; but bk. 19 contains sayings of disciples only, and these occur also in other books. The main themes are ethics and government. In spite of the general failure even to seek after righteousness, it is maintained that human nature is made for virtue, which is a life-long task. For the attaining of virtue there is sufficient strength, if only it is exerted. Hence the importance of moral culture, though some may be incapable of it. The ideal man (Chun Tzu) is depicted, and such topics as filial piety, friendship, and perfect virtue are discussed. 'Reciprocity'—not to do to others what one would not have done to oneself—is the highest moral rule. There is intentional reticence on extramundane matters. In politics the moral ends of government are emphasized, as is also the influence of a virtuous ruler over his subjects. Bk. 10 contains many particulars as to Confucius's deportment and habits. More important are the scattered estimates of Confucius by himself.

(2) *Ta Hsüeh*, 'The Great Learning,' is so called with reference either to the importance of its matter or to the maturer age of its students. The text appears to be fragmentary. In one recension it forms a section of the *Li Ki*; but as usually printed it is arranged by Chu Hsi, though without authority, into text by Confucius and comment by Tseng Tzu. The book professes to trace the development of morality from investigation of things, through extension of knowledge, sincerity of the thoughts, and rectification of the heart, up to cultivation of the person (which is the central idea); and then on to regulation of the family and tranquillizing of the empire. The work, though not without some excellent moral ideas, falls far short of its promise.

(3) *Chung Yung*, 'The Doctrine of the Mean' (probably rather 'Equilibrium and Harmony'), is ascribed to K'ung Chi, grandson of Confucius, commonly known as Tzu Ssu. This treatise, like the *Ta Hsüeh*, forms a section of the *Li Ki*. Human nature, as given by heaven, is the source of morality. In its original state it is 'equilibrium'; as developed into right action it is 'harmony.' The beginnings of this development lie at hand in ordinary duties and virtues, particularly in 'reciprocity,' which is here developed positively (=the Golden Rule; cf. *ERE* vi. 311⁵). Such development of nature is exhibited in the sages. When it is so developed that fact and ideal coalesce, we have 'sincerity.' Some have this sincerity by innate endowment; some attain to it by moral instruction. It is the *summum bonum*, and has a transforming influence on things and men. Confucius is eulogized extravagantly, though perhaps not precisely identified with the ideal man who is the equal of heaven.

(4) *Mencius* (371–288 B.C.).—Seven books of his teaching remain, which are credibly ascribed to Mencius himself in collaboration with his disciples. The main topics are ethics and politics. Human nature is made for righteousness. This original constitution is the child-heart which good

men preserve. Mencius maintains the disinterested nature of the affections, and asserts as according to nature the subordination of the passions to moral control. Nature in ordinary men and in the sages is one and the same, but for its development ceaseless effort is required. The 'passion nature' is not to be suppressed but disciplined. If nature does not evince its goodness, it is only as a hill constantly grazed on appears bare of verdure. Untoward circumstances should be regarded as divine discipline. Repentance so purges a man that he may even worship God. Mencius's views on politics are mostly developed in conversation with contemporary rulers, with whom he uses, on the whole, an admirable frankness. Government should be benevolent and righteous. Such a government inevitably prospers. Its main concerns are agriculture and education. Above all, the people, who are of the first importance in a State, must have a stable livelihood. If a monarch be utterly unworthy, it is not rebellion to depose him; but this must be done in accordance with the decree of heaven revealing itself in the popular mind. Mencius acutely criticizes the heretical views of his time. In IV. ii. 26 he recommends observation of phenomena as the source of knowledge. His style is lively, the illustrations abundant and mostly apt, and the dialectic keen. He has popularized and given a tone of his own to the doctrines of Confucius, to which his work is the most interesting approach.

LITERATURE.—For the English student the most accessible works are J. Legge's ed. of the *Chinese Classics*, Hongkong, 1861-72, and the volumes of his translations in *SSE tu*,² [1899], xvi. [1892], xxvi. [1885], xxviii. [1885]. In W. A. F. Martin, *Hanlin Papers*, 2nd ser., Shanghai, 1894, there is a chapter on 'Chinese Ideas on the Inspiration of their Sacred Books.' For a more general view of Chinese literature one may refer to A. Wylie, *Notes on Chinese Literature*, London, 1887; H. A. Giles, *A History of Chinese Literature*, do. 1901; W. Grube, *Gesch. des chines. Literatur*,² Leipzig, 1909.

P. J. MACLAGAN.

LITERATURE (Dravidian).—Dravidian literature is the record of the best of the thought of those peoples of S. India who speak languages designated by Kumārila Bhaṭṭa, in the 7th cent. of our era, as Āndhra Drāviḍa. The four principal literary Dravidian languages are now Telugu, Tamil, Kanarese, and Malayālam. According to the Census Report of 1911, Telugu is spoken by 23½ millions of people, Tamil by a little over 19 millions, Kanarese by 10½ millions, and Malayālam by 6½ millions. That the Sanskrit-speaking Aryans were acquainted with S. India at an early period is evident from the mention of the Āndhras by the grammarian Pāṇini (probably c. 350 B.C.), but Aryan immigration into the South came at so late a period that the southern Dravidian languages retained, with but few exceptions, their own characteristic grammatical structure. Their vocabulary was, however, enlarged by the inclusion of Sanskrit technical terms and words or their corruptions. So widely did this Aryan influence on the literature of the South spread in course of time that J. Vinson says:

'Not one Telugu, Kanarese, or Tamil book now in existence is independent of Sanskrit. . . . Writing was not applied to vernacular languages before the 4th century. It was the Aryan Brāhmins or Jains or Buddhists who first having learned the vernaculars used them for literary purposes and then taught the natives to write and compose works. The preliminary or Jain period must have lasted two or three centuries' (*Siddhānta Dipika*, August 1908).

The southern inscriptions of Aśoka show that writing must have been familiar to the people by the 3rd cent. B.C. The present southern scripts are, however, all derived from the Āndhra alphabets of about the 4th cent. of our era. Telugu and Kanarese alphabets date from the 5th cent., while the oldest Tamil cursive writing comes from the 7th century. Previous to any writing or written records the folk-songs of the people,

their moral aphorisms as well as their lyric outbursts of love and war, set as they were to music, were handed down by memory from generation to generation. P. Sundaram Pillai states that more than 19,000 lines of the hymns of the early poet Sambandhar, not later in date than the 7th cent., are still extant:

'Most of them appear to have been uttered impromptu, and all of them being lyrical are set to music. The original tunes are now mostly forgotten. They were lost in the later airs introduced by Aryan musicians of the north' (*Some Milestones in the History of Tamil Literature*, p. 5).

The intruding Aryan influence so blended with the indigenous Dravidian element that the Aryan lute (*vinā*) completely ousted the primitive Dravidian musical instrument (*yāl*), no reliable description of which remains on record. Similarly, the old grammars and the grammars of the Pāṇinian and Āndhra school of grammarians have been superseded by the now standard authority for all classic compositions, the *Nan Nūl*, composed by a southern Jain grammarian, Pavanandi, about the beginning of the 13th century. The *Nan Nūl* lays down the rule that 'to reject the old and obsolete usage and to adopt new and modern usage is not an error but a yielding to the necessities of time and circumstance' (G. U. Pope, *Third Tamil Grammar*, Madras, 1859, Rule 462, 'Nan Nūl'). Notwithstanding this salutary rule, Dravidian prose and poetry are considered worthy of commendation by the learned only when they are as different from the spoken vernaculars as Anglo-Saxon is from modern English. The more they hold themselves aloof from the colloquial language of the time and people, and the more they are swathed in archaisms, the more they merit the praise of *pandits*. The earliest, and therefore the purest, Dravidian literature, as freest from Aryan influences, lies enshrined in works dating from about the 2nd cent. of our era. Collections known as the *Ten Classical Poems* are assigned to a very early date; these were succeeded by *Eight Compilations* of various authors. Eighteen shorter stanzas, including the moral aphorisms of the *Kural* of Tiruvalluvar, followed, and the four hundred quatrains of the *Nāḷadiyār*, said to have been composed by a Jain poet of about the 8th century. The latter quatrains show strong Aryan influences, dealing as they do with the ordinary topics of Indian metaphysics—the pain of existence, transmigration of the soul, and release therefrom. Some of the quatrains are mere translations from such Sanskrit epics as the *Mahābhārata*. Pope, who translated and annotated the *Nāḷadiyār* in a scholarly edition, described it as 'The Bible of the Cultivators of the Soil.' Its style, however, is so classical that no cultivator of the soil could understand the meaning of the verses unless explained to him in the language that he is accustomed to speak. The moral epigrams of the *Kural* and *Nāḷadiyār*, in couplets and quatrains, have been acclaimed as the highest achievements of Dravidian literature. Pope (*Kural*, p. xiv) truly says of the *Kural* (and the same applies to the *Nāḷadiyār*) that a line 'is often little else than a string of crude forms artfully fitted together.' Style such as this, framed on Sanskrit corrupt compounds, can hardly claim the title of literature, however epigrammatic or moral the underlying and hidden thought may be. The *Nāḷadiyār* is, nevertheless, well suited to fill its present rôle as a literary puzzle for Tamil students at the Madras University, or for Honours candidates at other Universities.

To the same period, from the 2nd cent. to the 10th cent., are ascribed the chief versified Tamil romances—the *Maṇi Mekhalai*, the *Silappadhikāram*, and the most perfectly constructed and the most untranslatable, on account of its open erotic sentiment, of all Tamil romances, the

Jivakachintamani. These poems, amid a surrounding of love and romance, give a vivid view of early Jain and Buddhist life in S. India and reliable accounts of the doctrines of the Jain and Buddhist faiths. They still await translation into English to make them available for historical purposes. No translation could possibly convey the peculiar charm of the stately and leisured style of the original, its melodious and harmonic sequences of sound, and the subtlety of its quaint and involved conceits of metaphor. J. Vinson (*Manuel de la langue tamoule*, p. xlv) has given a valuable and balanced judgment respecting the comparative value of the best of Dravidian literature.

Malgré tout, cependant, la littérature tamoule est secondaire. A part peut-être les recueils de sentences morales, il n'est pas un poème de quelque importance dont une traduction complète puisse être lue sans fatigue par des Européens. Ses descriptions y sont diffuses, monotones, pleines de mauvais goût et d'exagérations choquantes, conformes d'ailleurs à un type uniforme donné. Ses poèmes d'amour ne sont pas plus variés, et les poèmes de guerre se ressemblent tous; ce sont proprement des jeux d'esprit, des amplifications de rhétorique sur une formule générale et sur un canevas minutieusement réglé. L'invention et l'imagination ne peuvent s'y exercer que sur les détails, sur les expressions, sur la mesure, sur la forme extérieure en un mot.

This Aryan influence on the religious literature (see DRAVIDIANS [South India]) and even on the indigenous folk-songs of the people has had the result that without a previous knowledge of Sanskrit much is almost unintelligible. According to C. E. Gover (*Folk-Songs of Southern India*, p. 14), who gathered together folk-songs from the varied peoples of S. India,

the foreign element progressed till almost the whole written literature of the country became Brahmanic. Indigenous poetry fell into undeserved contempt or, where that was not possible, was edited so unscrupulously that the original was hidden under a load of corruption.

This Aryan influence so permeated the whole spirit and vitality of indigenous literature that Appakavi, a grammarian of the 17th cent., contemptuously declared that Telugu adaptations from the Sanskrit were merely for the use of women and Śūdras. The distinguished Dravidian scholar, G. V. Rāma-mūrti, who quotes the above in his *Memorandum on Modern Telugu* (Madras, 1913, p. 3), further states that, should a Brāhman read the *Rāmāyaṇa* for religious merit, he reads the Sanskrit original and not a Telugu adaptation. The same writer, who is an ardent advocate for a reformed pure Dravidian literature freed from Sanskrit corruptions, states only the truth when he says:

A Sanskrit original, whether it is the *Rāmāyaṇa* or *Mahābhārata*, is much simpler in style and language than a translation of it' (*op. cit.* p. 6).

Nevertheless, the simple peasant values these Telugu, Tamil, Kanarese, or Malayālam imitations of, or adaptations from, the Sanskrit poems, epics, and *purāṇas*. Read as they are by professional reciters under the village tree during the long star-lit evenings, they hold the simple folk in spellbound wonder and awe as they listen to a running translation and commentary in the current vernacular. They teach the village folk the simple story of life, of the rewards and joys of those who had faith in the gods and thereby gained salvation through the grace of the deity, of the triumph of good over evil, and, above all, the loved stories of wifely devotion and patient suffering under unmerited calamities.

LITERATURE (Egyptian).—The great bulk of extant Egyptian sacred literature may be

grouped in three divisions: (1) the Pyramid Texts; (2) the *Book of the Dead*, with its related group of books, the *Book of Am Duat* (or of knowing that which is in the under world), the *Book of Breathings*, the *Book of Gates*, etc.; and (3) miscellaneous writings, embracing a number of hymns to various gods, Ra, Osiris, Hāpi, Amen, such writings as the *Lamentations*, and the *Festival Songs of Isis and Nephthys* and the *Litanies of Seker*, and a number of legends concerning the gods and their relations to mankind.

1. The Pyramid Texts.—These constitute by far the most important body of Egyptian sacred writings known to us, not only because they exhibit the religious beliefs of the nation at a very early period in its history, but also because the remains of primitive traditions embedded in them enable some of the Egyptian beliefs to be traced back even to pre-historic times, and because the development manifest in the later versions of them shows how gradual but important changes were happening in Egyptian religious belief within a definite period.

The great pyramids of the IVth dyn. kings have no interior inscriptions, and it was supposed that this was true of all other pyramids also, until in 1880 Mariette's workmen at Saqqarah managed to effect an entrance to the pyramid of Pēpy I. of the VIth dyn., and later on to that of Merenra of the same line, and found that both contained lengthy hieroglyphic inscriptions, hewn in the stone and coloured green. Eventually inscriptions were found in five pyramids, of which the oldest is that of Unas of the Vth dyn., and the others are those of Teti, Pēpy I., Merenra, and Pēpy II., all of the VIth dynasty. The inscriptions thus cover a period of about 150 years, from 2625 to 2475 B.C., or, on Petrie's Sinai dating, from about 4210 B.C. onwards. Immediately after their discovery the texts were edited by Maspero, and the attention devoted to them has been steadily increasing. The best edition at present available is that of Sethe (*Die altägyptischen Pyramidentexte*, Leipzig, 1908-10).

These texts are, then, the oldest body of religious literature extant in the world, and a great deal of the material embodied in them carries us back to very much earlier times than their own sufficiently early date, referring to primitive customs and conditions of life which had long been extinct by the time of the Vth and VIth dynasties. The later versions show traces of editing, which has been undertaken in order to meet the new developments of religious thought arising in a period of 150 years. Broadly speaking, the object of these writings is to secure blessedness in the after life to the king on the walls of whose tomb they are inscribed; for there is as yet no trace of any idea that the immortality postulated for the Pharaoh may be also the property of the common people. The whole contents of the texts are directed towards the one purpose of securing entrance to the abodes of bliss for the dead king, and unification with the gods when his entrance is secured. These contents fall under the following divisions: (1) funerary ritual and ritual of mortuary offerings, (2) magical charms, (3) ancient ritual of worship, (4) ancient hymns, (5) fragments of ancient myths, and (6) prayers on behalf of the dead king.

The material is arranged in sections, each of which is headed by the words 'Utter (or recite) the words.' Of these sections the pyramid of Unas contains 228, and the other pyramids make up the number to 714. The amount of material is thus considerable, as may be judged from the fact that in Sethe's edition it fills two quarto volumes with over 1000 pages of text. It is arranged in the most haphazard manner possible, the scribes re-

sponsible for the different versions having made (as usual in Egyptian religious writings) not the slightest attempt to group together the various types of matter enumerated above. The hymns scattered through the collection already exhibit a familiar poetical arrangement, in the form of couplets showing parallelism in the ordering of words and thoughts; and the texts are not devoid of a certain wild and rude power of imagination which entitles them to rank as literature. Thus, when the dead king rises to the vault of the heavens,

‘Clouds darken the sky,
The Stars rain down,
The Bows [a constellation] stagger,
The bones of the hell-hounds tremble,
The gatekeepers are silent
When they see king Unas
Dawning as a soul.’

And there is some power of fancy in the passage which pictures the king, after he has passed the lily-lake and drawn near to the gates of heaven, being challenged by voice after voice, out of the world of the dead, ‘Whence comest thou, son of my father?’ until, at last, when answer has been duly made to all the challengers, they fall silent, and the dead Pharaoh enters unopposed upon his heavenly kingdom.

The life of blessedness which the Pyramid Texts contemplate has already ceased to be that which we may take to be the earliest form of the Egyptian conception of the life after death—that of sojourn at and about the tomb. The deceased king’s realm is in the sky, and, moreover, in the east of the sky—this in absolute contradiction to later belief, which always placed the abode of the blessed dead in the west. In the sky the king may develop either of two destinies: he may become a star, or he may be associated with Ra, the sun-god, finally becoming identified with him. These two destinies no doubt represent two different strata of earlier belief, which have been slumped together according to the regular Egyptian custom of associating incompatibles without attempting to reconcile them.

The earliest form of belief represented in the texts is solar; the deceased is constantly identified with Ra, and the Osirian belief is referred to in terms which show that it was held to be incompatible with, or even hostile to, the solar form. Certain prayers are designed to protect the pyramid and its temple against the intrusion of Osiris; and other passages show that ‘to the devotee of the Solar faith, Osiris once represented the realm and the dominion of death, to which the follower of Re was not delivered up’ (Breasted, *Development of Religion and Thought in Ancient Egypt*, p. 140). Gradually, however, and, as the texts show, even within the Pyramid Age, the Osirian faith began to assert its power and to appropriate part of the place which the solar religion had formerly occupied. In doing so the Osirian conception of the life after death, originally one of an underworld, becomes more or less solarized, and the two faiths interpenetrate to some extent; but, on the whole, the Pyramid Texts present us with the picture of the gradual assertion of superiority on the part of the Osirian faith over the earlier solar creed. It would appear that in this transformation we witness the triumph of popular over State religion, as it is evident that, to start with, the solar faith was the State theology, while the cult of Osiris was always a popular form of religion.

On the whole, there is no more interesting body of religious literature in the world than this, the most ancient of all, and its interest is due, not to its own intrinsic value alone, but also to the fact that it takes us nearer than any other religious writing to the primitive ideas of mankind as to the modes of life in the world after death. Passages

such as those which describe how the dead king in the other world lassoes and disembowels the gods, cooking them in his kettle, and eating them,

‘Their great ones for his morning meal,
Their middle-sized ones for his evening meal,
Their little ones for his night meal,’

so that ‘their magic is in his belly,’ have their own value as literature for the wild power and vigour of imagination which they reveal; but they are still more valuable as survivals of a period when the Egyptian, whom we have never seen save in the decent, ordered civilization of the dynastic period, was actually an unregenerate savage, with beliefs on the same intellectual level as those of other uncivilized races.

2. The Book of the Dead.—Next in importance to the Pyramid Texts comes the collection of sacred writings which has for long been regarded as representative of Egyptian religious literature, and is most widely known by the totally erroneous title of *The Book of the Dead*. The only justification for the use of this title is that the texts more or less regularly used in the collection were, like the Pyramid Texts, entirely designed for the advantage of deceased persons in the other world. The Egyptians themselves called the collection ‘The Chapters of Pert em Hru,’ or ‘The Coming Forth by Day’ (or ‘Ascending by Day’), a title whose significance is somewhat obscure, though the contents of the chapters suggest that it may have something to do with the powers which the knowledge of them conferred upon the deceased to go in and out from his tomb, and to live an unfettered life in the other world. Concerning the early history of the *Book of the Dead* we have no certain information. In fact, there is practically no literature extant from the period between the VIth and the XIth dyn. to show the development of religious thought. In the middle kingdom, however, under the XIth and XIIth dynasties, there begins to appear a series of texts which are regarded by some as an early recension of the *Book of the Dead*. These texts are written no longer on the walls of tombs, but on the inner surface of the cedar coffins in which the well-to-do people of the period are buried. They are generally written in black ink, and are ornamented with coloured borders representing the usual funerary offerings to the deceased. About one-half of the material thus preserved is taken from the Pyramid Texts, the other half consisting of material which is met with later in the genuine *Book of the Dead*; so that, really, the inscriptions of this period occupy a middle position between the old texts, whose object was the service of the king alone, and the later book, which was a popular compilation intended for the use of all and sundry. It might be useful, therefore, to distinguish these Middle Kingdom texts by some such title as that of ‘Coffin Texts,’ which Breasted employs to denote them. The writing of these texts is marked by the same carelessness and inaccuracy which characterize the later versions of the *Book of the Dead*. The scribe’s sole object was to cover the prescribed surfaces as rapidly as possible; it was never expected that his work would be seen again, and consequently he took the least possible trouble with it. In one instance the same chapter is repeated five times over in a single coffin. Apparently the thought that by his carelessness he might be prejudicing the safety of his patron in the other world did not worry the Egyptian scribe.

The Coffin Texts are intermediate in character, as in time, between the Pyramid Texts and the *Book of the Dead*. The old solar ideas of the Pyramid Texts are still present; but the Osirianizing process, already begun, has been carried a stage further, and now we have indications of the

intrusion of the essentially Osirian idea of an under world into the old solar idea of a celestial heaven. Breasted epigrammatically sums up the dip of the balance in the Coffin Texts towards the Osirian side by the remark that in the Pyramid Texts Osiris was lifted skyward, while in the Coffin Texts Ra is dragged earthward (p. 277). The idea of a Western Elysium, in contradistinction to the solar idea of an Eastern one, begins to appear, and the character of the Elysium begins to approximate to that of the Sekhet Aaru, 'Field of Bulrushes,' as found in the *Book of the Dead*. Thus one of the chapters of the Coffin Texts is concerned with 'Building a House for a Man in the Nether World, digging a Pool, and planting Fruit trees.' Already the Coffin Texts exhibit instances of the desire, which reaches full development later, of furnishing the deceased with words of power to enable him to assume various transformations. Various texts enable him to transform himself into 'the blazing eye of Horus,' into an 'akh'-bird, or into 'the servant at the table of Hathor'; and along with this development comes another which reaches an extraordinary pitch in the *Book of the Dead*—that of charms to protect the deceased against the dangers of the under world. Thus there are charms for 'preventing the head of a man from being taken from him,' for repulsing serpents and crocodiles, for preventing a man from being obliged to walk head downwards, and so forth. This kind of rubbish, towards which the Egyptian mind had an extraordinary inclination, increases steadily in amount until the really valuable morality of the *Book of the Dead* is almost choked under its senseless bulk.

The *Book of the Dead*, properly so called, makes its appearance with the New Empire in the 16th and following centuries B.C., under the XVIIIth and XIXth dynasties. The change from inscriptions on tomb-walls to inscriptions on the inner surfaces of coffins is now followed by a further change: the texts which form the new compilation for the use of the dead are now written on rolls of papyrus, and placed in the coffin. The various versions extant from the XVIIIth to the XXIIInd dyn. have mainly been derived from tombs near Thebes, and therefore the *Book of the Dead* of this period is known as the Theban Recension. It cannot be too clearly understood that there never was a standard text, or anything even remotely approaching to such a thing. Probably no two papyri agree as to the number of chapters, or the contents of them, and the divergencies are extraordinarily great. The size and content of the so-called *Book of the Dead* which was buried with any particular man depended entirely upon the power or the will of his friends to purchase a satisfactory copy for him or the reverse. The poor man has a meagre roll a few feet in length, containing a pitiful selection of a few of the more important chapters; the rich man may have a sumptuous version from 60 to 100 ft. in length and containing anything up to 120 or 130 chapters. In the XVIIIth dyn. the scribes began to ornament the text with designs in black outline, known as vignettes. Little by little the practice developed, and in the XIXth dyn. the illustrated papyrus had become the rule. The illustrations are often beautiful pieces of illumination, and sometimes attention has been given to them at the expense of the text.

In the most notable papyri of the XXIst dyn. the development of the artistic work continues at the expense of the text, which has become very corrupt, and also begins to contain passages which are not found in the older versions. This tendency is accentuated in the XXIIInd dyn. papyri, which contain sections that, strictly speaking, have no connexion with the *Book of the Dead*. And from

this time onwards there is a falling off in the versions, until a time is reached when no copies of the book seem to have been written. This period coincides with the decline of the power of the priests of Amen-Ra.

In the XXVIth dyn., however, the book takes a new lease of life. It now appears to have been reduced to some sort of order, to have been, in fact, edited and systematized. The result of this editing is the Saïte Recension. It contains four chapters which have no counterparts in the earlier versions.

In the Ptolemaic period we have a version which is best represented by the Turin Papyrus, from which Lepsius prepared his well-known edition. It is the longest extant collection of texts, containing nominally 165 chapters—some of them, however, are really vignettes, and others duplicates, the number of actual chapters being 153.

Meanwhile a number of short religious works had been compiled, containing what at this period was deemed to be most essential in the old versions of the book, and these are more commonly found in the end of the Ptolemaic period than the full version. These are known as the *Shai-en-Sensen* ('Book of Breatblings'); they contain no hymns, no addresses to the gods—nothing, in fact, which does not directly refer to the life of the deceased in the world beyond. They may be regarded as an epitome of all that the Egyptian hoped to obtain in the spirit world.

In the Roman period there are still found small rolls of papyrus inscribed with statements referring to the happiness of the deceased in the next world; and even in the early centuries of the Christian era the knowledge and use of the book were not quite extinct, for selections from it are found on coffins as late as the 2nd century.

If we take into consideration the fragmentary versions in use as late as the 2nd cent. A.D., the actually extant documents of Egyptian religion, the Pyramid and Coffin Texts, and the *Book of the Dead*, cover a period of practically 3000 years on the most limited system of dating; and, allowing for the fact that even in the earliest texts theological ideas are to a great extent developed and stereotyped, we shall probably not exceed reasonable limits in saying that these documents represent the theological development of at least 5000 years. Petrie's system of dating would, of course, considerably extend this period.

The object of the *Book of the Dead* was simply and solely to secure for deceased persons eternal life and all the advantages which the Egyptian considered desirable in the world beyond the grave (cf. art. DEATH AND DISPOSAL OF THE DEAD [Egyptian]). There are chapters the knowledge of which was intended to preserve the body from decay or the ravages of certain animals—e.g., ch. xxvi., 'Of driving away Apshait' (the beetle or cockroach), and ch. xlv., 'Of not suffering corruption in the under world'; chapters providing charms against the serpent Apepi, the serpent Rerek, and the crocodile that comes to take away the charm from the deceased; chapters 'Of not letting a man be burnt or scalded in the under world,' and 'Of not eating filth or drinking filthy water in the under world,' and so forth.

Generally speaking, it may be said of these chapters, and of many others of similar import, that they are somewhat melancholy reading. Allowance has, of course, to be made for the fact that they are full of allusions to a mythology the knowledge of which has almost absolutely perished, and that these allusions may have been full of signification to the Egyptian, though they are meaningless to us. It seems, however, that very early the sense of a number of the references had

already been lost, as there are several chapters which contain glosses on the various allusions, and these glosses do not always agree. Very often the chapters do not rise above the level of mere vulgar incantation. Sometimes they consist simply of an endless series of names supposed to have magical power; sometimes they are merely ludicrous—e.g., ch. xxxiii., 'Of repulsing serpents in the under world':

'Hail, thou serpent Rerek, advance not hither! Behold Seb and Shu. Stand still now, and thou shalt eat the rat which is an abominable thing unto Rā, and thou shalt crunch the bones of a filthy cat.'

The most important chapter of the book is cxxv., which embodies the Egyptian conception of the judgment of the dead. It consists of three parts: the introduction, the famous 'Negative Confession,' and a concluding text, and is fully discussed in artt. CONFESSION (Egyptian), and ETHICS AND MORALITY (Egyptian).

The fundamental religious idea of the Egyptian mind was that of immortality, and it is to the Pyramid Texts and the *Book of the Dead* that we owe our knowledge of the extraordinary development which this idea had reached in Egypt at the earliest historical period, of the wonderful persistency with which it was maintained and worked out into almost endless detail, and, most of all, of the strange resemblances which the Egyptian conception of resurrection and immortal life presents to the Christian conception. The *Book of the Dead* is not to be taken as in any sense a complete statement of Egyptian belief—a thing which as yet is conspicuously lacking. The name sometimes given to it, 'The Egyptian Bible,' is a total misnomer. But in the working out of its central theme it affords unquestionable evidence of the fact that the conception of immortality and resurrection held by the ancient Egyptian was such as no other religious system of antiquity ever approached.

Little is told us of whether any intercourse was expected in the other world with the souls of those who had been known on earth, but chs. lii., cx., and clxxxix. at least indicate that the deceased looked forward to recognizing and being protected by the spirits of his father and mother.

The other sacred books related to the *Book of the Dead* may be briefly dismissed.

The *Book of the Overthrowing of Apepi* contains fifteen chapters treating of the various methods of destroying this enemy of souls in the under world. Its material is largely borrowed from the *Book of the Dead* (Papyrus of Nesi-Amsu, British Museum).

The *Book of Knowing that which is in the Duat* contains a description of the twelve parts of the under world through which the bark of the sun journeyed during the hours of night. It tells the names of these divisions, of the gates and gods belonging to each, and states the advantages to be derived from a knowledge of these names.

The *Book of Breathings* is largely a compilation from the *Book of the Dead*, and in the later periods was buried with the dead, being placed under the left arm, near the heart.

3. Miscellaneous writings.—Under this heading are to be included numerous hymns of Rā, Osiris, Hapi, Ptah, and other gods (cf. art. HYMNS [Egyptian]); the *Festival Songs of Isis and Nephthys*; the *Litanies of Seker*; the *Lamentations of Isis and Nephthys*, and other similar works.

The *Festival Songs and Lamentations* are poems dealing with the Osirian myth, and supposed to be recited by the two goddesses with a view to effecting the resurrection of the dead Osiris. The ancient *Legends of the Gods* and their relations to mankind are found in inscriptions in several tombs (notably in the tomb of Seti I.) and in various papyri, and have been frequently translated.

In addition there are certain books which do not strictly come under the heading of 'sacred,' but have yet a semi-religious character. Among them may be mentioned the *Precepts of Ptah-hotep*, of *Gemnikai*, of *Ani*, and of *Khensu-hotep*, writings essentially of the same character as the book of Proverbs, while the *Lay of the Harper* (or *Song of King Antef*) may be compared with Ecclesiastes, and a remarkable comment on the social and moral condition of the land in the Middle Kingdom is found in the *Admonitions of Ipuwer*.

LITERATURE.—I. PYRAMID TEXTS.—Versions: G. Maspero, *Les Inscriptions des pyramides de Saqqarah*, Paris, 1894; K. Sethe, *Die altägyptischen Pyramidentexte*, Leipzig, 1908–10. Examples of the texts are given by E. A. W. Budge, *Egyptian Religion*, London, 1908, and *Literature of the Egyptians*, do. 1914. The best summary of their contents and appreciation of their importance is found in J. H. Breasted, *Development of Religion and Thought in Ancient Egypt*, do. 1912.

II. THE BOOK OF THE DEAD.—Versions: Coffin Texts, P. Lacau, 'Textes religieux,' *RTV* xxvi. [1904]–xxvii. [1905], xxviii. [1906]–xxxiii. [1911]; R. Lepsius, *Älteste Texte des Totenbuchs*, Berlin, 1867; S. Birch, *Egyptian Texts of the Earliest Period from the Coffin of Anamu*, London, 1880; Budge, *Facsimiles of Egyptian Hieratic Papyri in the British Museum*, do. 1911.

BOOK OF THE DEAD PROPER.—Versions: E. Naville, *Das ägypt. Totenbuch*, Berlin, 1880; Lepsius, *Türin Papyrus*, Leipzig, 1842; Birch, tr. of the Turin Papyrus in C. C. J. Bunsen, *Egypt's Place in Universal History*, Eng. tr., v., London, 1867; Budge, *The Book of the Dead*, do. 1898 (contains also a translation of the *Book of Breathings*); Maspero, hieroglyphic transcript with Fr. tr. of abridged version of the *Book of the Dead*, in *Les Monies royales de Dér-el-Bahari*, Paris, 1880.

III. MISCELLANEOUS WRITINGS.—For hymns, etc., cf. Literature in art. HYMNS (Egyptian). A good popular rendering of the *Legends of the Gods* is found in M. A. Murray, *Ancient Egyptian Legends*, London, 1913. The *Admonitions of Ipuwer* have been rendered by A. H. Gardiner, *The Admonitions of an Egyptian Sage*, Leipzig, 1908.

IV. GENERAL REFERENCES.—A. Erman, *Handbook of Egypt. Religion*, Eng. tr., London, 1907; A. Wiedemann, *Rel. of the Anc. Egyptians*, Eng. tr., do. 1897; F. Reisner, *The Egyptian Conception of Immortality*, do. 1912; A. H. Sayce, *The Rel. of Anc. Egypt*, Edinburgh, 1913.

J. BAIKIE.

LITERATURE (Indian Vernacular).—The literature of the modern vernaculars of India may be divided into two main classes—that written under Musalmān, and that written under Hindu, influence. The former dates from the Mughul conquest, and was composed mainly in the Urdū form of Hindōstānī. Up to the introduction of printing at the beginning of the 19th cent. it was nearly all in verse and was confessedly written on Persian models and in Persian metres. The earliest works date from the 16th cent. A.D., but the standard of composition was set by Wali of Aurangābād in the Deccan, who flourished at the end of the 17th cent., and who is known as 'the Father of *Rehta*,' *Rehta* being the technical name for the form of Hindōstānī used by these poets. From the Deccan the taste for this literature spread to Delhi, where Wali found numerous successors, and thence to Lucknow. The most celebrated of the Delhi poets were Rafi'u's-Saudā, best known for his satires, and Mir Taqi, famed for the purity of the language in which his *Ghazals* and *Mathnavis* were expressed. Both these flourished in the 18th century. Among the Lucknow poets the most celebrated was Mir Hasan (18th cent.). Hindōstānī prose hardly existed as literature till the foundation of the College of Fort William in Calcutta at the commencement of the 19th century. It began with the preparation of text-books for students at the College, and since then has had a prosperous existence. It has been specially successful in the department of fiction. The novels of such authors as Ratan Nāth Sarshār and 'Abdu'l Halīm Sharar are worthy of a wider circle of readers than that to which they are

condemned by the language in which they are written.

Although the above literature grew up under Muslim auspices, its language has been successfully adopted by many educated Hindus, some of whom are looked upon at the present day as masters of an exceptionally pure style.

The beginnings of Hindu literature in the modern vernaculars were religious. In the North, up to about the 16th cent. A.D., the language of religion was Sanskrit, but, in the South, vernaculars were employed at a much earlier period. There is a great collection of Śaivite texts in Tamil, said to go back to the 2nd or 3rd century. The more important of them are described in the art. DRAVIDIANS (South India). To these can be added a long list of Vaiṣṇavite works in the same language dating from before the time of Rāmānuja (12th cent.). The most noteworthy of these are referred to by A. Govindāchārya in two papers in the *JRAS* (1910, p. 565 ff., and 1911, p. 935 ff.). The Dravidian doctors employed both Sanskrit and Tamil for their writings. As a rule, it may be said that the Vādgalais, or Northern Tamils, wrote in Sanskrit, while the Teṅgalais, or Southerners, wrote in Tamil (cf. Govindāchārya, in *JRAS*, 1912, p. 714).

In Northern India vernacular religious literature is of enormous extent and, considered merely as literature, of great merit. It owes its origin to the spread of the Vaiṣṇavite Bhakti-Mārga under Rāmānanda and his followers (see art. BHAKTI-MĀRGA, vol. ii, p. 539 ff., esp. 546). All the great writers of this early period belonged to humble ranks of life, and were not Sanskrit scholars. Each therefore wrote in his own vernacular.

'The greatest of all the moderns, Tulsī Dās, although a Brāhman by caste, was abandoned by his parents at birth, and was picked up and educated by a wandering ascetic. Kabir was a weaver, and Dādū a humble cotton-carder. Nāṁdev, the founder of Marāṭhā poetry, was a tailor, and his most famous successor, Tukārām, a struggling Śūdra shopkeeper. Truvalluvar, the brightest star in the South Indian firmament, was a Pariah, the lowest of the low; and Vēmana, the most admired of Telugu writers, was an untaught peasant.'¹

In Northern India this bhakti-literature falls into two groups—that devoted to Rāmachandra, and that devoted to Kṛṣṇa (Krishna). In both cases it includes not only devotional works, but all branches of literature ancillary thereto.

In the art. BHAKTI-MĀRGA (vol. ii, p. 543) it has been pointed out that the foundation of the religion is the belief in the fatherhood of God. This is more especially true as regards that literature in which Rāmachandra is regarded as the most perfect presentation of the Deity, and on this idea is based some of the most lofty poetry that India, ancient or modern, has produced. In the Ganges valley, Kabir (15th cent.) preached the doctrine in wise and pithy sayings that are still household words in Hindōstān. An offshoot from his teaching was the Sikh religion, whose sacred book, the *Adi Granth*, is a collection of hymns by various authors formed by degrees in the course of the 16th century (see art. GRANTH, SIKHS). Both Kabir and Nānak (the founder of Sikhism) were more or less sectarian in their teaching. A greater man than either, but the founder of no sect, was the famous poet Tulsī Dās (16th–17th cent.), the author of the religious epic entitled the *Rāma-charita-mānasa*, or 'Lake of the Gestes of Rāma,' and of at least eleven other important works. His influence down to the present day over the people of Hindōstān cannot be overrated. Tulsī Dās was a native of Awadh (Oudh), and this country was the scene of Rāmachandra's early life and of his latest years. The poet, therefore, wrote in the Awadhī dialect of Eastern Hindi, and this form of speech has ever since, in the Ganges valley, been the only one employed for celebrating the deeds of Rāma-

chandra, and, indeed, for epic poetry of every description.

In Hindōstān proper, numerous followers and imitators of Tulsī Dās have narrated the story of Rāmachandra, and the same subject has also, though to a less extent, attracted writers in other parts of India. In Bengali there is the 16th cent. *Rāmāyaṇa* of Kīrttibās Ojhā, which is still recited at village festivals. In Marāṭhī, the learned Mōrōpant wrote several poems dealing with Rāma, but the favourite deity of this language is Kṛṣṇa. In the south of India we have a Tamil *Rāmāyaṇa* written by Kamban in the 11th cent., a Malayālam *Rāma-charita* of the 13th or 14th cent., and a Kanarese *Rāmāyaṇa* by Kumāra Vālmiki, said to be one of the oldest works in that language.

The literature based on the presentation of Kṛṣṇa as the Deity differs from the Rāma-literature in one important particular. The love of God is represented, not as that of a father to his child, but as that of a man for a maid. The soul's devotion to the Deity is pictured by the self-abandonment to Kṛṣṇa of his queen Rādhā, and all the hot blood of Oriental passion is encouraged to pour forth one mighty torrent of prayer and praise to the divine Lover. The whole idea is based on sexual relations; and, though the mystics who first wrote of it did so in all purity of conscience, in later years it developed into erotic poetry of a character too gross for description.

It is natural that most of the literature of this school should take a lyric form. According to tradition, Kṛṣṇa's earlier exploits centred round the town of Mathurā, and it was from this locality that his worship in the Ganges valley spread to other parts of Northern India. Hence, just as the Rāma-literature is couched in Awadhī, so the Kṛṣṇa-literature of Hindōstān is mainly recorded in the Braj Bhākhā dialect spoken round Mathurā. Its most famous writer was Śūr Dās (16th cent.), the blind bard of Agrā. His *Sūra-sāgara*, or 'The Ocean (of songs) of Śūr Dās,' and the epic of Tulsī Dās are considered to have exhausted between them all the possibilities of Indian poetry—no later poet could write anything original. In spite of this dictum, one later writer in Braj Bhākhā, Bihārī Lāl of Jaipur (17th cent.), composed the *Sat Saī*, or 'Seven Centuries' of verses, a collection of seven hundred masterpieces in dainty miniature painting of scenes or incidents in the life of Kṛṣṇa. Numerous other writers connected with this phase of religion followed Śūr Dās in the Ganges valley. In Bihār, to the east, he was preceded by Vidyāpati Thākur (15th cent.), who, however, wrote in his own language, an old form of Bihārī. He was the first of the old master-singers of Eastern India, and was followed and imitated by Chaitanya and other religious lyric poets in Bengali. Assam, further east, and, in the west, Rājputānā, Kashmīr, Gujārāt, and the Marāṭhā country have all been prolific in this style of composition, the most famous writers being Mirā Bāī, the queen poetess of Māwār (15th cent.), and Tukārām (17th cent.) the Marāṭhā. In the south of India we have the great Tamil hymnology, the *Nāṭayira-prabandham*, some of the contents of which are said to date from the 12th cent., and, in Telugu, the *Bhāgavatā* of Bammara Pōtarāja, which ranks as a classic. There are also several works in Kanarese.

Reference has already been made to the Śaivite literature of S. India. There is a considerable literature devoted to Śiva in the north. The best known is that of Bengal, where the worship of Durgā, the *śakti*, or energetic power of Śiva, is very popular. There were numerous writers who dealt with the worship of this goddess. The most admired is probably Mukundarāma Chakravartī (17th cent.), author of the *Śrīmantā Saudāgar*,

¹ G. A. Grierson, in *IGI* II. 415.

or 'Adventures of the Merchant Śrīmanta,' and the *Chandī*, a poem in praise of the goddess Durgā. Extracts from the latter have been translated into English verse by E. B. Cowell (*JASBe* lxxi. [1902], extra no.). There is also a considerable Śaivite literature in Kashmir. This directly deals with Śiva, rather than with his *śakti*, and is more in agreement with the Śaivite writings of the South described in the art. DRAVIDIANS (S. India).

A few lines must be devoted to the non-religious vernacular literature of India. Of great importance are the bardic chronicles of Rājputānā, Gujarāt, and the Marāṭhā country. The name of the earliest and most famous of these, the *Prithvirāj Rāsau* of Chand Bardāi (12th cent.), is familiar to students of J. Tod's *Rajasthan* (London, 1829-32, frequently reprinted), in which the poem is freely quoted. A semi-historical work, the *Padmāvatī* of Malik Muḥammad, is an epic poem in Awadhī of considerable merit.

The technical study of poetics gave rise to a large literature, to a certain extent ancillary to the literature of religion. Its most famous writer in Northern India was Keśav Dās of Bundelkhāṇḍ (16th cent.), who wrote in Braj Bhāṣā.

The introduction of printing into India has given an immense impetus to the writing of books. It is impossible to deal with the results of this great increase in the mass of reading matter, good and bad; it must suffice to say that, so far as Hindu literature is concerned, it has tended more and more to follow English models. The only writer in the vernacular who has gained a high reputation in both Europe and Asia on the grounds of originality and imagination is the modern Bengali poet Rabindra Nāth Tagore.

LITERATURE.—The only work attempting to deal with the vernacular literature of India as a whole is R. W. Frazer, *A Literary History of India*, London, 1898; G. A. Grierson, in *IGI*, vol. ii. (Oxford, 1908), ch. xi., may also be consulted. Brief and incomplete accounts of the literatures of most of the literary languages of S. India have appeared in such periodicals as *IA* and in prefaces to grammars and dictionaries. For Marāṭhī literature the English student can find the most accessible account in the preface to J. T. Molesworth, *Marāṭhī Dictionary*², Bombay, 1857. For Bengali see Dinesh Chandra Sen, *History of Bengali Language and Literature*, Calcutta, 1911, the philological parts of which should be used with caution, and a valuable collection of selections from Bengali literature entitled *Vaṅga Sāhitya Parichaya*, Calcutta, 1914. For N. India generally cf. G. A. Grierson, *The Modern Vernacular Literature of Hindūstān*, Calcutta, 1889; the dates in this are frequently taken from native sources, and are not always to be relied upon. See also C. J. Lyall, art. 'Hindostāni Literature,' *EB* vii. xiii. 493 ff.; and Gaṇeśa Vihārī Miśra, *Syāma Vihārī Miśra*, and Sukadeva Vihārī Miśra, *Mīrabandhu-vinōda* (Hindi), in course of publication, pt. i., Kharḍwā and Allāhābād, 1918. G. A. GRIERSON.

LITERATURE (Jewish).—The term 'Jewish literature' is used to cover those writings of the Jewish people which were composed after the completion of the Biblical (OT) canon, and which are devoted to the discussion or exposition of Judaism—its teachings, its history, and its documentary sources—and designed primarily for Jewish readers. This definition excludes all such works of Jewish authorship as, though written in Hebrew and meant for Jewish readers, deal with matters of general learning or literature.

I. THE TRANSITION FROM ORAL TRADITION TO WRITTEN RECORDS.—Between the completion of the Hebrew canon and the rise of Jewish literature there is an interval of several hundred years, and the reason why the literary activity of the Jews was so long in abeyance is that they regarded it as unlawful to commit their teachings to writing. The Scripture, as the Book *par excellence*, could suffer no other book to approach it; all supplementary doctrine must be imparted orally (תורה מן המעל); 'to set down the oral teaching in writing is forbidden.' Thus even the Biblical Apocrypha were regarded as ספרים חיצוניים, 'ex-

traneous books.' The idea that the production of new works was unlawful must have been prevalent by the time of the elder Sirach, and hence his collection of proverbs could not be received into the canon; an author who wished to reach the public by a book had to publish it under some ancient and venerable name, such as Daniel. That the Alexandrian Jews were at that time displaying a remarkable literary fertility did not affect the Jewish authorities in Palestine at all, for the works of the former were written in Greek, and could, therefore, make no claim to canonicity. Thus all the creations of the Jewish mind in this epoch remained unwritten; translations of the Bible, prayers, academic and popular instruction, the development of law and custom, of ethics and religion—all these were carried on by oral instruction only. Apart from letters and fugitive notes relating chiefly to ancient pedigrees,¹ there is only a single document that has come down from ancient times in a written form, viz. the roll of festivals (מגילת תענית), a list of joyous memorial days of the Jewish nation (Jth 8⁹, χαρμοσυνην ὅκου Ἰσραήλ)—that remarkable Aramaic calendar which stands as a monument of Jewish national pride, though it is extant only in a revised form with relatively late scholia (*JE* viii. 427 f.).

It would appear that as regards the Haggadā the interdict upon written communication was somewhat relaxed soon after the fall of the Jewish State, while as regards the Halākāh it was still rigidly observed (Bab. *Gittin*, 60b). The first complete literary product of post-Biblical Judaism is the Mishnā, which was redacted c. A.D. 200 by R. Judah Nāsī. Whether the Mishnā was at once committed to writing is a question which is still—as it has been for a thousand years—a subject of controversy among scholars; and, while there are ostensible indications of its having been in written form from the first, yet our reliable sources rather support the hypothesis that at the time of its redaction and even for centuries afterwards it was still transmitted in a purely oral form (*JE* viii. 614). By the time we reach the redaction of the Babylonian Talmud, however (c. A.D. 500), the ancient prohibition must at length have been set aside, the change being necessitated, indeed, by the exigencies of the period—the repeated interference of the State in forbidding the continuance of the seminaries in their traditional ways—and also by the enormous growth of the material, which had now become too great a load for the human memory. In view of these facts, the last of the Amōraim and the Sabōraim found it necessary to break with the past by committing the Talmud to writing, and they thereby cleared the ground for the growth of a Jewish literature. Once the ban against writing had thus been lifted from the Halākāh—that important domain where the interdict had been observed most rigorously—Jewish scholars formed the resolution, hesitatingly at first, but with time ever the more confidently, to write down and make more generally known the facts of their people's life and doctrine.

II. LITERARY PERIODS.—Jewish literature, in the fifteen centuries of its development, has passed through a variety of phases. To the period from c. A.D. 500 to 1000 we must assign its initial stages, in which the various branches of literature had to be evolved and wrought into form. While formerly knowledge of every kind was contained and indiscriminately massed together in the Talmud, special departments were now gradually disengaged from the mass, and were dealt with in monographs and more or less systematically. To the Gaōn Sa'adya b. Joseph (A.D. 892-942; see art. SA'ADYA) belongs

¹ Cf. Joel Müller, *Briefe und Responsen aus der vorgaonäischen jüdischen Literatur*, Berlin, 1886.

the distinction of having been the first to treat of the most widely varied branches of Jewish theology in special works, and thus to have laboured as a pioneer, so that he has been rightly named 'the chief of the speakers in every place.' From A.D. 1000 to 1200 Jewish literature passed through its mediæval period of fertility in two ramifications, viz. a Hispano-Arabic, which displays a powerful tendency to scientific thoroughness and systematization, and a Franco-German, which in more characteristic fashion further elaborated the traditional materials of knowledge. The period from 1200 to 1500 was one of decline, and from 1500 to 1750 one of profound decadence, during which the literary activity of the Jews was mainly confined to Poland and the East; but, from the advent of Moses Mendelssohn ([*q.v.*] 1729-86), Jewish literature, now in contact with the spirit of European culture, experienced a fresh revival which, mainly under the influence of Leopold Zunz (1794-1886), developed into a scientific treatment of Judaism, i.e. a methodical and critical discussion of the thought expressed in the Jewish teachings and evolved from the Jewish mind, and has since found expression in numerous works, not only in Hebrew, but in all the languages of Europe. We cannot here trace Jewish literature throughout its various epochs and in all its phases; it must suffice to examine the chief departments in which it was specially active, to indicate the tendencies that asserted themselves in it, and to search for the reasons that led to the success of this or that particular work. A characteristic feature of Jewish literature, as contrasted with the literatures of other peoples, is that it is not so much the work of individual authors as the collective product of the spirit of entire epochs. In many cases, too, it is ill preserved—a result of the fact that it was not studied by the learned only, but spread among all classes; and, further, that it did not merely serve an intellectual interest, but also provided for a religious need, and was in consequence often disseminated and transmitted by untrained hands, in a form very different from what was originally intended.

III. *THE SEVERAL DEPARTMENTS OF JEWISH LITERATURE.*—Jewish literature in its entire range may be conveniently brought under the following categories, with which we shall deal in order: (1) Scripture study and investigation of the Hebrew language; (2) works relating to the Talmud; (3) historical literature; (4) systematic theology; and (5) liturgical and secular poetry.

I. *Scripture study and investigation of the Hebrew language.*—Jewish literature is first of all, as it was originally, exegesis of Scripture—Biblical study in the broadest sense of the term. Targum and Midrash constitute its earliest forms, and perhaps the two were originally one, for the Targum was of the nature of paraphrase, and thus involved a kind of exegesis. Traces of the old, non-literal rendering of the Scriptures are found in the so-called Palestinian Targums—the Targum of Jonathan and the Fragmentary Targum. For the Pentateuch, however, the rendering to which Aquila first gave the name of the Targum of Onkelos, and which assumed its definitive form in the Babylonian schools of the 3rd cent. A.D., became the standard of authority; it was recited in the synagogue, and was generally regarded by the Jews as *the* Targum. For the Prophets, again, the acknowledged standard was the so-called Targum of Jonathan—not much later in date than that of Onkelos; while here, too, the other Palestinian Targums fell into the background. For the Hagiographa there was in the period of the Talmud no recognized Targum at all, and the renderings which we now possess were separately executed in the course of centuries, some of them,

indeed, not having been completed till after A.D. 1000 (cf. *JE* xii. 57 ff.). 'Midrash' (*q.v.*) denotes exposition of Scripture, and was at first attached to the particular passages explained; but in the Bible itself we find the word used in the sense of a reproduction of older narratives (2 Ch 24²⁷; cf. 13²⁹). The Midrash was of a twofold character; from the text of Scripture it evolved laws—the *Halakhâ*—or else deduced moral and religious teachings, adding stories and parables—the *Haggadâ*. The *Halakhic* Midrash was compiled chiefly in the schools of R. Ishmael ben Elisha (early 2nd cent. A.D.) and R. 'Aqibâ (see art. AKIBA BEN JOSEPH), and the latter school continued to be regarded as authoritative; the work of both schools, however, being in the mass subsequently lost, has come down to us in mere fragments; and it is only recently that we have been able, with the help of the *Midrash hag-Gadol*, a compilation of the 13th cent., written in Yemen, to piece the remains together, and obtain an approximate idea of the form of the ancient Midrashim. The *Haggadic* Midrash is of vast extent; much of it is included in the Talmud, but it is found also in special collections. Leaving out of account the immense number of smaller Midrashim (*JE* viii. 572 ff.), we may distinguish the following great compilations: the *Midrash Rabbâ* or *Midrash Rabbôth* to the Pentateuch and the Five Megillôth, to Esther, Ruth, Song of Solomon, Lamentations, and Ecclesiastes, the *Tanhûmâ* to the Pentateuch, and the *Midrash* to the Psalms, Proverbs, and Samuel; but, while all these continuously follow the order of their respective texts, the *Pesiqtâ* collections deal only with selected portions of the *Tôrâh* or of the Prophets, for use at festivals or on special Sabbaths. Mention should also be made of the two great Midrashic compilations known respectively as the *Yalqût Shimônî*, which probably took shape in Germany during the 12th cent. A.D., and embraces the entire Bible, and the *Midrash hag-Gadol* of Yemen already referred to, which is confined to the Pentateuch (*ib.* 557 ff.). The *Haggadic* Midrash has been brought within the reach of contemporary scholarship by the monumental works of Wilhelm Bacher, *Die Agada der babylonischen Amoräer*, Strassburg, 1878, *Die Agada der Tannaiten*, do. 1890, 1902, and *Die Agada der paläst. Amoräer*, do. 1892-99.

The Midrash frequently gives simple explanations of the words and meaning of the Scripture text, but this is by no means its primary interest; in the main it is concerned with religious and devotional ends. Jewish scholarship did not evolve a rational exegesis of its own—exegesis in the scientific sense—till the time of Sa'adya, who was a pioneer and wrote independent commentaries upon, as also a translation of, the whole Bible. In his excursions he, too, writes with a religious purpose; but, on the whole, his chief concern is the rationalistic, grammatical, and lexical exposition of Scripture. The movement which he initiated owes its further development in the main to European scholars. In Europe there arose two great exegetical schools, one in Spain, the other in Northern France. The Spanish school was largely influenced by Arabic learning, and its most prominent representative was Abraham ibn Ezra (1093-1168), whose works superseded those of all his predecessors (cf. *JE* vi. 520 ff., and art. IBN EZRA, § 1). His commentaries had an extraordinary popularity; they have come down to us in various MS copies, and were appended to the first printed editions of the Bible. The Northern French school, again, while it certainly lacked the scientific bent, the philological foundation, and the general culture of the Spanish, yet by its devoted study of the Biblical text and its sympathy with the spirit of the written word

did a large amount of highly meritorious and exemplary work for the discovery of the verbal sense. It failed to gain recognition in its ripest representatives, who—particularly Samuel b. Meir (c. 1085–c. 1174)—have, in fact, been re-discovered by modern scholarship; but the favourite and most widely circulated commentary of the Middle Ages was the work of Solomon b. Isaac of Troyes, called Rashi (1040–1105), who combined the old method of the Midrash with the effort to ascertain the plain meaning; and consequently, though he certainly gives the dry details of exegesis, we also find in his work passages of an attractive and edifying character. His commentary eclipsed all others in general esteem; from the outset to the present day it has been widely read, and has formed a subject of study by itself; while in the course of centuries it has drawn to itself over a hundred special commentaries, and ranks in the popular mind as ‘the commentary’ *κατ' ἐξοχήν* (cf. *JE* x. 324 ff.). A blending of the characteristic tendencies of the Spanish and Northern French schools appears among the scholars of Provence, from whose group sprang David Kimhi (1160–1235; cf. *JE* vii. 494 f.), whose exegetical works on the Prophets and the Hagiographa were specially prized. The re-discovery of the predecessors and successors of the exegetes named, as also the historical evaluation of the entire literature of the period, has been the work of modern scholarship. In Kimhi's commentaries we find a new type of exegesis—the philosophical, which soon passed into the mystical. Of the works that favour this type, those especially which were able to bring their more stubborn materials into a popular and generally accessible form attained a great vogue. These include the long-popular commentaries of Don Isaac Abarbanel (1437–1508; cf. *JE* i. 126), and also those of the so-called Būrists (*JE* iii. 232), dating from the age immediately after Moses Mendelssohn. On the whole field of exegetical literature cf. *JE* iii. 162–176.

Closely associated with the exegesis of Scripture were the works dealing with Hebrew philology. Linguistic study among the Jews was but rarely regarded as an end in itself, but, as the science of the language in which the Scripture was written, was pursued mainly as an adjunct to Biblical investigation. The literary treatment of Hebrew grammar and lexicography was systematically prosecuted by the Hispano-Arabic school, the masterly works of which, however, were composed in Arabic, and accordingly, even when translated into Hebrew, attracted but little notice; the philological writings of Judah b. David Hayyuj (b. c. 950; *JE* vi. 277 f.) and Abū al-Walid Marwān ibn Jānāh (early 11th cent.; *ib.* vi. 534 ff.), important as they are, were re-discovered only recently. The works of Abraham ibn Ezra enjoyed an enormous vogue, as did also, and even in a still greater degree, the grammar and dictionary of David Kimhi, which have in many quarters retained their pre-eminence until recent times. From the 15th cent., however, a marked decline in linguistic studies began; in proportion as mysticism prevailed, interest in the exact investigation of Hebrew fell away; the works of Elijah Levita (1468–1549; cf. *JE* viii. 46) attracted much less notice in Jewish than in Christian circles. Philology remained in a state of neglect until it was restored to its rightful position by the Mendelssohnian group; the manuals of J. L. Ben-Ze'eb (1764–1811; *JE* ii. 681 ff.) were widely studied until they were superseded by more modern and more competent works. The revival of Hebrew philology was due in a very special degree to the pioneer work of S. D. Luzzatto (1800–65; cf. *JE* viii. 224 ff.). Luzzatto was at the same time the first Jewish scholar for centuries

who combined the study of the language with the exegesis of Scripture, and may also be regarded as the most eminent independent representative of Biblical literature among the Jews of last century. With the name of Luzzatto that of Abraham Geiger (1810–74) deserves to be specially associated. Speaking generally, we may say that the Biblical science of the Jews during last century was profoundly influenced by the contemporary critical works of Christian scholars in the same field.

2. Works relating to the Talmud.—The Talmud came to be the most important, the most comprehensive, and the most highly esteemed branch of Jewish literature; it is in a sense bound up with Biblical study, as its germs are found in the Midrash, and as it purports to be nothing more than an exposition of and a complement to the Scriptures. It consists of two parts, the Mishnā and its elucidation, the latter being the Talmud in the narrower sense; the term *G'mārā*, which is usually applied to the second part, is of relatively late origin, and was introduced into the text by the clerical censorship. Our use of the expression ‘the Talmud’ involves a presumption due to the facts of historical development; for, although there is but one Mishnā, there are two commentaries upon it—one of Palestinian, the other of Babylonian, origin. In the process of historical development, however, the seminaries of Palestine were early dissolved, while those of Babylonia maintained their position, and succeeded in establishing the regulative supremacy of their views and decisions. The result was that, although in the earlier period the Palestinian scholars were held in great honour, and their decisions sought in all important questions, eventually the scholars of Babylonia came to be the sole recognized authorities. In the age of the *G'ōnīm* (c. 600–1040) the Babylonian Talmud had secured so high a place in general esteem that its Palestinian counterpart was virtually forgotten; and when, about the year 1000, the latter was once more brought to mind, consolation for its long neglect was sought in the pretext that the decisions of the Palestinian scholars had been known to the Babylonians, and had been duly taken into consideration by them. In consequence, the Palestinian Talmud remained in comparative obscurity; it was not studied to anything like the same extent as the Babylonian, nor did it find a single commentator during the entire mediæval period; moreover, its text suffered such gross deterioration that we can now scarcely hope to see it restored even to a semblance of its original form. It should be noted, however, that a few *Hālakhic* collections from Palestine, the so-called Minor Tractates, were appended to the Babylonian Talmud, and were studied in conjunction with it, thus becoming a factor in the further development of religious practice and religious law. The two Talmuds are not related to the Mishnā in the same way; in the Palestinian Talmud we have the commentary to forty Mishnaic Tractates, belonging to the first four Orders; in the Babylonian we have thirty-six only, principally from the second, third, fourth, and fifth Orders, while of the first and sixth Orders only one tractate in each is dealt with.

As the Talmud, until the dawn of the modern epoch, occupied the central place in Jewish learning, and formed the supreme standard of religious thought and practice among the Jews, it became the nucleus of an enormous literature, which, in connexion with its more outstanding representatives, may be summarized in the following divisions.

(a) *Explanatory works*.—For so intricate a work as the Talmud, explanation was indispensable; its own expositions were frequently very brief, and the links of connexion could be supplied only by those who had been initiated into the peculiar mode of its dialectic; moreover, the language of the Jews, like their general conditions of life, underwent in process of time

radical changes, and was no longer the same as was presupposed in the Talmud. The need of explanation was felt at an early date, and soon, indeed, explanatory notes seem to have been attached to the text and transmitted with it; thus we find writers of the 10th cent. quoting *verbatim* from comments dating from the 6th.¹ On the other hand, what we may call an expository literature was not evolved till a much later day, for it was the Gersonid of the 10th cent. who first felt constrained to supply written comments—first of all in the form of explanations of words; and these, again, were the germs of the comprehensive dictionaries, of which the most celebrated was the *Arūkh* of Nathan b. Jehiel of Rome († 1108; cf. *JE* ix. 180 ff.). The first commentaries in the ordinary sense, however, were produced in N. Africa c. A.D. 1000; besides explaining words, they gave short notes elucidating the context. The most important of these N. African commentaries is that of R. Hananel b. Hushiel of Kairwan (990–1050; cf. *JE* vi. 205). In Spain little progress was made in the composition of commentaries, although it was in that country that the most influential Mishna commentary of the Middle Ages was composed, viz. that of Moses Maimonides (q.v.) 1135–1204; cf. *JE* ix. 73 ff.), written originally in Arabic, but afterwards translated into Hebrew, and from the time that it was first printed (1492) to the present day regularly embodied in editions of the Mishna or the Talmud. The most notable contributions to the exposition of the Talmud were produced in Germany and France. Talmudic learning, carrying with it the earliest commentaries, spread by way of Italy to Germany. R. Gershon b. Judah, 'the Light of the Exile' († 1040; cf. *JE* v. 638 f.), who taught in Mainz, gave the impulse to a new method of Talmudic exposition. His school not only dealt in the most thorough manner with details, but attached great importance to bringing out the connexion of thought; and from that school emanated the most notable of all commentaries on the Talmud, that of Rashi mentioned above. Its greatness lies in the fact that its author, with the self-restraint of genius, surrenders his mind wholly to the text, suppressing his own opinions, and bent only upon discovering and exhibiting the thought of the original writer. Rashi never introduces superfluous matter; nor, again, does he ever gloss over a difficulty; he either gives a solution of it or modestly confesses that he has none to suggest. The work came to be used as an indispensable auxiliary to the study of the Talmud; it superseded all previous commentaries, and threw all the later into the shade. While much of the expository literature of that age was buried in oblivion until the modern period, Rashi's work was frequently conjoined with the MSS of the Talmud, and it has been bound up with the printed editions from the first; even at the present day, indeed, it is regarded as an essential adjunct to the study of the Talmud, and no less as a work on the whole unrivalled in its method. The French schools sought to supplement Rashi; they occasionally felt the need of a more dialectical mode of exposition, and thought that the text of the Talmud should be furnished with decisions of the questions proposed and with references to practical life; and, finding none of these things in Rashi's work, they wrote supplementary notes, *tsāfūth*, which, however, did not run continuously with the text, but here and there supplied comments of the desiderated type upon particular passages. Of these *Tsafists* numerous schools arose in Germany and France during the 12th and 13th centuries; the works which they produced were much studied in the Middle Ages, and afterwards, from the time when the Talmud was first printed in its entirety (Venice, 1520), a number of them, selected for purposes of study, were issued in conjunction with it (cf. *JE* xii. 202 ff.). A peculiar development of the expository literature appears in the so-called 'novels' (*hiddushim*), which, taking their pattern from the works of Napmanides (1194–c. 1270) and Solomon b. Adreth (1285–1310), continued to be produced for hundreds of years from the 13th cent.; they were really commentaries in the form of treatises on entire sections of the Talmud. Talmudic commentaries finally degenerated into mere empty dialectic, and this was specially the case in Germany and Poland from the 15th century.

As regards the Palestinian Talmud, the Middle Ages scarcely produced a single commentator, and the modern period not even one, who deals with it from beginning to end. The best known and most widely circulated commentaries to it are the *Qorrān ha-Edhā* of David Frankel, the teacher of Moses Mendelssohn, and the *Pnā Moshe* of Moses Margolioth (c. 1700). For the literature of the commentaries see *JE* xii. 28 ff.

(b) *Compendia*.—While the Talmud was regarded as the standard to which all religious institutions must conform and by which all questions of law must be solved, it was, nevertheless, but ill adapted to facilitate consultation for the decisions that were often required in practical life. Apart from the fact that it was a work of vast compass, such as scarcely a single individual could completely master, it confined itself almost wholly to the discussion of the questions which it raised, and hardly ever gave a decision as to which of the opinions which it presented should be regarded as authoritative. Further, its matter is not always systematically arranged; it frequently passes abruptly from one theme to another, so that its discussions of a single question have often to be sought for and examined in widely separate places. In order to remedy these defects, Yehudā, Gaon in Sura, had (c. A.D. 750) drawn up a compendium of *hullākhōth*, which was subsequently revised, enlarged, and, as the *Hullākhōth Gedhōlōth*, given a place in the religious literature by Simon Qayyara (c. 850), from whose time

it has been taken into account as a basis for all decisions (cf. *JE* vii. 461 ff.). The *Hullākhōth Gedhōlōth* often follows the Talmud's own order, and, while abridging its discussions, it reproduces them with verbal accuracy, and in such a way as to make the final question quite clear. The same method was adopted by Isaac b. Jacob Alfasi (1013–1103), whose work was diligently studied, and was likewise used as a basis for decisions. This type of synoptical abridgment of the Talmud became the work of a special school, mainly in Spain, where it was cultivated by many scholars—and with outstanding success by Asher b. Jehiel († 1327), a native of Germany, who took Alfasi's text as his groundwork, and added to it numerous notes from the *Tsafists*; his compendium is generally given in the printed editions of the Talmud.

Another mode of epitomizing the matter of the Talmud was to arrange it under the 'Six hundred and thirteen commandments and prohibitions,' an arrangement which is first found as an introduction to the *Hullākhōth Gedhōlōth*, and was subsequently often reproduced in comprehensive forms. The most important work of this class is the *Sfēr ham-Misvōth* of Moses Maimonides, which, originally written in Arabic, was several times translated into Hebrew, and found many opponents and many imitators (cf. *JE* iv. 181 ff.).

The most important and practically most serviceable type of compendium, however, was the 'Code' in the narrower sense of the word. Here, too, Maimonides stands supreme; his *Mishnē Tōrāh*, written in Hebrew c. A.D. 1150, is the most systematic book in all Jewish literature; with masterly skill he arranges the entire material of the Talmud according to subjects, groups it in paragraphs, and succeeds in presenting it in such a way that the reader can at once find his bearings. Each section of the work opens with a clear statement of its subject, and then proceeds from the less to the more significant, from details to essentials, all being set forth so lucidly that the solution of any particular problem can be found without delay. The book met with the approbation which it so well merited—though it likewise encountered opposition, not only because of the bold and unprejudiced views advanced by the author in the theological sections, but also—what chiefly concerns us here—because of its very structure. Codification was a process that was never greatly favoured among the Jews, who were disposed to fear that it might supersede the study of the sources; and with regard to the work in question, consisting as it did of abstractly formulated paragraphs, and giving no references to sources or to the learned champions of particular views, they thought it well to guard specially against that danger. Nevertheless, the admirable structure of the *Mishnē Tōrāh*, and the veneration in which its author was held, made it a standard work; and the writings designed to elucidate or criticize it constitute a literary aggregate of vast proportions.

Maimonides, in importing the entire material of the Talmud into his Code, took no account of the question whether it still applied to the conditions of his age; thus, e.g., he dealt also with the laws regarding the Temple, the sacrifices, etc. About the year 1340, however, Jacob b. Asher drew up a new code, entitled *Arbā'ā Turim*, in which he passed by such subjects as were no longer of practical significance, and took cognizance of views and decisions that had meanwhile come to the front; moreover, unlike Maimonides, he dealt with the various themes in treatises, not in separate paragraphs, and, in particular, he gave expression to the views of scholars who had lived in the centuries immediately preceding. The *Arbā'ā Turim* came to be a work of the utmost significance in the following period. Joseph Caro (1488–1575; cf. *JE* iii. 535 ff., and art. CARO, JOSEPH) wrote a voluminous commentary to it, the *Beṭh Yōsef*, from which he afterwards compiled an abstract, entitled *Shūlḥan 'Arukh*. The *Shūlḥan 'Arukh* follows the arrangement of the *Arbā'ā Turim*, and, like that work, is divided into four parts. It deals only with the laws that had been in force from the fall of the Temple, but it departs from its model and reverts to the method of Maimonides in giving rules only, short paragraphs, and in making no reference to its sources or to the advocates of particular views. In systematizing power and candour of thought, however, Joseph Caro is signally inferior to Maimonides; he was strongly influenced by the mystical tendency in the theology of the period of decadence. The *Shūlḥan 'Arukh* was at first slighted, being regarded as a mere 'book for the ignorant,' and its eventual fame was due to its critics, who gave expression to their opposing views in commentaries and supplements to it. To begin with, Moses Isserles (1520–73; cf. *JE* vi. 678 ff.) published a series of supplements to the *Beṭh Yōsef* under the title of *Darkhē Moše*, and afterwards re-issued them as glosses to the *Shūlḥan 'Arukh*; here, on the basis of the Talmudic tradition then dominant in Germany, he frequently modified the decisions of Caro. It was in this supplemented form that the *Shūlḥan 'Arukh* was thereafter regularly given to the public, but it did not win full recognition till about 1850, by which date each of its four parts had already formed the text of celebrated commentaries; these, however, were not of the nature of expositions, but were rather supplements, and often, indeed, in direct opposition to their text. Thus at length it gained an acknowledged position, yet never without encountering resistance; and even in those circles of Jewish life where in principle it served as a norm there were countless departures from it in matters of detail. On the literature of the compendia cf., further, *JE* vii. 635 ff.

(c) *Responsas*.—A combination of the two forms of Talmudic literature dealt with in the foregoing is found in the *She'elōth u-T'shūbhōth* ('Questions and Answers'), which contain explanations, decisions of particular cases, etc. The literary interchange of views regarding Talmudic problems began very early,

¹ Cf. N. Brüll, *Jahrbücher für jüd. Gesch. und Litt.*, II. (Frankfort, 1876) 43.

and an active correspondence by letter had been carried on between the teachers of the Talmud in Palestine and those in Babylonia. In proportion as the Jews became more and more dispersed, correspondence became more and more necessary; and from the time of the G^onm there was a large increase in the number of responses; from that period itself, indeed, no fewer than fifteen more or less voluminous collections of responses have been preserved. Nor, when the centre of Jewish life was transferred to Europe in the Middle Ages, did the interchange of opinions diminish either in extent or in vigour. Thousands of opinions and legal pronouncements by certain eminent Rabbis of mediæval times have been preserved, and were in the mass consulted as an important source of information. The number of works embodying such responses is so enormous that we must be content to mention only the most extensive and the most generally consulted; from the Middle Ages we have those of Meir b. Baruch of Rothenburg (1290-98), Nahmanides (1194-c. 1270), and Solomon b. Adreth (1235-1310), and that of Isaac b. Sheshet (1320-1408), all belonging to Spain; from the dawn of the modern period, those of Israel Isserlein († 1460) and Joseph Kolon (c. 1450), as also that of David ibn Abu Simra († c. 1570); and from more recent times those of Ezekiel Landau († 1793) and Moses Sofer († 1839). On the literature of the responses cf. also *JE* xi. 240 ff.

(d) *Systematic works*.—Mention must be made, lastly, of that branch of the literature which deals with the problems of the Talmud in a methodical and systematic way—a mode of treatment but little regarded in the earlier period, and, indeed, never strenuously applied till modern times. The earliest work aiming at systematic treatment is the *Seder Tannaim v^e Amora'im*, dating from the 9th cent.; the next works of the kind to appear were the *Mebh^o hat-Talmud* of Samuel ibn Nagdila (extant only in one part, which, however, is printed in all editions of the Talmud) and the *Ma'alah* of Nissim b. Jacob, both of the 11th century. Of great importance in a methodological respect, again, are the introductions which Maimonides issued as prolegomena to his commentary on the Mishnâ and several of its divisions. Later works worthy of mention are the *Sifer hak-Kriti'ut* of Samson of Chinon (c. 1300) and the *Hatikhah 'Olām* of Joshua ha-Levi of Tiemeen (c. 1450); the latter has drawn around it numerous commentaries, and has often been reprinted. A new epoch in these aspects of Talmudic study was ushered in by S. J. L. Rapoport (1790-1867; cf. *JE* x. 322 f.), who, in various Hebrew periodicals, as also in his dictionary, the *Brekh Mithn*, dealt with the problems of the Talmud in a scientific way, at once systematic and critical. The course marked out by Rapoport has been followed by Z. Frankel (1801-75; *ib.* v. 432 ff.) in his *Darke ham-Mishnâ* and his *M^oho ha-Yerushalmi*, Abraham Geiger (1810-74; *ib.* v. 584 ff.) in numerous treatises in his magazines, and I. H. Weiss (1815-1905; *ib.* xii. 495 ff.) in the historical work named below.

3. *Historical literature*.—The post-Biblical historiography of the Jews took its rise as an element in the systematic treatment of the Talmud. The majority of the earlier works in this field were written chiefly with the object of re-constructing the chain of tradition and of determining as accurately as possible the genealogies of eminent families and the chronicle of learned men. The germs of Jewish historical literature are found in the Talmud itself, and these furnished the pattern for the earliest developments. The chronology of the course of history from the Creation to the destruction of the Second Temple is given in the *Seder 'Olām*, the nucleus of which was the work of Jose b. Halafta (c. A.D. 160). An annalistic work, though dealing only with the family of the exilarchs, is found in the *Seder 'Olām Zutā*, a genealogical register, which cannot have been drawn up before the 7th cent. A.D., and which assumes a disparaging attitude towards the exilarchs of the day. The biographical annals of scholarship, again, are represented by the *Seder Tannaim v^e Amora'im* (c. 880), and the *Epistle of Sherira* (987), the latter being our principal source for the period between A.D. 500 and 1000. To the same class belongs also the *Sifer hay-Qabbālā*, composed in 1161 by Abraham b. David of Toledo, who is chiefly concerned to exhibit the continuity of learned tradition down to his own times; for, though he gives somewhat more detailed information regarding the Jews in Spain of the two preceding centuries, yet even there his manifest purpose is to trace the development of learning and recognized authority. The work of Abraham Zakuto, who was for a time a professor of astronomy and chronology in Salamanca, but after the expulsion of the Jews from Spain settled in the East, was upon similar lines; his *Sifer Yuhasin* (1504) contains a detailed study of most

of the Talmudic authorities, and also a chronology brought down to his own day. For centuries this work was known only in a form containing a series of supplements, and was first made accessible in its original shape in 1857. Jehiel Heilprin, of Minsk, wrote his *Seder had-Doroth* (c. 1700) solely for the purpose of supplementing the data of Zakuto and bringing the Rabbinical genealogies down to his own times.

A further incentive to the writing of history was provided by the peculiar fortunes of the Jewish people, and in particular by the sufferings and persecutions which they had to endure almost without intermission during the Middle Ages. These oppressions are chronicled in a vast number of fragmentary records, both in prose and in poetry, but there are very few connected and continuous accounts. We shall enumerate here only the more extensive compilations of this type still extant. A narrative of the persecutions which harassed the Jews, chiefly in the Rhine country, in connexion with the Crusades is given by A. Neubauer and M. Stern in their *Hebraische Berichte über die Judenverfolgungen während der Kreuzzüge*, Berlin, 1892. In those days of incessant persecution it was the practice to read (*commemorare*) in the synagogues the roll of those who had perished as martyrs; so-called memorial books were drawn up in the various communities, and were constantly added to. The most comprehensive of these books was published by S. Salfeld under the title *Das Martyrologium des Nürnberger Memorbuches*, Berlin, 1898. The earliest connected account of the persecutions was composed by the noted astronomer Judah ibn Verga († c. 1485), whose *Shebhet Y'hudah* was supplemented by a younger relative named Solomon and another writer named Joseph, and published in its enlarged form. The best-known account of the Jewish martyrdoms in the Middle Ages is from the hand of the physician Joseph hak-Köhén, who lived in the 16th cent., and resided in various Italian cities; his *Emeg hab-Bakhā* describes with accuracy and graphic power the persecutions and banishments suffered by the Jews from the destruction of the Second Temple. A strange combination of martyrology and the history of learning is found in Gedaliah ibn Yahya's *Sha'aseleth haq-Qabbālā* (c. 1550), which, although much of it was shown at an early date to be untrue and even incredible, enjoyed an extraordinary popularity, and was again and again issued in printed editions.

The Jewish scholars of the Middle Ages had little aptitude for intelligently grasping or portraying their people's history. The *Book of Josippon*, a reproduction of the Latin Hegesippus (cf. *ERE* vii. 578^b) in fluent Hebrew, composed in Italy in the 10th cent., stood long alone; by reason of its vivid and interesting style it has always been held in great esteem, and has been not only frequently edited in Hebrew, but also translated into many other languages. Even more rarely, if possible, do we find mediæval Jewish writers attempting to write profane history in Hebrew. A work of later date deserving of mention is Joseph hak-Köhén's *Chronicle of the Kings of France and Turkey*, written in 1553, while, a few decades afterwards, David Gans († 1613, in Prague) published, in his *Semah David* (Prague, 1592), records, first of Jewish, and then of universal, history from their respective beginnings to his own time; this work appeared also in a Latin translation. In general, however, Jewish writers restricted themselves to the composition of popular narratives of particular episodes.

It was not until comparatively recent times, indeed, that Jewish history was treated in a coherent and orderly manner. In 1820 I. M. Jost began the publication of a history of the Jews in

many volumes and in various forms, in which he was primarily concerned to recount the political fortunes of his people, discussing their sociological development in an appendix. Leopold Zunz, while he wrote nothing of the nature of a systematic work on Jewish history, furnished in his *Zur Geschichte und Literatur* (Berlin, 1845) copious materials for all branches of that history, and suggestions as to the method of treating them. The best-known and most widely circulated work of this class, the *Geschichte der Juden* by H. Graetz (2nd ed., Leipzig, 1853-70), aims chiefly at exhibiting the development of the religion and literature of the Jews in relation to their political position and the martyrdoms suffered by them, while A. Geiger's *Das Judentum und seine Geschichte* (Breslau, 1871) deals solely with their religious development. I. H. Weiss, in his *Heb. Dôr Dôr w-Dôrshûw* (Vienna, 1871-91), is likewise concerned only with the development of Judaism on its spiritual side. On the historical literature cf. also M. Steinschneider, *Die Gesch.-Literatur der Juden*, i. (Frankfort, 1905), and art. 'Historiography' in *JE* vi. 423 ff.

An important source of information regarding the history of the Jews in the Middle Ages is found in the copious narratives of the numerous Jewish travellers and wayfarers. The most important of such books of travel is the *Mass'ûth* of Benjamin of Tudela, who (c. 1165) made a journey from Spain to the East and back, and noted down in a racy style 'all that he had seen or heard.' In the edition of the *Mass'ûth* prepared by A. Asher (London, 1840), Zunz has given a detailed account of the geographical literature of the Jews ii. 230 ff.).

4. Systematic theology.—A great part of the Talmud and the Midrashim is devoted to the religious and moral teachings of Judaism; the Haggādā in particular is concerned mainly with the problems of theology—with dogmatic and ethical ideas. No more than the Bible itself, however, does the Talmudic literature give a systematic presentation of theological doctrine. It was, in fact, only under the influence of Muslim theology that Jewish writers first essayed to deal systematically with the doctrinal fabric of their religion, and to support it by arguments. Their works were, to begin with, written in Arabic, but were soon all translated into Hebrew—largely through the efforts of the family of Ibn Tibbon, in Lunel—and in this form given to the Jewish world. The earliest speculative theologian among the Jews was Sa'adya Gaon, who, in his *Emunôt w-De'ûth*, written in 933, sought to bring the doctrinal teachings of Judaism into relation with contemporary philosophy. Bahya b. Joseph (first half of 11th cent.; *JE* ii. 446 ff.) won an extraordinary success with his *Hôbbôth ha-L'bhâbhôth*, which treats chiefly of the moral teachings of Judaism; the book was read far and wide, and was in its day perhaps the most popular work of general philosophical literature among the Jews. Judah Halevi (*JE* vii. 346 ff.; see also art. HALEVI), in his *Kuzari*, renounced philosophy altogether, and based theology exclusively upon the revealed faith and the experience of the Jewish people; the work, by reason of its poetic mode of treatment in the style of the Platonic Dialogues, enjoyed a great vogue. By far the most eminent work in this field, however, is the *Môreh N'bhukhâm* of Moses Maimonides, which, like his *Mishnê Tôrah* mentioned above, is distinguished at once for its rigorously systematic structure and for the keenness and independence of its thought. Although the book, with its free handling of Jewish doctrine, aroused hostility on many sides, and was even publicly burned at the instance of Jewish accusers,

yet in influence it stands supreme; all later study of Jewish philosophy revolves around the *Môreh*, and the most outstanding Jewish thinkers, such as Spinoza, Moses Mendelssohn (*qq.v.*), and Solomon Maimon, found in it the incentive to the construction of their own systems. The *Môreh* marks the culminating point of Jewish philosophical literature in the Middle Ages. Of writers belonging to the time after Maimonides we mention only Levi ben Gershon ([*q.v.*] c. 1350; *JE* viii. 26 ff.), who, with his *Milhâmôth Adhônai*, was the first to make a stand against the authority of Aristotle; Hasdai Crescas (c. 1400; *ib.* iv. 350 ff.), whose *Or Adhônai* was drawn upon by Spinoza as an important source; and Joseph Albo (c. 1415; *ib.* i. 324 ff.), whose *Ikkârîm* was an enormously popular book.

The period after Maimonides was, however, on the whole one of profound decadence in philosophical studies, which were, in fact, regarded as positively unlawful. The enlightened philosophy of Maimonides brought forth a counterpoise in the composition of the Qabbālā (see QABBĀLĀ), a peculiar medley of speculative ideas and curious fancies which was put forward as an esoteric doctrine of ancient origin, and sought to attach itself to the earliest authorities; its representatives, indeed, did not scruple even to disseminate writings purporting to be the work of the most venerable personages, including Moses and the Patriarchs. The most notable book of such speculative secret doctrine was the *Zôhar*, which was put into circulation c. 1300 by Moses de Leon, and passed off as the work of Simeon b. Yohai, a writer of the 2nd cent. A.D. It takes the form of a commentary to the Pentateuch, but is interspersed with many systematic dissertations, which bear special names, and are perhaps later insertions. The *Zôhar* was regarded with the utmost reverence; it was designated a divine book, and was ranked higher than the Talmud or even the Bible itself; its real origin was brought to light only in recent times. The name of Isaac Luria († 1572) marks a further stage in the development of the mystical literature. While Luria himself wrote nothing, his pupils promulgated his teachings in a vast number of biographies of their master, of commentaries to the Bible and the book of prayer, and of legal and ethical works. Likewise Hasidism (cf. *ELI* vii. 606^b), the last phase of Jewish mysticism, gave birth to countless works of the kind indicated above; but, as all of them reproduce the ideas of their respective schools in a most unsystematic and incoherent way, it is very difficult to describe them in terms of literary science.

It was not until comparatively recent times that Jewish theology again assumed a rationalistic character. The turning-point was marked by Mendelssohn's *Jerusalem* (Berlin, 1783), and thereafter, under the influence of Kant, Hegel, and Schelling, Jewish thought brought forth various systems, not one of which, however, can be said to have come into general favour. The modern Judaism of Western countries, in fact, has been powerfully influenced by the prevailing philosophy of the age. Of the latest works dealing with Jewish theology we would mention only K. Kohler, *Grundriss einer systematischen Theologie des Judentums*, Leipzig, 1910, and S. Schechter, *Some Aspects of Rabbinic Theology*, London, 1909.

The ideas embedded in the theological literature were given to the wider Jewish public by means of popular writings, including not only the many widely circulated discourses (*Drashôth*), but also numerous books of morals, which, it is true, laid more emphasis upon ethics than upon the speculative verification of the faith. The most excellent of the books of morals produced in the Middle Ages is the *Sefer Hâsdâm* of Judah b. Samuel of

Regensburg (†1217; *JE* vii. 356 ff.), a work of high ethical value, which, though not free from the superstition of its time, is pervaded by an admirable spirit of piety and an earnest desire to foster the mutual love of men. The books of morals were in many cases translated into the language of the country in which they arose, and they form a large part of the Judæo-German, Judæo-Spanish, and Judæo-Arabic literatures. From the time of their composition they have had an enormous currency, and even at the present day the most widely read and systematic work on Judaism is the *Éthik des Judentums* of M. Lazarus (Frankfort, 1898, 1911).

The theology of the Jews also involved the work of pointing out the lines of demarcation between their own religion and other creeds. The Jews, who from an early period formed but a sparse minority among the adherents of other faiths, had abundant occasion for such procedure. As might be expected, all their writings which deal with theological matters are concerned also with apologetics and polemics, but the systematic treatment of the questions at issue was a relatively late development. The works in this field which were given to the public and still survive are but few in number; from fear of the dominant religion, indeed, they were often suppressed, or at any rate not issued in printed form.¹ Jewish polemical works consist either of explanations of Biblical passages which had been interpreted in a Christological or Muhammadan sense, or of systematic treatises on the cardinal doctrines of Christianity or Islam. Of writings directed against Christianity the *Tôl'dhōth Y'shū'ā* (on which see *ERE* vii. 552^a) was not used so much by Jews themselves as by Christian controversialists. Of Jewish polemical works that created a considerable stir, mention may be made of the *Nissākhōn* of Lipman-Mühlhausen, a resident of Prague (c. 1400), who in that work brought forward three hundred and forty-six passages of the OT as telling against Christianity, and the *Hizzug Emunā*, in which Isaac Troki, the Qaraite, made a systematic attack upon Christian doctrine (c. 1580). Both of these works were translated into various languages, and many attempts were made to refute them by Christian theologians. On the polemical literature cf., further, *JE* x. 102 ff.

A considerable amount of varied polemical activity was likewise directed against the Qaraites and other Jewish sects, but for the most part it finds expression incidentally in more general writings, and we are unable to specify any monograph of importance in this smaller field.

5. Liturgical and secular poetry.—The worship of God supplied the most powerful impulse to the post-Biblical development of Hebrew poetry, which, now termed *piyyūt*, was revived with a view to enriching the liturgy. All instruction in and laudation of Jewish history and religion, which in the olden time had been the work of the preacher, fell, from c. A.D. 600, to the function of the *paṭṭān*. It was under the influence of the Arabs that Jewish religious poetry sprang into life, and it was from them that it borrowed its artistic forms, but it required first of all to mould the Hebrew language to its designs—a process which, after long-sustained efforts, was at length brought to full realization in Spain. The most distinguished *paṭṭān* of the Middle Ages was Eleazar b. Jacob haq-Qalir, who lived probably c. A.D. 750 in Palestine; he composed over two hundred well-known poems, which have found a place in the Jewish prayer-books of

nearly all countries, though we must note the exception of Spain, which had its own eminent figures in this field, and where mediæval Hebrew poetry attained its highest level between 1040 and 1140. The most outstanding names here are those of Solomon ibn Gabirol, Moses and Abraham ibn Ezra, and Judah Halevi (*qq.v.*). Poems by these writers are found in all prayer-books, but such compositions form only a small part of their poetic work; they also wrote voluminous 'divans,' which, it is true, soon fell into oblivion, and were rediscovered only in recent times; a number of them still await publication. On the *piyyūt* cf. *JE* x. 65 ff.

While liturgical poetry occupied the place of supreme regard, other branches of the poetic art were by no means neglected. Of these the most widely cultivated was the didactic, which was turned to account in every department of knowledge. The *piyyūt* itself sometimes assumed a didactic form; but, in addition, we find disquisitions in verse relating to the calendar, philology, and Biblical study, the *Hālākhā*, the laws of religion, Talmudic jurisprudence, philosophy and polemics, history, medicine, astronomy, etc., and poems in all these branches of study are extant in large numbers (cf. *JE* x. 98 f.). Of more importance, as being more closely in touch with the poetic spirit, is Jewish lyric poetry. The religious poetry, once more, was to a great extent lyrical. But the earliest development of the lyric in the ordinary sense, *i.e.* the poetry that finds its themes in love, wine, war, patriotism, etc., took place in Spain, where the supreme master of this form was Moses ibn Ezra, where Judah Halevi won renown by his occasional poems and his poetical descriptions of nature, and where Abraham ibn Ezra and Judah al-Ḥarizi (early 13th cent.) found recognition as keen satirists. The greatest Jewish secular poet, however, was Immanuel b. Solomon, of Rome—the contemporary, perhaps a personal friend, of Dante—who combined Oriental fantasy with Italian erotics, and gave expression to them in highly polished Hebrew verse, writing, indeed, with such audacious abandon that the *Shūlḥān 'Aruḥh* forbade the reading of the poet's *Mahberōth* on the Sabbath, while even in our own time Graetz has accused him of having profaned the Hebrew muse. Another lyric writer worthy of mention is Israel Nagara (c. 1570), who, while he sings of God and of Israel, works upon a basis of love-songs and their melodies, and writes with such intensity of passion and such daring anthropomorphism that he too incurred the censure of the Rabbis. Moses Hayyim Luzzatto (1707–47) deserves mention as a writer of great emotional power, and as the first who composed epic poetry in the Hebrew language.

Jewish poetry, like Jewish literature in general, passed through a long period of barrenness, which lasted, indeed, until it was vitalized by the modern renaissance of intellectual interests. The majority of the more distinguished poets of the present age are of Russian origin, the most eminent of all being Judah Loeb Gordon (1831–92; cf. *JE* vi. 47 f.), whose achievement, however, lies more in the field of satire than in that of the lyric. Of living poets special reference is due to H. N. Bialik, whose lyric poetry has justly met with the highest appreciation, and whose compositions have already been translated into nearly every European language. The last few decades have witnessed the rise of a copious Hebrew literature of general interest.

LITERATURE.—J. W. Etheridge, *Jerusalem and Tiberias; Sora and Cordova: Religious and Scholastic Learning of the Jews*, London, 1856; M. Steinschneider, *Jewish Literature from the Eighth to the Eighteenth Century*, Eng. tr., do. 1857; D. Cassel, *Lehrbuch der jüdischen Geschichte und Literatur*, Leipzig, 1879, Berlin, 1896, Eng. tr., *Manual of Jewish History and Literature*, London, 1883; G. Karpeles, *Geschichte der jüdischen Literatur*, Berlin, 1886, 1909, *Ein Blick in die jüdische Literatur*, Prague, 1895, *Jewish Literature and other*

¹ Writings connected with the long controversy between Judaism and Christianity were collected by J. B. de Rossi in his *Bibliotheca Judaica Antichristiana*, Parma, 1800, while Steinschneider has compiled a work entitled *Polemische und apologetische Literatur in arabischer Sprache zwischen Muslimen, Christen und Juden*, Leipzig, 1877.

Essays, Philadelphia and London, 1895; I. Abrahams, *A Short History of Jewish Literature*, London, 1906; S. Levy, 'Is there a Jewish Literature?' in *JQR* xv. [1903] 583-603; J. Jacobs, art. 'Bibliography' in *JB* iii. [1902] 199-201; I. Davidson, art. 'Literature, Hebrew,' *ib.* viii. [1904] 108-112.

I. ELBOGEN.

LITERATURE (Pahlavi).—Pahlavi ('Parthian,' i.e. 'heroic, belonging to heroic times'), or Middle Persian, literature dates, so far as its contributions to religion are concerned, from the 8th to the 11th cent. of our era; and its chief value in this regard is the elucidation of Zoroastrianism and Manichæism (*q.v.*), since it explains and supplements the data contained in the Avesta (*q.v.*) and adds materially to the scanty documents of Manichæan literature, besides giving fragmentary renderings of Christian texts. The religious material in Middle Persian falls into three categories: translations of Avesta texts, original compositions on Zoroastrian religious subjects, and Manichæan and Christian literature.

1. **Translations of Avesta texts.**—These translations are combined with running commentaries, sometimes of considerable length; but they are handicapped by failing to understand the original, especially in its grammatical relations, since the inflected type of the Avesta language had yielded, long before the composition of any Middle Persian of which we have any indication, to the analytic type present in Pahlavi, whose grammar differs only in unimportant details from that of Modern Persian and other modern Indo-Iranian dialects. At the same time, the Middle Persian translations of the Avesta possess a real value and must be considered in any attempt to decipher the meaning of the Avesta original, particularly in view of the allusions, etc., preserved by Iranian tradition (see, further, art. **INTERPRETATION** [Vedic and Avesta]). The principal Pahlavi translations are of the *Yasna*, *Vispārād*, and *Vendidad* (most conveniently ed. F. Spiegel, *Avesta*, Vienna, 1853-58; L. H. Mills, *The Ancient MS of the Yasna, with its Pahlavi Tr.* (A.D. 1323), generally quoted as *J2*, Oxford, 1893, and *Guthas*, Leipzig, 1892-1913 [also with Sanskrit and Modern Persian versions, and Eng. tr.]; the *Vendidad* separately by D. P. Sanjana, Bombay, 1895, and H. Jamasp and M. M. Ganderia, do. 1907), *Nyāyisns* (ed. [also with Sanskrit, Persian, and Gujarātī versions, and Eng. tr.] M. N. Dhalla, New York, 1908),¹ *Yast* i. (ed. K. Salemann, in *Travaux du 8^e congrès des orientalistes*, Petrograd, 1879, ii. 493-592), vi., vii., xi. (ed. J. Darmesteter, *Études orient.*, Paris, 1883, ii. 286-288, 292-294, 333-339; a complete ed. is promised by Dhalla), *Nirangistān* (ed. D. P. Sanjana, Bombay, 1894; tr. of Avesta portion by Darmesteter, *Zend-Avesta*, Paris, 1892-93, iii. 78-148, and *SBE* iv.² [1895] 304-368), *Aogemadaēcā* (ed. and tr. W. Geiger, Erlangen, 1878), and *Hātōxt Nask* (ed. and tr. Hoshangji Jamaspji Asa and M. Haug, in their *Arda Virāf*, Bombay, 1872-74, also tr. Darmesteter, *Zend-Avesta*, ii. 648-658, and *SBE* xxiii. [1883] 311-323). In addition, Pahlavi versions of *Yt.* ii., xiv., and xxiv., and of the *Āfrinakāns* and *Sih rōcaks*, are known to exist in MS.²

¹ Translations of the Pahlavi version of *Ys.* xxx. and lvii. have been made by H. Hubschmann (*Ein zoroastr. Lied*, Munich, 1872, and *SM.A.*, phil.-hist. Classe, 1873, pp. 651-664), of xi. by W. Bang (*Bull. de l'Acad. roy. de Belgique*, xviii. [1889] 247-260), of xxviii.-xxxii. 1 by M. Haug (*Essays on the Sacred Language, Writings, and Religion of the Parsis*, London, 1907, pp. 338-354), of ix. by M. B. Davar (Leipzig, 1904), and of *Vend.* i. by W. Geiger (Erlangen, 1877), of i., xviii.-xx. by Haug (*op. cit.* 355-393), and of xvii. by P. Horn (*ZDMG* xliii. [1889] 82-84).

² The authenticity of the *Vīrkart-i-Dīnk* (ed. Peshotan, Bombay, 1848) is too dubious to be considered here. The book, of which the writer knows only two copies (in the Staatsbibliothek, Munich, and in the library of A. V. W. Jackson, Columbia University), has been suppressed by the Parsis as unauthentic (cf. on it West, *GIrP* ii. 89 f.; C. Bartholomae, *Indogerman. Forschungen*, xi. [1900] 119-121, xii. [1901] 92-101).

2. **Texts on Zoroastrian religious subjects.**—Of these the longest and most important is the *Dīnkart* ('Acts of the Religion'), dating from the 9th cent., and forming 'a large collection of information regarding the doctrines, customs, traditions, history, and literature of the Mazda-worshipping religion' (E. W. West, *GIrP* ii. 91). The first two books have been lost, and the ninth ends abruptly. The *Dīnkart* is the chief source for a knowledge of Zoroastrian philosophy in the Sasanid period, and it also contains much legendary material of value, such as the traditions concerning Zoroaster (tr. West, *SBE* xlvii. [1897] 3-130), while two books, viii.-ix. (tr. West, *ib.* xxxvii. [1892] 3-397), contain summaries of the Avesta, including accounts of those large portions which are no longer extant. The text, which is of exceptional difficulty, has been edited by D. M. Madan (Bombay, 1911), and, with English and Gujarātī paraphrases, by Peshotan Behramji and Darab Peshotan Sanjana (do. 1874 ff.; vol. xiii. carries the work through *Dīnk.* vii. 2). The *Bundahishn* treats of Zoroastrian cosmogony, cosmology, and eschatology. It is found in two recensions: a shorter (ed. and tr. F. Justi, Leipzig, 1868; tr. West, *SBE* v. [1880] 3-151) and a longer—the so-called Great, or Iranian, *Bundahishn* (ed. T. D. Anklesaria, Bombay, 1908; summary of contents in *GIrP* ii. 100-102; tr. of portions by Darmesteter, *Zend-Avesta*, i. 267 f., ii. 305-322, 398-402; by J. J. Modi, *Asiatic Papers*, Bombay, 1905, pp. 225-234; and by E. Blochet, *RHR* xxxii. [1895] 99 ff., 217 ff.).

Eschatology forms the general subject of the *Artā-ī-Virāf Nāmak*, which sets forth, in describing the journey of Artā-ī-Virāf through heaven and hell, the future life of both righteous and wicked (ed. Hoshangji and Haug, Bombay, 1872-74). Here belong also the *Bahman Yast*, which purports to be Ahura Mazda's revelation to Zoroaster of the future vicissitudes of the Iranian nation and religion (ed. K. A. Noshervan, Poona, 1899; tr. West, *SBE* v. 191-235); and the *Matan-i-Sāh Vāhrām-i-Varjāvand* ('Coming of King Vāhrām-i-Varjāvand'), on the expulsion of the Arabs from Persia (ed. Jamaspji Minocheherji Jamasp-Asana, *Pahlavi Texts contained in the Codex MK*, Bombay, 1897-1913, p. 160 f.).

The principal Pahlavi texts of a purely general religious character are the following: *Mātagān-i-Haft Amaspand* ('Particulars of the seven Amesha Spentas'); *Stāyishn-i-Sih-Rōcak* ('Praise of the Thirty Days'), which 'praises and invokes Ahuramazd as the creator of each of the thirty sacred beings whose names are applied to the days of the month, and whose attributes are detailed and blessed in succession' (West, *GIrP* ii. 108); *Stāyishn-i-Drōn*, a laudation of the *drōn*, or sacred cake; *Haqiqat-i-Rōjhā* ('Statement of the Days'), stating what actions are suitable on each of the days of the month; *Mātagān-i-Māh Fravartīn Rōj Kūrdāt*, enumerating the marvellous events that have occurred on the sixth day of the first month from the beginning to the end of the world (ed. Jamaspji, *op. cit.*, pp. 102-108; tr. K. J. Jamasp Asānā, *Cama Memorial Volume*, Bombay, 1900, pp. 122-129); *Mātagān-i-Sih-Rōj*, containing material similar to the *Haqiqat*, but in fuller detail (tr. D. P. Sanjana, *Nest-of-kim Marriages in old Iran*, London, 1888, pp. 105-116); *Dārūk-i-Xūrsandih*, giving the components (contentment, perseverance, etc.) which are to be pounded with 'the pestle of reverence,' and taken daily at dawn with the spoon of prayer (ed. Jamaspji, *op. cit.*, p. 154); *Gīm-i-Drōn* ('Meaning of the Sacred Cake'), dealing with the symbolism and consecration of the *drōn*; *Patēt-i-Xūt*, a long formula for the confession of one's sins; a number of *Āfrins* ('Benedictions'); the *Āširvād*, or marriage benediction; *Namāz-i-Ahurmazd*, a lauda-

tion of Ahura Mazda (ed. and tr. E. Sachau, *SWA W* lxvii. [1871] 828-833; also tr. Darmesteter, *Une Prière judéo-persane*, Paris, 1891); and *Nām-stāyisnīh*, a laudation of the name and attributes of Ahura Mazda.

Second only to the *Dinkart* as a source for knowledge of the religious philosophy of the Sassanid Zoroastrians (and, like the larger work, doubtless embodying a large amount of older material) is what may be termed *responsa* literature. This treats of all sorts of matters on which questions might arise. One of the most important works of this type is the *Dātistān-i-Dīnik*, the 'Religious Opinions' of Mānūšīhar, high priest of Pārs and Kirmān, in reply to the questions raised by Mitrō-Xūrset and others (tr. West, *SBE* xviii. [1892] 3-276; the first 15 questions ed. D. P. Sanjana, Bombay, 1897); with this is connected a long and important Pahlavi *Rivāyat* (ed. Bamanji Nasarvanji Dhabhar, Bombay, 1913), while the same Mānūšīhar wrote, in 881, three epistles on ritual problems (ed. Dhabhar, Bombay, 1912, tr. West, *SBE* xviii. 279-366), his brother, Zāt-Sparam, also being the author of a noteworthy religious treatise (tr. West, *SBE* v. 155-186, xlvi. 133-170, xxxvii. 401-405). Of equal importance with the *Dātistān-i-Dīnik* is the *Dīnā-i-Mānōg-i-Xrat* ('Opinions of the Spirit of Wisdom'), of which only a portion (ed. F. C. Andreas, Kiel, 1882) survives in Pahlavi, though the complete work is found in Pāzand and Sanskrit (ed. West, Stuttgart, 1871, tr. West, *SBE* xxiv. [1885] 3-113). The *Pursišnīhā* ('Questions') are chiefly answered by quotations from Avesta texts (the latter ed. and tr. Darmesteter, *Zend-Avesta*, iii. 53-77, *SBE* iv.² 276-299), and another noteworthy collection of *responsa* (as yet unedited) is contained in the *Rivāyat-i-Hemēt-i-Asavahistān*. Here, too, belongs, roughly speaking, the *Sāyast-lā-Sāyast* ('Proper and Improper'), whose contents 'are of a very varied character, but sins and good works, precautions to avoid impurities, details of ceremonies and customs, the mystic signification of the Gathas, and praise of the sacred beings are the principal subjects discussed' (West, *GIRP* ii. 107; tr. West, *SBE* v. 239-406). In this category may also be ranked the *Mātīgān-i-Yōst-i-Fryāno*, narrating how the righteous Yōst answered the 33 questions of the wizard Axt, who was thus destroyed, whereas he had previously killed all who had failed to solve his queries—the Iranian version of the story of the sphinx (ed. and tr. Hoshangji and Haug, in their *Arda Virāf*; also tr. A. Barthélemy, *Une Légende iraménne*, Paris, 1889). Controversial literature is represented by the *Mātīgān-i-guyastak Abālīš*, recounting the disputation between the heretic Abālīš and Ātūr-Farnbag (who began the compilation of the *Dinkart*) before the khalif al-Ma'mūn about 825 (ed. and tr. Barthélemy, Paris, 1887).

Yet another important type of Pahlavi literature is that of didactic admonitions. To this class belong the *Pand-nāmak-i-Zaratūšt* (not the Prophet, but probably the son of Ātūr-pāt-i-Māraspandān; ed. and tr. P. B. Sanjana, in his *Ganje-Shāyagān*, Bombay, 1885); *Andarj-i-Xūsro-i-Kavāṭān*, purporting to be the dying counsels of Chosroes to his people (ed. and tr. Sanjana, *op. cit.*; also tr. L. C. Casartelli, *BOE* i. [1887] 97-101, and Salemann, *Mélanges asiat. tirés du bull. de l'acad. imp. des sciences de St. Pétersbourg*, ix. [1887] 242-253); *Andarj-i-Ātūr-pāt-i-Māraspandān*, being the advice of Ātūr-pāt to his son Zaratūšt (perhaps the person mentioned just above; ed. and tr. Sanjana, *op. cit.*; also tr. C. de Harlez, *Muséon*, vi. [1887] 66-78); *Pand-nāmak-i-Vajōrg-Mitrō-i-Būxtakān* (ed. and tr. Sanjana, *op. cit.*); *Five Dispositions for Priests and Ten Admonitions for Laymen* (ed. Jamaspji, *op. cit.* 129-131); *Characteristics of a Happy Man*

(ed. Jamaspji, *op. cit.* 162-167); *Vācak ācand-i-Ātūr-pāt-i-Māraspandān*, the dying counsel of Ātūr-pāt (ed. Jamaspji, *op. cit.* 144-153); *Andarj-i-Aōsnar-i-dānāk*, *Injunctions to Beh-dīns*, *Admonitions to Mazdayasnians*, and *Sayings of Ātūr-Farnbag and Baat-Afrīt* (these as yet unedited).

3. Manichæan and Christian literature.—Until comparatively recently it was supposed that Pahlavi literature was exclusively Zoroastrian; but the discoveries made in Central Asia by M. A. Stein, A. Grünwedel, A. von Le Coq, and P. Pelliot have revealed a new province of extreme interest and value. The decipherment of the MSS found by these explorers has only begun. Here it must suffice to say that we already possess Pahlavi versions of somewhat extensive portions of Manichæan literature—a fact the more important since this religion had hitherto been known only from the writings of its enemies. The most important collection of these texts thus far is that of F. W. K. Müller (with German translation, 'Handschriften-Reste in Estrangelo-Schrift aus Turfan,' *ABAW*, 1904; revised ed. C. Salemann, 'Manichæische Studien, 1,' *Mém. de l'acad. imp. des sciences de St. Pétersbourg*, viii. 10 [1908]; Müller, 'Doppelblatt aus einem manich. Hymnenbuch,' *ABAW*, 1913). In the closely allied Soghdian dialect are numerous fragments of a version of the NT, perhaps from the 9th or 10th cent. (Müller, 'NT Bruchstücke in sog. Sprache,' *SBAW*, 1907, pp. 260-270; 'Sog. Texte, I,' *ABAW*, 1913; cf. L. H. Gray, *Expt* xxv. [1913] 59-61).

4. Pāzand and Sanskrit versions.—The special problems of the Pahlavi language cannot be discussed here (see F. Spiegel, *Gram. der Huzvāresch Sprache*, Vienna, 1851; P. B. Sanjana, *Gram. of the Pahlvi Lang.*, Bombay, 1871; C. de Harlez, *Manuel du Pehlvi*, Paris, 1880; Darmesteter, *Études iran.*, do. 1883; Salemann, 'Mittelpersisch,' *GIRP* i. i. [1901] 249-332; E. Blochet, *Études de gram. pehlvie*, Paris, n.d. [1905]); it must suffice to say that, when the Semitic words (or logograms) in Pahlavi are written in Iranian (e.g., *sāhān sāh*, 'king of kings,' instead of *malkān malkā*), the language is termed Pāzand (Spiegel, *Gram. der Pārsisprache*, Leipzig, 1851). Many Pahlavi texts already listed are found in Pāzand as well. The great majority of the religious writings of this type, except the important *Šikand gūmānīg-Vjār* ('Doubt-dispelling Explanation'), probably dating from the latter part of the 9th cent. (ed. Hoshang and West, Bombay, 1887; tr. West, *SBE* xxiv. 117-251), and the *Jāmāsp-nāmak* (ed. J. J. Modi, Bombay, 1903), have been edited by E. K. Antia (*Pāzand Texts*, Bombay, 1909). The *Šikand gūmānīg-Vjār* defends the doctrine of dualism, and in this connexion polemizes in very interesting fashion against Judaism, Christianity, Manichæanism, and—necessarily quite guardedly—Muhammadanism (cf. artt. JESUS CHRIST IN ZOROASTRIANISM, JEWS IN ZOROASTRIANISM); the *Jāmāsp-nāmak* gives a summary of Iranian cosmology, history, and future fortunes of the Iranian religion. Among the texts edited by Antia are *doās* (benedictions recited on various occasions), *nirangs* (charms, often of much ethnographical interest; for examples see Modi, *Anthropological Papers*, Bombay, 1911, pp. 48, 125-129; K. E. Kanga, in *Cama Mem. Vol.*, 142-145), *patēts* (confessions); and of texts not included in this collection mention may be made of *A Father instructing his Son* and *Andarj-i-dānāk Mart*.

A number of Pahlavi (and Avesta) treatises are found in Sanskrit as well as in Pahlavi and Pāzand versions. Many of these are given in editions of Pahlavi texts enumerated above, but we must also note the ed. of Neriosangh's version of the *Yasna* by Spiegel (Leipzig, 1861) and the series of *Collected*

Sanskrit Writings of the Parsis, ed. S. D. Bharucha (Bombay, 1906 ff.).

5. **Parsi-Persian literature.**—Apart from Persian translations of Avesta and Pahlavi texts, there is a large amount of Zoroastrian literature in Persian, which, for the most part, still awaits study. The *Zartušt-nāmah*, dating from the 12th cent., which is now accessible in original and translation by F. Rosenberg (Petrograd, 1904), gives a legendary biography of Zoroaster. Another work of importance is the *Šad-dar* ('Hundred Gates'), which discusses a hundred subjects of note in Zoroastrianism. Two of its three recensions have been translated into English (West, *SBE* xxiv. 255-361) and Latin (T. Hyde, *Hist. religionis veterum Persarum*, Oxford, 1700, pp. 433-488). A different work, although along the same general lines, is the *Šad-darbund-i-Huš* (or *Šad-dar Bundahišn*; ed. B. N. Dhabhar, Bombay, 1909). Of worth for a study of the methods of Zoroastrian polemic against Muhammadanism is the '*Ulamā-i-Islām*', which is found in two recensions, the shorter of which has been edited and translated (ed. J. Mohl, *Fragments relatifs à la religion de Zoroastre*, Paris, 1829; tr. J. Vullers, *Fragments über die Religion des Zoroaster*, Bonn, 1831; Blochet, *RHR* xxxvii. [1898] 23-49). A particularly valuable collection of Parsi-Persian literature is contained in the MS Bu 29, belonging to the University of Bombay, the second volume of which has been edited by M. N. Unvālā (not yet published) and analyzed by Rosenberg (*Notices de litt. persie*, Petrograd, 1909). It contains a large number of *Rivāyats* (religious traditions) and letters on the most diverse subjects—ritual, cosmogony, eschatology, etc.—the longer recension of the '*Ulamā-i-Islām*' (pp. 72-80), the *Ahkām-i-Jāmāsp* (containing the horoscopes of Zoroaster, Moses, Alexander the Great, Christ, Mazdak, etc., as well as cosmology and eschatology, pp. 111-130), *Vasf-i-Anšāsfandān* (attributes of the Amesha Spentas, pp. 164-192), *Aghāz-i-dāstān Mazdak va-Sāh Nūšrōvān 'Adil* (on the heresiarch Mazdak, pp. 214-230), six parables connected with the Barlaam cycle (pp. 305-327; cf. art. JOSAPHAT, BARLAAM AND), and questions asked of Zoroaster by Jāmāsp (pp. 417-422). Among other Parsi-Persian texts, not yet edited, may be mentioned a *Discussion on Dualism* between a Zoroastrian priest and a Muhammadan, and the *Saugand-nāmah*, or 'Book of Oaths.'

The interesting secular works in Pahlavi, Pāzand, and Parsi-Persian, such as geographical matter, social rules, and tales, do not come within the sphere of religion.

Finally, it may be mentioned that translations of the Avesta have been made not only into Persian (for specimens see, in addition to works cited above, Darmesteter, *Études iran.* ii. 262 ff.), but also, from the 15th cent., into Gujarātī, the vernacular of the Indian Zoroastrians (see the Prolegomena to K. Geldner's ed. of the Avesta, Stuttgart, 1896, pp. vii-xi; Darmesteter, *Zend-Avesta*, i. p. xlii); and the modern religious literature of the Parsis is chiefly written either in Gujarātī or in English.

LITERATURE.—F. Spiegel, *Traditionelle Lit. der Parsen*, Vienna, 1860; E. W. West, 'Pahlavi Lit.', *GIRP* ii. (Strassburg, 1904) 76-129; E. Wilhelm and K. B. Patel, *Cat. of Books on Iranian Lit. published in Europe and India*, Bombay, 1901, and the former scholar's annual report on 'Perser' in *Jahresberichte der Geschichtswissenschaft*.

LOUIS H. GRAY.

LITERATURE (Vedic and Classical Sanskrit).

—1. **The language.**—The name 'Sanskrit' (*sam-skṛta*, 'adorned,' 'perfected,' perfect passive participle of the verb *sam-skṛ*, 'to adorn,' from *saṁ*, 'together,' and *kar*, 'to make') is ordinarily applied to the whole ancient and sacred language of India. It belongs more properly to that dialect which may

be defined more exactly as Classical Sanskrit, the language which was treated by the Hindu grammarians, Pāṇini and his followers. For more than 2000 years, until the present day, this language has led a more or less artificial life. Like the Latin of the Middle Ages, it was, and is, even today, to a very marked extent, the means of communication and literary expression of the priestly, learned, and cultivated classes. The more popular speech upon which it was based is known as *bhāṣā* ('speech,' from *bhāṣ*, 'to speak'), of which there is no direct record. Sanskrit is distinguished more obviously from the phonetically later, decayed dialects, Prākṛit and Pālī, the second of the two being the language of the canonical writings of the Southern Buddhists. The relation of the Prākṛit and Pālī dialects to Sanskrit is closely analogous to the relation of the Romance languages to Latin. On the other hand, Sanskrit is distinguished, although much less sharply, from the oldest forms of Indian speech, preserved in the canonical and wholly religious literature of the Veda (Skr. *veda*, 'knowledge,' from *vid*, 'to know,' connected with Gr. *folda* 'I know,' Lat. *videre*, Old Bulgarian *vědě*, 'I know,' Gothic *wait*, 'I know,' Old High German *wizzan*, Germ. *wissen*, Eng. *wit*, 'to know'). These forms of speech are in their turn by no means free from important dialectic, stylistic, and chronological differences; yet they are comprised under the name Vedic (or, less properly, Vedic Sanskrit), which is thus distinguished from the language of Pāṇini and its forerunner, the language of the Epics, whose proper designation is Sanskrit, or Classical Sanskrit.

Vedic differs from Sanskrit about as much as the Greek of Homer does from Attic Greek. The Vedic apparatus of grammatical forms is much richer and less definitely fixed than that of Sanskrit. The latter has lost much of the wealth of form of the earlier language, without, as a rule, supplying the proper substitutes for the lost materials. Many case-forms and verbal forms of Vedic have disappeared in Sanskrit. The subjunctive is lost; a single Sanskrit infinitive takes the place of about a dozen very interesting Vedic infinitives. Sanskrit also gave up the most important heirloom which the Hindū language has handed down from pre-historic times, namely, the Vedic system of accentuation. In the last forty years the recorded Vedic accents have proved to be of paramount importance in the history of the Indo-European languages. Vedic, however, notwithstanding its somewhat unsettled wealth of form and its archaic character, is not a strictly popular dialect, but a more or less artificial 'high speech,' handed down through generations by families of priestly singers. Thus both Vedic and Sanskrit, as is indeed the case more or less wherever a literature has sprung up, were in a sense caste languages, built upon popular idioms. The grammatical regulation of Sanskrit at the hands of Pāṇini and his followers, however, went beyond any academic attempts to regulate speech recorded elsewhere in the history of civilization.

Older forms lying behind the Vedic language are reconstructed by the aid of Comparative Philology. The Vedic people were immigrants to India; they came from the great Iranian region on the other side of the Hymālaya mountains. The comparison of Vedic (and to a less extent Sanskrit) with the oldest forms of Iranian speech, the language of the Avesta and the cuneiform inscriptions of the Achaemenian Persian kings, yields the rather startling result that these languages are collectively mere dialects of one and the same older idiom. This is known as the Indo-Iranian or Aryan (in the narrower, and proper, sense) language. The reconstructed Aryan language differs

less from the language of the Veda than Classical Sanskrit does from Prākṛit and Pāli. The language of the Iranian Avesta is so much like that of the Veda that entire passages of either literature may be converted into good specimens of the other by merely eliminating the special sound changes which each has evolved in the course of its separate existence. And the literary style, the metres, and above all the mythology of Veda and Avesta are closely enough allied to make the study of either to some extent directly dependent upon the other. In fact, the spiritual monuments of the Avesta as well as the stone monuments of the Achaemenian kings became intelligible chiefly by the aid of the Vedic language. Since the revival of classical learning there has been no event of such importance in the history of culture as the discovery of Sanskrit in the latter part of the 18th century. There is at present no domain of historical or linguistic science untouched by the influence of Sanskrit studies. The study of this language gave access to the primitive Indo-European period, and originated the science of Comparative Philology in all its bearings. Linguistic Science, Comparative Mythology, Science of Religion, Comparative Jurisprudence, and other important fields of historical and philosophical study either owe their very existence to the discovery of Sanskrit or were profoundly influenced by its study.

2. The Veda as a whole.—The word 'Veda' is the collective designation of the ancient sacred literature of India, or of individual books belonging to that literature. At an unknown date, which is at the present time conventionally averaged up as 1500 B.C., but which may be considerably earlier, Aryan tribes (clans, *viś*, from which is derived the later name of the third, or agricultural, caste, Vāiśya) began to migrate from the Iranian highlands on the north of the Hindu Kush mountains into the north-west of India, the plains of the river Indus and its tributaries. The non-Aryan aborigines, called Dasyu, in distinction from Ārya (whence the word 'Aryan'), the name of the conquerors, were easily subdued. The conquest was followed by gradual amalgamation of the fairer-skinned conquerors with the dark aborigines. The result was a not altogether primitive, semi-pastoral civilization, in which cities, kings, and priestly schools rivalled the interests connected with cattle-raising and agriculture. From the start we are confronted with a poetical literature, primitive on the whole, and more particularly exhibiting its crudeness when compared with Classical Sanskrit literature, yet lacking neither in refinement and beauty of thought nor in skill in the handling of language and metre. That this product was not entirely originated on Indian soil follows from the above-mentioned close connexion with the earliest forms of Persian literature. Vedic literature in its first intention is throughout religious. It includes hymns, prayers, and sacerdotal formulæ offered by priests to the gods in behalf of lay sacrificers; charms for witchcraft and medicine, manipulated by magicians and medicine-men; expositions of the sacrifice, illustrated by legends, in the manner of the Jewish Talmud; higher speculations, philosophic, psycho-physical, cosmic, and theosophic, gradually growing up in connexion with and out of the simpler beliefs; and, finally, rules for conduct in everyday life, at home and abroad. This is the Veda as a whole.

At the base of this entire literature of more than 100 books, not all of which have as yet been unearthed or published, lie four varieties of metrical and formulaic compositions known as the four Vedas in the narrower sense. These are the R̥gveda, the Yajurveda, the Sāmaveda, and the

Atharvaveda. These four names come from a somewhat later time; they do not coincide exactly with the earlier names, nor do they correspond completely with the contents of the texts themselves. The earlier names are *ṛchah*, 'stanzas of praise,' *yajūṁsi*, 'liturgical stanzas and formulæ,' *sāmāni*, 'melodies,' and *atharvāṅgirasah*, 'blessings and curses.' The collection which goes by the name of R̥gveda contains not only 'stanzas of praise,' but also 'blessings and curses,' as well as most of the stanzas which form the basis of the *sāman*-melodies of the Sāmaveda. The Atharvaveda contains *ṛchah* and *yajūṁsi*, as well as blessings and curses. The Yajurveda also contains many blessings in addition to its main topic, the liturgy. The Sāmaveda is merely a collection of a certain kind of 'stanzas of praise' which are derived with some variants and additions from the R̥gveda, but are here set to music which is indicated by musical notations.

3. The R̥gveda.—The *R̥gveda* is on the whole the most important as well as the oldest of the four collections. A little over 1000 hymns, equalling in bulk the surviving poems of Homer, are arranged in ten books, called *maṇḍalas*, or 'circles.' Six of them (ii.-vii.), the so-called 'family books,' form the nucleus of the collection. Each of these is the work of a different *ṛṣi*, 'seer,' or rather a family of poets, traditionally descended from such a *ṛṣi*, as may be gathered from certain statements in the hymns themselves. The eighth book and the first fifty hymns of the first book, belonging to the family of Kanva, are often arranged strophically in groups of two or three stanzas. These form the bulk of those stanzas which are sung to melodies in the Sāmaveda. The hymns of the ninth book are addressed directly to the deified plant *soma*, and the liquor pressed from it, in order that it may be sacrificed to the gods. The remainder of the first book and the entire tenth book are more miscellaneous in character and problematic as to arrangement. On the whole they are of later origin and from a different sphere. Their themes are partly foreign to the narrower purpose of the *ṛchah*; witchcraft hymns of a more popular character and theosophic hymns appear in considerable numbers. The poems of the former class reappear, usually with variants, in the Atharvaveda.

On the whole the R̥gveda is a collection of priestly hymns addressed to the gods of the Vedic pantheon (see VEDIC RELIGION) during sacrifice. This sacrifice consisted of oblations of intoxicating *soma*, pressed from the 'mountain-born' *soma*-plant, which reappears in the Zoroastrian Avesta under the name *haoma* (*q.v.*), and was therefore the sacred sacrificial fluid of the Indo-Iranians, or Aryans. In addition, melted butter (*ghṛta*, or *ghī*) was poured into the fire, personified as the god Agni (Lat. *ignis*), who performs the function of messenger of the gods (Angiras). The ritual of the Veda is to a considerable extent pre-historic, and advanced in character—by no means as simple as was once supposed. But it is much less elaborate than that of the Yajurveda and the Brāhmaṇas (see below). The chief interest of the R̥gveda lies in the gods themselves and in the myths and legends narrated or alluded to in the course of their invocation. The mythology represents an earlier, clearer stage of thought than is to be found in any other parallel literature. Above all, it is sufficiently primitive in conception to show clearly the processes of personification by which the phenomena of nature developed into gods (anthropomorphosis). The original nature of the Vedic gods, however, is not always clear, not as clear as was once confidently assumed to be the case. The analysis of their character is a chapter of Vedic

philology as difficult as it is important. In any case enough is known to justify the statement that the keynote of Rigvedic thought is the nature myth.

4. The Yajurveda.—The *Yajurveda* represents the exceeding growth of ritualism or sacerdotalism. Its *yajūṃṣi*, 'liturgical stanzas and formulæ,' are in the main, though not wholly, of a later time. They are partly metrical and partly prose. The materials of the Rigveda are freely adapted, with secondary changes of expression, and without regard to the original purpose and order of their composition. The main object is no longer devotion to the gods themselves; the sacrifice has become the centre of thought: its mystic power is conceived to be a thing *per se*, and its every detail has swollen into all-importance. A crowd of priests (seventeen is the largest number) conduct a vast, complicated, and painstaking ceremonial, full of symbolic meaning even in its smallest minutiae. From the moment when the priests seat themselves on the sacrificial ground, strewn with sacred grass, and proceed to mark out the altars (*vedi*) on which the sacred fires are built every act has its stanza or formula, and every utensil is blessed with its own fitting blessing. Every flaw is elaborately expiated. These formulæ are conceived no longer as prayers that may, or may not, succeed, but as inherently coercive magic. If the priest chants a formula for rain while pouring some sacrificial fluid, rain shall and must come; if he makes an oblation accompanied by the curse of an enemy, that enemy is surely destroyed. In fact, and in brief, the Yajurveda means the deification of the sacrifice in its every detail of act and word.

5. The Sāmaveda.—The *Sāmaveda* is the least clear of all the Vedas as regards its purpose and origin. Its stanzas, or rather groups of stanzas, are known as *sāmāni*, 'melodies.' The *sāman*-stanzas are preserved in three forms: (1) in the Rigveda, as ordinary poetry, accented in the same way as other Vedic poetry; (2) in the Sāmaveda itself in a form called *ārchika*, a kind of libretto composed of a special collection of stanzas, most of which, though not all, occur also in the Rigveda (see above); here also there is a system of accents, peculiar in its notation, but apparently with reference to the unsung *sāmans*; (3) in the third *sāman*-version, the *gānas*, or song-books, we find the real sung *sāmans*; here not only the text but the musical notes are given. Still this is not yet a complete *sāman*. In the middle of the sung stanzas exclamatory syllables are interspersed—the so-called *stobhas*, such as *om*, *han*, *has*, *hoi*, or *hin*; and at the end of the stanzas certain concluding syllables—the so-called *nidhanas*, such as *atka*, *ā*, *in*, and *sāt*. The Sāmaveda is devoted chiefly to the worship of Indra, who is a blustering, braggadocio god and who has to befuddle himself with *soma* in order to slay demons. It seems likely, therefore, that the *sāmans* are the civilized version of savage shamanism (the resemblance between the two words, however, is accidental), an attempt to influence the natural order of things by shouts and exhortations. It is well understood that the Brāhmanas were in the habit of blending their own hieratic practices and conceptions with the practices which they found among the people. The *sāman*-melodies and the exclamations interspersed among the words of the text may therefore be the substitute for the self-exciting shouts of the shaman priests of an earlier time.

6. The Atharvaveda.—The oldest name of the Atharvaveda is *atharvāṅgirasah*, a compound formed of the names of two semi-mythic families of priests, the Atharvans and Aṅgirasas. At a very early time the former term was regarded as synonymous with 'holy charms,' or 'blessings,' the

latter with 'witchcraft charms,' or 'curses.' In addition to this name, and the more conventional name Atharvaveda, there are two other names, practically restricted to the ritual texts of this Veda: *bhṛgvāṅgirasah*, that is, 'Bhṛgu and Aṅgirasas,' in which the Bhṛgu, another ancient family of fire-priests, take the place of the Atharvans; and *Brahmaveda*, probably 'Veda of the Brahma, or holy religion in general.' As regards the latter name, it must be remembered that the Atharvaveda contains a large number of theosophic hymns which deal with the *brahma* in the sense of the Neo-Platonic λόγος, as a kind of pantheistic personification of holy thought and its pious utterance. The Atharvaveda is a collection of 730 hymns, containing some 6000 stanzas.

7. The Vedic schools.—The redactions or collections of these four Vedas are known as *Saṁhitās*; each of them is handed down in various schools, branches, or recensions, called *charaṇa*, *sākhā*, or *bheda*, the term *sākhā*, or 'branch,' being the most familiar of the three. These 'branches' represent a given Veda in forms differing not a little from one another. The school differences of the Rigveda are unimportant, except as they extend also to the Brāhmaṇas and Sūtras of that Veda (see below). There are two Sāmaveda redactions, those of the schools of the Kauthumās and the Rāṇāyanīyas. A very persistent tradition ascribes nine schools to the Atharvaveda; the *Saṁhitās* of two of these, the Sannakiyas and Paippalādas, are published, the latter in an interesting chromo-photographic reproduction of the unique manuscript of that text preserved in the library of the University of Tübingen. The Yajurveda, especially, is handed down in recensions that differ from one another very widely. There is in the first place the broad division into White Yajurveda and Black Yajurveda. The most important difference between these two is that the Black Yajurveda schools intermingle their stanzas and formulæ with the prose exposition of the Brāhmaṇa (see below), whereas the White Yajurveda schools present their Brāhmaṇa in separate works. The White Yajurveda belongs to the school of the Vājasaneyins, and is subdivided into the Mādhyandina and Kanva recensions. The important schools of the Black Yajurveda are the Taittirīyas, Maitrāyanīyas, Kāthas, and Kapiṣṭhalas. Sometimes these schools have definite geographical locations. For example, the Kāthas and Kapiṣṭhalas were located, at the time when the Greeks became acquainted with India, in the Panjāb and in Kashmir. The Maitrāyanīyas appear at one time to have occupied the region around the lower course of the river Narmadā; the Taittirīyas, at least in modern times, are at home in the south of India, the Deccan.

8. The Brāhmaṇas.—The poetic stanzas and the ritualistic formulæ of the Vedas collectively go by the name of *mantra*, 'pious utterance,' or 'hymn.' These were followed at a later period by a very different literary type, namely, the theological treatises called *brāhmaṇa*, the Hindu analogon to the Hebrew Talmud. The Brāhmaṇas are exegetical and commentative, bulky expositions of the sacrificial ceremonial, describing its minute details, discussing its value or reason, speculating upon its origin, and illustrating its potency by ancient legends. Apart from the light which these texts throw upon the sacerdotalism of ancient India, they are important because they are written in connected prose—the earliest in the entire domain of Indo-European speech. They are especially important for syntax: in this respect they represent the oldest Indian stage even better than the Rigveda, owing to the restrictions imposed upon the

latter by its poetic form. The Brāhmaṇas also were composed in schools, or recensions: the various Brāhmaṇa recensions of one and the same Veda differ at times even more widely than the Saṁhitās of the *mantras*. Thus the Rīgveda has two Brāhmaṇas, the *Aitareya* and the *Kauṣītaki*, or *Sāṅkhāyana*. The Brāhmaṇa matter of the Black Yajurvedas is given together with the *mantras* of that class (see above); on the other hand, the White Yajurveda treats its Brāhmaṇa matter separately, and with extraordinary fullness, in the famous *Satapatha Brāhmaṇa*, the 'Brāhmaṇa of a Hundred Paths,' so called because it consists of a hundred lectures. Next to the Rīgveda and Atharvaveda Saṁhitās this work is the most important production in the whole range of Vedic literature. Two Brāhmaṇas belonging to independent recensions of the Sāmaveda have been preserved entire, that of the Tāṇḍins, usually designated as *Pañchaviṁśa Brāhmaṇa*, and that of the Talavakāras or Jaiminīyas. To the Atharvaveda is attached the very late and secondary *Gopatha Brāhmaṇa*; its contents harmonize so little with the spirit of the Atharvan hymns that it seems likely to have been produced in imitation of the 'school' conditions in the other Vedas.

9. The *Āraṇyakas* and *Upaniṣads*.—A later development of the Brāhmaṇas is the *Āraṇyakas*, or 'Forest Treatises.' Their later character is indicated both by the position which they occupy at the end of the Brāhmaṇas and by their partly theological character. The name 'Forest Treatise' is not altogether clear. Either these works were recited by hermits living in the forest, or, owing to the superior sanctity of their contents, they were taught by teacher to pupil in the solitude of the forest rather than in the profaner atmosphere of the town or village. The two important *Āraṇyakas* are the *Aitareya* and the *Taittirīya*, belonging to the two Vedic schools of that name. The chief interest of the *Āraṇyakas* is that they form in contents and tone a transition to the *Upaniṣads*, the older of which are either embedded in them or form their concluding portions (see artt. *ĀRANYAKAS*, *UPANISADS*).

10. The *Srauta-Sūtras*, or manuals of the Vedic ritual.—Both *mantra* and *brāhmaṇa* are regarded as revealed (*śruti*, or 'revelation'); the rest of Vedic literature as tradition (*smṛti*), derived from holy men of old. This literature has a characteristic style of its own, being handed down in the form of brief rules, or *sūtras*, whence it is familiarly known as *Sūtra* literature, or the *Sūtras*. They are, in the main, of three classes, each of which is, again, associated with a particular Vedic school, reaching back, as a rule, to the school distinctions of the Saṁhitās and the Brāhmaṇas. The first class of *Sūtras* are the *Srauta* or *Kālpa Sūtras*, which may be translated 'Sūtras of the Vedic Ritual.' They are brief mnemonic rule-books compiled, with the help of oral tradition, from the Brāhmaṇas. They are technical guides to the Vedic sacrifice, distinguished from the diffusive Brāhmaṇas, where the ritual acts are interrupted by explanation and illustrative legend. To the Rīgveda belong two *Srauta Sūtras*, corresponding to its two Brāhmaṇa schools: the *Āśvalāyana* to the *Aitareya Brāhmaṇa*, and the *Sāṅkhāyana* or *Kauṣītaki* to the Brāhmaṇa of the same name. To the White Yajurveda belongs the *Srauta Sūtra* of *Kātyāyana*, closely adhering to the *Satapatha Brāhmaṇa*. There are no fewer than six *Srauta Sūtras* belonging to the Black Yajurveda, but only three of them are published, or in the course of publication, those of *Āpastamba* and *Baudhāyana*, belonging to the schools of the *Taittirīyas*, and the *Mānava*, belonging to the school of the *Maitrāyaṇīyas*. The Sāmaveda has

two *Srautas*, those of *Lātyāyana* and *Drāhyāyana*, belonging respectively to its two schools of the *Kaṭhumas* and the *Kāṇvaṇīyas*; the *Atharvaveda* has the late and inferior *Vastāna*.

11. The *Gṛhya Sūtras*, or 'House Books.'—Of decidedly greater, indeed of universal, interest is the second class of *Sūtras*, the *Gṛhya Sūtras*, or 'House Books.' These are treatises on home life, which deal systematically and piously with the events in the everyday existence of the individual and his family. Though composed at a comparatively late Vedic period, they contain practices and prayers of great antiquity, and supplement most effectively the contents of the *Atharvaveda*. From the moment of birth, indeed from the time of conception, to the time when the body is consigned to the funeral pyre, they exhibit the ordinary plain Hindu in the aspect of a devout and virtuous adherent of the gods. All the important events of life are sacramental, decked out in practices often of great charm and usually full of symbolic meaning. For ethnology and the history of human ideas the 'House Books' are of unexcelled importance. These manuals are also distributed among the four Vedas and their schools, each of which is theoretically entitled to one of them. More than a dozen are now known to scholars. The Rīgveda has the *Gṛhya Sūtras* of its two schools, that of *Āśvalāyana* and *Sāṅkhāyana*; the White Yajurveda that of *Pāraskara*; the Black Yajurveda a large number, as those of the *Āpastamba*, *Baudhāyana*, *Hiranyakeśin*, *Mānava*, and *Katha* schools; the Sāmaveda has the *Gobhila*, *Khādīra*, and *Jaiminīya*. To the *Atharvaveda* belongs the unique *Kauṣika Sūtra*, which, in addition to the domestic ritual, deals with the magical and medicinal practices that specially belong to that Veda.

12. The *Dharma Sūtras*, or 'Law Books.'—The third class of *Sūtras* are the *Dharma Sūtras*, or 'Law Books.' They also deal to some extent with the customs of everyday life, but are engaged for the most part with secular and religious law. In one department of law, that of expiation, these *Sūtras* root in the Vedic hymns themselves. A considerable number of expiatory hymns and stanzas, clearly of the same stock as the law of expiation, are found in Vedic texts, especially the *Atharvaveda* and the *Taittirīya Āraṇyaka*. The *Law Sūtras*, in their turn also, are either directly attached to the body of canonical writings of a certain Vedic school or are shown by inner criteria to have originated within such a school. The oldest *Law Sūtras* are those of the *Āpastamba* and *Baudhāyana*, belonging to the Black Yajurveda schools of that name; the *Gautama* belonging to the Sāmaveda; the *Viṣṇu* belonging to the *Katha* school of the Black Yajurveda; and the *Vāsiṣṭha* of less certain associations. The earliest metrical law-books, the so-called *Dharmaśāstras*, written in Classical Sanskrit, seem also to be based on lost *Sūtra* collections of definite Vedic schools. The most famous of these, the *Mānava Dharmaśāstra*, or 'Law Book of Manu' (see *LAW [Hindu]*), may be founded upon a lost *Dharma Sūtra* of the *Mānava* or *Maitrāyaṇīya* school of the Black Yajurveda, while the briefer 'Law Book of *Yājñavalkya*' is unmistakably connected with some school of the White Yajurveda.

English readers may obtain ready insight into the contents of Vedic literature in all its important aspects through the series of translations edited by Max Müller in *SBE* (Oxford, 1879 ff.). Parts of the Rīgveda are translated by Müller himself (vol. xxxii.) and H. Oldenberg (vol. xlv.). The *Atharvaveda* by M. Bloomfield (vol. xli.); the *Satapatha Brāhmaṇa* by J. Eggeling (vols. xli. xxvi. xli. xlii. and xlii.); seven of the *Gṛhya Sūtras* by Oldenberg (vols. xxix. and xxx.); the older *Dharma Sūtras* by G. Bühler and J. Jolly (vols. ii. vii. and xiv.); and the *Law Book of Manu* by Bühler (vol. xxv.).

13. Vedic and Sanskrit literature contrasted.—

The form and style of Sanskrit literature differ a good deal from those of the Vedas. As regards the language, it is to be noted that prose in Vedic times was developed to a tolerably high pitch in the Yajurvedas, Brāhmaṇas, and Upaniṣads; in Sanskrit, apart from the strained scientific language (*sūtra*) of philosophy or grammar, or the diffuse and inorganic style of the commentators, prose is rare. It presents itself in genuine literature only in fables, fairy tales, romances, and partly in the drama. Nor has this prose improved in literary and stylistic quality, as compared with the earlier variety. On the contrary, it has become more and more clumsy and hobbling, full of long awkward compounds, gerunds, constructions in the passive voice where the active would do, and other artificialities. As regards the poetic medium of Classical Sanskrit, it also differs from the Veda. The bulk of Sanskrit poetry, especially the Epic, is composed in the *śloka* metre, a development of the Vedic *anustubh* metre of four octosyllabic lines of essentially iambic cadence. But numerous other metres, usually built up on Vedic prototypes, have become steadily more elaborate and strict than their old originals; in the main they have also become more artistic and beautiful.

Notwithstanding the wonderfully unbroken continuity of Hindu writings, the spirit of Sanskrit literature also differs greatly from the Vedic. The chief distinction between the two periods is that the Veda is essentially a religious collection, whereas Sanskrit literature is, with rare exceptions, such as the *Bhagavad-Gītā*, or the metrical Law Śāstras, profane. In the Veda lyric poetry as well as legendary and expository prose are in the service of prayer and sacrifice; in Sanskrit epic, lyric, didactic, and dramatic forms are all for the purpose of literary delectation and æsthetic or moral instruction. In Sanskrit literature, moreover, with the exception of the grand compilations of the *Mahābhārata* and the *Purāṇas*, the authors are generally definite persons, more or less well-known, whereas the Vedic writings go back to families of poets or schools of religious learning, the individual authors being almost invariably submerged.

14. *Epic literature.*—Sanskrit literature may be divided into epic, lyric, dramatic, didactic, narrative, and scientific. In epic poetry there is the important distinction between the freer, narrative epic called *itihāsa* (q.v.), 'story,' or *purāṇa*, 'ancient legend,' and the artistic or artificial epic called *kāvya*, 'poetic product.' The great epic, the *Mahābhārata*, is by far the most important representative of the former kind. Of somewhat similar free style are the eighteen *Purāṇas* (see below), of much later date than the *Mahābhārata*. The beginnings of the artistic style are seen in the other great Hindu epic, the *Rāmāyaṇa*. But the finished style of the *kāvya* is not evolved until the time of Kālidāsa about the 6th cent. A.D.

The *Mahābhārata*, or 'Great Bhārata Story,' the greatest of Hindu epics, is a huge authorless compilation for which tradition has devised the name Vyāsa, 'Redaction,' as author. It is written for the most part in the epic metre, the *śloka*, and contains altogether about 100,000 stanzas of four lines each, about eight times the length of the Homeric poems.

The kernel story of the epic, which is interrupted by many episodes, or interwoven narratives, tells how the ancient and wicked dynasty of the Kurus was overthrown by the pious Pāṇḍavas and Pāṇḍus. At a gambling-match depicted in the most vivid language, Duryodhana, the king of the Kurus, cheats the Pāṇḍu princes, robs them of their kingdom, and exiles them for thirteen years. But this is only the preparation for the final war, or eighteen days' battle, between the opposing royal houses and their allies. In this the Kurus are finally overthrown and destroyed.

The heroic story is not only interrupted by episodes, but is in general made the pivot around which philosophical (religious) and ethical discussions of great length revolve. Thus the work has assumed the place in Hindu literature of an encyclopaedia of moral and religious instruction.

A *Bhārata* and a *Mahābhārata* are mentioned as early as the 'House-Books' (see above) of the later Vedic literature, but all dates assigned to the original simpler epic which preceded the encyclopaedic poems in its finished form are mere guesses, except that it obtained its essentially present form in the 4th or 5th cent. of our era.

Among the episodes of the *Mahābhārata*, the *Bhagavad-Gītā*, 'The Song of the Divine One,' or 'Song Celestial,' is pre-eminent. It is in some respects the most interesting and important book in post-Vedic literature.

When the rival armies of the Kurus and the Pāṇḍus are drawn up against each other, Arjuna, the leader of the Pāṇḍus, stoutest of heroes, hesitates to enter upon the slaughter. Then Kṛṣṇa, one of the incarnations of Viṣṇu, acting as Arjuna's charioteer, silences his scruples by pointing out that action, which is the performance of duty, is the obligation of man in the world, although, finally, abstracted devotion to the Supreme Spirit alone leads to salvation. The poem is conceived in the spirit of eclectic Hindu theosophy or philosophy. At the bottom is the Sāṅkhya doctrine of dual matter and spirit, but this is tinged with monistic Vedāntist pantheism (see BHAGAVAD-GĪTĀ).

It is not likely that the poem formed part of the original 'Bhārata Story,' but there is no information as to its date and authorship. The *Mahābhārata* has been translated into English prose at the expense of Prātāpa Chandra Kāy (Calcutta, 1895), and by M. N. Dutt (do. 1895).

15. *The Rāmāyaṇa.*—The *Rāmāyaṇa*, the second of the great epics, is in the main the work of a single author, Vālmiki. Though all parts are not from the same hand, and though it is not entirely free from digressions, it tells a connected story of great interest in epic diction of the highest order. It is to this day the favourite poem of the Hindus. The central figures are Rāma and his devoted wife Sītā; the main event the conquest of Laṅkā (probably Ceylon).

Daśaratha, the mighty king of Oudh (Ayodhyā), having grown old, decides upon Rāma, his oldest son, as his successor, but his intriguing second queen, Kaikeyī, succeeds in changing his mind in favour of her son Bharata. Rāma, banished for fourteen years, retires with Sītā to the forest. Upon the death of Daśaratha, his son Bharata refuses to usurp Rāma's throne, but seeks him out in the forest in order to conduct him back to the throne in his capital city. Rāma in turn refuses to cross his father's decision; he offers his gold-embroidered shoes as a token of his resignation of the throne. But Bharata, on returning, places the shoes upon the throne, and holds over them the yellow parasol, the sign of royalty; he himself stands by and acts as the king's plenipotentiary. In the meantime Rāma makes it his business to fight the demons who molest the ascetics of the forest in their holy practices. Rāvaṇa, the king of the demons, who lives in Laṅkā, revengefully kidnaps Sītā. Then Rāma forms an alliance with Hanuman and Sugriva, the kings of the monkeys, who build for him a wonderful bridge across from the mainland to Laṅkā. Rāma slays Rāvaṇa, is reunited with Sītā, returns home, and, conjointly with Bharata, rules his happy people, so that the golden age has come again upon the earth.

The story, notwithstanding the fact that it presents itself outwardly as a heroic legend, lies under the suspicion of containing one or more mythic roots. Certainly in the Veda Sītā is the personified furrow of the field, the beautiful wife of Indra or Parjanya (see VEDIC RELIGION). Hence Rāma certainly continues the qualities of Indra, the slayer of demons. The story also seems to typify the advance of Brāhmanical civilization southward towards Ceylon.

The *Rāmāyaṇa* consists of seven books, in about 24,000 stanzas. It exists in three recensions, which differ one from the other in their readings, the order of the stanzas, and in having each more or less lengthy passages that are wanting in the others. The best known and most popular recension has been translated by the Anglo-Indian scholar E. T. H. Griffith in five volumes (Benares, 1870-75).

16. *The Purāṇas.*—Somewhat related in character to the great epics are the *Purāṇas*, eighteen in number. They are later poetic works of mixed cosmogonic, epic, and didactic character. The

word *purāṇa* occurs frequently in the prose texts of the Veda as a designation of the Veda's own cosmogonic and legendary lore; the name is also applied to the *Mahābhārata*. In its most distinctive sense the word refers to a class of writings which certainly do not date before the 6th cent. A.D. The existing *Purāṇas* seem to be sectarian religious manuals for the people, written in the interest of either the worshippers of Viṣṇu or those of Śiva. Though the fundamental later Hindu triad—Brahmā, Viṣṇu, and Śiva—is recognized, nevertheless the Vaiṣṇavite *Kūrma Purāṇa* does not hesitate to say: 'Viṣṇu is the divinity of the gods, Śiva of the devils.' To Brahmā all alike refer only in a perfunctory fashion. According to ancient tradition, the ideal *Purāṇa* is divided into five parts: (1) primary creation, or cosmogony; (2) secondary creation, or the destruction and rebuilding of the worlds; (3) genealogy of the gods and patriarchs; (4) *manvantaras*, or periods of reigns of the Manu; (5) the history of the dynasties of kings. Though no extant *Purāṇa* is so divided, yet their subject-matter roughly follows that order. The entire type of composition is of secondary importance; it borrows its themes very largely from the epic literature, and represents religious belief, practices, and legends in an exaggerated, fantastic, often disordered fashion (see *PURĀṆAS*).

17. The 'artistic epics.'—The Hindus consider six *kāvya*s, or 'artistic epics,' entitled to the epithet 'great' (*mahā-kāvya*). But their artistic, or, better, artificial, character removes them in reality from the sphere of genuine epic; they are interesting on account of their wealth of descriptive power and delicacy of illustration; they are deficient in the portrayal of strong character or stirring action. Moreover, they are commingled more and more with lyric, erotic, and didactic elements, as well as with bombast and play on words. Nevertheless, no less a person than Kālidāsa, the universal poet and dramatist, is the author of the two best known artistic epics, the *Kumārāsambhava*, or 'Birth of the War God,' and the *Raghuvamśa*, or 'Race of Raghu.' The former consists of seventeen cantos, the first seven of which are devoted to the courtship and wedding of the deities Śiva and Pārvatī, the parents of the youthful god of war. The real theme of the poem appears only towards the end, in the account of the destruction of the demon Tāraka, the object for which the god of war was born. The *Raghuvamśa*, in nineteen cantos, describes in the first nine the life of Rāma, together with that of his dynasty. Then in the next six cantos comes the story of Rāma himself, the same theme as that of the *Rāmāyaṇa*. The remaining cantos deal with the twenty-four kings who ruled as Rāma's successors in Ayodhyā. The remaining *kāvya*s deal for the most part with themes from the *Mahābhārata* and *Rāmāyaṇa*.

18. Lyric poetry.—Every form of artistic Sanskrit literature, whether epic, dramatic, or confessedly lyric, has a strong lyric cast. At the bottom these three kinds, in the Hindu poet's hands, are but thematically differentiated forms of the same poetic endowment. Ornate figures of speech, luxuriant richness of colouring, carried into literary composition from the gorgeous climate, flora, and fauna of India, subtle detail-painting of every sensation and emotion—these are the common characteristics of Hindu artistic poetry. Lyric poetry can hardly do more than emphasize or specialize these conditions, yet it has its individual traits, the most important of which is the refined elaboration of the single strophe, in distinction from continuous composition. In form and name these strophes are infinitely elaborated and varied. In no other literature have poets endeavoured so strongly to harmonize the sentiment of

a stanza with its metrical expression. The most elaborate continuous lyrics of India are the *Meghadūta*, or 'Cloud Messenger,' and the *Ṛtusañhāra*, or 'Cycle of Seasons,' both by Kālidāsa.

The theme of the former is a message sent by a *yakṣa*, or elf, exiled from heaven. The messenger is a passing cloud which shall report to the *yakṣa*'s wife, as she tosses lovelorn upon her couch through the watches of the night, the longing of her exiled husband. May the cloud, after delivering his message, return with reassuring news, and never himself be separated from his lightning spouse. The 'Cycle of Seasons' is famous for its descriptions of India's tropical nature, matched all along with the corresponding human moods and emotions.

The bulk of lyrical poetry, however, is in single miniature stanzas, which suggest strongly the didactic sententious proverb poetry which the Hindus also cultivated with great success. In fact the most famous collection of such stanzas, that of Bhartṛhari, consists of lyric, didactic, and philosophic poems. Bhartṛhari, who lived in the 7th cent. A.D., is perhaps the most remarkable Hindu poet next to Kālidāsa.

His stanzas, 300 in number, are divided into three centuries—the 'Century of Love,' the 'Century of Wisdom,' and the 'Century of Resignation.' There is no action in these stanzas. Ever and again, within the narrow frame of a single stanza, the poet pictures the world of him for whom the wide universe is summed up in woman, from whose glowing eyes there is no escape. But, after singing woman's praise in every key, he finally declares that he has become an altered man. Youth has gone by; his thoughts, freed from infatuation, are all for contemplation in the forest, and the whole world he accounts but as a wisp of straw.

The second master of the erotic stanza is Amaru, author of the *Amaruśataka*, or 'Century of Amaru.' He also is a master at depicting all the moods of love: bliss and dejection, anger and devotion. None of the Indian lyricists treats love from the romantic or ideal point of view; it is always sensuous love. But a certain delicacy of feeling and expression, as well as a sensitive appreciation of those qualities of love which attract irresistibly, only finally to repel, lifts their stanzas above the coarse or commonplace. It is Hindu 'minne-song,' flavoured with the universal, though rather theoretical, Hindu pessimism.

19. Didactic poetry.—Even in erotic lyrics the Hindu's deep-seated inclination towards speculation and reflexion is evident. This has not only been the basis of that which is best and highest in their religion and philosophy, but it has assumed shape in another important product of their literature, the gnomic, didactic, sententious stanza, which may be called the 'Proverb.' O. von Böhtlingk (*Ind. Sprüche*, Petrograd, 1870-73) collected from all Sanskrit literature some 8000 of these stanzas. They begin with the *Mahābhārata*, and are particularly common in the moral envoys of the fable literature. Their keynote is again the vanity of human life, and the superlative happiness that awaits resignation. The mental calm of the saintly anchorite who lives free from all desires in the stillness of the forest is the resolving chord of human unrest. But for him who remains in the world there is also a kind of salvation, namely, virtue. When a man dies and leaves all behind him, his good works alone accompany him on his journey into the next life (metempsychosis). Hence the practical value of virtue almost overrides the pessimistic view of the vanity of all human action. These gnomic stanzas are gathered up into collections such as the *Sānti-śataka*, or 'Century of Tranquillity,' or the *Moha-mudgara*, or 'Hammer of Folly'; but the ethical saw is really at home in the fables of the *Pañchatantra* and *Hitopadeśa*. These works are paralleled by Buddhist compositions (see below). In fact, a Buddhist collection of this sort, the *Dhammapada*, or 'Way of the Law,' contains perhaps the most beautiful and profound words of wisdom in all Hindu literature.

20. The drama.—The drama is one of the latest

yet one of the most interesting products of Sanskrit literature. With all the uncertainty of literary dates in India there is no good reason to assume for this class of works a date earlier than the 5th or 6th cent. of our era. Certain Vedic hymns in dialogue are all that the early periods of Hindu literature suggest as a possible partial, yet very doubtful, basis for the drama. The Sanskrit word for 'drama' is *nāṭaka*, from the root *nat*, *nart*, 'to dance' (whence 'nautch girls,' etc.). The word therefore means literally 'ballet.' It is not doubtful that dances contributed something to the development of the drama. In various religious ceremonies of earlier times dancing played a part; at a later time the cult of Śiva and Viṣṇu, and especially of Śiva's incarnation Kṛṣṇa, was accompanied by pantomimic dances. These pantomimes reproduced the heroic deeds of these gods, and were accompanied by songs. Popular representations of this sort, the so-called *yātras*, have survived to the present day in Bengal. They are not unlike the mystery-play of the Christian Middle Ages, and their modern continuation, the passion-play. The god Kṛṣṇa and Rādhā, his love, are the main characters, but there are also friends, rivals, and enemies of Rādhā. The *yātras*, a mixture of music, dancing, song, and improvised dialogue, while unquestionably in some way connected with the origin of the drama, are nevertheless separated by a very wide gap from the finished product of the *nāṭika* as it appears in such works as the *Sakuntalā* of Kālidāsa, or the *Mṛcchhakatikā*, 'Clay Cart,' of Śūdraka.

It is still a moot question whether Western (Greek) influence, particularly the New Attic Comedy of Menander (as reflected in Plautus and Terence), has not in some measure contributed to the shaping of the Hindu drama. It is known that Greek actors followed Alexander the Great through Asia, and that they celebrated his victories with dramatic performances. After the death of Alexander Greek kings continued to rule in North-Western India. Brisk commerce was carried on between the west coast of India and Alexandria, the later centre of Greek literary and artistic life. Greek art and Greek astronomy certainly exercised strong influence upon Hindu art and science. The chief points of resemblance between the Hindu drama and the Greek comedy are as follows. The Hindu drama is divided into acts (from one to ten), separated by varying periods of time; the acts proper are preceded by a prologue spoken by the stage manager (*sūtradhārā*). The stage was a simple rostrum, not shut off from the auditorium by a curtain, but, on the contrary, the curtain was in the background of the stage; it was called *yavanikā*—that is, 'Greek curtain' (*louvre*). The characters of the Hindu drama resemble in some respects those of the Attic comedy. There are courtesans and parasites, braggarts and cunning servants. Especially the standard comic figure of the Hindu drama, the *vidūṣaka*, the unromantic friend of the hero, compares well with the go-between, the *servus currens*, of the Græco-Roman comedy. The *vidūṣaka* is a hunch-backed, bald dwarf of halting gait, the clown of the piece. Though a Brāhman by birth, with maliciously humorous intent, he does not speak Sanskrit, but the popular dialect, Prakṛit, like the women and the inferior personages of the drama. He plays the unfeeling realist, intent upon every form of bodily comfort, especially a good dinner, to the hero's sentimental flowery romanticism. Although it is just possible that one or the other feature of the Hindu drama may be due to outside influence, the inner matter is certainly national and Indic. The themes are, for the most part, those of the heroic legend in the

epics, or they move in the sphere of actually existing Hindu courts. The themes, at any rate, are not different from those of other Hindu literature. They show no foreign admixtures. It must not be forgotten that certain general coincidences between the drama and the theatre of different peoples are due to common psychological traits; hence genuine historical connexion in such matters requires the most exacting proof.

The chief dramatic writer is Kālidāsa, the incomparable Hindu poet, master at the same time of epic and lyric poetry (see above). Three dramas are ascribed to him: the *Sakuntalā*, the *Urvaśī*, and *Mālavikāgnimitra*, or 'Mālavikā and Agni-mitra.' From a time somewhat earlier than Kālidāsa comes the drama *Mṛcchhakatikā*, the 'Clay Cart,' said to have been composed by king Śūdraka, who is praised ecstatically as its author in the prologue of the play. Similarly, during the 7th cent. A.D., a king named Harṣa is said to have composed three existing dramas: the *Ratnāvalī*, or 'String of Pearls'; the *Nāgānanda*, whose hero is a Buddhist, and whose prologue is in praise of Buddha; and the *Priyadarśikā*. From the 8th cent. A.D. date the dramas of Bhavabhūti, a South Indian poet, the most distinguished dramatist next to Kālidāsa and Śūdraka. His most celebrated compositions are the *Mālatīmādhava*, or 'Mālatī and Mādhava'; and the two dramas *Mahāvīra-charita* and *Uttararāmacharita*, both of which deal with Rāma, the hero of the *Rāmāyaṇa*. Finally may be mentioned Viśakhadatta, the author of the *Mudrārāksasa*, the 'Seal of the Minister Rāksasa,' a drama of political intrigue, whose composition also dates from the 8th century.

'Action is the body of the drama'—such is the dictum of the Hindu theorists. Precisely what we should call dramatic action is not the prominent quality of the greatest dramatist of them all, Kālidāsa. His dramas are rather distinguished by tenderness of feeling and delicacy of touch. They are lyric rather than dramatic. The action is slow, the passions profound but not elemental. The deepest feelings are portrayed in delicate forms which never approach violence or coarseness, but, on the contrary, are over-nice. At the height of the situation, perhaps in profound misery, the hero and the heroine still find time to institute comparisons between their own feelings and the phenomena of nature. There is indeed a plethora in them all of mango-trees and *śirīṣa*-blossoms, of creepers and lotus, of *bimba*-lips, of gazelles, flamingoes, and multi-coloured parrots. But we must bear in mind the climate of India, and its almost frenzied flora and fauna; then this excess will seem less extravagant. Kālidāsa's dramas are always artistic and finished, and their beauty strongly suggests the genius of Goethe. The single Hindu drama which calls to mind a real modern drama is the 'Clay Cart,' ascribed to king Śūdraka, whose persons, diction, and action, more than those of any other Hindu play, remind one of Shakespeare (see DRAMA [Indian]).

21. Fables and stories.—No department of Hindu literature is more interesting to the student of comparative literature than that of the fables and fairy tales. There is scarcely a single motive of the European fable collections that does not appear in the Hindu collections. The study of the migrations and relations of fables and fairy tales was first elevated to the position of a science by Theodor Benfey in his work on the *Panchatantra* (Leipzig, 1859). On the other hand, the proverbs and instructions which are woven into the fables present the best and most practical picture of Hindu ethics. The most important and extensive collection of fables and tales is Buddhist, being written in Pāli. This collection is

designated as the *Jātakas*, which seems to mean 'Birth Stories.' Buddha is made to appear in every one of them as the wise or successful person or animal of the fable; he himself points the moral (see *JĀTAKA*). The two most important Sanskrit collections are the *Pañchatantra* and the *Hitopadeśa*. The *Pañchatantra*, or 'Five Books,' the most celebrated Sanskrit book of this sort, existed at least as early as the first half of the 6th cent. A.D., since it was translated by order of king Khusrū Anūshirvān (531-579) into Pahlavi, the literary Persian language of that time. It thence passed into Arabic, Greek, Persian, Turkish, Syriac, Hebrew, Latin, and German; and from German into other European languages. The name 'Pañchatantra' is probably not original, but took the place of 'Karāṭaka and Damanaka,' or some similar title, derived from the names of the two jackals prominent in the first book. This may be surmised, because the title of the Syriac version is 'Kalilag and Damnag,' of the Arabic version 'Kalilah and Dimnah.' Both the *Pañchatantra* and the *Hitopadeśa*, or 'Salutary Instruction,' were originally intended as manuals for the instruction of kings in domestic and foreign policy. The *Hitopadeśa*, said to have been composed by Nārāyana, states that it is an excerpt from the *Pañchatantra* and 'other books.'

The most famous collection of fairy tales is the very extensive *Kathāsaritsāgara*, or 'Ocean of Rivers of Stories,' composed by the Kashmirian poet Somadeva, about A.D. 1070. This is in verse; three much shorter collections are in prose. The *Sukasaptati*, or 'Seventy Stories of the Parrot,' tells how a wife whose husband is away, and who is inclined to solace herself with other men, is for seventy nights cleverly entertained and deterred by the story-telling parrot, until her husband returns. The *Vetāla-pañcaviṃśati*, or 'Twenty-five Tales of the Vampire,' is known to English readers under the name of 'Vikram and the Vampire.' The fourth collection is the *Śimhāsana-dvātrīṃśikā*, or 'Thirty-two Stories of the Lion-seat' (throne), in which the throne of king Vikrama tells the stories. A noteworthy feature of the Sanskrit collections of fairy tales, as well as of the fables, is the insertion of a number of different stories within the frame of a single narrative. This style was borrowed by other Oriental peoples, the most familiar instance being the *Arabian Nights*. A few prose romances of more independent character may be mentioned in this connexion. The *Daśakumāra-charita*, or 'Adventures of the Ten Princes,' a story of common life and a very corrupt society, reminds one of the *Simplicissimus* of Grimmshausen. Its author is Daṇḍin, and it probably dates from the 6th cent. A.D. The *Vāsavadattā* by Subandhu, and the *Kādambarī* by Bāṇa, are highly artificial romances; the latter narrates, in stilted language and long compounds, the sentimental love-story of an ineffably noble prince and the equally ineffably beautiful and virtuous fairy princess Kādambarī. These works are known as *charita*, 'narrative'; the same name is also used for chronicles or quasi-historical literature of inferior grade. The nearest approach to history, in our sense of the word, is the *Rājataranginī*, or the Chronicle of Kashmir, by Kalhaṇa, from the middle of the 12th cent. A.D.

22. Scientific literature.—India abounds in all forms of scientific literature, written in tolerably good Sanskrit, even to the present day. One of the characteristics of the Hindu mind is that it never drew the line between literary creation and scientific presentation, so that it is not easy to mark off from one another *belles lettres* and scientific literature. The ancient legal books of the Veda (see above) continue in the more modern poetical

Dharmaśāstras and *Smṛtis*. Of these the Law Books of Manu and Yājñavalkya (see above) are the most famous examples; Manu specially enjoys great authority to this day. Rooted in the Upaniṣads are the *sūtras*, or rules, of the six systems of Hindu philosophy, and their abundant expositions. Grammar, etymology, lexicography, prosody, rhetoric, music, and architecture all own a technical literature of wide scope and importance, and the treatment of most of these shows a surprising tendency to assume metrical form. The earliest works of an etymological and phonetic character are the Vedic glosses of Yāska, the so-called *Naighaṇṭukas* and the *Nirukta*, and the *Prātiśākhya*s, or phonetic treatises pertaining to the treatment of a Vedic text in a given school or *śākhā* (see above). Later, but far more important, is the *Grammar* of Pāṇini, one of the greatest grammarians of all times, and his commentators Kātyāyana and Patañjali. Mathematics and astronomy were cultivated from very early times; the so-called Arabic numerals came to the Arabs from India, and were designated by them as Hindu numerals. Indian medical science must have begun to develop before the beginning of the Christian era, for one of its chief authors, Charaka, was the head physician of king Kaniska in the 1st cent. A.D. The germs of Hindu medical science reach back to the Atharvaveda. The Bower Manuscript, one of the oldest of Sanskrit manuscripts (probably 5th cent. A.D.), contains passages which agree verbally with the works of Sūruta and Charaka, the leading authorities on this subject.

LITERATURE.—The most convenient sketch for English readers is A. A. Macdonell's thoroughly competent *History of Sanskrit Literature*, one of the volumes of 'Short Histories of the Literatures of the World,' edited by Edmund Gosse (London, 1900). The bibliographical notes at the end of the book are a safe guide to more extensive study. Readable and popular in style is R. W. Frazer's *Literary History of India* (London, 1898). Max Müller's *History of Ancient Sanskrit Literature*² (London, 1860) deals only with the Vedic period, and was important in its day, but is now antiquated. A. Weber's *History of Indian Literature* (from the German by T. Zachariae, London, 1878) is a learned and technical work, not at all adapted to the wants of the general reader; it represents the state of knowledge of a quarter of a century ago. The German work of L. v. Schröder, *Indiens Literatur und Cultur* (Leipzig, 1887), contains a fuller, very instructive, and readable account of Hindu literature; copious translations and digests of the texts themselves render this work very helpful. The more recent treatises are H. Oldenberg, *Die Literatur des alten Indiens* (Stuttgart, 1903), and V. Henry, *Les Littératures de l'Inde* (Paris, 1904), both excellent treatises, having in view more particularly æsthetic valuation of Hindu literature. Still more recently there have appeared three parts of M. Winternitz's *Geschichte der indischen Literatur* (Leipzig, 1908 ff.), a most satisfactory and instructive book. The *GLAP*, commenced under the editorship of G. Bühler, and continued after his death by F. Kielhorn and others (Strassburg, 1896 ff.), covers the entire domain of Indo-Aryan antiquity, and contains authoritative information concerning many points and problems of Sanskrit literature.

MAURICE BLOOMFIELD.

LITHUANIANS AND LETTS.—I. Ethnography.—The Lithuanians and the Letts belong to the Aryan family of peoples, and together with the Borussians or Old Prussians, who became extinct in the 17th cent., form a distinct ethnological group. This group, now generally called the 'Baltic,' had already ramified into its several divisions in its pre-historic period, and its unity is now seen only in certain common elements of popular tradition and in the sphere of language—as regards which, however, the Lithuanians exhibit a much more archaic type than the Letts. The original home of the Lithu-Lettish or Baltic race was probably the basin of the lower Niemen, and, as that district is virtually coterminous with the Lithuania of to-day, while the Letts are found in Courland, the adjacent Prussian littoral, the southern half of Livonia, and Polish Livonia in the government of Vitebsk, it would appear that the Lettish branch had reached its present location

by migrating to the originally Finnish districts of Courland and Livonia, and that, on the other hand, the Lithuanians remained fast upon their ancestral soil.

Numerically, neither member of the group is of great account, nor is it likely that either was ever important. The Lithuanians number some one and a half million, about 120,000 of them being in Prussia; the Letts less rather than more—the estimates varying from 1,200,000 to 2,000,000. In a physical respect both branches are mixed, though the mixture has been in no way detrimental to them, since many individual Lithuanians and Letts still exhibit all the distinctive marks of pure Aryan descent, while the rest, men and women alike, are generally self-reliant and sympathetic, well-formed, and often even handsome.

2. Political history.—The historical fortunes of the two peoples have run in quite distinct courses. (a) *Lithuanian*.—The history of the Lithuanians opens in the 11th cent. with prolonged frontier wars with Russia, from which, however, they emerged so successfully, and with their integrity still so far complete, that one of their princes, Mendowg (recognized by Pope Innocent IV. as king of Lithuania), actually contemplated the founding of a united Lithu-Russian State. This design, however, was frustrated by Mendowg's death (1263) and by internal embroilments. Nevertheless, it was at length brought to realization by the government of the Grand-duke Gedymis († 1341); and then, under the leadership of his sons, Olgiard (whom his brothers recognized as sovereign Grand-duke) and Keistut, the young nation succeeded in extending its sway from the Baltic to the Euxine, and from the Polish Bug to the Ugra and the Oka, though it did not include the western districts (Nadrauen, Schalauen, and Sudauen), which the Teutonic Knights had brought under their control during the years 1274–83.

At the death of Olgiard, in 1377, his place was taken by his favourite son, Jagiello, who, however, soon quarrelled with Keistut († 1382) and with his son Witaut, the outcome of the dissension being that the latter became the real lord of Lithuania, although nominally the sovereignty of Jagiello was not thereby infringed. Jagiello had shortly before (1386) married Hedwig, queen of Poland, thus opening the way for a political alliance between Lithuania and Poland which seriously threatened the independence of the former. Witaut strained every nerve and took all available measures to avert this danger. Not only did he seek to promote the independence of his country in a political sense, but he also endeavoured, by working for a union between the Greek and Roman communions within its borders, to make it ecclesiastically self-dependent. While these endeavours proved to be in vain, they won him the confidence of the Utraquist Hussites in such measure that upon the death of King Wenceslaus they offered him the Bohemian crown, and it was only the unpropitious political conditions of the time that prevented his acceptance of it. He was now all the more ready to assume the crown of Lithuania, which, indeed, the Emperor Sigismund, with a view to the complete severance of that country from Poland, had thrice offered him already. Here, again, however, Witaut was disappointed, as Poland intercepted the passage of the party which was conveying the crown to him, and he died shortly afterwards (1430)—four years before Jagiello, who, as Queen Hedwig's consort, had at her death (1399) become king of Poland.

In the succeeding period the Lithuanians repeatedly took occasion to assert their independence in relation to Poland, but this did not prevent the principality of Olgiard from gradually becoming a

Polish feudatory. Witaut himself had been repeatedly compelled by the necessities of war and by external troubles to make concessions to Poland, and his successors, under the increasing pressure of the steadily growing power and rapacity of Moscow, were forced in even larger measure to purchase the help of Poland by ever closer fusion with that State. These rulers, moreover, almost without exception bore the name of Jagiello, and united in their individual persons the Grand-dukedom of Lithuania and the crown of Poland. The eventual result was the incorporation of the two countries in a single political organism whose fortunes were controlled by a common Diet. The incorporating union was effected at the Diet of Lublin in 1569.

(b) *Lettish*.—At the very outset of Lettish history we find the merchants of Lubeck taking steps to find an outlet for their commerce in the district of the Lower Dvina, and they were followed by German missionaries, who there founded the earliest Christian settlements. While these attempts at colonization were not at once greatly successful, they had, nevertheless, the effect of making Livonia known to the West, and of directing against that heathen land the enthusiasm for war against unbelievers which in that period of the Crusades dominated the thought of Christendom. It was owing to this enthusiasm that Albert, canon of Bremen († 1229), was able to secure a permanent footing in Livonia (1200), and as its bishop—supported as he was by constant immigration from Germany and by the Livonian Order of the Sword (founded in 1202)—to establish there a German colonial State, which was recognized in 1207 as a frontier-district of the Empire. Its suzerainty was shared by Albert and the Order in such a way as to make the power of the bishop preponderant; but this position of matters was fundamentally altered when, in 1237, the Livonian Order was merged in the Order of the Teutonic Knights, the latter thus adding the domain of the former to its own. Taking as its model the Prussian State, in which it alone held the reins of sovereign authority—the bishops themselves being subordinate to it—the Teutonic Order sought to curb the episcopal power among the Letts, and it was all the more successful in this policy as it managed to subjugate the hitherto unconquered heathen districts. The process of subjugation, so far as the Lettish provinces, Livonia and Courland, were concerned, was virtually completed by 1290. The Order, nevertheless, did not thereby win repose, but had constantly to take the field against unfriendly neighbours, and, as the fortune of war was on the whole unfavourable to it, while its powers were sapped by internal dissensions, and the secularization of its Prussian territory in 1525 isolated its Livonian domain, its authority in the latter also was at length completely shattered. In 1562 Livonia became a Polish province, while Courland, as a hereditary feudal duchy of Poland, came into the power of the last Master of the Livonian part of the Order, Gotthard Kettler. Finally, both provinces became subject to Russia.

3. Ecclesiastical history.—Thus, while the Western Lithuanians and the Letts came under German control in the 13th cent., the whole of Eastern—now Russian—Lithuania was brought into close relations with Poland a century later, and accordingly, as was to be expected, the two divisions came to diverge widely from each other, not only as regards their language, but also in the moral, and most of all in the religious, sphere. Eastern Lithuania, which at the time of Keistut's death was almost entirely pagan, was thrown open to Christianity by Jagiello, who himself had embraced that faith at his marriage with Hedwig,

and strove with all the zeal of a new convert to propagate it among his own people of Lithuania; they became more and more closely bound to Poland, and the Church of the Polish Court and the Polish State soon gained complete spiritual authority among them. In this way Russian Lithuania became a Roman Catholic country, and such, except to a very small extent, it has always remained; its non-catholic population consists only of a small number of Lutherans, who were won to that communion through efforts directed from Courland, and of some 40,000 adherents of the Reformed Confession, whose forefathers were induced to renounce Roman Catholicism under the influence of Prince Nicholas Czarny Radziwill. The ecclesiastical history of the Western Lithuanians and the Letts took a different course. As in the Prussian territory of the Teutonic Knights, which under the Grand-Master Margrave Albert of Brandenburg became a secular Protestant duchy in 1525, so in Livonia and Courland the Lutheran teaching was enthusiastically welcomed, and, in fact, won universal acceptance in both provinces. Most of the inhabitants remained faithful to it, so that Protestantism is to-day almost universal among the Letts. The only exceptions are found in localities where Roman Catholicism was able to gain a footing under the protection of Poland, or where proselytes have been won by the Russian State Church.

4. *Early religion.*—The religion which prevailed among the Lithuanians and Letts prior to the introduction of Christianity was a developed nature-cult. Besides the worship of woods and waters, of trees, stocks, and stones, of fire and household snakes, we find a belief in the personality of the heavenly bodies, especially the sun, as also in the existence of divine beings who control all created things. Pre-eminent among these divine beings was 'God,' designated by the primitive Aryan name *dēvas* (Lat. *deus*). He was regarded generally as the highest supramundane power, but sometimes, like *Zeus* in Homer, he was a distinct mythological figure, and as such probably identical with *Perkūnas* (Lett. *Pērkons*), the thunder-god, who presided over the heavenly bodies, and was regarded as armed. An ancient folk-song tells that, when the moon was unfaithful to his wife, the sun, and became enamoured of the morning star, *Perkūnas* cut him in pieces with a sword. According to Lithuanian belief, *Perkūnas*'s aunt washed the wearied and dust-covered sun, who was once called the daughter of God, and who herself had sons and daughters; in popular songs these play a great part as mystic powers, but are always represented as human in all respects. We hear frequently also of the 'children of God,' and it would seem that the mythological imagination did not distinguish between the latter and the 'children of the sun.' The sun, nevertheless, was not regarded as the wife of *dēvas* (or of *Perkūnas*), as appears not only from what has been said, but also from a Lettish folk-song which tells how, when *Perkūnas* set out to find a wife beyond the sea, he was attended by the sun, bearing a dowry-chest. The Letts, again, believed that *Perkūnas* was a polygamist, and in another of their folk-songs he is said to have as many wives 'as the oak has leaves,' though none of them plays an independent part in the mythology.

We need have no hesitation in assuming that the ancient religion of the Lithuanians and of the Letts alike recognized the existence of other divine beings, and the way in which these are associated shows that they originated in the observation of nature and human life. But, with the exception of *Láime*, the goddess of fortune, none of them comes down to us under a common Lithu-Lettish

name, and we must be the more cautious in connecting such beings with the ancient religion because many of the divine names of the Lithu-Lettish mythology rest upon the misconceptions or fabrications of later times. There is adequate evidence, however, for an early belief in a number of demonic beings, such as the *laumes* ('fairies') and the *pūkis* ('goblin,' 'flying dragon'), and it is equally certain that the Lithu-Lettish religion was dominated from primitive times by the conception of a devil (Lith. *Wėlnias*; Lett. *Welnis*). While that conception never became perfectly distinct, it nevertheless formed so definite an antithesis to the idea of 'God' that we cannot doubt the presence of a dualistic element in the Baltic cult.

Corresponding to the belief in demonic beings, superstition of a more general kind was, and still is, very prevalent. It manifests itself in a belief in witches (*rāģana*, 'seeress'), in the practice of casting lots (Lith. *būrti*; Lett. *burt*), in notions regarding countless occurrences of daily life, and not least in the idea that the spirits of the dead (Lith. *wėlės*; Lett. *wēļi*) continue to move about among the living—an idea that is undoubtedly very ancient, as it is attested not only by distinct historical evidence, but also by certain features in folk-song (as, e.g., the notion that disembodied spirits marry), and, above all, by graves dating from heathen times, which often contain the remains of both rider and horse, and are furnished with weapons and implements, thus pointing conclusively to the belief that the dead continue to exist in a condition not unlike that of their earthly life. As the majority of these graves contain skeletons, not ashes, they likewise show that the Lithu-Lettish peoples believed in the resurrection of the body. As to the situation of the Lithu-Lettish abode of the dead, there seems to have been no general agreement, some data suggesting the sky, others a nether world. In various localities we find traces of a doctrine of metempsychosis.

Whether the cult had a special class of priests cannot be made out. It had certainly no temples in the proper sense, and the 'ædes sacræ' of which we hear should probably be regarded as slight erections in which fire was kept burning. Sacrifices were common, and were offered not only by way of petition and thanksgiving, but also as propitiations; to judge from the Lettish designation, *feedi* ('blossoms'), the offerings would seem to have consisted originally of flowers and fruits, but we have historical evidence that there were from the first other kinds of sacrificial gifts, while, if not among the Letts, yet among the Lithuanians and Borussia, we find traces even of the practice of human immolation.

5. *Sociological features.*—Our data regarding the political and social conditions, the prevailing sentiments and morals, of the ancient Lithuanians and Letts are not sufficient to enable us to give a full and clear account of their civilization. With varying degrees of certainty, however, we may make the following statements regarding their mode of life: they were efficient in war, and were divided into numerous clans or cantons governed by chieftains; they lived by tillage, cattle-rearing, and hunting, and practised all manner of handicraft and trading; they lived in separate homesteads, and their family life was of the patriarchal type; marriage was based upon the purchase and capture of brides, and, while the wife was subject to the husband, she held a place of high honour among her children; finally, both peoples had a remarkable liking for song, but did not possess the art of writing.

6. *Literary development.*—One result of the lack of writing is that the Lithuanians and Letts have absolutely no literary remains from heathen

times. It was, in fact, only when the Christian Church began to make use of texts written in the native languages—long after the invention of printing—that literary documents were at length produced. A Lithuanian and a Lettish translation of the Lutheran Catechism—the former by Martin Mosvidius, subsequently a clergyman, and published in 1547, the latter by various clergymen belonging to Courland, in 1586—a Lithuanian version of a Roman Catholic catechism by a canon named Michael Dauksa (1595), and a work translated by a protestant Lithuanian nobleman named Pitkiewicz (1598), are the earliest known writings in the Lithu-Lettish languages. Like most of this earlier literary work, the further development of Lithu-Lettish literature was long due to clergymen, and thus, naturally enough, that literature, even when it is not of a distinctively religious character, is in its earlier stages largely pervaded by Christian feeling and moral earnestness. Among the Letts the most outstanding figure of the earlier secular literature was Pastor G. F. Stender (1714–96); among the Lithuanians, Pastor Christian Donalitis (1714–80), the distinguished author of a poem entitled 'The Seasons.' As contrasted with this earlier stage, contemporary secular literature is entirely modern in its point of view, as it not only bears the impress of the social revolutions of last century, but is informed by the spirit of a national consciousness, and aims at the independence and enlightenment of the Lithuanian and Lettish peoples. This progressive movement, which proceeded at first but slowly, has within recent decades become very vigorous, and alike in the field of politics and in that of letters has produced great, if not always good, results. Not a little of the poetic production of Lithuanian and Lettish writers is well worth the attention of foreign readers. Yet even the best of it is not to be compared in poetic quality with the lyrical survivals of the earlier eras, falling far short of the beauty of many Lithuanian folk-songs (*dainos*), and also of the charm of the countless Lettish lyrics in quatrains (*džesmas*).

LITERATURE.—*Scriptores rerum prussicarum*, 5 vols., Leipzig, 1861–74; A. Guagnini, *Sarmaticæ Europæ descriptio*, Speyer, 1581; A. Bezenberger, *Litauische Forschungen*, Göttingen, 1882; A. Leskien and K. Brugmann, *Litauische Volkslieder und Märchen*, Strassburg, 1882; G. H. F. Nesselmann, *Litauische Volkslieder*, Berlin, 1883; A. LOCKE.—

x. Chief dates in his life.—John Locke was born on 29th August 1632, at Wrington, Somersetshire. Brought up at home till the age of fourteen, he was then sent to Westminster school, from which he passed in 1652 to Christ Church, Oxford. He found little satisfaction in the scholastic kind of training then in vogue at Oxford, and, although, after his election to a Senior Studentship at Christ Church in 1659, he held lectureships in Greek and Rhetoric, his interests eventually turned more to scientific and medical studies. His connexion with medical practice happened in 1666 to bring him into contact with Lord Ashley, afterwards Earl of Shaftesbury, who figured so prominently in the politics of Charles II.'s reign; and the meeting had an important influence on Locke's life. In the following year Locke went to London to act in the double capacity of confidential adviser to Shaftesbury himself and

tutor to his son, while he was also engaged in political work and held some appointments. Shaftesbury was dismissed from office in 1673, and in 1675 Locke had to go to France for his health. He remained abroad for four years, staying chiefly at Montpellier and Paris, but in 1679 returned to England to assist Shaftesbury once more. The two years that intervened before the statesman's fall and flight were stormy, and, though Locke had disapproved and probably kept clear of the final plots, he thought it prudent in 1683 to betake himself to Holland, nor did he return until the Revolution had made it safe to do so in 1689. The two years 1689–90 saw the publication of the great *Essay* and two others of his principal works, and thus constitute a sort of literary epoch in his life. From 1691 onwards he lived more in retirement, and chiefly in the family of Sir Francis Masham, at Oates, in Essex. He was in great favour with the new government, and for four years (1690–1700) held the well-paid appointment of a Commissioner of Trade. Failing health compelled his retirement from this office. His death took place at Oates on 28th October 1704.

2. Characteristics as a thinker and writer.—

'Perhaps no philosopher since Aristotle has represented the spirit and opinions of an age so completely as Locke represents philosophy and all that depends upon philosophic thought, in the 18th cent.—especially in Britain and France' (A. C. Fraser, *Locke*, Preface). Locke's claim to be regarded as thus representative may be based alike on the variety of the subjects on which he wrote—philosophy, education, politics, religion—and on the aims and qualities of his thinking. In all directions he exhibits the merits and the defects which are attributed to the period. He is impatient of authority and of 'the jargon of the schools,' seeks to put aside preconceptions and see the truth of things clearly for himself, believes firmly that 'reason must be our last judge and guide in everything,' and desires sincerely to pursue truth only and for its own sake. On the other hand, he has no adequate knowledge or appreciation of the heritage of the past, accepts current assumptions, distinctions, and doctrines without seeing any need to test them, tends to bring 'reason' down to the level of reflective common sense, and is quite ready to acquiesce in a very humble estimate of its reach as a human faculty. Moreover, although Locke was so eminently representative and exercised an immense influence on European thought, he cannot be ranked very high as a philosophic thinker. His thinking, though patient, laborious, and candid, is fatally deficient in the two qualities of thoroughness and system. The deficiency is partly explained, no doubt, by his occupation with practical affairs, which interfered with continuous philosophical pursuits, and partly, too, by the directly practical aims of much of his writing; but this practicalness of his aims is itself characteristic. Locke's 'discontinued way of writing' goes also to explain his great fault as a writer—the endless repetitions with which he wearies his readers. In the 'Epistle to the Reader' with which he prefaced the *Essay*, he admits frankly that he has not been at great pains to correct the fault, and at times he certainly seems to let his pen run on almost as it pleases. But his faults are not unconnected with real virtues—his intentness upon expressing his whole thought fully and clearly, his desire to drive home his point and to gain the full assent of the reader. When he writes with any care, his plain style is as excellent as it is appropriate, and, when he is moved to earnestness, he writes with force and real impressiveness. His faults are seen at their worst in his controversial writings. Although he professes his eagerness to be shown his errors, he seems in point of fact to have been rather impatient of criticism. He is too much taken up with exposing the misunderstandings and misrepresentations of which his critics have been guilty to try to penetrate to the real motives of their criticisms. Hence his replies do not carry us much further, while even as polemics they have their defects. For, although Locke can be very effective both in direct retort and in irony,

he is too apt to weaken his case, not merely by over-elaboration, but also by an insistence on the letter of his own and his critics' statements which the reader feels to be petty and unprofitable.

3. The 'Essay concerning Human Understanding' (1690).—In the prefatory 'Epistle to the Reader' Locke tells us how he was started upon the line of inquiry which resulted, after some twenty years of interrupted labour, in the publication of the *Essay*. He was discoursing with a few friends on a subject which he does not specify, but which we know from another source to have been 'the principles of morality and revealed religion' (see Fraser's ed. i. p. xvii). The baffling character of the difficulties which arose in the course of the discussion caused Locke to ask himself whether, before entering upon such subjects, it was not rather 'necessary to examine our own abilities, and see what objects our understandings were, or were not, fitted to deal with.' He took up the task of this examination, and found it expand far beyond his first expectations. The aim of his whole inquiry, however, remained the same throughout, viz. that determination of the certainty, extent, and degrees of human knowledge which is the theme of bk. iv. of the *Essay*, and to which all the rest of the work is subservient.

But before this theme could be dealt with effectively certain preliminary matters had to be cleared up. To know is to have ideas about things—this at least, whatever more. If, then, we are to arrive at right conclusions about the scope of knowledge, we had best begin by examining this medium in which alone it exists; i.e., we had better try to take stock of our ideas,¹ and see how we come by them. To Locke it was plain that we come by them only through experience. To convince the reader that our knowledge and our ideas have no other source, Locke devotes bk. i. of the *Essay* to showing that there are no 'innate' principles or ideas, unless we understand the term 'innate' in some sense which makes the assertion of such innate knowledge either insignificant or misleading. If there are no such innate ideas, then we must look to experience and experience only for the origin of all our ideas, and must try to trace them back, one and all, to their source therein. It is easy to underestimate the importance of Locke's teaching on this point, but it really constitutes one of his claims to be regarded as the founder of modern psychology.

Yet it was hardly as a psychologist that Locke himself was interested in the source and origin of our ideas; it was rather because he thought that, by seeing how, and at what point, our ideas emerge or are formed in the course of experience, we should be better able to measure the knowledge which we get by means of them. We should know, in short, what the actual experience is from which the ideas are derived, and on which, therefore, the knowledge which we have by means of the ideas is based. The results of Locke's stock-taking of our ideas in bk. ii. can be here only summarized.

He finds that all our ideas may be traced back to two great sources: sensation, which gives us the ideas involved in our knowledge of the external world, and 'reflexion,' which is the perception of the operations of our own mind, and which gives us ideas such as those of reasoning, believing, willing. The ideas derived from (one or both of) these sources may be either simple—such as the ideas of yellow, thinking, pleasure, unity—or complex. The complex ideas are subdivided (ii. ch.

xii.) into ideas of modes, substances, and relations. By 'modes' are meant 'such complex ideas which, however compounded, contain not in them the supposition of subsisting by themselves, but are considered as dependences on, or affections of substances: such as are the ideas signified by the words triangle, gratitude, murder.' They may be either simple (=unmixed) or mixed, according as they are merely variations or combinations of one simple idea, or, on the other hand, involve different simple ideas; e.g., the different numbers are simple modes of number or unity, whereas ideas like gratitude and murder are mixed modes. Under the above heads Locke proceeds to survey and examine the most important ideas or classes of ideas that enter into our knowledge. The classification is open to criticism in various ways, but where it principally fails Locke is in dealing with the more abstract and general categories, such as existence, power, unity, substance. The first three of these are said in ch. vii. to be simple ideas derived both from sensation and from reflexion. But it is obvious that they are not really comparable with simple ideas like yellow or hot; they are not sensible qualities. Locke himself speaks of the ideas of existence and unity as 'suggested to' the understanding by objects, and in ch. xxi. the idea of power seems to be reached by a process in which inference, as well as direct experience, plays a part. The general idea of substance seems in like manner to be a result of inference, if we are to give that name to a process and a result which Locke describes in terms so halting and dubious that it is not surprising that his critic Stillingfleet took offence at them. The mind, we are told (ch. xxiii. § 1 f.), takes notice that its simple ideas go constantly together in groups (the qualities that make up a single thing), and, 'not imagining how these simple ideas can subsist by themselves, we accustom ourselves to suppose some substratum wherein they do subsist, and from which they do result; which therefore we call substance.' So that if any one will examine himself concerning his notion of substance in general, he will find he has no other idea of it at all, but only a supposition of he knows not what support of such qualities, which are capable of producing simple ideas in us.²

It was the ambiguous position of ideas like power and substance that gave an opening for Hume's sceptical criticism. Throughout the long analysis of ideas which occupies bk. ii. the modern reader, accustomed to a more precise demarcation of the provinces of logic, psychology, and metaphysics, is perplexed by the difficulty of giving any one consistent interpretation of Locke's procedure. The analysis is not simply a logical dissection of ideas into their simplest constituents. Yet it is too much influenced by the point of view of logical analysis to be a truly genetic or psychological account of the growth of our ideas. Finally, both interests are crossed by the further interest in the knowledge-value of our ideas, though the last point of view takes us over to the theme of bk. iv. Thus the discussion of primary and secondary qualities in ch. viii., and the discussions of power, substance, and identity in the chapters so named, are as definitely concerned with the knowledge-value of our ideas, and with the nature of the realities known by means of them, as any part of bk. iv.

In bk. iii. ('Of Words') Locke applies his analysis of ideas to the interpretation of the words by which we express them. The most striking feature of the book is the way in which the distinction of real and nominal essence is applied to the names which signify mixed modes (e.g., moral ideas) and substances respectively. When we define man as a rational animal, we lay down a certain abstract idea, or combination of abstract ideas, by reference to which our application of the term 'man' is determined. This abstract idea is the 'nominal essence' of

¹ The term 'idea' is used by Locke in a very wide sense 'for whatsoever is the object of the understanding when a man thinks.' The equivalent in modern psychology is a term like J. Ward's 'presentation.'

man The nominal essence, then, is for Locke nothing more than the statement of the meaning in which we intend to use the general name, whereas the 'real essence' of a thing is the real being or inner constitution of the thing itself. Now in Locke's view the ideas of mixed modes are ideas which we ourselves frame or put together at our own discretion. Therefore, so far as they are concerned, nominal and real essence coincide, and there is nothing, unless the complexity or vagueness of the ideas in question, to prevent us from stating their essence exactly and completely. But in the case of substances we are dealing with things which have a real essence, and, since in Locke's view their real essence is not known to us, we have in their case no guarantee that the distinctions which we draw by means of our abstract ideas or nominal essences will truly represent the real lines of division among the things themselves. In fact, by introducing the notion of essence at all we are assuming that there is a real division of things into species, and this assumption is liable at any point to turn out untrue. The lines of division which we suppose to exist may be found to break down. Hence Locke concludes that in the case of substances our general names express merely the nominal essence. 'The boundaries of species are made by men,' though, of course, we are guided in making them by those superficial resemblances among things which nature presents to our view.

In bk. iv. we come at last to those conclusions regarding the nature and extent of knowledge—or, where knowledge fails, of probability or probable judgment—to which the rest of the work had been subsidiary. Knowledge is defined by Locke as 'the perception of the connexion of and agreement, or disagreement and repugnancy of any of our ideas.' And of such agreement and disagreement he distinguishes four sorts: (1) identity or diversity (*e.g.*, 'blue is different from yellow'), (2) relation (*e.g.*, geometrical equality), (3) co-existence (of attributes in a subject or substance), and (4) real existence 'agreeing to any idea' (*e.g.*, 'God is'). Further, our knowledge of the agreement and disagreement of our ideas has different degrees of evidence. It may be (a) immediate or intuitive—and all certainty goes back to such intuition—or (b) demonstrative, *i.e.* reached by a series of steps, and therefore in Locke's view not quite so clear as immediate intuition, even though each step has, or ought to have, intuitive evidence. Lastly (c), there is 'sensitive knowledge,' our knowledge of the particular existence of external things when they are actually affecting our senses. The last degree of knowledge Locke regards as inferior to the other two, though not open to serious doubt. Whatever falls short of these degrees of evidence is matter, not of knowledge, but at the most of probability. From these preliminary determinations Locke proceeds to a series of discussions in which three problems are intertwined in a way that is rather confusing to the reader: (1) the problem how far we can have knowledge which is real in the sense of being authentic or valid, and not a mere imagination, (2) the problem how far this real knowledge is also general or universal, (3) the problem how far knowledge which is real in the first sense is also real in the further sense of being a knowledge of real existence, *i.e.* a knowledge of things which have a substantive existence or reality. The clue to Locke's answer to all three problems lies in the sharp opposition which he makes between our knowledge, *e.g.*, of mixed modes, where we are dealing with (complex) ideas which are 'archetypes of the mind's own making,' and our knowledge of substances and of real existence, where our ideas refer to archetypes beyond themselves. In the former case our knowledge (of relations among our ideas) can be at once real (in the first sense) and general, because it makes no further claim to be a knowledge of real existence (of things) or co-existence (of attributes in things). In the latter case our knowledge makes this further claim, and is therefore far more restricted. Our knowledge of the properties of a triangle or of the wrongness of murder is real and general, even though no perfect triangle could be drawn or no murder had ever been committed. But our knowledge of real existence and co-existence can never

be thus general. As regards real existence, we have, according to Locke, an intuitive knowledge of our own existence, a demonstrative knowledge of God's existence, and a sensitive knowledge of that of external things. But it is to be observed that this knowledge is a knowledge of existence and not of substance, for on Locke's view we do not know the inner nature either of spiritual or of material substance. In fact, he offended his orthodox readers by suggesting that, while we may believe, we cannot know, that the soul (of man) is immaterial. The inner nature (or real essence) of material bodies he assumes to consist in a certain atomic constitution; and, since he regards this as inaccessible to our knowledge, he denies the possibility of physical 'science,' in the strict sense of the term 'science.' Such 'knowledge' as we have of material bodies is only of the co-existence of their superficial properties, and does not go beyond probability, though it may be extended and improved by experiment.

The subsequent development of philosophy and science has made many of Locke's positions seem strange to us. Our confidence in physical science is far greater, our reliance on abstract demonstrations of 'the existence of a God' far less than his. Above all, we have to be more careful about the relation of 'ideas' to real existence and less ready to separate and unite them alternately as suits our convenience. The weaknesses of Locke's compromise between common sense and philosophy have been made so abundantly evident by later criticism that it is hard to be fair to his real merits. And yet it is to the suggestiveness of his treatment of the problems of knowledge that later criticism owes the advance that it has made on his positions.

4. Ethics and politics.—Locke's contributions to ethics are scanty and of little value, unless we credit to ethics the discussion of free will contained in the chapter on power (bk. ii. ch. xxi.). Certainly this discussion, in spite of the perplexities which Locke candidly reveals to the reader, is full of interest and instruction alike for the moralist and for the psychologist. But in ethics proper his notion that morality is no less capable of demonstration than mathematics is an eccentricity, which can be explained only by his theoretical views about our knowledge of mixed modes. It certainly matches ill with his doctrine of moral obligation, which recognizes no higher motives than those of pleasure and pain, reward and punishment.

Nowhere are the features of Locke's thought displayed more characteristically than in his political doctrine. Published early in 1690, the *Two Treatises of Government* had a direct reference to current politics. The first was a refutation of Filmer's plea for the unlimited (paternal or hereditary) right of kings, the second a defence of the Revolution. Concerned only about the right of the people to resist oppressive and arbitrary rule, Locke is more than usually careless about thoroughness and system. He accepts with easy credulity the literal truth of a social compact, with the subsidiary doctrines of a state of nature, natural rights of the individual, and tacit consent of the individual to submit to the established government. In one and the same sentence (bk. ii. ch. xiii. § 149) he tells us that in a constituted commonwealth 'there can be but one supreme power, which is the legislative,' yet that 'the legislative being only a fiduciary power to act for certain ends, there remains still in the people a supreme power to remove or alter the legislative, when they find the legislative act contrary to the trust reposed in them.' He tells us (xi. § 134) that the legislative is 'sacred and unalterable in the hands where the community have once placed it,' yet admits that, as a result of historical changes, the legislative

may cease to be representative and may therefore stand in urgent need of reform (xiii. § 157). And then, to complete the reader's confusion, he assigns the task of reforming the legislative to that royal prerogative whose arbitrary exercise he elsewhere denounces. In view of such incoherences we must be content to take Locke's treatise primarily as a pamphlet for his own time; it has at all events more historical than theoretical importance.

5. Toleration.—Locke's writings upon toleration serve as a link between his political and his religious doctrines. In 1689 he published in Holland a Latin *Epistola de Tolerantia*, which was translated into English in the same year. Criticisms (attributed to one Jonas Proast of Queen's College, Oxford) drew from Locke *A Second Letter concerning Toleration* and *A Third Letter for Toleration* in 1690 and 1692 respectively, and twelve years later he had even begun a fourth, of which, however, only a fragment was written. The original letter is a businesslike piece of argument, the second is longer, the third is very long and very tedious. Locke can see nothing at all in his critic's arguments, and it must indeed be admitted that the position which the critic had chosen to defend was anything but strong—viz. that, in the case of those who will not embrace the true religion, the magistrate ought to employ force, in the shape of moderate penalties, to compel them to consider the error of their ways. Against this position Locke shows again and again that compulsion can produce only outward conformity, not inward conviction, that what was punished was therefore really dissent and not 'want of consideration,' that any end which justified moderate penalties would equally justify the severest persecution where moderate penalties failed, that 'the true religion' must for practical purposes mean the magistrate's own religion, and that the arguments by which the critic sought to escape from these conclusions were either circular or question-begging. The practical force of Locke's argument lies in this, that the sincerity of religious dissent makes compulsion futile, while the actual divisions among Christian sects make it presumptuous. Philosophically these considerations were reinforced and explained by his view that in matters of religion there is no certain (or demonstrative) knowledge, and that we must be content with 'a persuasion of our own minds, short of knowledge' (*Works*¹, vi. 144). But he had also laid down clearly in the first letter the religious ground that it is 'in the inward and full persuasion of the mind' that 'all the life and power of true religion consists' (p. 11). 'I cannot be saved by a religion that I distrust, and by a worship that I abhor' (p. 28).

It can hardly be said, however, that the constructive argument of the original letter is in itself satisfactory. It is based on Locke's narrow conception of the State as concerned with little but the security of life and property, and as limited in its functions by the supposed consent of the individual. His argument is qualified, too, in ways which make its consistency doubtful. Thus it refuses toleration to atheists, because 'promises, covenants, and oaths, which are the bonds of human society, can have no hold upon an atheist' (p. 47), and, in effect, to Roman Catholics, because their religion requires them to submit themselves to a 'foreign jurisdiction' (p. 48). And this refusal does not square very well with that '*absolute liberty, . . . equal and impartial liberty*,' which, the reader was assured at the outset, '*is the thing that we stand in need of*.' Locke wants to separate sharply and completely the spheres of the civil power and the Church. As he denies to the magistrate any right to prescribe articles of faith or forms

of worship, so he condemns those who 'upon pretence of religion' arrogate to themselves any peculiar authority in civil concerns: 'I say these have no right to be tolerated by the magistrate' (p. 46). But it seems strange that, with the recent history of his own country in view, he should not have recognized that an assertion of authority in civil concerns was almost certain to be made by the dominant religious sect, whatever it might be. The magistrate who was not to tolerate such ecclesiastical pretensions would hardly be able to avoid meddling in matters of religion. Nor was it to be expected that any religious sect, whether Catholic or Puritan, which was firmly convinced that it alone taught the true way of life and that its rivals were spreading pernicious errors would quietly acquiesce in its exclusion from the use and the control of the civil power. As in other cases, so here, Locke's argument makes a great show of robust common sense, but does not go very deep, and involves large tacit assumptions.

6. Religion.—One of these assumptions, no doubt, was that latitudinarianism of his own religious views which found expression later in his *Reasonableness of Christianity* (1695). In that work he seeks to show, by a great array of Scriptural evidence, that the one and only gospel-article of faith is this, that Jesus is the Messiah, the promised Saviour. To believe this, to repent of our sins, to endeavour after a sincere obedience to the Saviour's commandments—these and these only are the conditions required to make any one a Christian, these and these only are the true 'fundamentals' of the Christian religion, viz. those 'which are to be found in the preaching of our Saviour and his apostles.' Locke anticipates the objection that belief, on the strength of reported miracles, in the statement that Jesus is the promised Messiah is merely a historical, and not a saving, faith; but it can hardly be said that he sees the real force of the objection. He speaks, it is true, of the 'oblation of a heart, fixed with dependence on, and affection to God' as 'the foundation of true devotion, and life of all religion,' and describes faith as 'a steadfast reliance on the goodness and faithfulness of God' (*Works*¹, vii. 129, 131), but he does not explain sufficiently how this religious faith arises out of the historical belief. He insists on the inability of plain people, 'the day-labourers and tradesmen, the spinsters and dairy-maids,' to follow abstract reasonings, and on the consequent necessity for an authoritative religion and morality. 'The greatest part cannot know, and therefore they must believe' (p. 146). But whether such an appeal to authority would find its most natural satisfaction in Locke's simplified Christianity, or is even quite consistent with it, is not so clear. Among other advantages of an authoritative revelation he speaks of the support which it affords to morality, and he leaves us in no doubt as to the kind of support he has in view.

'The philosophers, indeed, showed the beauty of virtue; they set her off so, as drew men's eyes and approbation to her; but leaving her unendowed, very few were willing to espouse her. The generality could not refuse her esteem and commendation; but still turned their backs on her, and forsook her, as a match not for their turn. But now there being put into the scales on her side "an exceeding and immortal weight of glory"; interest is come about to her, and virtue now is visibly the most enriching purchase, and by much the best bargain' (p. 150).

It has to be remembered, however, that appeals to self-interest—'the favourite passion,' as Butler calls it—were characteristic of the age.

7. Education.—Locke's views on this subject are contained in his *Thoughts concerning Education* (1693) and the posthumous *Conduct of the Understanding*. The latter connects directly with the *Essay*, and was originally designed to form a

chapter of it. It has been highly praised, but, like other writings on the general education of the intellect, seems often to be elaborating truths of a somewhat obvious kind. Perhaps its main value, after all, lies in the ample illustration which it affords of Locke's own intellectual attitude and temper of mind. The other work makes a much more definite contribution to the art of education. The limited and practical aim of the *Thoughts* is emphasized by Locke himself, viz. to set forth 'how a young Gentleman should be brought up from his infancy.' As a medical man he does not disdain to give detailed advice as to bodily health and training. The characteristic feature, however—and the conspicuous merit—of the book is the paramount importance which it gives to the training of character.

¹ That which every Gentleman . . . desires for his Son, besides the Estate he leaves him, is contained (I suppose) in these four Things, Virtue, Wisdom, Breeding, and Learning' (§ 134).

The order expresses Locke's deliberate estimate of the relative importance of the qualities named, and this estimate governs his treatment of the subject consistently throughout the book. No reader of the *Thoughts* is likely ever to confuse education with instruction. So, too, in the case of intellectual education itself, Locke insists, in his *Conduct of the Understanding*, that the business of education 'in respect of knowledge, is not, as I think, to perfect a learner in all or any one of the sciences, but to give his mind that freedom, that disposition, and those habits, that may enable him to attain any part of knowledge he shall apply himself to' (§ 12). A writer who goes carefully into details must, of course, expose himself to criticism. Locke's advice as to bodily training is in some points certainly not such as medical authority would now approve, and some of his views on moral training are at any rate open to question. But there can be little question about this, that Locke is at his best in dealing with such matters. His fresh and independent view of his subject, his steady insistence on character as all-important, his own kindness and affection for young people, and his practical common sense combine to make him an admirable exponent of the spirit in which the educator should go about his work.

LITERATURE.—The best ed. of Locke's works is, according to A. C. Fraser, that of E. Law, 4 vols., London, 1777. The references in the art. are to *Works*¹, 10 vols., do. 1812. The *Essay* has been edited by Fraser, 2 vols., Oxford, 1894. The chief *Life* is that of H. R. Fox Bourne, 3 vols., London, 1876. There are short accounts of Locke's life and philosophy by Fraser, Edinburgh, 1890, T. Fowler, London, 1880, and S. Alexander, do. 1908; and E. Fechter's *John Locke: ein Bild aus den geistigen Kämpfen Englands im 17ten Jahrhundert*, Stuttgart, 1898, is a work of similar character. In addition to the histories of philosophy, the chapters on Locke in the following works may be referred to: R. Adamson, *The Development of Modern Philosophy*, Edinburgh, 1903, 1.; Leslie Stephen, *Hist. of English Thought in the 18th Century*², London, 1905, both vols.; *The Cambridge History of English Literature*, Cambridge, 1907–12, viii. ch. xiv. (W. R. Sorley). Of more special works those of G. von Hertling (*John Locke und die Schule von Cambridge*, Freiburg, 1892), G. Geil (*Über die Abhängigkeit Locke's von Descartes*, Strassburg, 1887), and R. Sommer (*Locke's Verhältnis zu Descartes*, Berlin, 1887) deal with the difficult question of Locke's relation to his predecessors; that of E. Martinak (*Die Logik John Locke's*, Halle, 1894) with the philosophy proper.

H. BARKER.

LOCKS AND KEYS.—Before the invention of bolts or, later, of locks and keys, a variety of devices were in use to secure safety. Many peoples at a low level of culture live in shelters or huts, one or more sides of which are quite open (Tasmanians, Seminoles, Indians of Guiana, etc.), and others live in a house only for occasional purposes—sleeping, birth, sickness, death, etc.—so that there is no need of a fastening. But in other instances, even where no doors exist, attempts

¹ E. Casalis, *Les Bassoutos*, Paris, 1859, p. 132.

are made to render the entrance secure. The huts of the Eskimos are approached by a narrow winding passage along which one must creep on all fours. Kumi villages are stockaded, and the door is approached by a winding passage trebly stockaded.¹ In Fiji, the Caroline Islands, Kiwai Island, among the Indians of the Chaco and of Guiana, and in various parts of Africa the doorway is made very low or very narrow, or is merely a small aperture at some height from the ground (cf. Pr 17^{1a}).²

Sometimes the doorway is closed merely with a couple of large plantain leaves or palm leaves plaited into basket work, or with a branch of a coco-nut (Solomon Islands, Roro-speaking tribes of N. Guinea)³ or with a *portière* (ancient Peru),⁴ or with a kind of blind or mat which can be raised or lowered as desired (Uaupes, Samoa, Tonga, Tlascala, New Mexico).⁵ To this might be fastened pieces of metal or shell which clattered and so gave warning when any one entered (Tlascala), or, as in New Britain, a rattle was hung in the doorway, so that any one entering at night might strike his head against it and warn the inmates.⁶ In Benin, where locks were known (§ 1), a cord running through a staple, and attached to a block of wood, served to keep the door closed.⁷ Or, again, a wooden screen is slid across the entrance—a kind of primitive door (Cross River, Kitimbiri, ancient Mexico, Efik and Ekoi, Bageshu).⁸ This is secured by thongs (Baganda, Melanesia [but the tying can be done from without through an opening made for the purpose]),⁹ by props or a wedge (African tribes, Zuni [stone slabs held in position by props]),¹⁰ or by bars (Mexico, Upper Congo, Grebos, Dayaks, wild Malay tribes, Zuni).¹¹ In some instances such doorways or doors are further protected by charms or fetishes which will work evil on any one trying to enter. These are analogous to the protectives placed at a keyhole to prevent fairies, spirits, etc., from entering through them (§ 3 (c)).¹² As knotted strings or thongs served for tents, so they were also sometimes used to fasten doors. In Babylonia and Egypt seals sometimes served the purpose of locks and keys, but bolts were also used, and over those of the temple of Samas in Babylonia libations of oil were poured as well as over other parts of the door

(cf. § 3 (d)). A conqueror in Egypt sealed the doors of the temple of Rā after having bolted them.¹

1. **Primitive locks and keys.**—In some of the instances cited above a bar set against the movable door from within and held in place by various means is found. Doors and gates swinging on hinges were also held with bars of wood, bronze, or iron, set across from one doorpost to the other, the ends being set in holes in these (Dt 3⁵, Neh 7³, Is 45², Jg 16⁸), or with bars and bolts (Neh 3⁸, Babylonia, Egypt). In Homer, *Il.* xii. 455 ff., two bars are pushed out from square holes in the doorposts and meet in dovetailed fashion in the centre. A bolt or wedge keeps them in position. The primitive bolt, at first of wood, then of metal, slid into a staple on the doorpost.² Where folding doors were used, probably a vertical bolt above or below held one leaf, and a horizontal bolt fixed both in the centre. The bolt might be shot backwards or forwards by means of a cord from outside, secured to a catch by a series of knots. Or such a cord might lift a latch, the bar of which turned on a wooden pin.³ Before the use of locks and keys a simple method of sliding a bolt was used in Greece as well as in central and northern Europe, in the shape of a bent hook or sickle-shaped rod. This was passed through a hole in the door and caught in a hole in the bolt or on a projecting knob. Such 'keys' have been found in archaeological remains. A similar key about 2 ft. long made of iron with a brass handle ornamented with ring money, and known as the chief's door-key, is in use in N. Nigeria.⁴ Another method was to hold the bolt in place by means of a peg also worked from outside by means of a string. A further development, implying the use of a key, consisted in using pegs which fell from an upright into corresponding sockets in the bolt. These pegs might be lifted in different ways according to the type of lock in use. In one type two pegs fell into notches in the bolt when it was pushed home, and held it in place. To raise these a T-shaped key was used.⁵ It was pushed vertically through a hole in the door, given a quarter turn, bringing the arms into a horizontal position, and then pulled slightly back so that the returns of the T fitted into holes in the pegs, which could now be raised. The bolt was then pulled back by means of a string.⁶ In the second type a number of small pegs drop into holes in the bolt and are then flush with its lower surface. The key consists of a rod bent at a right angle with teeth fitted variously upon the shorter piece. When inserted below the bolt, the teeth raise the pegs flush with its upper surface, and the bolt can then be pushed back by the key. Innumerable varieties of this type of lock are known, and the key is probably that known as 'Lacanian' with three teeth, the invention of which was attributed to the Lacanians. Locks and keys of this type were used in Egypt, among the Romans (often of

an elaborate pattern), Greeks, Scandinavians, and possibly the Celts.¹ Both of these locks are of the 'tumbler' type, as is also the third, the tumbler being 'a bolt of a bolt.' In this the pins drop into holes in the bolt, which is hollow, until they are flush with the upper side of the hollowed-out part. The key consisted of a strip of wood or metal fitted with upright teeth corresponding in size and position with the pegs. It was inserted into the hollow of the bolt and raised the pegs, so that the bolt could be pulled back. In this case the key, which is sometimes of very large size, was put through a hole in the door large enough to let the hand pass through with it. But in some cases the lock was fixed on the outside. This type of lock was used in Egypt (perhaps not earlier than Roman times), and is still common there, in Oriental countries generally from early times—Syria, Arabia, Palestine—in Scandinavia, in Scotland, where it is still found in remote parts of the W. Highlands, among the Negroes of Jamaica, in British Guiana (where it may have been introduced by settlers), and among the Zulus (perhaps of Mormon origin).²

The first of these types is supposed to be the kind of lock which Penelope opens in *Odyssey*, xxi. 46 ff.³ Diels, however, regards the strap as fastening the bolt from outside. Penelope unloosens it (probably it was tied by a secret knot); then through a hole in the door she inserts a bar of metal bent twice at a right angle; its end strikes on a knob fixed on the bolt and pushes it out of its staple. If there were two bolts, both, connected together, could be shot at once.⁴ A large key of this kind is often represented on monuments as a hieratic survival, carried by priestesses.⁵ It is akin to the sickle-shaped key already described. In Benin a key and bolt working somewhat on this principle are in use. The bolt has a knob; the key is a metal rod, to the end of which is attached another piece bent twice at a right angle; at the other end is a ring-shaped handle. This key is inserted through a hole in the door, the keyhole being at a height above the bolt corresponding to the size of the key. The end of the key impinges on the knob, and, when a turn is given to it, the bolt is slid along. The bolts in the king's palace were of carved ivory.⁶ Locks and keys more or less of this type, but of wood, are used by the Wamba of British Central Africa. The key has teeth of 2 or 3 inches in length. When it is turned, it moves a wooden bolt into place. Possibly these are of Portuguese origin.⁷ Original native locks are made by the Hausa, and are traded among other tribes.⁸ Du Chaillu refers to native locks used for chests and doors in Goumbi, Equatorial Africa, but does not describe them.⁹ Among savage tribes generally civilized influences are introducing the use of European or American locks and padlocks—e.g., among the Baronga and elsewhere in Africa.¹⁰

¹⁰ Junod, *op. cit.* p. 92; du Chaillu, p. 254 f.

In another type, used mainly in padlocks, the key thrust into the lock compresses springs, thus permitting the shackle to be withdrawn. Such padlocks were used in Egypt, and are still known in W. Africa (possibly of Egyptian origin). They were also used by the Romans, and are still extant in China and India (the so-called puzzle padlocks).¹ The Romans had flat keys for raising latches, similar to those in use to-day.² Both the Greeks and Romans knew the lock with wards through which the key passes, thus moving the bolt backwards or forwards. Keys of a simple type to suit such locks are represented on vases.³ More elaborate keys are often small and form a part of finger-rings, the key lying flat upon the finger. False keys were also used by Roman robbers.⁴

While locks of the primitive types here described were used in different parts of Europe and are indeed still used in remote districts, the ward system, with obstacles to prevent any but the proper key from turning the bolt, was much used during the Middle Ages. The principle of the tumbler lock was applied to locks during the 18th century. Roman keys terminated in a flat or perforated handle; others were of an open lozenge, ovate, or round shape. Until the 13th cent. keys had little ornamentation. In the 13th to 15th centuries they terminated in a lozenge, trefoil, or quatrefoil. After this, and especially in the 16th cent., they had elaborate decoration and became works of art. The bows terminating the stems were filled with ornament, the stem itself was ornamented or took the form of an animal or human figure, or stem and bow took the form of a crucifix. Even the webs were sometimes ornamented.⁵

2. The key as symbol.—The importance of the key, as that by which doors guarding treasure, stores, etc., might be closed or opened, was marked in ancient times. This doubtless originated in the period when locks and keys of a primitive type were first invented and their value made plain to all.

(a) Frequently the wife as *Hausfrau* bears the household keys symbolically. She is the key-bearer for her husband. Among the Romans the newly-married wife was given the keys of the store-rooms. The divorced wife had to surrender the keys; hence the formula in the Twelve Tables signifying divorce—'claves ademit, exegit.' The wife who separated from her husband sent him back the keys—'claves remisit.'⁶ Among the Gauls and Scandinavians the bride was decked with keys at her girdle. Here also at divorce she had to give up the keys, and 'taking away' or 'giving up the keys' became a formula of divorce.⁷ Among the Gauls a widow placed keys and girdle on the corpse of the dead husband as a sign of renunciation in participation of goods—a custom found elsewhere, and also signifying that the widow was free of obligation.⁸ Slaves carried keys of various parts of the house, and the janitor bore the house-key. In the Christian Church the church-treasurer who carried the keys of the treasury was known as *claviger*.⁹ In Is 22²² 'laying the key of the house of David upon his shoulder' signifies transference of the supremacy of the

kingdom, and the imagery is taken from the large keys opening tumbler locks carried on the shoulder in the East. In Equatorial Africa, as chests containing treasure are a synonym for property, and as they are kept locked with either native or American locks, the more keys a man has the richer he is. Hence keys in large numbers are worn as a symbol of wealth.¹

(b) Since many divinities were key-bearers, their priestesses (not usually their priests) also bore keys symbolically, signifying that the divine powers were theirs, or that they were guardians of the sanctuary of the gods. Priestesses are often represented carrying on their shoulder a large key of the rectangular type, already alluded to as an archaic survival; a key represented on a grave-stone signifies the burial-place of a priestess.² Iphigenia is called *κληδοῦχος* ('key-bearer') of Artemis, and Io *κληδοῦχος* of Hera.³ Cassandra bore the keys of Hecate, and in the mysteries of the goddess the priestess was *κλειδοφόρος*, while the priestess of Ceres *κατωμαδιαν δ' ἔχε κλαῖδα*.⁴

(c) As has been shown in the art. DOOR (vol. iv. p. 851^b), heaven and the under world were believed to be regions or abodes with doors and gates. These doors and gates had bars and bolts as well as locks. In Babylonian mythology Mar'uk made gates to the heavens and attached secure bolts to them. Samaš is said to open the bolt of the bright heaven, and to Istar's supremacy is said to belong the opening of the lock of heaven. Hades with its seven gates has also bolts. Over these dust is scattered, and Istar threatens to break the bolts when she descends there.⁵ The gates of Pluto's realm are closed with iron bars and keys.⁶ The Hebrews had similar conceptions. Sheol has bars (Job 17¹⁶; cf. Ps 107¹⁶); Hades and the Abyss have locks and keys (Rev 1¹⁸ 9¹ 20¹). These conceptions were still retained in Christian belief, and nothing is more dramatic in the legends or theology of the *Descensus* than Christ's breaking the bars and bolts of Hades. Similarly in Mandæan mythology the regions of the dark worlds have gates with bolts and with locks and keys differing from all other locks and keys.⁷ So also earth, sea, the world, etc., have locks and keys. The Assyrian Ninib holds the lock of heaven and earth, and opens the deep, and Ea unlocks fountains.⁸ Cybele is represented with a key—that of earth, which is shut in winter and opened in spring. Eros has keys of sea and earth as well as of heaven, and Proteus has the keys of the ocean (*πύργου κληίδας*).⁹ The Egyptian Sarapis has keys of earth and sea.¹⁰ In Hebrew thought the sea has doors and bars, and the earth has bars.¹¹ In Breton folk-lore is found the curious idea that menhirs are keys of the sea. Should they be lifted, the sea would rush in. They are also keys of hell.¹² Fairyland likewise has its doors with locks and keys, and the key is sometimes given to a favoured mortal in order that he may obtain treasure.¹³

(d) It is not surprising, therefore, that some gods were represented with keys, those of the region which they guarded or which was sacred to them, or that the key became a symbol of power—the power which was represented in the opening or

closing of the doors of that region to allow or prevent entrance or egress. This was more especially marked in Greek and Roman mythology, in which certain of the divinities bear the title κλειδοῦχος, *claviger*. Janus, as god of doors, is said to have been represented 'cum clavi et virga' in left and right hands—the key and the rod of the Roman doorkeeper. He sits guarding the gates of heaven with the Hours. At morning the doors of heaven are opened to let out the day, and they are shut again at night. Even more universally he was κλειδοῦχος, since all things—heaven, sea, clouds, and earth—were opened by his hand.¹ Portunus, another god of doors, probably of barns and stores, also carried keys, and perhaps some ritual act was performed with keys on the Portunalia.² Divinities of towns carried the keys of the town—e.g., Athene is κλειδοῦχος of the town of Athens.³ According to Parmenides, Dike carries the keys of the doors of day and night, i.e. of heaven, and removes the bar from the door when necessary.⁴ So Helios, who comes forth from the doors of the sky, is said in the *Hymn* of Proclus (i. 2) to have keys. The same conceptions are found in Mithraic circles, perhaps partly taken over from these classical models. The Kronos of Mithraic belief carries a key in his right hand or one in each hand, or, like Janus, a key and a rod. These are the keys of the doors of heaven, by which souls enter or pass out to birth. He was addressed as 'the lord who fastens the fiery bars of heaven.'⁵

Divinities associated with the under world carry its keys. Hecate usually holds the keys of Hades on monuments or images of the goddess, and is also described as possessing them. She is even called 'the Lady bearing the keys of the Universe.'⁶ In Caria every fourth year the procession of the key (κλειδὸς πομπή) was celebrated in her honour—a festival which lasted for several days. Pausanias (v. xx. 1) describes Pluto as having keys of Hades, which is closed by him so that none can go out thence. In the magic papyri and elsewhere other divinities bear the keys of Hades—Persephone, Aëacus, Anubis—and here we enter the region of mingled classical, Oriental, and Egyptian beliefs which were popular after the decay of the Greek and Roman State religions.⁷

(c) Generally speaking, possession of the keys signifies power over the regions the locks of the doors of which these keys open. As heaven and Hades were regarded as towns or States with walls and gates, so they had locks and keys. The keys are entrusted to their respective guardian divinities, who have the power of opening or closing the gates. To those who were worthy of heaven its door was opened; to those who merited hell its door was opened. Once in, there was generally no egress. In Jewish thought Michael is said to hold the keys of the kingdom of heaven (3 Bar 11², cf. 4 Bar 9⁶, Eth. version, where he holds open the gates of righteousness till the righteous enter in).

The power of the keys as associated with St. Peter is treated of in the art. BINDING AND LOOSING. Here it is sufficient to say that the idea of his being dowered with the keys of the kingdom of heaven is sufficiently obvious. The picture is still that of a State or town with gates. St. Peter, as κλειδοῦχος, can open to those worthy of the kingdom and its rewards, or can keep the door locked against the unworthy. But it should be observed that, while generally righteousness,

obedience to divine law, was the condition of future reward, not only in Christianity but in other religions, there were other methods of compelling the opening of the gates of heaven. We find this in Mithraism, in Gnosticism, perhaps in the popular Christianity which was so much mingled with Gnosticism and paganism, and in the syncretistic magico-religious groups of the period. In these, submission to rites and ceremonies—e.g., of baptism, purification, and communion—possession of amulets, knowledge of the right pass-words or the names of the demonic or divine guardians of the gates of the heaven, were all so many keys with which the soul could unlock the gates and pass onwards or compel the κλειδοῦχοι to unlock them.¹

(f) The name 'key' might be given to anything which had the power of opening or disclosing. Rabbinic lore spoke of three keys which were given to no third party—the keys of the womb or of child-birth, of rain, and of resurrection of the dead.² As to the first of these, it is still a divine power which works in conception and birth, opening the womb, and we may compare the phrase of Aristophanes regarding Hera, that she guards the keys of marriage (κλήδας γάμου φυλάττει), or that of Pindar when he says of Peitho that she bears the secret keys which open the way to the sanctities of love.³ But the thought underlying this is seen in the erotic slang of many languages, which describes the male organ as 'key' and the female organ as 'lock.' The consummation of marriage by their means was a sacred act, consecrated to certain divinities. Similarly any book of secret knowledge or of mysteries or γνῶσις might be called a 'key.' It contained the means of unlocking mysteries, of opening the way to truth. The book of rites of the Paulicians is called *The Key of Truth*, and some of the magical texts current in the syncretistic groups already referred to bore the name 'Key.' The name is applied also to any book which purports to explain various matters, or even to literal translations of classical or foreign works; hence withholding 'the key of knowledge' of which Christ speaks (Lk 11⁵²) means debarring men from the knowledge of moral or spiritual truth which would give them entrance to the Kingdom of God. In the Coptic Gnostic documents Christ Himself is called 'the Key.'

As a symbol the key occurs in heraldry. It is found in the arms of the pope, of various bishoprics, of cities, of private families. It also occurs in the names and signs of shops and inns, and is here of ecclesiastical derivation—the Cross-keys, the Golden Key, etc. Keys, and especially that of the forbidden chamber, are prominent in folk-tales of the Bluebeard group (MacCulloch, *CF*, London, 1905, p. 306 ff.).

3. Locks and keys in magic.—The importance attaching to locks and keys gave them a place in various magical rites, while their being made of metal adds to their value, since metal of itself has magical power (see CHANGELING, vol. iii. p. 359^b; FAIRY, vol. v. p. 684; METALS AND MINERALS).

(a) As locks and keys make fast or open, bind or loose, so they are sometimes considered to have a sympathetic effect upon dwellers in the house—e.g., at a birth or at death. It is a common custom to open all the locks at a confinement, lest the delivery should be hindered through their remaining fast, and so to lighten the labour. With this may be compared the Roman custom of presenting the woman with a key as a portent of an easy delivery. In Sweden in difficult labour the midwife asks the woman whether she has prayed to the Virgin for her key to open the womb. If not, the midwife

says the prayer, the woman repeating it after her.¹

If a witch was present at a wedding and snapped a padlock to at the benediction, dropping it into water, she caused the marriage to be unfruitful, until the padlock was recovered. This belief is found in Germany and, in a similar way, in Greece.²

On similar grounds the soul cannot leave the body of a dying person as long as any locks or bolts in the house are fastened; these are therefore unlocked or unfastened and the house-doors are opened.³

In all these we have instances of sympathetic magic—what is done to the lock is *ipso facto* done to the living person. They correspond to the world-wide use of knots (*q.v.*) and bindings in magic.

(b) In many cases the key itself, probably as a symbol of power, is used as an amulet or has magical virtues. Already among the ancient Greeks and Etruscans this use was found (see *ERE* vol. iii. p. 436^b). In Italy small keys blessed by the priest are called 'keys of the Holy Spirit,' and are worn by infants as a preservative against convulsions. There, as well as in Portugal, Greece and the islands, Germany, and other places, the key is a frequent amulet against the evil eye. It may form one of the charms attached to the *cimaruta*, or sprig of rue, or may be a single amulet elaborately worked. Sometimes it is phallic, the handle being so shaped.⁴ In Jerusalem necklaces from which charms depend are worn, and among the latter are a lock and key.⁵ In China a common amulet given to an only son in order 'to lock him to life' is a silver lock. The father collects cash from a hundred heads of families and exchanges it for silver; of this a native padlock is made, and it is used to fasten a silver chain or ring round the boy's neck.⁶ In Korea the neck ring lock is also a charm. For a girl it is a real lock of silver with a bar across the top (the bolt), and the key at the side. For a woman it is a mere symbol of the lock. On it is the inscription, 'Longevity, riches, and all you wish.'⁷ With these practices may be compared an incident in a Danish *Märchen*: the hero gets a key as a christening gift, and it brings him luck.⁸ In Norway a large old iron key is used against dwarf-struck cattle. It is hung over the stall, and is supposed to heal them. Such keys are supposed to have been forged by dwarfs (cf. the use of elf-shot, *FAIRY*, § 6).⁹ An ancient method of warding off hail from a field was to hang keys around it—perhaps by way of locking the field in from harm, or merely as charms against the hail.¹⁰ In Transylvania a lock is carried in the seed-bag in order to keep birds from the corn.¹¹ A key, partly for its own virtues, partly because it is of iron, is commonly placed in a cradle to prevent fairies from changing the baby.¹²

¹² E. S. Hartland, *Science of Fairy Tales*, London, 1891, p. 97.

In the island of Zacynthos a key is placed on the breast of a corpse, because, being of iron, it will scare away evil spirits, though the popular explanation is that it will open the gate of paradise.¹ According to a belief in Poitou, when a werwolf is struck between the eyes with a key, the enchantment ends, and the human form is resumed.²

(c) Another magical use is that of the Bible and key. A large key, sometimes an ancient or hereditary key, is placed flat between the leaves of a Bible, which is then closed and bound with cord. The handle of the key projects and is held in the hand or on the fingers of one or two persons, while some formula is being said. At the psychological moment it twists and turns, thus indicating whatever is desired to be discovered. This has superseded earlier methods—*e.g.*, with a sieve—but Reginald Scot already mentions the use of a psalter and key. (1) They are used as a cure for nose-bleeding. Here the patient turns the Bible and key round, while the wise man repeats a charm. Then the latter removes the key and places it down the patient's back, while the patient holds the Bible. This is supposed to cure the bleeding entirely. The latter part of the charm is often used, but seldom now in a magical way. A similar use of Bible and key is for the purpose of 'unwitching' a patient.³ (2) It is also used in divination, usually to discover a thief or a witch. The names of the suspected persons are repeated with the formula, 'Turn Bible, turn round the key, turn, key, turn, and show the name to me.' At the right name the key twists and the Bible drops from the hand. Within recent years such a use is known to have actually led to an arrest.⁴ The Bible and key (or the key alone) are used in E. Anglia to divine with, and also to help a vessel entering or leaving port. To assist it to enter port, the key is turned towards oneself, and, to leave port, away from oneself.⁵

(d) The keyhole, as an opening by which fairies, spirits, and the like may enter the house, is often magically protected. Thus in the Sporades it is stopped with a skein of flax to prevent vampires from entering. They would require to count all the threads in the skein before doing so. In Cyprus, on locking up, the cross is signed with the key over the keyhole.⁶ In Germany the keyhole is stopped up in order to outwit the *Mar* ('nightmare') which enters thereby.⁷ In Egypt it is customary to say, 'In the name of God, the Compassionate, the Merciful,' when locking a door, as a protection against genii. The door cannot then be opened by them.⁸ In Aude a vase of water was placed before the keyhole to prevent visits from a spirit, and in Savoy a watch-glass. The spirit broke the latter and then left in disgust.⁹ Stables, cow-houses, etc., are sometimes protected by tying charms to the key—usually a perforated stone (the key-stone which keeps off the demon Mara) and a horn.¹⁰ In Babylonia demons were said to slip into houses through bolts, etc., 'gliding "like snakes,"' and it may have been to prevent this that libations were poured over these (§ 1; for other precautions taken see *DOOR*, vol. iv. p. 849^b).¹¹

(e) Keys were sometimes thrown into holy wells as a propitiatory offering to the spirit or guardian of the well, as at Criccieth on Easter morning.¹

4. The key-flower.—Mediaeval legend and later story had much to say regarding certain mysterious flowers which could either make locks fly open or cause a rock door in a mountain to swing open and so admit the seeker to obtain treasure hidden there. The flower was blue, red, or white, and was known as the 'wonder-flower' or 'key-flower' (*Schlüsselblume*); similar properties were also ascribed to the *Springwurz*, or 'explosive root,' usually obtained from a woodpecker whose nest had been closed up with a wooden bung. She flies off to seek the root, returns with it, and applies it to the bung, which is forced out with a loud noise. It is then taken by the treasure-seeker, who uses it as the flower is used in other instances.² Aelian and Pliny know of this legend, but speak of a plant, and the latter elsewhere refers to a herb by which all things closed can be opened.³ This is the *shāmīr* of Rabbinic legend, a kind of worm or a stone in possession of a moorhen.⁴ In connexion with these stories of mountain treasures obtained by the wonder-flower, there are usually mysterious white ladies who guard them, and who, like the *Heusfrau*, carry a bunch of keys which also give access to the treasure.⁵ There is a German belief that where the rainbow touches the earth a golden key falls, which gives its name to the flower.⁶ In the story of 'Ali Bābā, the rock door opens when the mysterious word *Sesame* is spoken. The word may have stood in an earlier version for the herb *sesamum*, but in other instances the use of magical words makes locks and bars open—e.g., those of the Egyptian under world—while even in tales of enchantresses from New Guinea the use of the words, 'Oh, rock be cleft,' and 'Oh, rock be closed,' causes a rock door to open and shut.⁷ In the lives of saints a not uncommon miracle is to unlock a door when the key is lost. They touch the lock with the hand, or their mere presence causes the door to open. In other instances they pass through closed doors, as modern mediums have claimed to do.⁸ Probably the *point d'appui* of these saintly miracles is Ac 12¹⁰.

cicada. A certain resemblance to the lobster seems to have brought the English meaning of 'locust' back to the insect.¹

Various species of different genera have been endemic plagues in N. Africa and the Levant from ancient times. In recent years S. Africa and Australia have suffered severely. Mediaeval lore, continuing the Biblical traditions and many Oriental tales, and also making the most of some inroads into Central Europe, elevated the locust into a fabulous monster. The Romans and Greeks had similar fancies; Pliny, e.g., speaks of Indian locusts three feet long, with legs of such hardness that they were used as saws.² Arabian legend created a body of myth about the insect. The locust addressed Muhammad thus:

'We are the army of the Great God; we produce ninety-nine eggs; if the hundred were completed, we should consume the whole world and all that is in it.'

At various dates Italy, Russia, Transylvania, Poland, France, and Spain were visited by swarms, and the accounts given vie in exaggeration. But in the East from Africa to N. India they have been and are still a dangerous pest to agriculture, as the example of Cyprus shows.

The insect chiefly referred to in historical accounts is *Schistocerca peregrina*, formerly classified as *Acridium peregrinum*. *Pachytylus migratorius*, formerly *Ecdipoda migratoria*, also appears in the Levant. They belong to the family *Acrididae*, not the *Locustidae*, and are the only Old World species, the others being American.³ The locustid insects of entomologists are the European grasshoppers. The OT has nine different names; it is improbable that these refer to different species. That most often employed is *arbeh* (e.g., Ex 10⁴⁻¹⁵), probably connected with *rābāh*, 'multiply.'⁴

The larva, not the perfect insect, is the destructive form. This blackish larva, which moves by hopping, resembles the imago very closely, but the wings are immature. The perfect insect walks until after a sixth change, when it is able to fly. Three to four inches in length, the larva, as it advances to the imago, passes from black to brown and green.

While we must distinguish the absolutely destructive larvae from the relatively harmless winged insects, some accounts of the flights of the latter are essential, having produced so great an impression on the popular imagination. It is curious that only modern observers have described the march of the larvae, as terrible in its completeness of destruction as that of the white 'ants' of Africa. But possibly such OT writers as Joel were familiar with the phenomenon, however vaguely they may refer to it. As will be seen from the account cited, it is far more impressive than the flight.

2. The locust flight.—Darwin's account has a typical value:

'... a ragged cloud of a dark reddish-brown colour. At first we thought that it was smoke from some great fire on the plains; but we soon found that it was a swarm of locusts. They were flying... at a rate of ten or fifteen miles an hour. The main body filled the air from a height of twenty feet, to that, as it appeared, of two or three thousand above the ground.' The sound was 'like a strong breeze passing through the rigging of a ship.' They were not, however,

1 *OED*, s.v. 'Lobster' and 'Locust.' Old Cornish has *legast*, and Fr. *langouste*; cf. *Trin. Coll. Hom.* 127 (1200 A.D.): 'wilde hunie and languste his mete.' The word appears to mean originally the 'springer' (the 'grass-hopper'; cf. also Fr. *sauterelle*; *sauter*), and to be connected with Gr. *ἀγκάω*, Lettish *lēkt*, 'leap, spring' (A. Walde, *Lat. etymolog. Wörterbuch*², Heidelberg, 1910, p. 433 f.). The Boers term their 'locust' *voelgangter*; this is the larva called by the Portuguese *saltana*, or 'jumper,' and by the Italians *cavalletta*, with which Germ. *Heupferd* may be compared. J1 24 and Rev 9¹ repeat this analogy of form and movement with the horse.

'Locust' in *DUG*.

4 G. E. Post, art. 'Locust' in *HDB*.

so thick together, but that they could escape a stick waved backwards and forwards.¹

Another account, from the Levant, states:

'Their swarms fill the air, darkening the sky, and the noise of their wings resembles the patterning of a heavy rain . . . towards nightfall they light . . . they often break the branches of the trees . . . the swarm invariably resumes its flight as soon as the sun has warmed it a little . . . it has not time to destroy all the vegetation.'²

In 1889 a swarm over the Red Sea occupied 2000 square miles; its weight was calculated at 42,850 millions of tons.³

Munro, writing of locusts in S. Africa, states that, when driven by a storm into the sea, they may 'lie on the beach as a bank from three to four feet thick and from fifty to one hundred miles in length, and the stench from the corruption of their bodies, it is affirmed, is sensibly perceived for a hundred and fifty miles inland.'⁴ He describes the movements of the flying locusts as 'curious, interesting, and pretty.'

All observers agree with the Psalmist (Ps 109²³) that locust swarms follow the course of the wind.

'To a certain extent' the flying insects 'do injure here and there . . . but they do not destroy everything before them, like the army of the larval stage or jumpers.'⁵

3. The locust march.—After the flight the females lay their eggs in the soil, each ovisac containing about a hundred eggs.

'When the tiny creatures issue from their nest . . . the very dust of the ground which was so still before, now seems to waken into life. They begin to move by a process of twisting or rolling over one another, so that for the first few days they receive the name of twisters (South Africa). Within eight or ten days, however, they can jump four or six inches, and at the age of three or four weeks a new characteristic makes its appearance. A desire to explore manifests itself, and in a surprising manner. The whole company moves in a body in one general direction, and more or less in a straight line, as if by one common instinct, without apparently having any recognised leader or commander.'⁶

Marching thus over the country, they eat everything that comes in their way, even the bark of trees; they enter houses and 'eat the very clothes and curtains at the windows'; they even eat the wool off the sheep; and, 'last stage of all that ends this strange, eventful history,' they will eat one another. When the *voetgangers* are on their way, they resemble and receive from the Boers the name of an 'army on the march.'⁷

'It is in this marching stage that the *voetgangers* do enormous damage and eat every edible thing in their path, and completely destroy the work of the husbandman. They are unlike the flying company of locusts, which only levy toll here and there, but these, when they pass, leave nothing.'⁸ 'The black larvae,' says Post, referring to Palestine, 'now spread like a pall over the land, eating every green thing, even stripping the bark off the trees.'⁹

The Syrians beat pans, shout, and fire guns to drive off a swarm. When they have settled, they are gathered in sacks. The government enforces a *per capita* contribution of eggs, or offers a price for them by weight. When the *larvæ* hatch out, in fifteen or twenty days, trenches are dug in their pathway, or fires are built.¹⁰ The only successful method of exterminating locusts was adopted in Cyprus in 1881. Since 1600 the island had been a wilderness. Matthei, conversant with the habits of the *larvæ*, erected an insurmountable wall of calico and leather round the main area. Unable to pass the smooth leather, the locusts fell into the trench dug beneath. At the same time 1300 tons of eggs were destroyed. The plague has been obsolete ever since.

4. Superstition and metaphor.—Among the Dravidians of Mirzapur, when locusts threaten the gardens, the natives catch one, decorate its head with red lead (in accordance with ceremonial custom), salam to it, and let it go. The whole swarm is then believed to depart.¹¹

Similarly in Syria, when caterpillars invaded a vineyard or field, 'the virgins were gathered, and one of the caterpillars

was taken and a girl made its mother. Then they bewailed and buried it. Thereafter they conducted the "mother" to the place where the caterpillars were, consoling her, in order that all the caterpillars might leave the garden.'¹²

It is not unlikely that the 'caterpillars' mentioned in this account are the locust *larvæ*. The conciliatory method of expelling pests and vermin is adduced by Frazer to explain such titles of Greek deities as Locust Apollo, Locust Hercules, and Mouse Apollo.¹³

Such worships 'were originally addressed, not to the high gods as the protectors of mankind, but to the baleful things themselves, the mice, locusts, mildew, and so forth, with the intention of flattering and soothing them, of disarming their malignity, and of persuading them to spare their worshippers.'¹⁴

In Hebrew literature, and thence to a certain extent in European, the locust is a symbol of destructive agencies.¹⁵ The OT also employs it to illustrate number and combination.¹⁶

5. Locusts as food.—Since the time of Herodotus¹⁷ the use of locusts as food has been known. Thomson limits it to the Bedawin of the frontier, and observes:

'Locusts are always spoken of as a very inferior article of food, and regarded by most with disgust—to be eaten only by the very poorest people.'¹⁸

They are roasted and eaten with butter, after the head, legs, and wings have been removed. They are also dried and then beaten into a powder, as a substitute for flour.¹⁹ According to Burckhardt, they were roasted and kept in sacks with salt. He adds that the Bedawin never used them as a dish, but would take a handful when hungry.²⁰ Van Lennep states that they resemble shrimps in flavour. Horses and camels are often fed with them, and they are exposed for sale in the markets of Baghdād, Medina, and Damascus.²¹

The Law forbade Israel to eat 'creeping' things; 'yet may ye eat of all winged creeping things that go upon all four, which have legs above their feet to leap withal upon the earth.'²² This exception includes the locust. The gospel account of locusts forming part of the diet of John the Baptist is accepted by most writers.²³ But Cheyne argues in favour of the ancient tradition that the *ἀκρίδες* are the beans or pods of the carob tree. This is a definite meaning of the words *ἀκρίδες* and 'locust,' and the latter is even applied to the similar bean of the cassia tree. The resemblance between the insect and the bean is the reason for the identity of name. The carob beans are the 'husks' referred to as food for swine in the parable of the Prodigal Son,²⁴ and they are still sold for food in Syria.²⁵ In mediæval literature these beans are St. John's bread. In ancient Palestine there was a proverb, 'Israel needs carob beans to do repentance.'²⁶ They were a type of the food of the poor, and the connexion is between poverty and repentance, the

Baptist being essentially the prophet of repentance.¹ It is impossible to decide a detail which is itself perhaps legendary. But its typical value is great; and, as such, the carob bean proverb leaves little doubt in identification. Treating the detail as historical fact, we reach the same conclusion in favour of Cheyne's view, for this reason, that, while the carob, like all leguminous food, is highly sustaining (the Levantines have always made such food their staple diet), the nutritious value of the insect locust is extremely small, and insufficient, with honey, to support life.

LITERATURE.—This is fully given in the article, excepting J. H. Fabre, *Souvenirs entomologiques*, Paris, 1879 ff., vi. 196-212, 248-297.
A. E. CRAWLEY.

LOGIC.—I. **DEFINITION.**—Exceptional difficulties lie in the way of a general description of logic, because the definite increment of knowledge which is undertaken by primary sciences is not claimed here in a sense that is comparable. In logic we merely 're-traverse familiar ground, and survey it by unfamiliar processes. We do not, except accidentally, so much as widen our mental horizon' (B. Bosanquet, *Essentials of Logic*, p. 2). And exceptional pains are necessary in explaining how unfamiliar processes which reveal no unfamiliar objects amount to knowledge and science. A knowledge of knowledge cannot be proposed with quite the same assurance as a knowledge of space, matter, organization, and history, or even beauty or goodness. Some writers have proposed an art, rather than a science or even a philosophy; and others, a science of a special kind of mental process, or a philosophy reflecting on special relations of our personality to the universe. Mansel collects the following varied descriptions of the subject (Introd. to Aldrich, *Artis Logicae Compendium*, p. lviii).

Logic is a part of philosophy (the Stoics). It is not a part, but an instrument (Peripatetics). It is both a part and an instrument (Academics). It is both a science and an art (Petrus Hispanus and others). It is neither science nor art, but an instrumental habit (Greek commentators). It is a science and not an art (Albertus Magnus and others). It is an art and not a science (Ramus and others). It is the science of argumentation (the Arabians), of the operations of the mind so far as they are dirigible by laws (Aquinas), of the syllogism (Scotus), of the direction of the cognitive faculty to the knowledge of truth (O. Wolff), of the universal and necessary laws of thought without distinction of its objects (Kant), of the processes of the understanding concerned in the estimation of evidence (J. S. Mill). It is the art of thinking (P. Gassendi, Arnauld), of reasoning (J. Le Clerc, B. Whately, and others), of the right use of reason (J. Clauberg, Watts), of dissertation (Ramus), of teaching (Melancthon), of directing the mind to any object (George Bentham), of forming instruments for the direction of the mind (Burgersdyck, R. Sanderson, Aldrich).

Underneath such summary phrases as 'laws of thought' and 'forms of knowledge,' which have become common in the more modern definitions, there still lie very varied suggestions as to scope and method. The following are influential examples:

'A collection of precepts or rules for thinking, grounded on a scientific investigation of the requisites of valid thought' (Mill, *Exam. of Sir W. Hamilton's Philosophy*, London, 1878, p. 462).

'If we analyse the mental phenomena with the view of discovering . . . the laws by which our faculties are governed, to the end that we may obtain a criterion by which to judge or to explain their procedures and manifestations . . . we have a science which we may call the Nomology of Mind. . . . Pure Logic is only an articulate development of the various modes in which they (the primary conditions of the possibility of valid thought) are applied' . . . the laws of thought as thought (Hamilton, *Lectures*, Edinb. and London, 1859-60, i. 122, in 12, 78 f.).

The forms and laws of thought 'are those subjective modes of the connection of our thoughts which are necessary to us, if we are by thinking to know the objective truth' (Lotze, *Outlines of Logic*, Eng. tr., Boston, 1892, p. 6).

'The conditions under which thought can arrive at propositions which are certain and universally valid . . . and the rules to be followed accordingly' (O. von Sigwart, *Logic*, Eng. tr., London, 1896, § 1).

'The doctrine of the regulative laws, on whose observance rests the realization of the idea of truth in the theoretical activity of man' (Ueberweg, *System of Logic and Hist. of Logical Doctrines*, Eng. tr., London, 1871, § 3).

¹ Cheyne, art. 'Husks' in *EB*.

'The subject-matter of Logic is Knowledge, *qua* Knowledge, or the form of knowledge; that is, the properties which are possessed by objects or ideas in so far as they are members of a world of knowledge . . . the characteristics by which the various phases of the one intellectual function are fitted for their place in the intellectual totality which constitutes knowledge' (Bosanquet, *Essentials of Logic*, p. 44, *Logic*, i. 3).

These definitions with one consent repudiate the relativity, or volitional limitation, which is suggested by the title 'art'; but the responsibilities which must fall on a professed science they acknowledge only with some qualification. Mill does not propose any 'scientific investigation' which is not already sponsored by psychology. Hamilton attenuates the specific guarantee by relying on conditions that are 'primary.' The others appear to undertake something further, but with the same risks as are attendant on speculative philosophy. Ueberweg expressly relies on 'universal laws of existence,' borrowed from metaphysics, and 'laws of the life of the mind,' from psychology, for 'auxiliary axioms' (§ 2). In order that we may avoid the responsibility of assuming that the 'unfamiliar processes' of which Bosanquet speaks are 'knowledge' in the same sense as our more natural scientific processes are, and that logical doctrine consists of 'theses to be proved' and 'axioms to be applied,' as Ueberweg claims (§§ 1, 4), comparable with these in significance, we might define logic as the art of raising the natural scientific processes into explicit self-consciousness. The special labour of logical studies, in any case, is to be undertaken with a view to what psychologists describe as 'acquaintance with,' rather than 'knowledge about,' our natural processes.

'Without logic, the mind of man can admirably energise, admirably reason; but without it, does not know itself through and through; and ignores one of the fairest and most fruitful of its faculties. Logic brings to the mind self-acquaintance. Such is its use, and it cannot have any other' (Barthélemy Saint-Hilaire, *De la Logique d'Aristote*, p. xli).

We might also require of any doctrine which claims to be logical that it shall be (1) reflective, as distinct from assertive, in its significance, (2) teleological or purposive in its principle, (3) *a priori* or independent in its authority, (4) theoretical rather than practical in its limitations, and (5) disciplinary, not objective, in its motive.

1. **Reflexion.**—Reflective contents belong to various kinds of philosophical doctrine. In logical doctrine they recover the reference to personality which has been discarded from scientific, and place an 'I know' where otherwise would be a 'So it is.' This reference is the ground for classifying logic with the sciences specially grouped as mental, as in Hamilton's scheme (*Lectures*, vol. i. ch. 7), or as an 'integral part of philosophy' (Ueberweg, § 6); and it forbids such arrangements as those made by A. Bain and H. Spencer, where, at least in part, it stands first in the series of natural sciences arranged in the order of abstractness. For logic is what it is, not because it leaves out of consideration the spatial and other aspects of reality which natural sciences accept, but because it accepts something which they reject, and so changes the significance of a scientific statement, in scholastic phrase 'a first intention,' into a 'reflective idea,' or 'second intention.'

2. **Purpose.**—Knowledge is a form of life, and, like other forms, cannot be explained by detailing its constituent energies or organs, without assuming a finality for the whole. For descriptive purposes we can say that 'the idea of complete knowledge is the motive power of theoretical effort' (Sigwart, § 62, 6); or, to mark off the occasion for logical study, that 'the *fundamental fact* which underlies all logical reflection . . . is that we make a distinction, from the point of view of value, between the true and the false' (W. Windelband, in *Encyclopædia of the Philosophical Sciences*, Eng. tr., i. 11); or, in co-ordinating cognitive life with

other moments of cosmic existence, that 'the "value" which is the object of philosophical Logic is logical reality and fact itself' (B. Croce, *ib.* p. 203). Logical consciousness reinforces this finality, though the doctrine is essentially neither description of the experience nor discrimination of the faculty nor perspective of the event, but expression of the aim.

3. Independence.—In analogy with Kant's celebrated criticism of knowledge, that it all begins with experience, but does not all spring from experience, we can say that logical consciousness begins with knowledge, but does not spring from it, or wait for a licence from it in the same way that empirical science has to wait for its special data. Even the borrowings from psychology and metaphysics are not for the purpose of conferring authority on logic, but are methodical devices for making it precise, for 'unfolding an inward conviction,' as Butler claimed to do in regard to conscience. The logical rule is neither more nor less authoritative than the example, provided it is understood discriminatively. 'If any man stumbles at the fact that when we want to think about thought we must, in so doing, already follow the norms of right thinking—there is no arguing with him' (Windelband, *loc. cit.* i. 25). All we can do is, in the words of Kant, to 'make the rule followed by the understanding a separate object of thought' (*Logic*, *Intro.* § i.).

4. Theory.—Cognition gives us the control of nature; and the reflective faculty, the control of self. But logic is the expression of the reflective faculty so far, and so far only, as the self is cognitive and there is conscience in science. It is indifferent to the manifestations of personality in feeling or action, and even in so much of cognition as escapes control.

5. Discipline.—Thus the motive of logic is not furnished by the world of objects, but by the aims of personality; if an art, it is a cognitive art, if a science, a disciplinary science; and it is sustained by our solicitude for intellectual self-government. The historical beginnings of logical theory are to be found in those racial dispositions and social conditions which gave occasion for the deliberate control of our trains of thought. In India it appears to have originated with rules in ceremonial deliberation:

'From the Brahmanic decisions on disputed points arising in the course of sacrifice . . . collected in exegetical and philosophic aphorisms . . . Gotama [probably later than the 5th cent. B.C.] evolved a system' (Bodas, *Tarka-Sangraha of Ananibhatta*, *Intro.* p. 20).

And with Gotama the inwardness of logical concern has outworn its ceremonial form.

'The end proposed is the escaping from liability to transmigration, and the attainment of tranquil and eternally uninterrupted beatitude' (*Aphorisms*, tr. J. R. Ballantyne, *Intro.* p. 5).

In Greece it originated with canons of public debate and scientific instruction: the propaganda of plausibility by the Sophists, the challenges to the complacency of popular beliefs issued by Socrates, the polemics of Zeno.

Some of Aristotle's predecessors, he records, 'had given rhetorical, others interrogative, discourses to learn—since they imagined that they should instruct their pupils by delivering, not [logical] art, but the effects of art' (*Soph. Elenchi*, ch. 34). The art which he constructed deepened, like Gotama's, into pure reflexion and self-communion, for 'dialectic [the art of discussion], being investigative, holds the way to the principles of all methodical thought' (*Topics*, i. ch. 2, *Soph. Elenchi*, ch. 2). But in the Greek, unlike the Hindu, logical illumination, reflexion fastened upon conviction at the point where individual intelligence merged in the intelligence of humanity at large—just as in Greek ethics the good of the individual merges in that of the State. The Greek forms of proposition and syllogism seem to symbolize a world of intellects, where a common record of conviction can be main-

tained amid determinations of experience and foresight varying and changing with the individuals; the Greek analysis of demonstrative science idealizes the inner coherence of such a record, whereby it dominates the individual intellect, while the Greek dialectic is the interplay through which vitality, welling from the latter, streams into the record.

The motive of logic being disciplinary, its method must be adjusted to the intellectual forces which are permanently constitutive of civilization; and its general scope cannot change to the extent to which other sciences change, where any advance may open up new vistas of inquiry. Kant is able to say:

'Since Aristotle's time Logic has not gained much in extent, as indeed its nature forbids that it should. But it may gain in respect of accuracy, definiteness and distinctness. . . . Aristotle has omitted no essential point of the understanding; we have only to become more accurate, methodical and orderly' (*Logic*, *Intro.* § n.).

Nevertheless, it must share the vicissitudes in fortune of civilization as a whole. And the more influential of these, since Aristotle, have been the limit set on the range of free judgment during mediæval centuries, the value set upon personality by modern religion and philosophy, and the accelerating progress of physical sciences in the most recent times—three influences which have some connexion with a certain exaggeration in value which has fallen upon the three Aristotelian departments of doctrine successively in scholastic, modern, and recent years, and has transformed at least the dialectic almost beyond recognition. For the contrasts and controversies between the historic schools are questions of emphasis and balance in what might be called the 'dimensions' of logical discipline, to borrow a conception from geometry; or in the fundamental 'ideas' used in forming our conceptions, to borrow from Whewell's philosophy of all scientific discovery whatever.

In almost every science 'controversies' have 'turned upon the possible relations of Ideas, much more than upon the actual relations of Facts' (*Philosophy of Discovery*, p. 255).

The dimensions or ideas in which the historic schools have formed conceptions for logical value may be distinguished as explicitness, consistency, relevance, and system.

II. PRINCIPLES.—Parallel with what Whewell says as to the progress of physical science—

it 'consists in reducing the objects and events of the universe to a conformity with Ideas which we have in our own minds—the Ideas, for instance, of Space, Force, Substance [Number, Composition], and the like . . . the Idealization of Facts' (*ib.* p. 385)—

we may expect for logic also that

'an exhaustive solution of the great aggregate of logical problems can only grow up out of the union of all the different methods of treatment to which Logic has been subjected in virtue of the inner essential manifoldness of its nature' (Windelband, *loc. cit.* i. 9).

But the different 'methods' must be such as are grounded, if not 'in the systematic continuity of a philosophical theory of knowledge,' as Windelband requires, still in the unity of dimensions in consciousness of logical value. The 'principles' of logic must be these dimensions.

1. Explicitness.—The earliest of such dimensions to be utilized in the formation of logical conceptions was that of explicitness. We must be conscious of the definite germinal organization within our judgments or inferences, whenever occasion arises to make them deliberate. Hamilton proposes as 'the only postulate of Logic which requires an articulate announcement . . . to be allowed to state explicitly in language all that is implicitly contained in thought' (*Lectures*, iii. 114). And Gotama inaugurated the history of the science by detailing sixteen conceptions for our guidance in the analysis of this 'content,' as 'standards of right notion.'

'Proof [i.e. the faculty of a right notion]; the object of a

right notion; doubt; motive; familiar fact; scholastic tenet; syllogism; hypothetical confutation; ascertainment; discussion; controversial wrangle; cavil; semblance of a reason; perversion; futility; and unfitness to be argued with—from knowing the truth in regard to these [sixteen things], there is the attainment of supreme good' (*Aphorisms*, tr. Ballantyne, § 1. 1).

Most of these topics appear to represent 'stages in dialectic or in the process of clearing up knowledge by discussion' (Adamson, *History of Logic*, p. 166; cf. Saint-Hilaire, p. xxx). But logic in the long course of its development has always made use of a method dialectical in this sense, which should not hide from us a more inward motive and significance. While it was as yet only tradition, no other method was practicable; and, even when it became literary, the practical utility of the method preserved it alongside of interpretations that were more spiritual. The alliance of the two methods was assumed in the reforms and elaborations made by Dignāga about A.D. 500.

'Demonstration and refutation together with their fallacies are useful in arguing with others; and Perception and Inference, together with their fallacies, are useful for self-understanding; seeing thus, I compile this Śāstra' (*Nyāya-pravēśa*, quoted in Vidyabhāṣaṇa, *Hindu Medieval Logic*, p. 89).

The Aristotelian exposition of the same alliance was turned to forensic uses by Cicero, to academic uses by the scholastics, and to educational uses by the many modern and the now contemporary authors who choose to teach a science of argument, as the medium for an implied science of knowledge.

The conceptions of explicitness suggested to a modern mind by Gotama's sixteen standards and the explanations which he and his commentators append to them would be such as follow. In placing a logical value upon any given judgment, we must bring into consciousness (1) the extent to which our cognitive faculties are committed to it, perceptually, inferentially, conceptually, or interpretatively; 'that I shall die' is inferential, the 'recognition of a sign'; (2) the genus of truth or reality which is thus assumed as accessible to the faculty, or 'fit to supply a right notion'—a topic similar to that of the 'category' in modern logic, or, in Whewell, the 'idea'; (3) the question, or predetermination of a void in the system of our knowledge, which brings faculty and reality into the relation—the problematic phase in the development of a judgment, such as fails us in truism or is perverted in paradox; (4) the emotive root which makes a thought worth thinking or even a science worth creating; for 'truth implies a reference to purpose as well as to reality' (W. R. Boyce Gibson and A. Klein, *Problem of Logic*, London, 1908, p. 2); 'that I shall die' is significant only for the businesses of life; 'that I shall not altogether die,' for the counsels of moral perfectness; (5) and (6) the sureness and definiteness which fact and dogmatic or conceptual principle bring with them to their function in inference; (7) the scheme of their co-operation in the inferential syntheses; there must be (a) the probandum, defined by doubt and motive; (b) the reason, appealing to a sign; (c) the example, verifying a principle of signification; (d) the application, investing the reason with the significance of the example; and (e) the conclusion, establishing the probandum as a significate. 'Shall I not die, seeing that I am but human, as my fathers died because they were human? For I am as human as they, and consequently I, too, must die.' It is the transition from the problematic to the assertory phase of thought that sunders the application and conclusion from the reason and probandum—a transition which disappears in all the Western schemes of explicitness, because it disappears in proofs and static formulations, as distinct from the processes, of knowledge. The remainder of the sixteen topics are adjustments imposed on a conviction by its entrance into an environment of other convictions on the same

question, by its encounter with convictions current in the world of other persons, and by the entrance of its motive into a system of other motives within our manifold practical nature, an organism where cognition, after all, is only one of the forces constituting its life.

2. Consistency.—Under the more complex social and intellectual conditions of life in Greece, the logical consciousness became more sensitive to the contact of individual thinking with this 'static formulation' of knowledge. And the 'idea' most essential for forming conceptions suitable to the spiritual emergency is that of consistency. It is not the consistency between thought and thought which in modern times became the ideal of Hamilton and the 'subjectively formal' logicians, but that which makes possible the allegiance of individual intellects, with varying perceptions, memories, and premonitions, to common formulations of knowledge.

(a) *Interpretative*.—In recent psychology the paradoxical tenet is held that, while a 'permanently existing idea' appearing in consciousness 'at periodical intervals' is a mythological entity, yet 'the mind can always intend . . . to think the same' (W. James, *Text-book of Psychology*, London, 1892, chs. xi. and xiv.). Similarly, we may say that, while a judgment identical in many minds is mythological, varying acts of judgment may give allegiance to the same super-personal truth, and join in the same inferential trend. It is such truth and trend, and not any range of individual experience and foresight, that allow Aristotle to postulate 'the proposition of the same thing about the same thing' (*de Interpretatione*, vi. 1), and the continuation of the same section within the same collection, of actual or possible facts (*Pr. Anal.* i. i. 5-8). The actual variability within this mythical identity is veiled by the indefiniteness of the form of proposition named 'particular'; and the actual poverty of human foresight, by the 'universal' proposition, distributing possibilities, as though on a mere chart, to an infinite range. That 'some men die willingly' cannot be the same thought for you and for me, and that 'all men die' is beyond the intellectual concern of either of us. Yet we consent that death is not the supreme terror, and we foresee it widespread as far as our imaginations can have any concern. Aristotle's *Prior Analytics* must be interpreted as dealing with this situation, and as rendering into varieties of syllogistic form the ways in which formulated thought can tolerate the limitations of actual thought, and the reservations under which it must reject them.

The first book of the *Prior Analytics*, after a brief statement of the nature of the proposition and of the fundamental law of predication, proceeds to analyse (1) the various kinds, figures, or modes of syllogism; (2) the means by which syllogisms are formed; (3) the reduction of various imperfect forms of argument to the perfect syllogistic type. . . . The second book . . . deals with the theory afterwards called that of *Consequence*, with circular reasoning, with the possibility and consequences of syllogisms formed by converting parts of the original argument, with certain modes of indirect argument and fallacy, and concluding with brief handling of induction, paradigm, enthymeme, argument from signs, probabilities, etc. (Adamson, *History of Logic*, p. 40).

Such topics are the main teaching of academic logic to-day, in spite of criticisms renewed from generation to generation. It must be that the more adverse critics are preoccupied with the interest of some other direction of consistency than the Aristotelian, or with some dimension of logical value other than consistency. To their interests it may seem paradoxical that a professed theory of mental process should resolve this into linguistic elements—argument, syllogism, proposition, name ('T. Case, *EBR*', art. 'Logic'); and unphilosophical that all the important distinctions should rest on the mere denotation of terms (Hamilton); and a mistaken subtlety to classify moods into figures,

according to order of terms (Kant); and puerile that inductive conceptions should be referred to their own list of instances (Bacon); and an error that syllogism is an estimate of evidence (Mill); and a usurpation that the formalities of deduction should be limited to syllogistic, and to propositions with two terms only, and to terms that are classes rather than objective relations, and to the logical relation only of inclusion and exclusion (L. Couturat, in *Encyc. Philos. Sciences*, i. 167-169).

(b) *Conceptual*.—A second direction in which consistency may be sought is between the thought of the moment and an identity or permanency of personal knowledge, hardly distinguishable from 'meaning the same,' as described in psychology, but quite distinguishable from the impersonal truth or universally human trend assumed by Aristotle.

The mythological world of the super-personal is replaced by an equally mythological content of the personal microcosm, a static conceptual structure to which our ever variable thoughts conform. The 'subjectively formal' or 'conceptual' logic is the canonic for the stability of this. It originated with Kant's discrimination between the section of his *Critique of the Pure Understanding* which he named 'Transcendental Logic,' where the 'forms' of knowledge appear as contributions of the mind to the constitution of its objects, and the 'General Logic,' where 'forms' are relations of cognitions to each other (*Critique*, bk. ii. *Intro.* § 2, *Logic*, *Intro.* § 1). Once more, then, as in the Hindu discipline, knowledge is referred to personality; but personality comes back not as an isolated centre of motive interest, to be disciplined for its high destiny, but as a realm of mere abstracts, namely cognitions outside the world of natural sciences, yet factitiously evolved through the course of transcendental reflexion. Kant himself, not forgetful of this origin, found in knowledge a dimension of 'relevance' as well as one of consistency. In the living thought he found an interplay corresponding to the petrified formations of the transcendental 'object.' And, while accepting the law of non-contradiction as the principle of such inference as is merely possible, he added a law of reason and consequence, for the cogency of any actual inference (*Logic*, *Intro.* § 71); and in applying this second law we encounter transcendental distinctions, such as between 'logical' or *a priori* universals and 'quasi-logical' or inductive. And the neo-Kantian school of logicians better their instruction by re-introducing the detailed conceptions of intellectual synthesis framed in transcendental logic. To others, however, still following the disciplinary motive, and unconcerned with the origin of the new realm commended to them for study, the only dimension recognizable independently of every physical or primary object, in which cognitions could be related to each other, appeared to be consistency.

'The stricter followers of the Kantian logical idea, e.g., Mansel and Spalding, recognise, as sole principles which can be said to be involved universally in the action of thought, the laws of identity, non-contradiction, and excluded middle, and in their hands logic becomes merely the systematic statement of these laws, and the exposition of the conditions which they impose upon notions, judgments, and reasonings' (Adamson, p. 16).

(c) *Symbolic*.—More recently, a third direction in which consistency might be followed has been taken, which seems to presuppose, if not the factitious abstracts of transcendental logic, yet still the reflective valuations of general logic. Given these, it furnishes a 'clearer, more precise, and more plastic expression' of them, and formulæ of equivalence between them. Algebra renders a similar service to arithmetic, but without raising any doubt as to the scientific priority of the latter. Symbolic logic is at least a discipline in consistency when we make logical reflexions. Whether it is

also a direct discipline in scientific knowledge, as the older formal logic is, and so may supersede or absorb it, is as yet controversially obscure.

But on every logic of consistency, however judiciously its pretensions may be restrained, one critical comment may be made:

'I do not deny the scientific convenience of considering this limited portion of Logic apart from the rest . . . but the smaller Logic, which only concerns itself with the conditions of consistency, ought to be, at least finally, studied as part of the greater, which embraces all the general conditions of the ascertainment of truth' (Mill, *Exam. of Sir W. Hamilton's Philosophy*, p. 477).

3. *Relevance*.—The larger logic was inaugurated by Aristotle through the addition of his *Posterior Analytics* to the *Prior*.

'No demonstrative proposition [e.g., about numbers or lines] is taken as referring to "any number you may know of," or "any straight line you may know of," but to the entire subject—to every possible number or line' (*Post. Anal.* i. 1).

Relevance is that in 'the things we know of' which, when we 'possess or receive a demonstration,' relieves us from the need of similarly 'knowing of' the 'entire subject.' It is what Bosanquet describes as 'an inmost character' of the content of knowledge, 'as revealed by the structural relations in which it is found capable of standing' (*Essentials*, p. 49). Aristotle conceives relevance as embodied in 'universals.' Mediæval Hindu logicians (Dignāga, *Divākara* [c. A.D. 530], and Nandi [c. A.D. 800]) taught the intervention of 'secondary ideas' or 'abstract conceptions' in the process of inference, and authorized a 'syllogism for self' in which this dispensed with the analogy between 'example' and 'application' still required in the 'syllogism for instruction.' But Aristotle elevated this secondary idea into an authoritative 'principle,' dominating our knowledge, whether personal or racial. The authority was conferred by the faculty of reason.

'From experience, or from the entire universal which is retained in the soul, the single unit apart from the manifold of sense, which is identical in all particular cases, comes the elementary principle of art and science. . . . Reason would seem to be the faculty which has the primary principles as its objects' (*Post. Anal.* ii. 19).

The universal as a principle assures applications that might escape the 'secondary idea.' 'Man is mortal,' therefore 'I, too, must be mortal,' although men instinctively may 'think all men mortal but themselves.' The inevitability was not objective, as Plato's metaphysics might imply, but inferential.

'It does not follow, if demonstration is to exist, that there must be Ideas, or a Unity outside the many individual things, but it does follow that some unity must be truly predicable of the many' (*Post. Anal.* i. 11).

The predicable unities appear in judgment as predicates that are 'genera' and 'definitions,' and as subjects that are 'second substances'; and in demonstration as the 'essences' of the things which we seek to explain, the 'nature' of the things whose destiny we wish to foretell, the 'reasons' for what we experience, and the 'causes' for what we infer. And, although these conceptions in the dimension of relevance still influence the texts of modern logic, philosophical progress has disclaimed the static, self-sufficing constitution, which seems to spring arbitrarily from the fiat of reason. The achievements of reason must themselves become conscious under the guidance of logical conceptions more liberal, such as 'conditions of a rule' (Kant), 'laws of connexion' between attributes (Mill), 'coherence' of conceptual 'content' (Lotze), or 'identity' of relational 'system' (Bosanquet). Two distinct operations of reason must be traced: that which explains the comparative complexity of universals whose constituents are available at will, and that which explains the selection of constituents from the passive sequences of experience.

(a) *Deductive*.—The definite logic of the first begins with Descartes, and that of the second with Bacon. The interest of modern mathematical

science supplied to Descartes the 'doubt' and 'motive,' to use Hindu logical conceptions, which brought to an end the Aristotelian superstition of 'second substances,' and suggested a scheme of rational constructiveness, proceeding from what Lotze afterwards named 'first universals' to a vast Platonic hierarchy, the 'world of ideas.'

'Those natures which we call composite are known by us, either because experience shows us what they are, or because we ourselves are responsible for their composition' (Rule xii.). . . . 'There are but few pure and simple essences . . . existing *per se*, not as depending on any others' (Rule vi.); essences which 'cannot be analysed by the mind into others more distinctly known' (Rule xii.). . . . 'Intuition is the undoubting conception of an unclouded and attentive mind; . . . it is more certain than deduction itself, in that it is simpler. . . . For example, 2 and 2 amount to the same as 3 and 1' (Rule iii.). . . . Deduction proceeds 'by the continuous and uninterrupted action of a mind that has a clear vision of each step in the process' (ib.). 'It is presented to us [as a complete movement] by intuition when it is simple and clear. . . . We give it the name of enumeration or induction [when it is complex], because it cannot then be grasped as a whole at the same time by the mind, and its certainty depends to some extent on the memory' (Rule xi.; Descartes, *Works*, tr. E. S. Haldane and G. R. T. Ross, vol. 1., Cambridge, 1911, pp. 7-43).

(b) *Inductive*.—It was a parallel but slower development of the scientific spirit, in observation and experiment, that inspired a complementary scheme of rational insight as to 'how experience shows the natures that are composite.' The field for unclouded intuition is here fenced off by the indefinite multiplicity of constituents in an actual experiential situation, and, however few and simple may be the 'ultimate essences,' the steps in their synthesis are beyond either complete intuitive penetration or memory. All that Hindu logic had here achieved was to classify the 'constant associations' between sign and significate. According to Nandi, the 'signs' are either positive or negative, perceptible or imperceptible; and are related to their significates (a) constitutively, (b) as resultants, (c) causally, or (d) by concrete order, of priority, subsequence, or simultaneity (*Vidyābhūṣaṇa*, p. 30 f.). Aristotle, in his *Topics*, when not prepossessed by the conception of second substances, reads more deeply into the indices of relevancy, suggesting comparative analysis of instances that are exceptional towards each other or contrary in their consequences, or are negative, reverse, privative, or relational to each other, or are homogeneous in whole or part, or vary methodically in quantity, time, place, or other relation. But these broken lights still left darkness of principle over the plans of manifestation for an 'essence' or 'nature,' and how reason finds them. It is inductive principle which Bacon appears to have been first in conceiving. The Baconian conception is:

'Observation presents to us complex natures which are the results of simpler, more general forms or causes. . . . The form which is sought can be detected only by examination of cases in which the given complex effect is present, in which it is absent, and in which it appears in different degrees or amounts; . . . a process of exclusion or elimination. . . . The method of exclusion can never be perfectly carried out; but all additional aids have significance only as supplying in part the place of exhaustive enumeration' (Adamson, p. 90).

Thus, were our experience divinely given on the perfect plan of reason, we should, in the words of Descartes, 'know what these natures are,' though we ourselves are not 'responsible for their composition.' J. S. Mill articulated the principle of exclusion or elimination in five experiential methods, with symbols and canons, and explained their cogency on the broad empiricist basis which his complete survey of logical doctrines is intended to commend and defend. But the ideal plan for the manifestation of universals in experience is as much the work of *a priori* reason as is the unclouded vision of synthetic essences described by Descartes, while the march of merely experiential sequences eternally withholds that definiteness and exhaustiveness of constituents which might thus unveil the pure tissue of relevancy. The neo-Kantian

logicians can accept the canons of elimination as living expressions of the aspirations of thought, in such an intellectual nature as displays the 'categories of relation,' substantiality, causality, and reciprocity. But the rationalization of any given experiential sequence must be approached through a further dimension of logical value—that of system. In this we may conceive the 'additional aids' which transform aspiration into accomplished science. Relevance is a selective principle, system a comprehensive.

4. *System*.—A conviction which cannot be a stable truth through sheer restrictions of internal relevancy may have value through its membership of a world of other convictions—other convictions not defined by the same question, as in the Hindu system of standards, but by questions in all degrees of kinship to it.

(a) *Dialectical*.—Aristotle's *Topics* marks out a sphere where such value may be traced by expressly excluding both the harmony of personal investigation with super-personal truth and the open vision of truth through reason.

'The purpose of this treatise is to find a method which will qualify us as disputants in regard to every kind of subject, where the start of the inference is from probable judgments, and which will instruct us how to avoid stultifying ourselves when we ourselves sustain an argument. . . . We call probable what appears true to all men, or to the majority, or to the wise, and, among the wise, to all, to the greater number, or to the most distinguished and authoritative' (*Topics*, i. 1). The wide ramifications of relationship of any conviction to the remainder of knowledge are suggested by a variety of incidental methods or 'auxiliary aids' to insight.

'The organs by which we find materials for syllogisms and inductions are . . . collection of opinion from various sources, resolution of ambiguities in meaning, discrimination between species and genera, assimilation of things to each other or in their relation to other things' (*Topics*, i. 13).

(b) *Methodological*.—In the modern era a more systematic study of system was begun by the *Novum Organum* of Bacon, the methodological reflexions of scientists themselves, and the theories of explanation, as distinguished from eliminative induction, and of approximate generalization, probability, and operations subsidiary to induction, resumed in detail by Mill. But the methods so formulated seem to be episodes in the consciousness of a more comprehensive development in the organization of our ideas. We continuously reform and refine our tentative concepts to meet the exigence of newly experienced facts (see artt. CONCEPT and INFERENCE). And in this process we both accept limitations from, and contribute pulsations to, a progressive sum of cognitive life. The logic of system frames conceptions of the limitation and the contribution, such as the colligation of facts by superinduction of conceptual schemata (Whewell), the depth to which concepts interpenetrate judgment or blur the purity of inferential synthesis (Lotze), the inversion of dependence in our thought between principle and application (Jevons), and the relation of approximation between science and final truth (F. Enriques). In the dimension of system, 'truth can only be tested by more of itself' (Bosanquet, *Logic*, ii. 267).

LITERATURE.—No bibliography of logic with any approach to completeness appears to have been attempted. J. M. Baldwin, *DPHP*, vol. iii. pt. 2 (New York, 1905), and the *Catalogue of Venn Collection, Univ. Lib.*, Cambridge, 1889, are the most useful. Reference is advisable to the following selection of representative authorities, besides such as have been quoted.

(1) *History, scope, and utility*.—C. Prantl, *Geschichte der Logik im Abendlande*, 2 vols., Leipzig, 1885 (the fullest history down to the Middle Ages); F. Harms, *Geschichte der Logik*, Berlin, 1881; A. Frank, *Esquisse d'une histoire de la logique*, Paris, 1888; P. Janet and G. Séailles, *Histoire de la philosophie*, pt. 2, do. 1887; R. Adamson, *A Short History of Logic*, London, 1911; W. Whewell, *On the Philosophy of Discovery*, do. 1860; *EB*, artt. 'Logic'; *Encyclopædia of the Philosophical Sciences*, Eng. tr., London, 1913, vol. 1.

For a summary of substantive logical doctrine see artt. BELIEF (Logical), CONCEPT, INFERENCE, JUDGMENT (Logical), and METHOD (Logical).

J. BROUGH.

LOGIC (Buddhist).—Buddhists have been called the real founders of the medieval logic and logical literature of India, a position which they share to a great extent with the Jains.

At about A.D. 400 began an epoch when they (Jains and Buddhists) seriously took up the problems of logic, and all the text-books on the Jaina and Buddhist systems of logic date at or after that time. Ujjaini in Malwa and Valabhi in Guzerat, . . . Patna and Drāvida (the Deccan), were the principal seats of Jainist logical activity. 'The Nyāyavatāra, by Siddhasena Divākara, dated about 533 A.D., was the first systematic work on the Jaina Logic.'

The earliest seat of Buddhist medieval logic is said to have been in Gandhāra (about Peshawar) on the Panjāb frontier, till the invading Huns dispersed all scholarly life. Only such literature survived as had been transported in translations to China and Tibet. There were, however, other schools at Ayodhyā (Oudh) and in the Deccan. From the latter school one systematic work of the 7th cent. A.D. has survived in Sanskrit: the *Nyāyabindu* of Dharmakīrti, and its commentary by Dharmottara.²

This ascription of the rise of logical studies in mediæval India to Jain and Buddhist culture is tantamount to saying that systematic treatment of the nature and regulation of reasoned knowledge as such first took shape when Indian culture was practically Buddhist and Jainist. That systematic treatment was more critical and exegetical than constructive. It is clear from the Buddhist scriptures, and also, so far as any work has yet

¹ S. C. Vidyābhūṣaṇa, *History of the Medieval School of Indian Logic*, Calcutta, 1909, p. xviii.

² Ed. P. Peterson, in the *Bibliotheca Indica*, Calcutta, 1890.

been done upon them, from the Jain scriptures, that an unwritten and unelaborated body of normative principles and methods of thought had long existed in India. The early medieval logics are exegeses, expounding and elaborating the logical categories applied in earlier works. These categories included classifications of knowledge, doctrines of terms and propositions, methods of induction, fallacies, and, possibly, in the Jain classics, syllogism. Of the methods and categories themselves the early works say little or nothing. Those works are the expression of the greater or constructive stage of the Buddhist and Jain movements. The Buddhist scriptures are often critical; but they criticize the traditions which they found holding the field, rather than the principles and methods of deduction and induction of their day.

Two passages in the *Suttas* afford an apparent exception to this assertion. In these, certain matters are declared to be 'not in the sphere of *takka*,' rendered by Rhys Davids and R. Otto Franke 'mere logic'¹ (*tarka-sāstra*, or 'rules of thought,' is one of the technical Indian terms for logic). And logic-mongers (*takkino*) and pedants (*vimamsino*), failing to grasp them, are said to arrive at fantastic theories.² Again, in prescribing a pragmatic criterion of the merits of a religious doctrine, the Buddha is said to have excluded such criteria as authority, tradition, etc., and both *takkhetu* and *nayakhetu*.³ These, again, belong to the oldest technical terms for logic, *hetu* ('condition,' 'cause,' 'inference') and *naya* ('method') practically covering all reasoned thinking in both Jainist and Buddhist books.⁴ This depreciation of ratiocinative method, combined with misconceptions of the orthodox theory of knowledge in early Buddhism, has given rise to the mistaken view that Buddhists rejected both logical method and the validity of any knowledge established by it.⁵ But a careful consideration of the two *Suttas* quoted above, in the light of the sober intellectual method prevailing in the great majority of the *Suttas*, brings us to a very different conclusion. In the latter passage the soundness of any ethical doctrine or gospel is held to be rightly tested, not by metaphysical dialectic, but by a utilitarian calculus. In the former passage the 'logic' that is condemned as inadequate is such as often finds condemnation among ourselves, when we 'feel' rather than discern that deductions are being made from outworn, outgrown terms, from wrong data, from words ambiguously used. Only a culture which has a logic of recreated inductions will condemn such misuse of deduction as 'mere logic.' It is one of the penalties induced by such effete reasoning that the noble formulation of right thinking should, in popular usage, incur reproach, as if it had failed in general.

The Buddhist *Sutta* and *Abhidhamma Piṭakas* afford unmistakable evidence of (1) the existence of a current logical doctrine, (2) misuse of the same by dialecticians or 'sophists,' deducing from confused terms and wrong premisses, and (3) a constant faith in the appeal to judgment and argument, i.e. to logical faculty, and to logical principles. The *Suttas*, or discourses, were in great part addressed to relatively immature minds—to the 'man in the street' and to the average *bhikkhu* or *sekha* (learner in the Order). But the proportion of discourses filled with categorical assertions is very small. Most of them seek to capture the listener by argument. No sentence occurs oftener than *Tam kissa hetu?*, 'What is the reason of that?' The prevailing method of the Buddha in his replies to

¹ *Dīgha Nikāya*, i. 12; Rhys Davids, *Dialogues of the Buddha*, Oxford, 1899-1910, i. 26; R. O. Franke, *Dīgha Nikāya in Aśvahi überasetzt*, Göttingen, 1914, p. 21.

interlocutors is one of gentle 'reasonableness' (to adopt Matthew Arnold's rendering of *επιεικεια*). And *nyāya* (*nāya*), 'knowledge,' 'science,' which is the title-word in the oldest Indian logical works,¹ is used synonymously with *satya* (*sachcha*), 'truth,' as forming, with *dhamma* ('right' or 'norm') and *kusala* ('good'), the threefold foundation on which the perfect man should be established.² In the somewhat later collection called *Abhidhamma Piṭaka*, where doctrines, put forward *ad hominem* in the *Suttas*, are more abstractly expounded by way of question and answer, logical method is more systematically applied. The import of a great number of terms is set out, usually in dichotomic division, but sometimes in the distinctively Indian method of presenting the by us so-called Laws of Thought, thus: Is A B? If not, is A not-B? If not, is A both B and not-B? If not, is A neither B nor not-B (in other words, is A a chimæra)? The expositions, again, are sometimes exercises in converted propositions, sometimes arguments in hypothetical propositions. The books entitled *Yamaka* and *Kathāvatthu*,³ respectively, consist entirely of these exercises and arguments. No definite exercise in, or allusion to, syllogism has been found in the *Piṭakas*, although it figures prominently in the earliest Buddhist and Jain treatises on logic. Nor, indeed, do the paired words *pamāṇa* ('immediate knowledge,' 'perception') and *anumāna* ('mediate knowledge,' 'inference') apparently occur in the *Piṭakas* as the indispensable logical terms which they subsequently became.⁴ Nevertheless, the *Suttas* and the *Abhidhamma* books taken together, with all the legendary and illustrative matter discounted, present so varied an appeal to the intellect of their age that it is not surprising if one result of the paramountcy of Buddhist culture was to yield a harvest, not only of psychological, but also of logical, analysis and systematization. A still greater field of material for the history of logic will possibly be opened up when (1) the original Jain scriptures are all edited, and (2) the Chinese and Tibetan translations of Buddhist Sanskrit treatises on logic, as well as (3) the orthodox Theravāda philosophical works in Sinhalese and Burmese MSS, become accessible. A comparison of the conclusions gleaned from these sources, and from the Pāli materials as yet accessible, with the concepts of European logic will prove of deeper philosophical importance than may appear likely to those who see in logic only an academic exercise. By intellectual procedure, according to the norms of which logic is the interpreter rather than the dictator, the human mind has grasped the most general data of experience inductively and deductively. And that procedure has centred round certain concepts here, round other concepts there. The difference in emphasis thus produced tends to become absolute, hindering both mutual understanding and also thereby a positive, general advance in philosophy. The system, for instance, of definition by genus and species, of division by dichotomy only, of subsuming the particular under the more general, admirable as it has proved in all quantitative analysis, may prove a hindrance in estimating qualitative values in æsthetic and spiritual inquiry. The Buddhist scriptures did not keep rigidly to these (peculiarly Greek) lines in their analyses. They did not always, or emphatically, see things as decomposable substances, in wholes and particulars. Their founder disliked

generalizing. 'I am not,' he is made to say, 'a generalizer, I am a particularizer.'⁵ True, they expressed organic phenomena in terms of *khandha*, 'aggregate.' But *khandhas*, for them, were not 'things that are,' but 'happenings and ceasings,' 'risings and fallings.' They may be said to have seen things more as intercrossing force-rays, each abscissa or confluence of which gave occasion for a general term. Hence their definitions consist in the laying together of mutually intercrossing, overlapping, or partially coinciding notions.

Centuries later we find Buddhaghosa and Buddhādatta adopting consistently a fourfold scheme for the definition of psychological and ethical terms, viz. by salient character(s), essential properties, resulting phenomena, and proximate cause.⁶ This method survives in a classic work centuries younger, but is no longer prominently used.⁷

To revert to the laws of thought—the way in which Indian logic presented the second and third of these (Contradiction and Excluded Middle) has been mentioned. But the first (Identity) was virtually traversed, in Buddhist thought, by the fundamental law of *anichcha* (*anitya*), 'impermanence' (i.e. incessant change). By this law A is never A for more than a moment, but is after that not A, but, as it were, A₁, A₂, A₃ . . . And, just as Aristotle rated as mere 'vegetable' the mind that rejected the (Greek) laws of thought, so for the Buddhists there was no intelligent or accurate thinking on any basis which ignored this law of impermanence. The other great tenets that 'all (life) is subject to ill,' and that 'all is without soul or substance,' are, in fact, corollaries of it.

The only general principle of thought put forward in Europe which harmonizes with Buddhist axioms is that 'Principle or Law of Sufficient Reason' for which certain logicians, notably Leibniz, claimed equal rank with the three named above, namely, that 'nothing happens without a reason why it should be so rather than otherwise.' This comes very near to the *udap-pachchayatā* ('this is conditioned by that') of Buddhist causality. And, generally speaking, it is in the logic of causation or of induction that we first notice the resemblances between Buddhist and European logic rather than the differences. The ancient formula of cause—that being present, this becomes; from the arising of that, this arises; that being absent, this does not become; from the cessation of that, this ceases⁸—is the nearest approach to our logical schemata that we find in the *Piṭakas*. And the mediæval elaboration of the principle so formulated—that 'its essential mark is the condition of the happening of a phenomenon' on the occurrence of its sole invariable antecedent phenomenon⁹—is well in tune with our more modern logic of induction.

LITERATURE.—This is given in the footnotes. Of the two important early classics, the *Mūlā-paṭha* (see *MILINDA*) and the *Netti-pakarana*, the former argues mainly by analogy, while the latter uses only the first and last of Buddhaghosa's four heads given above.

LOGIC (Indian).—See NYĀYA.

LOGOS.—The Greek word *λόγος* has no exact equivalent in any other language. Just as Goethe's *Faust*, when translating the first verse of the Fourth Gospel into German, tries in succession and rejects *Wort*, *Sinn*, *Kraft*, and finally decides upon *That*, so Latin theology wavered between *Verbum*, *Sermo*, and *Ratio* before accepting

¹ Not an *ekamsavāda*, but a *vibhajjavāda* (*Majjhima Nikāya*, ii. 197). The Theravāda, or mother school, were long known as *Vibhajjavādins*.

² *Atthasālinī* (PTS, 1897), 109, *passim*; *Abhidhammavāṭarā* (PTS, 1915), 2, *passim*.

³ *Abhidhammatthasāṅgaha* ('Compendium of Philosophy'), probably 12th cent. A.D., p. 212 f. (PTS, 1884, tr. 1910).

⁴ *Majjhima Nikāya*, ii. 32; *Saṃyutta Nikāya*, ii. 28, etc.

⁵ *Abhidhammatthasāṅgaha*, p. 187.

² Cf. *Saṃyutta Nikāya*, v. 19, with i. 189; Rhys Davids, *Dialogues*, ii. 187 (*Nāya* is rendered 'system'). The formula of causation is repeatedly called Aryan (i.e. Buddhist) *Nāya*.

³ Ed. for PTS, 1911-13, 1894-97. The PTS is publishing a translation of the latter work in 1915.

⁴ *Pamāṇa* is used only for 'measure,' 'estimate'; *anumāna* apparently does not occur at all

Verbum, the least satisfactory, perhaps, of the three. The word has a history both in Greek philosophy and in Jewish Alexandrian theology. But, whereas in Greek philosophy the word means the divine Reason regarded as immanent in the cosmic process, the authors of the Septuagint use it to translate the Hebrew *Memra* and its poetic synonyms, which mean primarily the spoken word of the Deity.¹ Hellenized Jewish thought attempted to fuse these two originally distinct meanings; and so arose the Christian use of the word as a name for the second Person of the Trinity, incarnated in Jesus of Nazareth. It will be convenient to consider in succession the growth of the idea in Greek philosophy, in Jewish-Alexandrian theology (the use of *Memra* in the Hebrew sacred literature hardly belongs to our subject), and in Christian theology.

1. In Greek philosophy.—The history of the Logos-idea begins with Heraclitus of Ephesus (c. 535–475 B.C.), who, as F. M. Cornford has rightly maintained,² represents a mystical reaction against the materialism of the Ionian philosophers. For him the visible world is a symbolic system which half conceals and half reveals the reality. This truth or reality is the divine soul of the world, whose life is manifested in the endless cycle of birth and death, of becoming, change, decay, and renewal. There is *one* Logos, the same throughout the world, which is itself homogeneous and one. This wisdom we may win by searching within ourselves; 'it is open to all men to know themselves and be wise.' The divine soul is 'Nature,' the cosmic process; it is God; it is *ψυχή*, the life-principle; it is Logos, the divine law, or will of God. 'All human laws are fed by the one divine law. It prevails as much as it will, and is sufficient and more than sufficient for all things.' This Logos is the immanent reason of the world; 'it existeth from all time; yet men are unaware of it, both before they hear it and while they listen to it.' The Logos, like Wordsworth's 'Duty,' keeps the stars in their courses. It is the hidden harmony which underlies the discords and antagonisms of existence. There is no trace in Heraclitus of a transcendent God, whose reason or will the Logos could be. The system is rather a form of pantheism, with a strong mystical element. In Anaxagoras, however, the Logos, or *νοῦς* (he preferred the latter term), is intermediate between God and the world, being the regulating principle of the universe, the divine intelligence. In Plato, though he was the founder of a philosophy in which the Logos-idea was to find a congenial home, there is but little that bears directly on our subject. The world, he says in the *Timæus* (p. 29 f.), is created by a fusion of mind and necessity; it is itself a living and rational organism, the 'only-begotten (*μονογενής*) son of God,' itself a God, and the 'express image' (*εἰκὼν*) of the Highest.

In Stoicism the philosophy of Heraclitus received a new life and fresh developments. Like Heraclitus, the Stoics regarded Fire as the primordial substance, the material principle of the divine. Endowed with inherent productive activity, it is the 'seminal Reason' (*λόγος σπέρματικός*) of the world, which manifests itself in all the phenomena of nature. These phenomena, or, rather, the active principles which create them, are often called *λόγοι σπέρματικοί*, in the plural. Christian writers like Justin Martyr laid hold of this doctrine to connect Greek philosophy with their own religion. Every man, Justin taught, at his birth participates in the universal Reason, which he identifies with the Johannine Logos which 'lighteth

every man.' Accordingly, he argues,¹ heathens like Heraclitus and Socrates, in so far as they lived *μετὰ λόγου*, may be claimed as Christians, and may be saved. The seminal Logos of the Stoics, when spoken of as a single Power, is God Himself as the organic principle of the cosmic process, which He directs to a rational and moral end. This power is not present in all creatures equally; only man participates in it so fully that he may be regarded as a real effluence of the Deity. The Stoics distinguished between the *λόγος ἐνδιάθετος*, the potential, unmanifested Reason, and the *λόγος προφορικός*, the thought of God expressed in action. This distinction led to a new emphasis being laid on the other meaning of *λόγος*, as 'word' or 'speech'; and in this way Stoicism made it easier for Jewish philosophy to identify the Greek *λόγος* with the half-personified 'Word of Jahweh.' Words and thoughts, according to the Stoics, were the very same things regarded under different aspects. The same *λόγος* which is Thought as long as it resides in the breast is Word as soon as it comes forth. The distinction between *ἐνδιάθετος* and *προφορικός*, often used by Philo and the Greek Christian Fathers, is really identical with that drawn by Aristotle between *ὁ ἐξω λόγος* and *ὁ ἐν τῇ ψυχῇ*.² Christian writers found another fruitful idea in the Stoic doctrine that, since the one Logos is present in many human souls, men may have communion with each other through their participation in the same Logos. The Logos-Christ might be explained Stoically as the indwelling revealer of the Father, with whom He is one; as the vital principle of the universe; as the way, the truth, and the life; as the inspirer of the highest morality; and, last, but not least, as the living bond of union between the various members of His 'body.' The world, for Stoicism, is simple and unique (*εἰς καὶ μονογενής*); it is a living creature (*ὁὐσία ἐμψυχος*). The Spirit (*πνεῦμα*) goes through all things, formless itself, but the creator of forms. The Logos, as World-Idea, is also single and simple (*εἰς καὶ ἀπλοῦς*), though it assumes manifold forms in its plastic self-unfolding. It is identified with Fate (*εἰμαρμένη*); and Stobæus says:

'Fate is the *λόγος* of the *κόσμος*, or the *λόγος* of those things in the universe which are directed by providence (*πρόνοια*). Chrysippus, however, instead of Logos uses Truth, Cause, Nature, Necessity, and other words' (*Rhet.* i. 180).

The question whether Stoicism identified God with the Logos is not easy to answer. E. Zeller is probably right in saying that the logic of Stoicism was rigidly pantheistic—it was a form of naturalistic monism: *Deus sive Natura*. Origen says that the Stoics and the Platonists both call the world God; but for Stoicism the world is the supreme God, for the Platonists only God in the second place. But the opponents of Stoicism are too harsh when they say that the Stoics bring in God only in order to be in the fashion. It was their religious need that made them bring Him in. Perhaps they could not consistently find room for any God above the Logos, but in fact they did ascribe to the Deity more personal attributes than could properly belong to their Logos. They were certainly able to feel enthusiastic devotion to the Logos as the principle of law and righteousness. This is shown by the famous hymn of Cleanthes:

'Thee it is lawful for all mortals to address. For we are Thine offspring, and alone of living creatures that live and walk the earth moulded in the image of the All. Therefore I will ever sing Thee, and celebrate Thy power. All this universe, rolling round the earth, obeys Thee, and follows willingly Thy command. . . . O King most high, nothing is done without Thee, neither in heaven nor on earth nor on the sea, except what the wicked do in their foolishness. Thou makest order out of disorder and things that strive find in Thee a friend; for Thou hast fitted together good and evil into one, and hast established one Reason (*λόγος*) that lasts for ever. But the wicked fly from Thy law, unhappy ones, and though they desire to possess what

¹ *Apol.* i. 46.

² *Anal. Post.* i. 10. 76.

is good, yet they see not, neither do they hear, the universal law of God. . . . But O God, giver of all things, who dwellest in dark clouds and rulest over the thunder, deliver men from their foolishness. Scatter it from their souls, and grant them to obtain wisdom, for by wisdom dost Thou rightly govern all things; that, being honoured, we may repay Thee with honour, singing Thy works without ceasing, as we ought to do. For there is no greater thing than this, for mortal men or for gods, to sing rightly the praise of universal law (λόγος).

In fact, this conception of a germinative principle of Reason which manifests itself in the universe, and especially in the minds of human beings as members of a universal community, prepared the soil on which a world-religion might grow. And at the same time the individual was brought into a closer relation with the divine than had been contemplated in any earlier system of Greek philosophy.

2. In Jewish-Alexandrian theology, — Hebrew thought about the 'Word of the Lord' does not enter the subject of the present article until the tendency arose to personify the self-revealing activity of Jahweh. The earlier books of the OT connect the operations of the *Memra* with three ideas—creation, providence, and revelation. God spake the word, and the worlds were made; then at once His spirit, or breath, gives life to what the Word creates, and renews the face of the earth. The protecting care of God for the chosen people is attributed by the Jewish commentaries to the *Memra*. Besides this, the 'Word of the Lord' inspires prophecy and imparts the Law. The tendency to personify the activities of Jahweh is seen in the expressions used about the Angel, the Name, the Glory, and, above all, the Wisdom of God. Similar language about the Word is found in the frequent phrase 'the Word of the Lord came unto me,' and in such passages as Ps 147¹⁵, Is 55^{10a}, 2^a, Ps 33⁴, Jer 23²⁰. Nevertheless, the personification is throughout poetical rather than metaphysical, except in writers completely under Greek influence. On the whole, in the later books the conception of Wisdom tends to displace that of Word—a change which really brings the Jewish idea nearer to the Greek. 'Wisdom' in Job is the hidden purpose which God is working out in man's existence—the grand secret of life known only to God. In Proverbs Wisdom is the cardinal virtue; she stands at the corners of the streets, and invites men to walk in her ways. God created or prepared her before the world was made; she was by His side when He planned the scheme of the world-order; she was daily His delight, rejoicing always before Him. Therefore He assures those who listen to her of life, blessedness, and the favour of God. In Ecclesiastes, Ecclesiasticus, and Wisdom of Solomon we find a further development of Jewish thought in the direction of Greek philosophy. Ecclesiastes presents us with a pessimistic philosophy quite alien from Judaism and strongly influenced by Stoicism, though the trend is masked by numerous interpolations. Ecclesiasticus is more Jewish in sentiment; 'Wisdom' has found her chief expression in the books of the Law. The book called Wisdom of Solomon is the work of an orthodox Jew, who has no sympathy with the views of Ecclesiastes, and resents their attribution to Solomon; but his doctrine of the divine Wisdom is strongly coloured by Stoical and Platonic ideas. Wisdom is immanent in God, belonging to the divine essence, and yet existing in *quasi*-independence side by side with God. Wisdom was the active agent in the creation of the world, selecting among the divine ideas those which were to be actualized in the created universe. She is an emanation from God, pervading all things, and passing 'more rapidly than any motion' among them, without contracting any impurity by her contact with matter. In the human spirit she is the teacher not only of every virtue and of all theological knowledge, but of all the human arts and sciences.

The identification of 'Wisdom' with the Greek Logos is almost explicitly made, as is the identification of Wisdom with the Holy Spirit of God. This book, in fact, marks a transition from the OT doctrine to that of Philo, and is of much importance in the history of Jewish-Alexandrian theology.

Philo not only blends Greek and Jewish ideas about the Logos; he achieves a syncretism of divergent Greek conceptions. His Logos is a combination of the Platonic ideas and Stoic universal causality. He takes over the main Stoical conception, but detaches it from materialism, and tries to harmonize it with the Platonic theory that visible things are only types of realities laid up in the intelligible world. His Logos is much like Plato's idea of the Good, except that it is regarded as creatively active. Philo found this conception useful, because he wished to conceive of the divine activity Hellenically, without ceasing to believe in the OT Jahweh. Jewish thought had been in danger of separating the Creator so completely from His creation as to produce an intolerable dualism. This tendency had been mitigated by poetical personification. Philo fixed these poetical symbols, and turned them from poetry to metaphysics by identifying the *Memra* with the Stoical Logos Platonized. In opposition to the earlier Jewish idea of the Word, Philo's Logos is an intermediary between God and the world; He is the principle of revelation. Philo is fertile in forms of expression to convey the relation of this principle of revelation to the Godhead and to man respectively. In the former aspect, the Logos is declared to be the first-born Son of God, the first of the angels; in the latter, He is the Man who is the immediate image of God, the prototypal Man in whose image all other men are created. The Logos dwells with God as His vice-gerent; He is the eldest son of God, and Wisdom is His mother. In other places He is identified with Wisdom. Again, He is the Idea of Ideas, the whole mind of God going out of itself in creation. He represents the world before God as High Priest, Intercessor, Paraclete. He is the Shekinah, or glory of God; but also the darkness or shadow of God, since the creature half conceals and half reveals the Creator. He is the intelligible world, the archetypal universe of the Platonists, and the real life of the world that we know. In man He operates as the higher reason. If we ask whether the Logos is an aspect of the divine nature or an individual being, we get answers which are hard to reconcile. The rational part of the soul exhibits the type of the Logos, the 'second Deity'; no mortal could be formed in the likeness of the supreme Father of the world, or ever brought into comparison with Him. But elsewhere the Logos appears to be only an attribute of God. As an orthodox Jew (or one who wished to pass for orthodox), Philo cannot have thought of affirming two divine agents. And yet the Platonic doctrine of a transcendent unknowable God required a divine vice-gerent, while the Stoic Logos had been an independent immanent world-principle, very different from the Hebrew Jahweh. The amalgamation of these divergent philosophies in Philo is rather external and superficial. The Philonic Logos is a dynamic principle, but also a cosmic principle, who accounts for the existence of the world. Occasionally Philo seems to suggest that the Logos is 'the God of us the imperfect,' as if from the highest point of view the Logos were only an appearance of the Absolute. So in a thoroughly Plotinian passage he says:

'God appears in His unity when the soul, being perfectly purified and having transcended all multiplicity, not only the multiplicity of numbers but even the dyad which is nearest to unity, passes on to the unity which is unmingled, simple, and complete in itself' (*de Abrahamo*, 24).

But this is not a common line of speculation in Philo.

In the NT the technical use of the word *Logos* is found in the Fourth Gospel (unless we should add 1 Jn 1¹⁴ and Rev 19¹³) only. But it is important to observe that St. Paul, especially in his later Epistles, gives us almost the whole of the *Logos*-doctrine which we read in the Prologue to the Fourth Gospel. The conception of Christ as a cosmic principle is even more emphasized in Colossians than in the Gospel. When we read of the Pauline Christ that He is the image (*εἰκών*) of God, that in Him the *Pleroma* of the Godhead dwells in bodily form, that He was the agent in creation, and the immanent Spirit 'through whom are all things,' that He pre-existed in the form of God, that He is the first-born of all creation, in whom and through whom and to whom are all things, that all things are summed up in Him, that He is all and in all, that His reign is co-extensive with the world's history, that He is life-giving Spirit, abiding in the souls of His disciples, forming Himself in them, and transforming them into His likeness, enlightening them and uniting them in one body with Himself, it does not seem that a candid criticism can deny that all the elements of a complete *Logos*-theology are to be found in the Pauline Epistles. Without assuming any direct influence of Philo, which is perhaps improbable, it is unquestionable that the Jewish-Alexandrian *Logos*-philosophy had a great and increasing influence upon St. Paul's doctrine of the Person of Christ. In proportion as the apocalyptic Messianism which we find in Thessalonians lost its importance for him, he approximated more and more to the type of Christology which we associate with the name of St. John. It must not be supposed that this statement stands or falls with the authenticity of Colossians and Ephesians. The Epistles to the Corinthians contain similar language.

The large obligations of the author of the Fourth Gospel to the Philonian school cannot reasonably be denied, though they have often been questioned. It is clear from the tone of the Prologue that Philo's conception of the *Logos*, or something akin to it, was already familiar to those for whom the Evangelist wrote. No explanation of the word *Logos* is given; and almost every verse in the Prologue might be paralleled from Philo. Technical terms from Philo (*σφραγίς* and *παράκλητος* are examples) abound in the Gospel. Indeed, the whole treatment adopted by the Evangelist presupposes the Jewish-Alexandrian philosophy of religion, and would be unintelligible without it. Nevertheless, it is true that the identification of the historical Jesus with the *Logos*, and of the Jewish Messiah with the *Logos*, makes a great difference. Philo had never thought of identifying the *Logos* with the Messiah—a figure in whom he took very little interest. The chief differences (which have often been exaggerated) between the Philonian and Johannine *Logos* are these: (1) the Evangelist defines far more clearly the relation of the *Logos* to God, as a second Person in the Godhead, distinct, though eternally inseparable from the Father; (2) the notion of God the Father as a transcendent unapproachable Being, to be known only through an intermediary, is foreign to the Gospel, in which God the Father acts directly upon the world; it is in consequence of the activity thus attributed to God the Father that the creative function of the *Logos* loses its interest and is not referred to after the Prologue; (3) in the Gospel the conception of the *Logos* is more dynamic than in Philo; the *Logos*-Christ is the complete revelation of the character of God rather than of His nature; the revelation of the Divine as self-

sacrificing love is an idea not to be found in Philo; it follows that the conception of *life*, which implies growth, change, and development, has an importance for the Evangelist which it could not have for Philo; (4) could Philo have accepted the Incarnation? The difference between the two writers here has often been magnified by orthodox critics. Philo believed in theophanies, and could have easily accepted a docetic theory of the Incarnation. The Fourth Evangelist is no docetist; but for him too the Incarnation was primarily a revelation. The Johannine Christ became flesh that we might 'behold his glory,' and learn what could only thus be taught. But a real Incarnation of the *Logos* would no doubt have been inconceivable to Philo, for whom no historical event seems to have any importance as such. The *Logos*-doctrine of the Prologue may be briefly summarized as follows. From all eternity, before time began, the *Logos* was. He is supra-temporal, not simply the Spirit of the World. He did not become personal either at the Creation or at the Incarnation.¹ The *Logos* was 'turned toward' (*πρὸς*) God. The preposition indicates the closest union, with a sort of transcendental subordination. The Father alone is the *πρῆν θεότητος*. The opening words of the Prologue do not (with Meyer, Weiss, etc.) refer to the exaltation of Christ, but to His eternal relationship to the Father. Deification was to the Jews blasphemy, to the Greeks a light thing. The Evangelist shows that the principles of distinction and deeper unity are in God Himself. 'All things came into being through the *Logos*,' who is the mediate Agent in creation.² 'Apart from him nothing came into being. That which has come into being was, in him, life.' Bossuet, following Augustine, comments rightly:

'Everything, even inanimate things, were life in the eternal Word, by his idea and eternal thought.'

The *Logos* is the light of men as *life*; that is to say, revelation is vital and dynamic. God reveals Himself as vital law to be obeyed and lived. The cosmic process, including, of course, the spiritual history of mankind and of the individual, is the sole field of revelation. 'The light shineth in darkness.' As the first step in the first creation was to divide the light from the darkness, so the new creation effects the same division in the moral and spiritual sphere. 'And the darkness arrested (!) it not.'³

'This is the genuine light, which lighteth every man as it comes into the world.' 'He was (always) in the world, and the world knew him not.'⁴ 'And the *Logos* became flesh and tabernacled among us.' Here (v. 14) the Evangelist mentions the Incarnation for the first time. The *Logos*, who from all eternity was fully divine (*θεός*), became flesh (assumed visible humanity) at a certain time.

It is not easy to say whether the Evangelist conceived of the *Logos* existing *before* the Incarnation as 'true man from all eternity';⁵ but 3¹³ and 6³² (cf. 1 Co 15⁴⁷) suggest that he did. It is certainly in accordance with Johannine ideas to hold that the Incarnation, and the Passion as the sacrament of the divine self-sacrifice, were part of the counsels of God from all eternity. The *Logos* before the Incarnation was, according to this thought, *Μαν ἐνδιδόχους*, though not *προφωρητός*. The Prologue thus leads up to the Incarnation of the *Logos*,

¹ There was nothing strange in this doctrine. The book of Proverbs (8²³) had asserted the same of Wisdom: 'I was set up from everlasting, from the beginning, or ever the earth was.'

² This is also Philonic; cf. *de Cherub.* 85: *ἐνρήσεις γὰρ αἴτιον μὲν αὐτοῦ (τοῦ κόσμου) τὸν θεόν, ὅψ' οὐ γέγονεν, ἄλλ' οὐ τὰ τέσσαρα στοιχεῖα, ἐξ ὧν συνεκράθη, ὄργανον δὲ ἄλγον θεοῦ, οὐ κατεσκευάσθη.*

³ So Origen took *κατέλαβεν*, probably rightly.

⁴ This is exactly what Heraclitus also says about the *Logos*.

⁵ T. H. Green, *Works*, London, 1885-88, iii. 208 f.

which is the theme of the whole Gospel, though the historical form precludes any further discussion of the subject on its philosophical side. The incidents are selected for their symbolical and illustrative value, and the whole tendency of the treatise is quietly to transmute local and temporal ideas about the Incarnation into a more universal and spiritual form. The highest form of faith, he more than hints, is that which can dispense with ocular evidence. The ascended Christ can be 'touched' more readily than was possible when the Logos had His tabernacle among men.

3. In Christian theology.—The doctrine of the Logos has a very important place in the theology of the early Christian Church. It was the answer of orthodox Catholicism to various theories of the Person of Christ which at that time seemed plausible—theories which made Jesus a phantom, or an emanation, or a demi-god. Heretical thought, down to and including Arianism, tended to rank Christ with the imaginary intermediate Spirits which formed a hierarchy between the supreme God and humanity. The Johannine Logos-doctrine was a barrier against all such theories. The Apostolic Fathers do not supply much material. Ignatius calls Christ *λόγος ἀπὸ συγῆς προελθὼν*,¹ which has a Gnostic ring, since Valentinus was soon to make Logos and Zoe the offspring of Bythos and Sigē. Hermas identifies the Son with the Law of God, just as Philo identifies Law and Logos. In the Acts of John the Logos-conception is separated from the man Jesus, so that Christ with His disciples can sing the praises of the Logos. And in ch. 13 the Voice teaches: 'This cross of light is sometimes called by me Logos, sometimes Jesus, sometimes Christ, sometimes *vois*,' etc. In Montanism (*q.v.*) this notion of the Logos as a *σὺγκρασις* of divine attributes was maintained. The anti-Montanist 'Alogi' represented a reaction against this tendency. They were 'feeble reptiles' (*ἐπικροτὲρ ἀσθενέες*), according to Epiphanius. This was a time of unrestrained theosophical speculation, in which an attempt was made to throw into the Logos-conception a mass of heterogeneous elements—Jewish, Greek, and Oriental. The Fourth Gospel had a very steadying effect, when it was accepted as canonical; and so had the writings of the Apologists—Justin, Tatian, Theophilus, and Athenagoras. The Apologists were theological conservatives. They wished to preserve traditional Christianity, with its doctrine of revelation and its reverence for the OT. They do not philosophize for their co-religionists; they talk about the Logos to show the pagans that Christianity is in agreement with 'the best thought of our time,' just as our clergy talk about evolution.

The philosophy which the Apologists mainly wished to conciliate was Stoicism, which in the 2nd cent. was much stronger than Platonism.² So Justin argues that Christ is the 'Spermatic Logos,' the Reason of God, at first immaterial in the Father's bosom, then sent forth as the spoken word for creation and revelation. All men are made in the image of the Logos; and 'those who believe in Christ are men in whom the divine seed, which is the Logos, dwells.' Tatian³ gives us a Stoic-Christian cosmology. The Logos was first *δυνάμει*, not *ἐνεργείᾳ*, residing in the bosom of the Father. Then, by the will of the Father, He came forth, and the worlds were made. The Logos is the *ἀρχή* in relation to the creatures. Theophilus⁴ employs the Stoic terms *ἐνδιάθετος* and *προφορικός*, and gives in outline a systematic Logos-doctrine.

¹ *Magn.* 8.

² Non-Christian Platonism never attached much importance to the Logos; the word for them had a different meaning; their 'Second Person' was *Noûs*.

³ *Orat.* 5.

⁴ *ii.* 10.

Athenagoras¹ maintains that the Logos did not first acquire a personal existence in connexion with creation. Minucius Felix² equates the Christian Trinity with *Mens, Ratio, Spiritus*. This is to be noted, because later, under Platonic influence, a principle above *Noûs* (*Mens*) was asserted, and this, with Christian speculative mystics, was naturally identified with the Father, with the result that *Noûs* was now equated with the Logos, and *Ratio* (the will and thought of God transmuted into vital law) had to be awkwardly assigned to the Holy Ghost. This led to confusion. The Alexandrians continued to call the Father *Noûs*, feeling probably that the Neo-Platonic Absolute in no way corresponds to the Christian God the Father. Thus they introduced a distinction resembling that between the Godhead and God in Eckhart; a sublimated conception of *Noûs* was introduced between the Absolute and the Logos.

In Clement of Alexandria the Logos-doctrine is a doctrine of Immanence. The world is an organic whole, moving on to some exalted destiny in the harmony of the divine order. Humanity has its life and being in Christ. The Incarnation is no abrupt break in the continuity of man's moral history. Christ was in the world before He came in the flesh, and was preparing the world for His visible advent. Hence the prophecies of the Incarnation enter into the organic process of human history. The history of man's redemption is, for Clement, the education of the human race under its divine 'Instructor.' As Instructor, the Logos has always been present in the world; He spoke through Moses, and through Greek philosophy. He even gave the sun and moon to be worshipped, that men might rise from the lower worship to the higher.³

'He is the Saviour of all, some with the consciousness of what he is to them, others not as yet; some as friends, others as faithful servants, others hardly even as servants' (*Strom.* vii. 2).

Salvation is not a physical process, but a moral growth through union with God; knowledge is not merely speculation, but a growing sympathy and insight into the character of God and His laws. The union of the Logos with God is so intimate that we cannot hold (with the Gnostics and some Platonists) that the Father is *passive* in the work of redemption. The Incarnation is in itself the Atonement by which God reconciles the world to Himself. For Clement, as for other Greek theologians, there is properly only one dogma—the Incarnation.

For Origen's Logos-doctrine see art. ALEXANDRIAN THEOLOGY, vol. i. p. 316.

There were two schools which opposed the Logos-theology—the rationalistic Unitarians, who regarded the 'divinity' of Christ as a mere power bestowed on Him by God, and emphasized the humanitarian aspect of His Person, and the modalistic Monarchians, such as Praxeas, Noetus, and Sabellius. These maintained the old alliance with Stoicism, after the Catholics had adopted Neo-Platonism as their mistress in philosophy (see, further, art. MONARCHIANISM). Hippolytus's anti-Sabellian treatises show the line of argument used by the orthodox—a position which was later regarded as not wholly satisfactory. Methodius,⁴ a Platonist but not an Origenist, argues that the Incarnation was the necessary complement of the Creation, the imperfection of Adam being natural. There is a double development—in the race and in the individual, both due to the immanent Logos. The *κένωσις* is perpetually re-enacted in spiritual experience. Macarius⁵ teaches the same doctrine: in each believer a Christ is born.

¹ 10.

³ *Strom.* vi. 14.

⁴ *S. Conviv.* iii. 5.

⁵ *Hom.* iv. 8 f.

The Arian controversy drove orthodoxy into something like a compromise with modalism. The test-word *ὁμοούσιος* gave the Monarchians most of what they wanted, and its adoption soon ended the hostility of this school. The Arian Christology is of no philosophical value; and its great opponent Athanasius, though he writes much about the Logos, does not add anything significant to the doctrine. It was, in fact, no longer thoroughly acceptable to the Catholics. The word *λόγος* was not allowed to appear in the Nicæan symbol; and the Synod of Sirmium (A.D. 451) condemned the doctrine of the *λόγος ἐνδιθέτος* and *προφορικὸς*. Other terminology, and to some extent other ideas, displaced it. It was never acclimatized in the Latin-speaking countries.

The Logos-doctrine has an obvious affinity with mysticism, and with types of religion which emphasize the divine immanence. It was revived by Eckhart in the Middle Ages, and has been a living article of faith with religious idealists, Christian Platonists, and speculative theists. It belongs to a permanent and very important type of religious thought, and can never lose its value, though there are now many who (like Max Müller) are ardent supporters of the Logos-idea in religious philosophy, while they cannot accept the Johannine identification of the Logos with a historical individual.

For an evolution in Indian philosophy somewhat similar to the development of the Logos-doctrine see art. VĀCH.

LOKĀYATA.—This word, which denotes properly 'belonging to the world of sense,' is the Indian name for the materialistic system whose adherents are termed Lokāyatikas or Laukāyatikas, or more usually Chārvākas, from the name of the founder of their doctrinal system. There are clear indications of the presence in India, as early as pre-Buddhistic times, of teachers of a pure materialism;¹ and undoubtedly these theories have had numerous adherents in India from that period onwards to the present day.

Although two authorities² bear witness to the former existence of text-books of materialism, viz. the *Bhāguri* and the *Sūtras* of Bṛhaspati, the mythical founder of the system, yet materialistic doctrines have never gained any further place in the literature of India. In order to understand these theories, therefore, we can only have recourse to a few passages of the *Mahābhārata*, to the polemic which was carried on against materialism in the text-books of the other philosophical schools, and to the doctrines of King Error in the philosophical drama *Prabodhachandrodaya*. This last was composed in the 11th or 12th cent. A.D., and aims at setting forth in allegorical style the superiority of Brāhmanical orthodoxy to all other theories of the universe. The principal source of our knowledge, however, is the first chapter of the *Sarvadarśanasamgraha*,³ a compendium of all the philosophical systems of India, composed in the 14th cent. of our era by Mādhavāchārya, the celebrated teacher of the Vedānta, in which the

doctrines of Indian materialism are set forth in the greatest detail. Mādhavāchārya begins his exposition with an expression of regret that the majority of the men of his day follow the materialism represented by Chārvāka.

The Lokāyata allows only perception as a means of knowledge, and rejects inference. It recognizes as the sole reality the four elements, i.e. matter, and teaches that, when a body is formed by the combination of the elements, the spirit also comes into existence, just like the intoxicating quality from the mixture of special materials. With the destruction of the body the spirit returns again to nothingness. The soul, therefore, is only the body *plus* the attribute of intelligence, since the existence of a soul distinct from the body cannot be established by perception. Supersensuous things are, of course, also wholly denied, and are dismissed at times with a mere jest. Hell is earthly pain, due to earthly causes. The Supreme Being is the king of the country of whose existence the whole world affords tangible proof. Emancipation is the dissolution of the body. The post-operative force of merit and demerit, which, according to the belief of all other Indian schools, determines the lot of each individual down to the smallest details, has no existence for the Lokāyatika, because this conception is reached only by inference. To the objection of an orthodox philosopher, that those who reject this controlling force in the universe leave the various phenomena of the latter without a cause, the materialist replies that the essential nature of things is the cause from which the phenomena proceed.

On the practical side this system exhibits itself as the crudest Eudæmonism; for it represents the gratification of the senses as the sole desirable good. The objection that sensual pleasures cannot be the highest aim for mankind, since these are always mingled with more or less pain, is met by the remark that it is for us to secure by prudence enjoyment as little alloyed as possible with pain, and to shun as far as is in our power the suffering inseparably connected with pleasure. The man who would have fish must take their skin and bones, and he who wants rice cannot exclude the husks from his bargain. Let him not then from fear of the pain renounce the pleasure which we instinctively feel to be congenial to our nature.

The Vedas are declared to be the idle prating of knaves, characterized by the three faults of untruthfulness, internal contradiction, and useless repetition; and the professors of Vedic science deceivers, whose doctrines are mutually destructive. To the Chārvākas the ritual of the Brāhmins is a fraud, and the costly and laborious sacrifices are useful only for providing with a livelihood the cunning fellows who carry them out. 'If an animal sacrificed at the Jyotiṣṭoma (the original form of the *soma* offering) rises to heaven, why does not the sacrificer prefer to slay his own father?' No wonder that in the view of the orthodox Hindu the doctrine of the Chārvākas is the worst of all heresies.

It is natural to conjecture that the Lokāyata system was based by its founder upon deeper principles, and developed upon more serious philosophical lines than the information which has come to us from their opponents allows us to understand. The conjecture, however, cannot be established.

³ Tr. E. B. Cowell and A. E. Gough, London, 1894.

LONGSUFFERING.—Longsuffering is alike a divine attribute and a human virtue. In both its uses its meaning is well represented by 'longanimity,' formerly a word of frequent occurrence, and not altogether obsolete.

The earliest example of 'longanimity' quoted in the *OED* (vi. 417) is from a 1450 tr. of *de Imitatione*, i. xlii. 14: 'Thou shalt overcome them [temptations] better ltel and ltel by patience and longanimyte'; the most recent citation of the word is from the *Spectator*, 11th Jan. 1890: 'His longanimity under the foolishness of the young woman is really marvellous.'

The literal meaning of the Greek word (*μακροθυμος*) of which 'longsuffering' is the translation is 'long-tempered,' the opposite of our familiar expression 'short-tempered' (cf. Germ. *Langmutigkeit*).

In three OT passages (Ex 34⁶, Nu 14¹⁸, Ps 86¹⁵) the RV substitutes a more literal rendering of the Hebrew phrase (עֲנָנִים רַחֵם, 'length of face')—'slow to anger'—for the AV 'longsuffering.' In many passages (Neh 9⁷, Ps 103⁸ 145⁸, Jer 15¹⁵, Jl 2¹³, Jon 4², Na 1⁹) the two translations are interchangeable.

'Longsuffering or slowness to anger is the glory of man as it is the glory of God' (R. C. Trench, *Sermons preached in Westminster Abbey*, London, 1881, xxx. 349).

That the two expressions are synonymous in many contexts is evident from the retention in the RV of 'longsuffering' in Jer 15¹⁵ 'Avenge me of my persecutors; take me not away in thy longsuffering.' The former sentence seems decisive in favour of the interpretation which regards the divine longsuffering as displayed towards the persecutors and not towards the prophet.

The petition shews how great was the peril in which the prophet perceived himself to stand: he believes that if God delay to strike down his adversaries, that longsuffering will be fatal to his own life' (C. J. Ball, *The Prophecies of Jeremiah*, London, 1890, p. 321).

A similar ambiguity arises in the interpretation of Lk 18⁷; AV translates *καὶ μακροθυμεῖ ἐν' αὐτοῖς*, 'though he bear long with them'; but RV 'and he is longsuffering over them.' A. Plummer (*ICC*², Edinburgh, 1898, *in loc.*) grants that *ἐν' αὐτοῖς* may refer to the enemies of the elect, but prefers to understand it to apply to the elect. The meaning, then, would be: 'And shall not God deliver His elect who cry day and night to Him, while He is slow to act for them?' But the analogy of Jer 15¹⁵ (cf. Sir 35²²) suggests that the main thought is of God's patient forbearance with those who are at once His enemies and the oppressors of His chosen ones. J. Moffatt renders: 'And will not God see justice done to his elect who cry to him by day and night? Will he be tolerant to their opponents? I tell you, he will quickly see justice done to his elect!' (*The New Testament: A New Translation*, London, 1913).

The uncertainty in regard to the interpretation of the above and other passages may serve to emphasize what Plummer rightly insists upon, namely, that, although *μακροθυμεῖ* usually means 'is slow to anger,' yet 'it sometimes means "to be slow, be backward, tarry," and is almost synonymous with *βραδύνα*. . . . So also *μακροθυμία* may mean "slow persistency" as well as "slowness to anger." Comp. 1 Mac. viii. 4' (*op. cit.*, p. 414).

The EV recognizes this wider meaning, and regards 'longsuffering' as equivalent to 'patience' in He 6¹² and Ja 5¹⁰. The corresponding verb is applied in Ja 5⁷ to the husbandman's patient waiting for the harvest. But 'patience' is more frequently the translation of *υπομονή*, 'the temper which does not easily succumb under suffering,' while '*μακροθυμία* is the self-restraint which does not hastily retaliate a wrong' (J. B. Lightfoot, *Saint Paul's Epistles to the Colossians and to Philemon*, London, 1879, on Col 1¹¹).

To the 'longsuffering' of God reference is made in Lk 18⁷, Ro 2⁴ 9²², 1 P 3²⁰, 2 P 3⁹, and to the 'longsuffering' of Jesus Christ in 1 Ti 1¹⁶ and probably 2 P 3⁹. In Ro 2⁴ 'forbearance' (*ἀνοχή*) is linked with 'longsuffering.'

The distinction between these two words is that 'the *ἀνοχή* is temporary, transient: we may say that, like our word "truce," it asserts its own temporary, transient character. . . . Thus, it may be urged, is true of *μακροθυμία* no less. . . . But as much does not lie in the word; we may conceive of a *μακροθυμία*, though it would be worthy of little honour, which should never be exhausted; while *ἀνοχή* implies its own merely provisional character' (R. C. Trench, *Synonyms of the New Testament*²¹, London, 1890, p. 190).

As a moral attribute of God, 'longsuffering' is a manifestation of His grace. In 'the riches of His goodness' He waits long and patiently for the sinner's repentance (Ro 2⁴), and in loving-kindness He tolerates those who deserve His wrath (Ro 9²²).

Yet '*patience* and *long-suffering* point not merely to the suspension of punishment, but to the love which never tires till it has exhausted its last resource. Owing to the contrast between the apparent impotence of long-suffering, and supreme moral omnipotence, this is an attribute which excites special reverence' (T. Haering, *The Christian Faith*, London, 1913, ii. 492 f.).

'Longsuffering,' as a Christian grace, is a 'fruit of the Spirit' (Gal 5²²). Though a passive virtue, it is the manifestation in human character of spiritual power received in answer to prayer from Him by whom believers are 'strengthened with all power, according to the might of his glory, unto all patience and longsuffering with joy' (Col 1¹¹). In his earnest prayers that Christians may be adorned with this grace, St. Paul asks that they may have the mind of Christ, for he obtained mercy, that in him, as chief of sinners, 'Jesus Christ might shew forth all his longsuffering, for an ensample of them which should hereafter believe on him unto eternal life' (1 Ti 1¹⁶). In 1 Co 13⁴ 'longsuffering' is said to be an attribute of the 'love' by which we are made partakers of the divine nature. Tertullian (*de Patientia*, 12) and other Fathers 'explain it to mean greatness of soul or magnanimity,' but *μακροθυμία* differs from *μεγαλοψυχία*, the 'high-mindedness' of Aristotle:

'First, it is not a consciousness of greatness, but a largeness of conception. Second, it is not the loftiness of spirit that great men alone possess, but a moral and godly frame of mind to be exhibited in the life of every Christian. Third, it is not a noble pride that stands aloof, but an interested spectator of life's sufferings, though not an active combatant in the strife' (T. C. Edwards, *A Commentary on the First Epistle to the Corinthians*², London, 1885, p. 343).

In the *Apocrypha* and *Pseudepigrapha* of the Old Testament (ed. R. H. Charles, Oxford, 1913), *inter alia* the following instructive examples of the use of 'longsuffering' are found:

Test. Dan 2: 'Unless ye keep yourselves from the spirit of lying and of anger, and love truth and longsuffering, ye shall perish.'

Test. Gad 47: 'The spirit of love worketh together with the law of God in longsuffering unto the salvation of men.'

Test. Jos. 172: 'With longsuffering hide ye one another's faults.'

Pirgē Abōth 41: 'Who is mighty? He who controlleth his evil disposition; as it is said: "Better is the longsuffering than the mighty, and he that ruleth his spirit than he that taketh a city."

LITERATURE.—The word 'longsuffering' is best studied with the aid of commentaries on the passages in which *μακροθυμία* occurs. There is an instructive and comprehensive article in *ExpT* xii. [1900-01] 330 ff.; the following bibliography is given: H. Cremer, *Bibl. Theol. Lexicon*³, Edinburgh, 1880, p. 288 ff.; J. Taylor, *Works*, London, 1843, iv. 483 ff.; R. W. Dale, *Week-Day Sermons*, do. 1853, p. 38 ff.; F. Temple, *Rugby Sermons*, do. 1861, iii. 173 ff.; C. J. Vaughan, *University and Other Sermons*, do. 1897, p. 230 ff.; A. Maclaren, *Paul's Prayer and Other Sermons*, do. 1893, p. 217 ff. See also J. Hastings, art. 'Longsuffering' in *EDB* iii. 136; H. C. Lees, art. 'Long-suffering,' in *DOG* h. 53 f.

LORETO.—For many centuries the little town of Loreto, situated some 15 miles from Ancona on a hill commanding a view of the Adriatic, has been a notable place of pilgrimage. Montaigne, who visited it in 1580, and who apparently believed

in the miracles of healing supposed to be wrought there, describes the town as 'containing few inhabitants except those who serve the needs of the religious devotees' (*Journal of Travels*, Eng. tr., London, 1903, ii. 196-209). The great basilica, the dome of which is visible from afar, was begun in 1483, completed in 1538, and has since received many additions and modifications. Of its artistic glories an excellent account is given in A. Colasanti (*Loreto*, Bergamo, 1910). But the basilica was built only to enclose and enshrine a tiny edifice known as 'la Santa Casa,' which is the real object of pilgrimage. The Holy House is believed to rest on the surface of the ground without foundations, and this fact seems to be authentic. It measures roughly 31 ft. by 13, and its walls are built of hewn stones, from their shape and colour often mistaken for brick, but externally they are hidden from view by a casing of marble richly adorned with sculptures. An ancient statue¹ of wood, of Byzantine inspiration, representing the Madonna and Child, now voluminously draped and also crowned, occupies a niche inside the little house at some height from the floor, and beneath it stands an altar at which Mass is said. Countless *ex votos* are suspended all around, but these probably represent only a small part of the rich gifts which belonged to the shrine before Napoleon rifled it in 1797. On that occasion the statue itself was carried off and taken to Paris, but in 1801 the First Consul returned it to the niche that it had formerly occupied. The words 'Hic Verbum caro factum est' sculptured above it indicate the shrine's official claim to the veneration of the faithful, but the story is more fully told in a Latin inscription set up in the basilica by Pope Clement VIII. In 1595, the approved English rendering of which runs as follows:

'Christian Pilgrim, you have before your eyes the Holy House of Loreto, venerable throughout the world on account of the Divine mysteries accomplished in it and the glorious miracles herein wrought. It is here that the most holy Mary, Mother of God, was born; here that she was saluted by the angel; here that the eternal Word of God was made flesh. Angels conveyed this house from Palestine to the town Tersato in Illyria in the year of salvation 1291 in the pontificate of Nicholas iv. Three years later, in the beginning of the pontificate of Boniface viii., it was carried again by the ministry of angels and placed in a wood near this hill, in the vicinity of Recanat in the Marches of Ancona, where, having changed its station thrice in the course of a year, at length, by the will of God, it took up its permanent position on this spot three hundred years ago. Ever since that time both the extraordinary nature of the event having called forth the admiring wonder of the neighbouring people, and the fame of the miracles wrought in this sanctuary having spread far and wide, this Holy House, whose walls do not rest on any foundation and yet remain solid and uninjured after so many centuries, has been held in reverence by all nations.'

This statement lays little stress upon what is perhaps the most surprising feature of the legend, viz. the triple change of site after the arrival of the Holy House upon the shores of the Adriatic. Pietro di Giorgio Tolomei, best known, from his native town of Teramo, as 'Teramanus,' who between 1465 and 1473 drafted the earliest version of the translation story that has been preserved to us (the document has been discussed with great critical acumen by Hüffer in his *Loreto*, i. 33-66), explains that, because the Santa Casa was not sufficiently honoured where it was first deposited, near Fiume in Illyria, it was carried thence by angels across the Adriatic to a wood at Recanat belonging to the 'Lady Loretha'; hence the name which has since attached to the shrine ('inde accepit tunc ista ecclesia nomen "sancta Maria de Loretha" ab illa domina que erat illius silve domina et patrona'). Here, however, there was

such a concourse of pilgrims that the wood was infested with robbers and murderers.

'For this reason,' the *Relatio Teramani* goes on, 'the Holy House was once more taken up by the hands of angels, and it was carried to the Mount of the Two Brothers, and on this same mount by the hands of angels it was set down. The which brothers, on account of the immense revenue and gain of money and other things, fell straightway into grievous discord and strife. Wherefore the angels, in the same manner as before, carried it away from the said place on the mount and brought it to a spot in the public road and there they made it fast.'

The legend also relates how the Blessed Virgin in 1296 appeared in his sleep to a certain man who was devout to her, and in this way made known the whole story. Thereupon sixteen good men and true journeyed to the Holy Land to measure the foundations of the Holy House at Nazareth. They discovered that these exactly agreed with the dimensions of the Santa Casa, and also that a stone tablet commemorated the disappearance of the little building which had formerly been venerated there. Furthermore, in the time of Teramanus himself two old men came forward and each testified that his grandfather's grandfather had confirmed from personal knowledge the account of the translation.

This was the story which, with further amplifications, added in the 16th cent., was believed from about the year 1470 to the present day. Although such antiquarian writers as M. Leopardi and G. A. Vogel betrayed their misgivings, they did not venture to throw doubts upon the substantial truth of the narrative. It was only in 1906 that U. Chevalier, following in the wake of the less elaborate criticisms of H. Grisar (at the International Catholic Congress of Munich in 1897), A. Boudinhon (in *Revue du clergé français*, xxii. [1900] 241), and L. de Feis (*La Santa Casa di Nazareth*, Florence, 1905), published a systematic refutation of the whole legend (*Notre-Dame de Lorette*). Since then an energetic and often acrimonious controversy has been carried on, both in magazine articles and in separate books, between the assailants and defenders of the legend; but, even among the organs of Roman Catholic opinion, the more weighty and critical reviews without exception have all ranged themselves on the side of Chevalier.

Apart from the intrinsic improbabilities of the legend itself, two lines of argument have been pressed home by the critics with irresistible force. The first, mainly negative, lays stress upon the fact that a shrine of Our Lady had existed at Loreto a century before the date of the supposed translation, that nothing whatever is heard of this translation until the middle of the 15th cent., and that, even when first spoken of, the accounts of the transportation by angels do not suggest that it was the house of the Holy Family at Nazareth which was so transported. Curiously enough—and this is a point which all the many writers on the subject seem to have missed—the earliest known mention of a miraculous translation by angels occurs in the narrative of an English pilgrim, William Wey, one of the original fellows of Eton College. His account, which is probably not of later date than 1462, runs as follows:

'Also twelve miles from Ancona and three miles from Recanat, is a hamlet which is called Loreto, where there is now a stone chapel of Blessed Mary which of old was built by St. Helen in the Holy Land. But because the most Blessed Mary was not honoured there, the chapel was lifted up by the angels, the most Blessed Mary sitting upon it, and was carried away from the Holy Land to Alretum, while the country-folk and shepherds looked on at the angels bearing it and setting it down in the place where it now is; where the most Blessed Virgin Mary is held in great honour' (*Wey's Pilgrimage*, Roxburghe Club, London, 1867, p. 54).

It will be noticed at once that the building transported is not the actual Holy House of Nazareth, but a chapel built by St. Helen. On the

¹ Adolfo Venturi (see Hüffer, *Loreto*, i. 41, n.) assigns it to the early years of the 14th cent.; but it seems to be mentioned in documents of the year 1813, and other authorities attribute it to the 18th or even the 12th century. The legend declares it to have been carved by St. Luke the Evangelist.

other hand, the first papal document which gives any indication of the special sanctity attaching to the Loreto shrine is the bull of Paul II. in 1470, which speaks thus:

'Desiring to show our veneration for the church of Blessed Mary of Loreto, miraculously founded in honour of the same most holy Virgin outside the walls of Recanati, in which, as the statements of persons worthy of credit attest, and as all the faithful may ascertain for themselves, an image of the glorious Virgin, through the wondrous mercy of God, has been deposited, attended by a troop of angels, and to which (church) by reason of the countless stupendous miracles which the Most High through her intercession has worked for all who devoutly have recourse to her and humbly implore her patronage,' etc.

Here again not the least suggestion is conveyed that the building, even if believed to exist miraculously without foundations, was the actual house of the Holy Family of Nazareth. On the other hand, the terms of this notice lend great probability to the opinion, supported by Hüffer and others, that it was the statue, showing, as we have noticed, Byzantine characteristics, and consequently known to have come from a distance, that was at first supposed to have been brought to Loreto by the hands of angels. Then the fact that the chapel had no proper foundations seems to have given rise to the further development that the whole building had been miraculously transported from the East. And, finally, a reason was found for this exceptional providence by assuming that the building was none other than the actual Holy House of Nazareth. Considerable support is lent to this hypothesis of a gradual evolution of the legend by a curious parallel in the case of a chapel not far from Siena. The story is told first by A. Fortunio in his *Cronichetta del Monte San Savino* (Florence, 1583, pp. 9-11). In the year 1116 a little wayside chapel of the Blessed Virgin at Asciano belonged to a certain lord, who at his death left it to his two sons. They quarrelled over the division of the offerings and were on the point of fighting a duel when, during the night, the angels took the chapel up and bore it to a place about 14 miles off, called Colle di Vertighe, near Monte San Savino. G. B. Mittarelli, a really serious and critical antiquary of the 18th cent. (see his *Annales Camaldulenses*, Venice, 1755-73, iii. 89-92), bears witness to the existence of the chapel in his time and also to its great antiquity. Here again, just as at Loreto, the chapel was without foundations, and a great church had been erected over the smaller building to protect and enshrine it. Whether the Loreto legend or that of the Colle di Vertighe is really the older it is difficult to decide. In the case of Loreto the negative evidence tending to show that in the beginning no idea existed of the chapel having come from Nazareth is emphasized by the large number of documents of the 14th and 15th centuries which have been unearthed concerning it. It is incredible, as Hüffer shows in his very patient discussion, that the supremely sacred character of the building could have been ignored, as it is, in almost all of them, if men had then believed that this was actually the Holy House in which God had become incarnate.

The second line of argument, developed by Chevalier and other critics, claims to show that at Nazareth itself nothing was known to have happened in 1291, when the Holy House is supposed to have been transported westwards; no pilgrims comment on the disappearance of a shrine which was known to have been visited by their predecessors in the 12th and 13th centuries, nor do the accounts of what was venerated at Nazareth as the abode of the Holy Family apply in the least to such an edifice as we now see at Loreto. It may be noticed also that the measurements and proportions of the chapel of the English shrine of Our Lady of Walsingham, which happen to have been

accurately preserved to us, do not agree with those of the Santa Casa, while, according to legend, the Walsingham chapel reproduced exactly the dimensions of the Holy House as measured by a pilgrim about the year 1060.

By the time of Pope Julius II. the legend of the Santa Casa had fully established itself in popular favour and it is incorporated in a bull of 1507, but with the qualification 'ut pie creditur et fama est.' In 1518 Leo X. identifies himself with the whole marvellous story 'ut fide dignorum comprobatur est testimonio,' and it must have been shortly after this that Thomas Duchtie or Doughtie of Musselburgh made his pilgrimage to the Holy Land and brought back that image of the Italian shrine for which he afterwards built a chapel on the land now occupied by Loreto School. Other pontiffs, notably Sixtus V. and in modern times Pius IX. and Leo XIII., adopted the tradition without any question, and Innocent XII. permitted the celebration of a special feast of the translation of the Holy House with a 'proper' Mass and Office. In the latter part of the 16th cent. the story of the miraculous translation was everywhere accepted, and the local traditions of Nazareth itself were modified to suit it. It should, however, be remembered that none of these papal bulls or other similar acts of ecclesiastical authority is regarded in the Roman Church as having any dogmatic force, and consequently all Roman Catholics are free to accept or reject the legend according to their own judgment of the historical evidence. The defenders of the tradition still lay stress upon an alleged scientific examination of the materials, particularly the stone of which the Santa Casa is built, and it is claimed that experts have declared that such materials are not found in Italy, but only in the neighbourhood of Nazareth (see D. Bartolini, *Sopra la Santa Casa di Loreto*, Rome, 1861). But these experiments were carried out in 1857, and it may be doubted whether their conclusions can be regarded as rigidly scientific. Let us also notice that the frescoes at Gubbio and in one or two other places, said to be of early date and representing angels carrying a house (the date and details are nearly always matters of controversy), cannot be assumed to refer of necessity to the Loreto legend. It is clear from the Monte San Savino chronicle quoted above that there was at least one rival tradition of the same kind in circulation. These frescoes, then, cannot be appealed to as a conclusive argument in favour of the early date of the Loreto story in particular.

LITERATURE.—The vast bibliography of the subject has been very fully, though not quite exhaustively, dealt with by J. Faurax, *Bibliographie lorétaine*, Tournai, 1913, and also by G. Hüffer, *Loreto* (see below), pp. 5-8; only a selection of books and articles can be mentioned here. The text of the early writers who elaborated the legend into the form which ultimately prevailed, viz. Teramanus, Jerome Angelita, Raphael Riera, and Horazio Tursellini, will be found printed at length in the voluminous work of P. V. Martorelli, *Teatro storico della S. Casa Nazarena*, 3 vols., Rome, 1732-35. Besides this, we may note, among older works, the important treatises of G. A. Vogel, *de Ecclesis recanatensi et lauretana earumque episcopis commentarius*, 2 vols., Recanati, published in 1859, though written in 1806, and M. Leopardi, *La Santa Casa di Loreto*, Lugano, 1841. Both these works give proof of much research among municipal archives and other MS. sources. In the modern controversy, after U. Chevalier, *Notre-Dame de Lorette*, Paris, 1906, by far the most important contribution to the subject is that of G. Hüffer, *Loreto: eine geschichtskritische Untersuchung der Frage des heiligen Hauses*, Münster, 1913 (so far only one volume, but a second promised). See also A. Boudinhon, *La Question de Lorette*, Paris, 1910; C. Bouffard, *La Vérité sur le fait de Lorette*, do. 1910, and *The Month*, July 1912.

Of the various attempts made to reply to Chevalier's criticisms we may note A. Eschbach, *La Vérité sur le fait de Lorette*, Paris, 1910; F. Thomas, *La Santa Casa dans l'histoire*, Lyons, 1909; L. Poizat, *Lorette au xix^e siècle*, Arras, 1906; M. Faloci Pulignani, *La Santa Casa di Loreto secondo un affresco di Gubbio*, Rome, 1907; I. Rimieri, *La Santa Casa di Loreto*, 3 vols., Turin, 1911; G. Kresser, in *Theolog. praktische Quartalschrift*, Linz, 1907, pp. 795-820, and 1911, pp. 508-

526; cf. also *Theologische Quartalschrift*, Tübingen, 1909, pp. 212-248, 477-490.

On Loret at Musselburgh see L. Barbé, *Byways of Scottish History*, London, 1913, pp. 141-152.

For a further bibliography see U. Chevalier, *Répertoire des sources hist. du moyen âge, topo-bibliographie*, Montbéliard, 1894-1903, cols 1746-1749.

HERBERT THURSTON.

LOTS.—See DIVINATION.

LOTUS (Egyptian).—1. Name.—First we must dismiss entirely the modern botanical name 'lotus.' '*Lotus Arabicus* is a small leguminous plant resembling a vetch' (*Proc. Roy. Soc.* lxxvii. [1900] 225). As plants more or less confused together, being all water-lilies, and popularly called 'lotus,' there may be specified (1) rose lotus (*Nelumbium speciosum*), distinguished by imbricated petals on the bud; (2) white lotus (*Nymphaea lotus*), distinguished by ribbed petals on the bud, rounded when opened; and (3) blue lotus (*Nymphaea caerulea*), distinguished by smooth, pointed petals. The two *Nymphaea* lotuses cross, and any intermediate form may occur naturally.

(1) *Rose lotus*.—This is at present an Indian plant unknown in Egypt, except as a cultivated rarity. It was known in Roman times, being found in the cemetery at Hawara (W. M. F. Petrie, *Hawara*, London, 1890, p. 52), and described by Athenæus:

'Lotus grows in the marshes . . . one like that of the rose, and it is the garlands woven of the flowers of this colour which are properly called the garlands of Antinous; but the other kind is called the lotus garland, being of a blue colour' (xv. 21). It was known earlier to Herodotus:

'There are also other lilies like roses that grow in the river, the fruit of which is contained in a separate pod . . . in this there are many berries fit to be eaten' (ii. 92).

There does not seem to be any proof that this plant was indigenous, nor that any instance of it was represented in Egypt. It cannot, therefore, be reckoned as of importance in religion or art. Various instances have been alleged, but incorrectly. Loret states that the lotus-flower supporting Horus is a rose lotus; but the petals are equal-ended and striped as white lotus. He also states it to be on the head of Nefertum; but that flower appears rather to be a *Nymphaea*. He agrees that it is not shown on monuments. The capital found at Memphis (Petrie, *Palace of Apries*, London, 1909, xviii.), like other early capitals, is white lotus, and not rose.

(2) *White lotus*.—This is characterized by the sepals and petals being ovoid with rounded ends. It is frequent in canal scenes of the early kingdom; as a capital at Memphis (Petrie, *Palace of Apries*, xviii.); as figures of capitals (Zowyet el-Meyityn, Vith dyn.; El-Bersheh, XIIth dyn.; see E. Prisse d'Avennes, *Hist. de l'art égyptien*, Paris, 1879); as a garland (P. E. Newberry and F. Ll. Griffith, *El Bersheh*, London, 1895) it was placed upon the mummies of Aahmes, Amenhetep I., and Rameses II. It is represented as the flower upon which Horus is seated, shown by the strong ribbing of the sepals (R. V. Lanzzone, *Dizionario di mitologia egizia*, Turin, 1886, ccxiv. 1). This figure is entirely of late date, 8th cent. B.C. and onward. Loret attributes this to the rose lotus; but J. G. Wilkinson emphatically states that it is the blue lotus (*Manners and Customs of Ancient Egyptians*, London, 1878, iii. 132 f.); the ribbing would indicate that it is, as a matter of fact, the white lotus.

(3) *Blue lotus*.—This is the most usual lotus-flower of all periods, with straight-edged pointed petals. It is found commonly in the tombs, and is the origin of the regular lotus-capitals. The Egyptian names of these flowers are variously equated. Loret puts the *nehb*, *nekheb*, or *nesheb* to the rose lotus, *seshni* to the white lotus, and *serpet* to the blue lotus. But we have seen that

probably the rose lotus was a Persian importation, and could not therefore have a usual name dating from the Vith dyn. (Papyrus, i. col. 440). Now Loret gives Arab authority for the *sushan* being a blue flower (*Flore phar.*, p. 116), and the *khazam* (which in the *Scala*=*soshem*) being also blue. It seems probable that *seshni* is the blue lotus. The seeds of all three lotus-plants were eaten (Herod. ii. 92), and *seshni* was gathered in the IIInd dyn. (see a seal in Petrie, *Royal Tombs*, London, 1901, ii. xxi. 171). If *seshni* were blue, probably the commonest name *nesheb* is the white lotus. The name *serpet* is more fully spelled out like a Syrian word, as *sairpata*. It seems obviously connected with *sirpād* of Is 55¹³, where it stands in antithesis to myrtle, and is therefore probably a bush rather than a herb or water-plant. It does not appear to have any connexion with a lotus.

2. *Meaning*.—Though the lotus is so abundant naturally in Egypt, and so incessantly represented in decoration, yet it seems to have singularly little contact with the religion or writing. Its use as a vocal sign is rare and of late period, and before that it appears only as a determinative of the names of such plants. It is never associated with any early god. Nefertum, who wears the flower on his head, is a late deity, the figure first occurring in the XIXth dyn. (A. Mariette, *Abydos*, Paris, 1869-80, i. 38c), where also is a portable shrine with the lotus-flower of the god, clearly the blue lotus. Usually he is not represented till the Greek period. Horus, who appears seated on the lotus-flower, is so represented only in the Ethiopian and later ages (G. Colonna-Ceccaldi, *Monuments antiques de Chypre*, etc., Paris, 1882, pl. viii.; G. A. Hoskins, *Visit to the Great Oasis of the Libyan Desert*, London, 1837, pl. vi. base). As Wilkinson says of the lotus, 'there is no evidence of its having been sacred, much less an object of worship' (iii. 133).

LITERATURE.—The principal books are V. Loret, *La Flore pharaonique*, Paris, 1892, for the botany; G. Foucart, *Histoire de l'ordre lotiforme*, do. 1897, for Egyptian architecture; W. H. Goodyear, *Grammar of the Lotus*, London, 1891, for general art connexions, but overstrained.

W. M. FLINDERS PETRIE.

LOTUS (Indian).—To the Indian taste the lotus has always been the fairest flower: it has enjoyed an unparalleled popularity throughout the length and breadth of India from the earliest times down to the present day, as is shown by its pre-eminence in literature and art. Beginning to be mentioned in the oldest Veda, it plays a prominent part in the mythology of Brāhmanism. To the later Sanskrit poets it is the emblem of beauty to which they constantly compare the faces of their heroines. The lotus, moreover, enters into Indian art of all ages and all religions as a conspicuous decorative element. It appears thus on the oldest architectural monuments of Buddhism as well as later on those of Jainism and Hinduism all over India. With the spread of Buddhism to the countries of the Farther East, its use as an ornament in religious art has extended as far as Japan.

1. *In literature.*—The lotus is already named in the Rigveda and is mentioned with increasing frequency in the later Samhitās. Two varieties occur in the Rigveda. The *pundarikā* (later known as a white variety of the *Nelumbium speciosum*) is once referred to (X. cxlii. 8) as a water-plant. In the Atharvaveda (X. viii. 43) the human heart is compared with this lotus, and the *Pañchavimsa Brāhmaṇa* (xviii. ix. 6) speaks of its flower as 'born of the light of the constellations.' The Taittiriya recension (I. viii. 2. 1) of the Black Yajurveda mentions a garland of such lotuses (*pundarikā-śraṇā*). The blue variety named *puskara* occurs several times in the Rigveda (VI. xvi. 3, VII. xxxiii. 11, VIII. lxxii. 11) and still oftener in the

later Vedas. In the former it is alluded to as growing in lakes. Here also the term seems to be applied to the bowl of the sacrificial ladle, presumably on account of resemblance in shape; it is certainly so applied in the *Āitareya Brāhmaṇa*. That this variety of the flower also was early used for personal adornment is shown by the fact that the Āsvin, the youthful twin gods of the morning, are described (X. clxxxiv. 2) as wearing a garland of blue lotuses (*puṣkara-sraj*). Another kind of lotus, the *kumuda*, is mentioned, together with its various edible parts, in the Atharvaveda (IV. xxxiv. 3). The flower meant is doubtless the white edible lotus (*Nymphaea esculenta*), denoted by this name in later times.

In the *Brāhmaṇas* the lotus first appears associated with the Creator Prajāpati in cosmogonic myths. Thus the *Taittiriya Brāhmaṇa* (I. i. 3. 5 ff.) tells how Prajāpati, desiring to evolve the universe, which in the beginning was fluid, saw a lotus-leaf (*puṣkara-parṇa*) standing erect out of the water. Thinking that it must rest on something, he dived in the form of a boar, and, finding the earth below, broke off a fragment, rose with it to the surface, and spread it out on the leaf. Again, the *Taittiriya Aranyaka* (I. xxiii. 1) relates that, when the universe was still fluid, Prajāpati alone was produced on a lotus-leaf.

Later, in the epic poetry of the *Mahābhārata*, the Creator, under the name of Brahmā, is described as having sprung from the lotus that grew out of Viṣṇu's navel, when that deity lay absorbed in meditation. Hence one of the epithets of Brahmā is 'lotus-born' (*abja-ja*, *abja-yoni*, etc.). The lotus is thus also connected with Viṣṇu, one of whose names is accordingly *padma-nābha*, 'lotus-navel.' It is further associated with Viṣṇu's wife Lakṣmī, goddess of fortune and beauty, in the *Mahābhārata*, where the myth is related that from Viṣṇu's forehead sprang a lotus, out of which came Śrī (another name of the goddess), and where one of Lakṣmī's epithets is *padmā*, 'lotus-hued.' The *Mahābhārata*, in its account of Mount Kailāsa, the abode of Kubera, the god of wealth, describes his lake Nalinī and his river Mandākinī as covered with golden lotuses.

2. In art.—As regards its application in religious art, the lotus figures, with the rise of that art in India, on all the Buddhist monuments which came into being in different parts of the country from about 200 B.C. onwards. In its simplest form the expanded lotus is very frequent as a circular ornament in the sculptures at Sāncī, Bhārhut, Amarāvati, and Bodh Gayā, as well as in the rock-cut Buddhist temples of Western India, being introduced as a medallion on pillars, panels, and ceilings. Very elaborately carved half-lotuses sometimes appear used thus, or, in Ceylon, as so-called moonstones—semi-circular stone slabs at the foot of staircases. Lotuses growing on stalks also occur in the sculptures of Gandhāra and of Mathurā, and often figure in elaborate floral designs on the pillars of Sāncī or the panels of Amarāvati.

The lotus is further found from the earliest times conventionalized either as a seat or as a pedestal on which divine or sacred beings rest in a sitting or standing posture. The oldest and most striking example of this use is exhibited in the figure of the Hindu goddess Lakṣmī in the Buddhist sculptures at Udayagiri, at Bhārhut, and especially at Sāncī, where it is frequently repeated on the gateways of the Great Stūpa. She is portrayed sitting or standing on a lotus and holding up in each hand a lotus-flower which is watered by two elephants from pots raised aloft by their trunks. This ancient type is found all over India at the present day; it even occurs among the old sculptures at Polonnarawa in Ceylon.

After Buddha began to be represented in sculpture, from about the beginning of our era, his image constantly appears sitting cross-legged on a lotus seat, occasionally also standing on a lotus pedestal. In this form it occurs, for instance, at Rājgṛ in Behār, in the Kanheri caves near Bombay, and often in the Gandhāra monuments of the North-West. From the latter region this type spread beyond the confines of India, reappearing in Nepāl, Burma, China, and Japan. Even when the seat is not actually the flower itself, two, three, or four lotuses are, in the Gandhāra sculptures, carved on its front. Such lotuses are even found delineated on a footstool on which Gautama rests his feet instead of sitting cross-legged. The number of the petals of such lotuses varies from four to six.

The use of the lotus seat has been extended to images of *bodhisattvas* not only in India but in Buddhist countries beyond its borders. Thus Mañjuśrī is represented sitting in this way not only at Sārnāth, near Benares, but also in Java and Tibet. In a modern Tibetan picture Maitreya is depicted on a lotus seat, and the figure of a Persian *bodhisattva* sitting on a seat adorned with lotuses and painted on a wooden panel was discovered by M. A. Stein during his first expedition to Central Asia. Even in China the *bodhisattva* Avalokiteśvara occurs sitting on a lotus seat, and in Nepāl also as standing on a lotus pedestal. The lotus is otherwise intimately connected with this *bodhisattva*; for he is represented as born from a lotus, and he regularly holds a lotus in his hand, whence is derived his epithet of Padmapāni, 'lotus-handed.' To him, moreover, refers the Buddhist formula *Om maṇi padme Hūm* ('Yea! O jewel in the lotus! Amen'), which at the present day is the most sacred prayer of the Buddhists in Tibet (see art. JEWEL [Buddhist], § 7). The persistence of this application of the lotus is indicated by the fact that it often appears not only in modern Indian brass images of Hindu gods, but even in seated portraits of Mahārājas of the 19th century.

The lotus seat and pedestal have an almost universal application in connexion with the figures of Hindu mythology. Thus Brahmā appears seated on Viṣṇu's navel lotus. The three great gods of the Hindu triad, Brahmā, Śiva, and Viṣṇu, with their respective wives, Sarasvatī, Pārvatī, and Lakṣmī, as well as Agni, god of fire, Pāvana, god of wind, Gaṇeśa, god of wisdom, Viṣṇu's incarnation Rāma, and the demon Rāvaṇa, are all found represented on a lotus seat. Viṣṇu, in addition, regularly holds a lotus in one of his four hands. A lotus pedestal also serves as a stand for images of the god Indra, of Viṣṇu and nearly all his incarnations, and of the sun-god Sūrya; in Ceylon also of Śiva and Pārvatī, as well as of Kubera, god of wealth, and in Tibet of Sarasvatī, goddess of learning.

Similarly, in the ancient Jain sculptures found at Mathurā the lotus constantly occurs as a medallion or in more elaborate floral decoration. It also appears as the symbol of the sixth Jina, or Saint. At the present day it is worshipped generally by the Hindus in India, and even by low caste Muhammadans in some parts of the country. See also art. FLOWERS, vol. vi. p. 54^a.

'Padmasana'. A. A. MACDONELL.

3. In Buddhism.—The symbolism of the lotus-flower (*padma*, *pundarika*, *utpala*) was borrowed by the Buddhists directly from the parent religion Brāhmanism. Primarily, the lotus-flower appears to have symbolized for the Aryans from very remote times the idea of superhuman or divine birth; and, secondarily, the creative force and immortality. The traditional Indian and Buddhist explanation of it is that the glorious lotus-flower appears to spring not from the sordid earth but from the surface of the water, and is always pure and unsullied, no matter how impure may be the water of the lake. It thus expresses the idea of supernatural birth, and the emergence of the first created object from the primordial waters of chaos; hence also the flower was regarded as the matrix of the Hindu creator himself, Nārāyaṇa, and his later form as the god Brahmā, who are respectively figured and described as reclining and seated upon a lotus-flower. As an emblem of divine purity, the lotus-flower is instanced in the pre-Buddhist Vaisṇavite *Bhagavad-Gītā* (*SBE* viii.² [1898] 64, xxxvi. [1894] 189); and this was possibly its signification when it was first applied to the historical Buddha, Śākyamuni.

As an emblem of divine birth, the lotus is the commonest of motives in Buddhist art and literature, as has been noted above (§ 2). In the Buddhist paradise of Sukhāvatī, the goal of popular Mahāyāna Buddhists, where no women exist, every one is born as a god upon a lotus-flower (*Saddharmapundarika* [*SBE* xxi. (1884) 389, xlix. (1894) pt. ii. pp. x, 62]), and there are lotus-flowers of *manigems* (*SBE* xlix. pt. ii. 86). The Western notion of the beatitude of 'lotus-eating' is possibly a memory of this old tradition of divine existence.

A form of this myth of divine lotus-birth is probably the myth which invests Buddha with the miraculous power of imprinting the image of a lotus-flower on the earth at every step that he took. The references to this are innumerable in the Pāli canon; but in the book which the present writer has shown to be manifestly the earliest of all the books of that canon, the *Mahāpadāna Suttanta* (*JRAS* 1914, p. 663 f.), the account of the infant Buddha's first seven steps makes no mention of the lotus-flower imprints which appear in the later versions.

The lotus was especially identified with the sun. This association rested doubtless upon the natural observation that the flower opened when the sun rose and closed at sunset, so as to suggest to the primitive mind the idea that the flower might be the residence of the sun during its nocturnal passage through the under world, or that it might be the re-vivifier, resurrector, or regenerator of the fresh or refreshed sun of the next day. Its very large multi-rayed flowers would also contribute to this association. It is probably from its association with the sun that we find the lotus-flower in the Gandhāra sculptures, and often subsequently, taking the place on Buddha's footprints of the 'wheeled disk of the sun with its thousand spokes.' This possibly was the source of the lotus-marked footprints.

The device of a lotus-flower in the hand seems to have symbolized not merely divine birth but the possession of life everlasting, and the preservation and procreation of life. Such was it with the Aryan queen of heaven, the Brāhmanist goddess Sīrī, and her derivative, the Buddhist Tārā, both of whom have the title 'Garlanded by Lotuses' (Tantra, *Ēgyud*, xv. 4). In the mystical Vedic, pre-Buddhist *Satapatha Brāhmaṇa* the lotus was a symbol of the womb (*SBE* xli. [1894] 215); and, as we have seen, it appears to have this sense in the famous *Om maṇi padme Hūm* formula (see JEWEL [Buddhist], § 7). Probably, therefore, such a meaning may be in part implied in the lotus held in the hand of Avalokita, the consort of Tārā, to whom that formula is now specially addressed. In the hand of Maitreya, the next coming Buddha, and other divine *bodhisattvas* of Gandhāra, the lotus in the hand, however, may have had a metaphysical significance and have denoted the preservation of the life of the law and the re-vivifying of the same. It was possibly in this sense as cherishers of the law that we find that a lotus-flower adorns the hands of many of the images of Buddhas and *bodhisattvas* who do not specially possess the attribute of a lotus held in the hand (see list below).

The gods and goddesses of Buddhism who hold a lotus in their hand are here enumerated; this lotus, with the object which it carries, forms one of the chief conventional attributes of the particular divinity.

The simple lotus, one of the three kinds specified above, is the especial mark of Tārā, Avalokita, Padmapāṇi, and, occasionally, Maitreya. The lotus surmounted by a sword is an attribute of Amoghapāśa, Khagarbha, Sindhanaḍa, Tārā, Padmapāṇyavalokita, and Maitreya; surmounted by a thunderbolt (*vajra*), it is an attribute of Mañjuśrī and mild Vajrapāṇi (*Sānta*); surmounted by a book, it is an attribute of Mañjuśrī and Prajñā Pāramitā; surmounted by a jewel, it denotes Kṣitigarbha and Ekajāta; by a sun, Samantabhadra. Among Tibetan saints the lotus is the especial emblem of the founder of the Order of Lāmas, Padmakara, 'the Lotus-born'; and Tsongkha-pa, the founder of the Yellow-Hat reformed sect, the Gelug, has two, one on either side of him.

Images of divine symbols, such as the seven treasures (see JEWEL [Buddhist]), are figured usually upon lotus-flowers.

In Buddhist mythology the 'lotus' gives its name to two out of the twenty-four 'previous' Buddhas of the Pāli canon, namely Paduma (properly Padma) and Padumuttara, and to several *nāga* demigods, Padma, Padmottara, and Pundarika; also to several of the Buddhist hells, namely Paduma, Mahāpaduma, and Pundarika (*Sutta Nipāta* [*SBE* x. pt. ii. 121]; these appear to be named from the flower-shaped boils which torment the inmates therein). It is also used to denominate the highest number known to Buddhist computators, namely 10,000,000¹⁷, or 1 followed by 119 ciphers, which is called a *padma* or, in Pāli, *paduma*, whilst the white lotus, *pundarika*, gives 10,000,000¹⁸, or 1 followed by 112 ciphers (R. C. Childers, *Dict. of the Pāli Language*, London, 1875, pp. 315, 392).

The white lotus, *pundarika*, gives its name to one of the great canonical texts of Mahāyānist Buddhism, the *Saddharmapundarika*, or 'Lotus of the True Law.' This is a theistic development of the Buddha-theory which represents Śākyamuni as the supreme god of the universe and the possessor of everlasting life. See following article.

LITERATURE.—This is sufficiently quoted throughout.

L. A. WADDELL.

LOTUS OF THE TRUE LAW.—No book gives a more accurate idea of the literature of the Great Vehicle or Mahāyāna (*q.v.*) than the *Saddharma-puṇḍarīka*, or *Lotus of the True Law*; and none gives a better impression of the character of the changes undergone by Buddhism in certain surroundings, from its beginnings down to the earliest times of the Christian era.

1. The Buddha, in the Lotus.—In the ancient Pāli documents Śākyamuni is a man, a simple mortal, and he moves in a historical background. In the *Lotus* he is a sublime being, eternal or almost eternal, who unveils in a phantasmagoric setting the 'divinity,' *i.e.* the divine splendour and the majestic power, which Buddhists now attribute to the Buddhas; he is a god as Hindus and Buddhists understand the word—that is to say, he manifests himself especially by mythological performances, although he is a stranger to all notions of creation or of immanence. Such a being has no history; therefore, as Kern says (*SBE* xxi. p. ix), the *Lotus* is a sort of 'dramatic performance, an undeveloped mystery play. . . . It consists of a series of dialogues, brightened by the magic effects of a would-be supernatural scenery.'

Among the most characteristic episodes we may mention the silence which Śākyamuni maintains for thousands of centuries, lengthening out his divine tongue into the most distant worlds; the appearance of the *stūpa* of a deceased Buddha, who had been in Nirvāṇa for a long time, but who wished to hear the *Lotus* (xi.);² the appearance of innumerable saints and Buddhas eager to hear the teaching of the Master, and coming from all the worlds. By means of Kern's excellent translation (*SBE* xxi.) we can appreciate the character of the 'sublime' and the 'supernatural' attributed by the Great Vehicle to the Buddha.

Although completely divine, Śākyamuni is not God in the *Lotus*. He is Buddha 'from the beginning'; he is the father of the worlds, the father of the future Buddhas and saints, the universal providence. In order to save human beings and to lead them to Nirvāṇa he appears in a human form which is illusory; he is born, teaches, and enters Nirvāṇa—at least as far as ordinary men can see; but in reality, while illusory Śākyamunis are appearing in this world, the true Śākyamuni reigns on a divine 'Mountain of vultures,'³ surrounded by future Buddhas,⁴ and imparting to them the true teaching, the true law. It is this true Śākyamuni that the *Lotus* shows.

Nevertheless, as we said, this god is not God. There is not a single word in the *Lotus* which is not capable of an orthodox, *i.e.* 'atheist,' interpretation. Śākyamuni may be styled Svayambhū,⁵ 'who is by himself,' because, like all the Buddhas, he became Buddha without receiving the teaching from another. He is Buddha 'from the beginning';⁶ but, just as the *Lotus* mentions a Buddha who will one day replace Śākyamuni, so we must believe that Śākyamuni is Buddha 'from the beginning of this cosmic age.' We know, moreover, that Brahmā himself

¹ The development of the tongue, capable of covering the whole face, is one of the signs of the 'great man' in the ancient sources.

² Contrary, evidently, to all Buddhist dogmas. The being 'who has attained Nirvāṇa' is 'invisible to gods and men,' since he is annihilated or has entered into eternal rest. The appearance of 'deceased Buddhas' in the *Lotus* is probably, therefore, only a case of the magical or deceptive power (*māyā*) of Śākyamuni.

³ A hill near Rājagṛha, which was turned by the neo-Buddhists into a heavenly mountain.

⁴ See art. BODHISATTVA.

⁵ This is a name of Brahmā. The *Svayambhūpurāṇa* is a glorification of the Buddha of Nepāl (S. Lévi, *Le Népal*, Paris, 1905).

⁶ Cf. this expression with the one described in art. MAHĀJŪRI. Mahājūri is 'the Buddha of the beginning, the middle, and the end,' therefore the Eternal and also the Absolute—quite different from Śākyamuni in the *Lotus*.

VOL. VIII.—10

is not, properly speaking, eternal. Besides, Śākyamuni is not the only Buddha; other Buddhas reign and teach at the same time as he, his equals in nature, although not necessarily in merits, glory, or activity as a saviour; every Buddha has his own 'field.'¹ If he is the father of the world, it is not because he creates human beings; it is because by his teaching he is the father of the saints or future Buddhas.

So much for speculation. In practice, in the religious sentiment that the *Lotus* assumes, Śākyamuni is really God, providence, and reward of the saints.

2. The doctrine of salvation in the Lotus.—According to the *Lotus*, the saints of the Little Vehicle (see art. ARHAT), or Hīnayāna (*q.v.*), do not attain Nirvāṇa; they believe that they will not be re-born, but they are re-born to receive the true doctrine from the heavenly Buddhas. Deliverance cannot be obtained except by first becoming a Buddha; and for that purpose it is necessary to enter the Vehicle of the future Buddhas (see art. BODHISATTVA).² This doctrine is set forth in various parables, the most famous of which is that of 'The Prodigal Child' (iv.); it is not without a somewhat distant resemblance to the Gospel parable.

'It is . . . as if a certain man went away from his father and betook himself to some other place. He lives there in foreign parts for many years, twenty or thirty or forty or fifty. In course of time the one (the father) becomes a great man; the other (the son) is poor; in seeking a livelihood . . . he roams in all directions and goes to some place, whereas his father removes to another country.' The father is vexed at having no son; but one day, when, sitting at the gate of his palace, he is dealing with the affairs of millions of sovereigns (*śaurei, suvarṇa*), he sees his son, poor and tattered. The son thinks, 'Unexpectedly have I here fallen in with a king or grandee. People like me have nothing to do here; let me go; in the street of the poor I am likely to find food and clothing without much difficulty. Let me no longer tarry at this place, lest I be taken to do forced labour or incur some other injury.' The father orders his son to be brought to him; but, before revealing his birth to him, he employs him for some years at all kinds of work, first at the meanest kind, and then at the most important. The father treats his son with paternal kindness, but the son, although he manages all his father's property, lives in a thatched cottage, and believes himself poor. At last, when his education is completed, he learns the truth. In the same way we are the sons of the Buddha, and the Buddha says to us to-day, 'You are my sons.' But, like the poor man, we had no idea of our dignity, of our mission as future Buddhas. Thus the Buddha has made us reflect on inferior doctrines; we have applied ourselves to them, seeking as payment for our day's work only Nirvāṇa, and finding that it is already ours. Meanwhile the Buddha has made us dispensers of the knowledge of the Buddhas, and we have preached it without desiring it for ourselves. At last the Buddha has revealed to us that this knowledge is to be ours, and that we are to become Buddhas like him.

3. Episodes.—Although the former part of the book (see below, § 4) is almost entirely devoted to Śākyamuni, chs. xxi.–xxvi. glorify several Bodhisattvas. We may mention the *āpārāṇa* of Avalokita (xxvi.), which is one of the most widely read works in China (see art. AVAOKITESVARA); the myth of the 'healer king,' Bhaiṣajyārāja (xxii.), a Bodhisattva who sets fire to his gigantic body for the salvation of human beings, and who is none other than the sun. In the Chinese Great Vehicle the practice of burning the skull is connected with this myth. In submitting to this cruel rite, the monk fulfils the duty of self-sacrifice incumbent on future Buddhas (J. J. M. de Groot, *Code du Mahāyāna en Chine*, pp. 50, 217, 227). The history of Sadāparibhūta, 'the always subdued one,' 'the always despised one' (xix.), exemplifies 'the superiority of simple-mindedness and pure-heartedness to worldly wisdom and scepticism' (Kern, in *SBE* xxi. p. xxxi). We should not have a right idea of the *Lotus* if we did not mention the glorification of the *dhāraṇīs*, or magical

¹ See art. MAHĀVASTU for the plurality of Buddhas and ABHIBUDDHA for the stages in the divinization of the Buddhas.

² With this idea is connected the theory of the double teaching of Buddha—provisional teaching (Little Vehicle) and true teaching (Great Vehicle).

formulæ (xxi.), and the glorification of the *Lotus* itself (xx.): 'He who writes this book, or causes it to be written, obtains infinite merit,' etc. We know that, in the *Milinda*, a Pāli book of the Little Vehicle, all that is required to obtain a divine re-birth is to think of Buddha when dying (*SBE* xxv. [1890] 124); with more reason, in the Great Vehicle, the tendencies of *bhakti* predominate (see art. BHAKTI-MĀRGA).

4. Date of the *Lotus*.—The *Lotus* was translated into Chinese for the first time in A.D. 235; but this ancient translation is lost. The next one (286) contains chs. xxi.–xxvi., which criticism proves to have been added afterwards, the former ch. xxi. becoming ch. xxvii. On the other hand, the former chapters include verses (*gāthās*) and explanations in prose (the latter more recent). Kern therefore thinks that 'several centuries' separate the primitive redaction from the one which was certainly in existence before 286. Winternitz is not so generous, and places the original about the year 200. The present writer is inclined to favour an earlier date: the *sūtras* of Amitābha were translated into Chinese in 148–170, and show a Buddhology as developed as the *Lotus*. It is difficult to identify the Bodhisattvas of the Gandhāra sculpture, except Maitreya, but there is little doubt that this sculpture also shows the quasi-divinization of Buddhas and future Buddhas.

LITERATURE.—Skr. text, ed. H. Kern and B. Nanjio, Petrograd, 1908–09, Fr. tr. by E. Burnouf, Paris, 1852, Eng. tr. by H. Kern (*SBE* xxi. [1881]); the two translations are accompanied by introductions and notes (Burnouf, *Introduction à l'histoire du bouddhisme indien*, Paris, 1845, pp. 29, 60; M. Winternitz, *Gesch. der ind. Literatur*, ii. (Leipzig, 1913) 230; works on Japanese Buddhism, especially R. Fujishima, *Bouddhisme japonais*, Paris, 1883; J. J. M. de Groot, *Code du Mahāyāna en Chine*, Amsterdam, 1893, pp. 50, 217, 227.

L. DE LA VALLÉE POUSSIN.

LOTZE.—1. General philosophical position.—Among German philosophers of the period which opens with the triumphant advance of natural science about the middle of last century, the most eminent name is undoubtedly that of Rudolf Hermann Lotze. Lotze's significance lies, above all, in his having instituted and constructed an all-embracing theory of the universe which does full justice to the claims of modern science, and at the same time conserves whatever was of real value in the results of the great idealistic movement of German philosophy in the preceding period; it was Lotze, in fact, who first directed those results to genuinely fruitful issues. To him belongs, moreover, the distinction of having stated and discussed the problems of thought with such outstanding clearness, force, and thoroughness that even in the most perplexing questions the reader is stimulated to form his own conclusions, or at least enabled to realize the difficulties that stand in the way of a definite result. The several philosophical sciences, accordingly, are indebted to Lotze's tireless intellectual labours for an effective and permanent furtherance and enrichment in numerous directions; and, indeed, it cannot be said that the results of his work have as yet been exhausted, or have been worked out in due measure by the general mind.

2. Life and works.—Lotze's early life falls within the period dominated by the thought and sentiment of Romanticism. Born on the 21st of May 1817 at Bautzen in Lusatia, he was grounded in classical study at the gymnasium of Zittau. Even as a boy he displayed that combination of critical acumen and lofty idealistic thought which characterized his riper years, and in a number of poems composed when he was about sixteen, and given to the public among his posthumous papers, we can clearly trace the rudiments of the comprehensive views which he subsequently elaborated; they reveal a maturity which amazes us in one so

young. In 1834 he entered upon his academic course at the University of Leipzig, where he devoted himself to the study of medicine, and so came into practical touch with scientific pursuits and with the exact methods of contemporary natural science. Simultaneously, however, he sought to satisfy his philosophical and æsthetic aspirations by the study of German idealism, and to this end attended the lectures of Chr. Weissé. What he won from his University studies was, above all, the conviction that the mechanical mode of interpreting nature must be extended also to the organic, animate sphere, and that the current uncritical doctrine of 'vital force' must be banished from the scientific field (cf. his dissertation, *De futurae biologiae principibus philosophicis*, Leipzig, 1838); and this challenge to vitalism continued to be one of the leading features of his critical activity until his view at length won general acceptance.

After practising for a time as a doctor in Zittau, Lotze qualified as a Dozent both in the medical and in the philosophical faculty of the University of Leipzig (1839), and from that time to his call to Göttingen in 1844 he not only laboured successfully as an academic teacher (he had become a Professor Extraordinarius in 1842), but manifested a remarkable fertility as an author. In 1841 he published the first of his greater philosophical works, the *Metaphysik*, in which he stood forth as an independent thinker who had struck out upon fresh paths, though at the same time the powerful impetus which he had received from Hegel and Herbart is clearly traceable in the work. The distinctive feature of the *Metaphysik* is in constant presentation of the idea that which truly exists—the ultimate root of reality—is to be found only in what by virtue of its unconditional value deserves to exist in this supreme sense. This line of thought, reminding us of Platonism and the Platonic insistence upon the supremacy of the Idea of the Good, finds pointed, if somewhat paradoxical, expression in the concluding statement of the book, viz. that the beginning of metaphysics lies not in itself, but in ethics. In 1842 Lotze issued a second work of importance, his *Allgemeine Pathologie und Therapie als mechanische Naturwissenschaften*. Here he attempts to apply without reservation the mechanical theory of things to the field of organic life, where the scientifically inadequate and, indeed, inadmissible idea of vital force had so long been resorted to; to that idea he likewise devoted a special article entitled 'Leben, Lebenskraft,' in R. Wagner's *Handwörterbuch der Physiologie* (Göttingen, 1843). In 1843 he also completed his *Logic*, in which he works on independent and often fresh lines, and strenuously emphasizes the 'spontaneity' of our thought-processes. His leading psychological views he wrought out at some length in another article in Wagner's *Handwörterbuch*, viz. 'Seele und Seelenleben' (1846), the most notable features of which were its doctrine of the substantial unity of the soul as a real entity and its unequivocal opposition to the materialistic views then forcing their way into psychology. His opinions in the field of æsthetics he set forth in a treatise entitled *Über den Begriff der Schönheit* (1845), which was soon followed by his *Über die Bedingungen der Kunstschönheit* (1847)—both appearing in the *Göttinger Studien*.

His *Allgemeine Physiologie des körperlichen Lebens* (1851) and *Medizinische Psychologie* (1852) develop the fundamental ideas of the *Pathologie*, seeking to examine more closely the validity of the procedure by which the mechanical method is extended to the organic sphere, as also to the psychological, and to define the necessary limits of that application. It is worthy of note that here

Lotze, in opposition to the parallelistic theory, quite definitely champions the hypothesis of a causal connexion between body and soul; and to this he adhered all his life. As regards the relation between the physical organism and the soul, in fact, he holds that the former is simply a system by which external stimuli are enabled to make a due impression upon the latter, and by which, again, the impulses of the soul are brought to bear upon the external world. The life of the soul is thus by no means a mere copy of the bodily life; the truth is rather that the soul governs the body, and makes it subservient to its own higher ends.

From 1856 to 1864 appeared the three volumes of Lotze's great work, *Mikrokosmos* (Eng. tr., 2 vols., Edinburgh, 1885), in which he set forth his philosophical system as a whole. His previous treatises, devoted almost entirely to a consideration of the basis of human life in nature, are here supplemented by a profound treatment of human life as expressed in history and the forms of civilization, and the work culminates in a survey of the universe from the standpoint of the philosophy of religion. The *Mikrokosmos* as a whole is dominated by the purpose in which Lotze's life-work in relation to his age took definite shape—to show how absolutely universal in its application, and at the same time how subordinate in its significance, is the function performed by mechanism in the structure of the world. It is in reality the philosophical problem of the age that Lotze here undertakes to solve; he makes it his task to refute the assumption that the modern mechanical science of nature demands as a necessary consequence a materialistic conception of the world; and his conclusion is that mechanism is simply the aggregate of the means by which the higher ideal element in the world can realize itself, and thus must not be allowed to rank as the ultimate reality. Hence, in particular, such mechanism does not conflict with that freedom of individual volition which we must postulate on moral grounds; the case is rather that it is to be conceived as simply the necessary condition of the efficient action of the autonomous will—as the mode of its self-realization. And just as little does this mechanism imply that the real world is a mere automaton, having its action fixed as by clock-work; on the contrary, the essential ground of the concatenation and process of the world is found by Lotze in the Infinite, which in the last resort can be conceived only as a living and all-embracing deity.

Lotze's next work of importance was his *Geschichte der Aesthetik in Deutschland* (1868). This work comprises (1) a history of the general points of view, dealing in the main with the æsthetics of Kant and of German idealism, but also treating of Herbart's views, and making reference to the fresh perspectives opened by the experimental method of Fechner; (2) a history of the fundamental æsthetic conceptions—'the agreeable in sensation,' 'the pleasing element in intuition,' and 'the beautiful in reflexion'; and, finally, (3) a history of the theories of art as developed in the various provinces of æsthetics.

In 1874 and 1879 respectively he published his larger *Logik und Metaphysik* (Eng. tr. of both, ed. B. Bosanquet, 2 vols., Oxford, 1884; *Metaphysics*², 2 vols., do. 1887, *Logic*², 2 vols., do. 1888) as the first two volumes of the *System der Philosophie* with which he hoped to crown his life-work. The third part, which was to have treated of ethics, æsthetics, and the philosophy of religion, was never completed. Lotze died in July 1881, shortly after taking up work in the University of Berlin, to which he had been called in the spring of that year. For the aspects of his final theory of the world, the composition of which in system he could not finish, we are therefore dependent upon

his earlier works, especially the *Mikrokosmos*. Much valuable additional material on many points is to be obtained from the dictated portions of his lectures, edited by E. Rehnisch (9 vols., Leipzig, 1881 ff., Eng. tr., ed. G. T. Ladd, *Lotze's Outlines of Philosophy*, 6 parts, Boston, 1884-87).

3. Philosophical teaching.—The scientific foundation of Lotze's philosophy lies in his investigations of metaphysics; his chief interest is the problem of the causal connexion of things, and he arrives at a most characteristic solution of it. As the starting-point of his inquiries he takes the fundamental postulate of all natural science, viz. the assumption of a universal law of causal connexion operative among the elements of reality; or, to speak more precisely, he is concerned with the problem of 'transitive action' (*transeuntes Wirken*), i.e. the question how a change that occurs in an object A can be connected by a universal law with a change that takes place in a separately existing object B. In Lotze's view the fact of such connexion leaves us no option but to discard the theory that separate objects have an independent existence, and to regard all elements of reality as comprehended in a universal unity of being, in the Infinite, so that what was at first conceived as a 'transitive action' between separate substances passes into the conception of an immanent operation within a single substantial entity, the 'world-ground.' This Infinite, if it is to supply a real basis for the facts in question, cannot in the last resort be thought of otherwise than as analogous to our own spiritual being, though, of course, as raised to an incomparably higher power and freed from the limitations necessarily inherent in human nature as a finite thing. Ultimately, therefore, the world-ground is defined as an infinite spiritual being, or deity, the entire process of things being conceived as immanent in this deity, and as integrated and sustained by the unity of its being.

Lotze then proceeds to deal in a thorough-going way with the idea that this world-ground or deity forms the one ultimate basis of the existence and interpretation of all things. The elements of the real are all merely dependent parts or modifications of the Infinite; at a later period Lotze preferred to call them its 'actions.' Such actions of the Infinite he divides into two classes: first, the particles of the material world, or the atoms, which he speaks of as the 'elementary actions of the one world-ground,' but as 'actions always maintained in uniformity by it'; and, secondly, souls, the actions not always [so] maintained, but emerging at distinct points of the world-process, and for a section of that process generating a not previously present centre of 'internalization' (*Verinnerlichung*). Outside of and prior to the activity of the Infinite, however, there are no universal laws operative *per se*, nor any so-called eternal truths; there is no independently valid 'law of occurrence' (*Recht des Geschehens*) or of existence; 'law' and 'truth,' indeed, simply express the mode of realization by which the Infinite chooses to effect its will, and their validity depends absolutely upon the will of the Infinite, and lasts only so long as that will remains one with itself—a self-identity which, however, must be regarded not as a metaphysical necessity, but as a consequence of the ethical nature of the world-ground or deity, in the sense of the latter's 'fidelity to itself.'

Further, a vital constituent in Lotze's theory of the universe as originally formulated was the idea of the animate nature of all reality. The ultimate elements of the real he at first regarded as spiritual entities, as of kindred nature with the Leibnizian monads. He was led to take this view mainly by æsthetic motives, as also by the con

viction that a purely material reality could have no independent existence. But, as he gradually wrought out his doctrine of the Infinite, the divine world-ground, his hypothesis of the animate nature of reality was more and more dispensed with, becoming ever the less necessary as what it had been designed to supply was equally well and, indeed, even better supplied by the fundamental position to which he later attained. He came at length to the above-mentioned conception of the material elements of reality as the mere 'actions of the Infinite,' maintained in a condition of uniformity, and thus differentiated in the clearest possible way from souls. Souls themselves, however, were likewise conceived as 'actions of the world-ground,' but as specially distinguished by their admirable and at bottom inexplicable capacity of feeling and knowing themselves as the active centres of an out-flowing life (*Met.* p. 601 f.). Some writers are of opinion that this view involves a denial of the doctrine of free will—a doctrine which Lotze always distinctly insists upon as an essential element in his theory of the universe, and for the sake of which he rejects, e.g., the pantheism of Spinoza, notwithstanding the profound relationship between that theory and his own. Obviously, therefore, Lotze himself did not believe that his conception of souls as actions of the Infinite in any way implied the surrender of human freedom; but it is nevertheless true that he refers to the subject only in certain religio-philosophical reflexions, and never deals adequately with the crux which undoubtedly shows itself at this point, so that in his metaphysical construction he has left here a problem still unsolved.

Taken all in all, however, since the development of Lotze's thought is never guided by a purely systematic interest, but, on the contrary, takes the fullest possible account of experience, his philosophy presents a conception of the universe which is distinguished by a marvellous unity and completeness.

LITERATURE.—Of the more important works dealing with the life and philosophy of Lotze, the following may be named: E. Pfeiderer, *Lotze's philosophische Weltanschauung nach ihren Grundzügen*, Berlin, 1884; O. Caspari, *Hermann Lotze in seiner Stellung zu der durch Kant begründeten neuesten Geschichte der Philosophie*, Breslau, 1894; E. von Hartmann, *Lotze's Philosophie*, Leipzig, 1888; E. Rehnisch, 'Zur Biographie Hermann Lotze's' (see in Lotze's *Grundzüge der Ästhetik*, at the beginning), and 'Hermann Lotze' in *Neues Lausitzisches Magazin*, lxxvii. (1901); R. Falkenberg, *Hermann Lotze*, Stuttgart, 1901 (*Frommann's Klassiker der Philosophie*, vol. xii.), and art. 'Lotze' in *Allgemeine deutsche Biographie*, suppl. vol. iii. (1907); M. Wentscher, *Hermann Lotze*, i., Heidelberg, 1913. For further lit. cf. *DP&P* iii. (1905) 347-350.

M. WENTSCHER.

LOURDES.—*LOURDES*, a small town in the extreme south of France (diocese of Tarbes, department of Hautes Pyrénées), has become known as a place of pilgrimage only since 1858. In view of the insinuation that the development of this shrine represents a conscious design on the part of the Roman Catholic clergy to exploit pious credulity in the interest of the then newly defined dogma of the Immaculate Conception, it is worth while to point out that in 1858 and for some years afterwards Lourdes was one of the least accessible spots in the country. The nearest railway was at Bayonne, 80 miles off, and the road through Lourdes led nowhere except to some little-frequented health-resorts in the Pyrenees. If there were any question of deliberately organizing a fraud to impress the world, the choice of such a site would be inexplicable. Whatever judgment may be formed as to the nature of the phenomena of healing now witnessed at Lourdes, a careful study of the evidence regarding the manifestations which first brought the shrine into notice tends unmistakably to establish the good faith of all the persons primarily con-

cerned. The history of the grotto of Lourdes is briefly this.

About mid-day on Thursday, 11th Feb. 1858, three little girls went to gather wood on the banks of the Gave. One of them, Bernadette Soubirous, a delicate child of 14, who looked much younger and who then could neither read nor write, was left behind by her companions. She was standing on a narrow strip of ground between the river and a low cliff known as the Massabielle, in which was a shallow cave or grotto with a sort of niche in the rock above it. Her attention was roused by such a rustling of the leaves as is caused by a sudden breeze, and, looking in front of her, she saw standing in the niche the figure of a beautiful young lady clothed in white and with a rosary in her hands. The figure made the sign of the cross, and the child, after doing the same, began to say her rosary. When the rosary was finished, the apparition smilingly saluted the child, and disappeared. This was the first of a series of similar apparitions of which a few details are given below. It is to be noted that, contrary to the usual experience of such visionaries, Bernadette had no clear intuition as to the identity of the heavenly visitant. Joan of Arc recognized her 'voices'—St. Michael, St. Catherine, etc.—from the first, but this was not the case here. 'A girl in white no bigger than myself' was her first description of the apparition (*Cros, Notre-Dame de Lourdes*, p. 16). The townsfolk, when they heard the tale, conjectured that she might have seen a soul from purgatory who came to ask for prayers, and, accordingly, when Bernadette went to the grotto a second time three days after, she took holy water with her and threw it at the apparition for fear the figure which she saw might be some delusion of the evil one, but the lady only smiled. Even after the sixth apparition Bernadette described her mysterious visitant in her patois as *aquéro*, i.e. 'it' (cf. Spanish *aquello* = *ecce illud*), and sometimes also as *un petito damizello* (*une petite demoiselle*; cf. *Cros*, pp. 42, 302). The vision was at all times restricted to Bernadette alone; no one else saw anything or pretended to see anything—a fact which is in marked contrast to such cases as those of Marie Magontier at Le Pontinet in the Dordogne in 1889 (see L. Marillier, *Proc. Society for Psychical Research*, vii. [1891] 100 ff.) or that of Knock in Ireland in 1879-80 (see M. F. Cusack, *The Apparitions at Knock*, London, 1880). On the other hand, the child herself usually fell into a state of trance in which her features were completely transfigured, and Dr. Dozous, who went at first out of curiosity as a sceptical scientist in search of experience, testifies that the flame of a candle playing upon her hand for many minutes neither roused her from her trance nor left any trace of burning upon the skin. Bernadette, as early as 21st Feb., was subjected to the severest cross-examination by the commissary of police, M. Jacomet, and by the Procureur Impérial, M. Dutour, both of whom threatened her and her parents with punishment if she persisted. Still later, on 28th Feb., she was severely cautioned by M. Rives, the Juge d'Instruction, her proceedings at the grotto were closely watched by gendarmes, and she met with a severe rebuff, more than once repeated, from the curé, Abbé Peyramale, to whom the apparition had directed her to address herself. None the less, though timid by nature, she was never in the least shaken in her account of what she had seen, nor was she cowed by threats of punishment. Not one of the many formidable persons who cross-questioned her detected any signs either of unbecoming boldness or eagerness for notoriety or of a hysterical temperament. There is a large amount of contemporary evidence upon the point in the works of Cros, Estrade, and Dozous. As

early as 27th March 1858, three physicians, appointed by the Prefect of the Department, who was anxious to suppress these manifestations, made a medical examination of Bernadette. In their report, dated 31st March (before the apparitions had come to an end), which is still preserved, the whole story of the early apparitions is recapitulated as the doctors heard it from Bernadette's own lips, and it is interesting to note its complete agreement with the account given by her many years later. Of mental disease or of any moral obliquity which would suggest the probability of conscious fraud the doctors found no trace. 'There is nothing,' they say, 'to show that Bernadette wished to impose upon the public.' On the other hand, nothing in the report suggests that the medical examiners themselves placed any faith in the story of the apparitions. They think that Bernadette was the innocent subject of a hallucination, and, while calling attention to her naturally impressionable character, they point out a certain development in the intensity of the trance with which the apparitions were normally accompanied. For the rest, they report that the child was delicate but perfectly sane and healthy-minded, and they offer no kind of suggestion that she should be put under restraint (Cros, p. 143).

It is interesting to contrast this report, which was fully justified by Bernadette's subsequent history, with the very unsatisfactory career of the two children who were witnesses of the alleged apparitions of the Blessed Virgin at La Salette in 1846, or again with Marillier's account of Marie Magontier, the child *voyante* of Le Pontinet, already referred to:

'I have no doubt,' says Marillier, 'so far as I am concerned, of the reality of her visions. In my opinion she certainly saw the Virgin in the crack of the wall. . . . She is no doubt subject to hallucinations; but at the same time she is ill-balanced and heavily weighted with the burden of heredity. She is the daughter of a father who was epileptic and of a mother who was doubtless insane, and she has the bearing, the character—in a word all the appearance of one suffering from hereditary degeneration. She is filled too with the morbid self-love and the enormous vanity so common among the degenerated' (*Proc. Soc. Psych. Research*, vii. 107).

According to the testimony of a number of persons who, much to the child's distress, pursued her with questions as to what she had seen, none of these undesirable characteristics was present in Bernadette Soubirous. Traps were laid to induce her to take money for herself or her parents, but her simplicity and good sense defeated them all. Though below the average in intelligence, she learned afterwards to read and write at the convent school, and until 1866 she remained engaged in humble occupations at Lourdes. She never saw the apparition again after 16th July 1858, though she visited the grotto frequently. In 1866 she became a nun at Nevers and remained there discharging the duties of infirmarian and sacristan, as far as her delicate health permitted, until her death in 1879. It is noteworthy that, though her body at the time of death was covered with tumours and sores, it was found, when the remains were officially examined in 1909, thirty years afterwards, entire and free from corruption (see Carrère, *Histoire de Notre-Dame de Lourdes*, p. 243).

With regard to the apparitions of the year 1858, it is to be noted that Bernadette always described the vision as one of ravishing beauty, and as living, moving, and speaking to her. The recorded words—for there seem to have been others which the child felt that she was bidden to keep secret as relating only to herself—are comparatively few. Though Bernadette several times asked the lady, as she had been bidden to do, to disclose her name, the apparition down to the sixteenth vision—that on March 25th—only smiled in reply. The dates and utterances of the series of apparitions are thus

commemorated in an inscription upon marble which is erected near the grotto:

'Dates of the eighteen apparitions and words of the Blessed Virgin in the year of grace 1858. In the hollow of the rock, where the statue is now seen, the Blessed Virgin appeared to Bernadette Soubirous eighteen times—the 11th and the 14th of February, each day with two exceptions from Feb. 18th until March 4th, and on March 25th, April 7th, and July 16th. The Blessed Virgin said to the child on Feb. 18th: "Will you do me the favour (*me faire la grâce*) of coming here daily for a fortnight?" "I do not promise to make you happy in this world but in the next." "I want many people to come." The Virgin said to her during the fortnight: "You will pray for sinners, you will kiss the earth for sinners. Penitence, Penitence, Penitence." "Go tell the priests to cause a chapel to be built." "I want people to come here in procession." "Go and drink of the fountain and wash yourself in it." "Go and eat of that grass which is there." On March 25th the Virgin said: "I am the Immaculate Conception."

One point claims to be especially noted. These visions did not come to Bernadette at command. On two important occasions, as the inscription notices, she failed to see the apparition, viz. on 22nd Feb. and 3rd March, when she herself certainly expected to do so and when a large crowd—in the latter case some 4000 people, many of whom had spent the night upon the spot—had come long distances to assist at the manifestation. But, as sensible critics remarked even then, this arbitrary behaviour of the mysterious lady was a point in favour of the genuineness of the vision. 'If the child had simply invented the apparition,' said one of them, 'what was there to prevent its happening to-day, just as it happened yesterday?' (Cros, p. 121).

But what has given permanent significance to these occurrences was the discovery of the spring the healing virtues of which now bring hundreds of thousands of pilgrims to Lourdes from every part of the world. At the ninth apparition, on 25th Feb., the crowd of four or five hundred people who were watching Bernadette saw her rise and walk towards the grotto and then back again, moving to and fro in apparent perplexity. Finally she stooped down and began to scratch up the ground with her hand. A puddle formed, and the child then drank some of the dirty water and daubed her face with it and also ate a few blades of the grass which was growing in the same spot. Many of the spectators took this for proof that the poor girl had really gone out of her mind. Afterwards Bernadette explained that the Lady had bidden her drink of the spring, but, as she could find no spring, she had followed the apparition's directions in scraping up the ground as described. It seems absolutely certain that at that period the existence of any spring at this place was quite unknown to the inhabitants of Lourdes. By the next morning the trickle had grown to the thickness of a finger, a few days later it was like a child's arm, and since then and down to the present time it yields a quantity of water equal to 122,000 litres, or about 27,000 gallons, a day. This is the miraculous water which is the reputed source of so many miracles. The wonders of healing began almost at once, and several of them were juridically investigated by a commission appointed by the bishop of Tarbes, which occupied itself with the inquiry from Nov. 1858 to the end of 1861. It is to be noted, and the fact is proved by contemporary reports made to Baron Massy, the Prefect of Hautes Pyrénées, and to M. Rouland, the Minister of Worship, that for some months the clergy did all in their power to discourage these manifestations. They fully acquiesced when the Government erected obstructions barring access to the grotto, but the evidence of the cures that had taken place eventually bore down official opposition, and in Jan. 1862 the bishop of Tarbes, acting upon the advice of the Commission which he had appointed, issued a decree declaring that 'the

apparitions (of the Blessed Virgin) have all the characteristics of truth and that the faithful are justified in believing them to be true.' Since then further ecclesiastical approbation has been given both to the apparitions and to the miracles of Lourdes in many ways, both direct and indirect, by the authority of the Holy See.

Any adequate discussion of the marvellous cures which take place at Lourdes must raise the whole question of the possibility of miracles. For Roman Catholics both the possibility and the continuance of a dispensation by which the Divine Omnipotence suspends at times the operation of natural causes are fundamental dogmas of the faith. Given the hypothesis that miracles may occur and do occur, it is difficult to imagine any facts more wonderful, either from the inveterate and organic nature of the diseases healed or from the abundance of the evidence with which the cures are attested, than the miracles worked at Lourdes. For those who wish to examine the subject for themselves no better or more convenient examples offer than the cures with which Emile Zola was brought into contact during his visit to Lourdes, and which he has introduced under fictitious names into his novel which bears that title.

Clémentine Trouvé (called in the novel Sophie Couteau) was cured instantaneously of a pericostic fistula of the most aggravated kind which, down to the moment of her bathing in the piscina, was suppurating freely. Marie Lemarchand (*alias* Elise Rouquet) was also instantaneously healed. This was a most repulsive case of lupus, in which the face had been so eaten away as almost to lose the semblance of a human countenance. The evidence quoted by Bertrin in his last edition (*Histoire*, p. 363f.) shows that seventeen years after the cure Marie Lemarchand was a healthy married woman with five children. Mme. Gordet (in the novel Mlle. de Guersaint) had been an invalid suffering from a complexus of most painful disorders, including tumour and phlegmon, for more than twelve years. The doctors declared that the only possible remedy lay in a dangerous operation, but she also was instantaneously cured in the piscina. In the case of Marie Lebranchu (Zola's La Gavotte), who was suffering from a tuberculous affection and had reached the very last stage of consumption, Zola supposes in his novel that the patient, after a temporary rally owing to the excitement of the pilgrimage, relapses soon after and falls a victim to the old disease which had never really relaxed its hold. In point of fact, the real Marie Lebranchu was in the enjoyment of vigorous health in 1903, fourteen years after the date of her cure (see for all these Bertrin, *Histoire*, who in his last edition has followed these cases up to the latest available date).

But examples of such cures are almost innumerable, and they may perhaps be most conveniently studied, especially by medical readers, in F. de Grandmaison's *Vingt Guérisons à Lourdes*, who gives an admirable choice of specially selected examples. It is not, of course, for one moment disputed that modern psychotherapeutics, and especially suggestion, have accomplished many marvels, but the instantaneousness of the cure, as attested more particularly in such cases as those of Pierre de Rudder, Mme. Rouchel, Gabriel Gargam, etc., can in no way be paralleled by any of Charcot's experiments at the Salpêtrière or elsewhere. Again, there are the extraordinary cases of the healing of quite young children, as, e.g., the two-year-old infant of Dr. Aumaire of Nantes, born with a club-foot and instantaneously cured at Lourdes, of which a remarkable account is given in the *Annales des sciences psychiques* (1907, p. 358f.). It may be confidently affirmed that the more carefully the evidence is studied, the more certain it becomes that the words 'suggestion' and, still less, 'hysteria' are not capable of accounting for the phenomena witnessed at Lourdes. In the preface to a booklet on Lourdes published by R. H. Benson a few months before his death, the writer describes his meeting with 'a famous French scientist—to whom we owe one of the greatest discoveries of modern times—who has made a special study of Lourdes and its phenomena.' The conclusions of this scientist, which,

as Benson says, are particularly interesting because 'he is not himself at present a practising Catholic,' were formulated by him as follows:

(1) That no scientific hypothesis up to the present accounts satisfactorily for the phenomena. Upon his saying this to me,' adds Benson, 'I breathed the word "suggestion," and his answer was to laugh in my face and to tell me, practically, that this is the most ludicrous hypothesis of all.

(2) That, so far as he can see, the one thing necessary for such cures as he himself has witnessed or verified, is the atmosphere of prayer. Where this rises to intensity the number of cures rises with it; where this sinks, the cures sink too.

(3) That he is inclined to think that there is a transference of vitalizing force either from the energetic faith of the sufferer or from that of the bystanders. He instanced an example in which his wife, herself a qualified physician, took part. She held in her arms a child aged two and a half years, blind from birth, during a procession of the Blessed Sacrament. As the monstrance came opposite, tears began to stream from the child's eyes, hitherto closed. When it had passed, the child's eyes were open and seeing. This Madame tested by dangling her bracelet before the child who immediately clutched at it, but from the fact that she had never learned to calculate distance, at first failed to seize it. At the close of the procession, the lady, who herself related to me the story, was conscious of an extraordinary exhaustion, for which there was no ordinary explanation.

In a lecture given by Benson in June 1914 he stated publicly that the scientist here referred to was no other than Prof. Alexis Carrel, whose marvellous experiments in the transplanting of living tissue have constituted the great sensation of recent biological research. Indeed, signs are multiplying on all hands that in the less conservative circles of the medical profession the brusque dismissal of the phenomena of Lourdes as matters already classified and fully accounted for is going out of favour. This change of attitude was emphasized not long since by the action of the medical faculty of the University of Lyons. A lady doctor, Jeanne Bon, presented a *Thèse sur quelques guérisons de Lourdes* (Paris, 1912). This University thesis was officially approved, and certain of the professors superintended its composition. It was only at the last moment that the jury took fright and found a pretext for conferring the doctorate upon the candidate in virtue of some different title. The author in her thesis maintains that genuine cases of tuberculosis, in which laboratory experiment has established the fact that pseudo-tuberculous hysteria was not in question, have been spontaneously cured at Lourdes, and that these cures are effected under conditions of extreme rapidity which conspicuously mark them off from other spontaneous cures of consumption as generally observed. Finally, it should be noticed that, in contrast to the cures of Christian Science and many other faith-healing organizations, the fullest medical investigation is welcomed at Lourdes. Medical men of all creeds are invited to attend at the Bureau des Constatations, to which a permanent medical staff is attached, and every facility for observation is afforded to all scientific inquirers. Patients who believe themselves to have been miraculously healed or benefited are urged to bring their medical certificates and to attend personally at the Bureau that the case may be properly investigated, and efforts are also made to induce them to return after an interval of a year or more to afford the staff of the Bureau an opportunity of inquiring into the permanence of the cure.

LITERATURE.—Many of the earlier books on Lourdes, notably that of H. Lasserre, *Notre-Dame-de-Lourdes*, Paris, 1868, which has been translated into many languages and of which numerous editions have been published, are lacking in accuracy or in the medical knowledge desirable in the treatment of such a subject. The best general work is undoubtedly that of G. Bertrin, *Histoire critique des événements de Lourdes*, 37th thousand, Paris, 1912 (the Eng. tr., *Lourdes: A History of its Apparitions and Cures*, London, 1908, is unfortunately incomplete, lacking most of the documents printed in the Appendixes). Other valuable works are: F. de Grandmaison, *Vingt Guérisons à Lourdes discutées médicalement*, Paris, 1912; A. Vourch, *Quelques Cas de guérisons de Lourdes et la foi qui guérit; étude médicale*, do. 1913; A. Gemelli, *La Lotta contro Lourdes*, Florence, 1912, *Ciò che rispondono gli Aversari di*

Lourdes, do. 1912; Dr. Boissarie, *Lourdes: histoire médicale*, Paris, 1891, *L'Œuvre de Lourdes*, do. 1908, *Les grandes Guérisons de Lourdes*, do. 1901-13; J. Jørgensen, *Lourdes*, Eng. tr., London, 1914; R. H. Benson, *Lourdes*, do. 1914; J. P. Baustert, *Lourdes und die Gegner vor dem Forum der Wissenschaft*, Rindschleiden, 1913; A. Castelein, *Le Sur-naturel dans les apparitions et dans les guérisons de Lourdes*, Paris, 1911. An interesting early account of Lourdes in English may be found in D. S. Lawlor, *Pilgrimages in the Pyrenees and the Landes*, London, 1870, pp. 286-448.

With regard to Bernadette Soubirous and the early history of the shrine see esp. L. J. M. Cros, *Notre-Dame de Lourdes*, Paris, 1901 (a summary of the historical portion of this work may be found in *The Month*, Sept. 1910); J. B. Estrade, *Les Apparitions de Lourdes*, Tours, 1899; Dr. Dozous, *La Grotte de Lourdes, sa fontaine, ses guérisons*, Paris, 1888; S. Carrère, *Histoire de Notre-Dame de Lourdes*, do. 1912; M. Reynès Monlaur, *La Vision de Bernadette*, do. 1914. Two valuable articles by F. de Grandmaison, defending Bernadette on medical grounds from the charge of hysteria and hallucination,

may be found in the *Revue pratique d'apologetique*, xvi. [1913]. There is also a large number of books and articles which discuss the phenomena of Lourdes in a critical or hostile spirit, among others, J. Rouby, *La Vérité sur Lourdes*, Paris, 1911; H. Baraduc, *La Force curatrice de Lourdes et la psychologie du miracle*, do. 1907; J. Bonjour, 'Les Guérisons miraculeuses,' in *Revue de psychothérapie*, June and July 1913; a discussion of the whole question of faith-healing by several English physicians and surgeons in *Brit. Med. Journal*, June 18th, 1910; an art. by F. W. Myers and his brother A. T. Myers in the *Proceedings of the Society for Psychological Research*, ix. [1894]; and a similar discussion by M. Mangin, 'Les Guérisons de Lourdes,' in *Annales des Sciences Psychiques*, xvii. [1902] 815-866. Two periodicals, the *Annales de Lourdes* and the *Journal de la Grotte*, provide information regarding the reputed miracles and other incidents occurring during the pilgrimage to the shrine. A bibliography of earlier books on Lourdes will be found in L. Clugnet, *Bibliographie du culte local de la Vierge Marie* (France, Province d'Auch), pt. iii., Paris, 1903.

LOVE (Psychological and Ethical).—I. The psychology of love.—Love, as a complex psychological experience, may be classed as a 'sentiment' or 'passion,' the term 'passion' being here understood not as an explosive emotional outburst, but as a deep and steadfast enthusiasm. Whether we prefer to call love a sentiment or a passion will depend on the point of view from which we regard it. 'Sentiment' and 'passion' stand alike for stable and complex organizations of the emotional life, but, whereas the term 'sentiment' implies a higher intellectual development and greater refinement and subtlety of emotional feeling, the characteristic feature of a passion as distinct from a sentiment is its forcefulness. A passion is an emotional complex of a predominantly forceful kind.

A passion has been defined by A. F. Shand as 'an organized system of emotions and desires.'¹ When, as in the life of the lower animals, emotional impulses are independently active, they may still exercise some mutual restraint: a dog summoned from the pursuit of a cat by his master's whistle no longer feels the pure joy of the chase, for the fear of his master's displeasure tends to neutralize the joy. But such restraint is external and contingent: it does not suggest self-restraint. Where, however, the various emotions of the soul have found an object on which they can concentrate their desire or their aversion, or have become devoted to an idea about which they cluster and develop, a system of self-restraint grows up within the emotions.

'In every passion there is a system of self-control regulating more or less efficiently the intensity and behaviour of its emotions.'²

A mother loves her child. She may tend to be jealous if an aunt or a nurse wins too much the child's affection. But, if her love for the child is genuine, she is grateful for the kindness shown to the child, and the jealousy is inwardly controlled. Or she may yearn to shield him from every danger, but will surrender him despite her fears to the inevitable perils of hardy growth. Here emotions of solicitude, fear, and selfless surrender, like those of jealousy and gratitude on the former supposition, all feel the dominance of the steady, disin-

terested love, and, as they feel it, tend to pass into harmony with one another.

A passion is not only organized emotion; it is also organized desire. For our emotions have their instinctive impulses, and these, when checked, tend to rise into conscious desires, into conative tendencies often urging in conflicting directions. Now it is of the very nature of a steadfast passion such as love to allow these desires and emotions place only as forms and expressions of itself; hence we find operative within the system a constant transforming influence. The emotions lose their primitive explosiveness and violence, for these disintegrating tendencies are incompatible with the centralizing, integrating work of the passion itself. As the spirit of this dominant passion circulates through all its members, exclusivenesses fall away, suspicion turns to interest, fear to respect, anger into the championship of just causes. The very form of the passion changes its character as the passion assumes mastery over the life. At first a concentrated persistency, as though set on an *idée fixe*, it relaxes and differentiates itself as the various emotions and desires become adjusted to its needs and demands, and become vehicles for its expression. The power of mere persistency passes into that of organized effectiveness. It is then a stable power, with its roots deep sunk in the vital affections and impulses; it has acquired the genuine stability which comes from organization and self-control.

As an organizing agency a passion will be functional at each point of its system, expressing itself as circumstance requires, now through this emotion or desire, now through that.

'In the love of an object, there is pleasure in presence and desire in absence; hope or despondency in anticipation; fear in the expectation of its loss, injury, or destruction; surprise or astonishment in its unexpected changes; anger when the course of our interest is opposed or frustrated, elation when we triumph over obstacles; satisfaction or disappointment in attaining our desire; regret in the loss, injury, or destruction of the object; joy in its restoration or improvement, and admiration for its superior quality or excellence.'¹

From the foregoing it will be clear that, when we speak of the passion of love, we have in mind something very different from any mere passionate emotion. We have in mind a system of organized

¹ See art. 'M. Ribot's Theory of the Passions,' in *Mind*, new ser., xvi. [1907] 489.

² *Ib.* 488.

¹ Art. 'Character and the Emotions,' in *Mind*, new ser., v. [1896] 217 f.

emotions and desires which, by very reason of its systematic character and the principle which unifies it, is stable, regulative, inclusive, and instinct with a profound rationality.

For the normal development of love the fundamental condition is that there shall be joy in the object.¹ If there is this, the rest will follow; if there is not this, love is doomed from the outset.

The emotion of joy is characteristically spontaneous, expansive, vital. Its very expression bears witness to this.

'In joy the features dilate, the eye-brows are arched, the countenance opens out, the voice is louder and fuller, the gesture more ample and vivacious. The heart and lungs dilate, and the brain works more easily and more rapidly. There is increase of mental animation and of sympathetic feeling and goodwill in all that is said and done. In a word the expression of joy is the expression of liberty and therefore of liberality.'²

It may also become the fundamental expression of love. And the condition for this is that this expansive emotion, whose primitive bias is to go out of itself, shall fasten round some object and give it an intrinsic value, a value for its own sake. To have a joy in anything for its own sake is the primary essential for the development of love. Indeed it is this valuation of the object for its own sake, so essential to joy as to love, that is the mark distinguishing joy from pleasure. I am pleased with an object when it gratifies some interest of mine or some instinctive impulse. It gives me pleasure because it fulfils my need. It is a pleasure in relation to my sensibility or to my activity. And we speak correctly of the pleasures of sense and of movement. But joy is not self-centred like pleasure. No doubt there is pleasure in it, for all our emotions are toned by pleasure or pain, but such pleasure is but the pleasure of the joy. There is also a self-enlargement in joy, but this is not of its essence. The joy itself attaches not to the subject but to the object, and to have joy in an object is to value it for its own sake. Joy is thus an active disinterestedness, and its instinctive impulse is not only to maintain its object, but to surrender itself to it and rest freely in it as in something of intrinsic value and promise.

To have joy in an object is to respect its individuality. This is implied in the very idea of delighting in it for its own sake. To have joy in what is real is to subordinate individual opinion wholeheartedly to the truth of the matter; to have joy in what is beautiful is to trust to the inspiration of beauty and not to the contrivance of artifice. The interests of the object dictate at each step the line of advance.

And yet, essential as joy is to the development of love, it is not the whole of love, for love includes not only joy, but sorrow, and it includes these as co-operative and interpenetrative emotions. The joy of presence is followed by the sorrow of absence, and this sorrow at absence, possessing the imagination, has a selective and idealizing influence. We remember and dwell on those aspects of the object that tend to endear it and make it appear still more worthy of our joy and devotion, so that, when the object is restored, our joy in it is deepened and strengthened by these new insights won through sorrow. Thus sorrow and joy co-operate in the strengthening of the passion of love. But of the two emotions joy is dominant, sorrow 'recessive.' For sorrow is ever a search for a lost joy, whereas joy is not a search for a lost sorrow. Moreover, were it not for the joy in retrospect and prospect which is operative in and through sorrow, sorrow would have a contracting and depressing influence over life.

Love, then, is more than its dominant emotion, joy; more than any mere synthesis of joy and

¹ Cf. A. F. Shand, *op. cit.* p. 495 f.

² A. Fouillée, *La Psychologie des idées-forces*, Paris, 1898, I. 155.

sorrow and their respective impulses. It is the inclusive passion and, in this supreme sense, the master-passion.

Love and belief.—Belief, following W. James's famous definition, is the sense of reality; or, if we wish to distinguish belief from faith, the intellectual from the intuitional aspects of spiritual sensibility, we might say that faith is the sense of reality, belief the sense of truth. Peirce, in his 'Illustrations of the Logic of Science' (*Popular Science Monthly*, xii. [1877], 289 f.), defines belief somewhat differently, but with similar purport, as the goal of thought and the starting-point of action. It is essentially the self-confidence that comes from having reached beyond doubt, and in its place built up settled habits or rules of action, the assurance that one is ready to meet the contingencies of life in any direction. At root this view identifies belief with the sense of power, power being here conceived as the reality with which our life is invested when doubt passes over into belief. To have a sense of power is to believe in one's self, to be ready to set one's own personal mark on whatever one touches; in a word, to hold, in James's phrase, that the *fons et origo* of all reality is ourselves.

Now, if we turn from belief so understood to love, and ask what the passion of love has to tell us about reality, we find that for love the supremely real thing is not itself, but its object. Clearly, if belief and love are to meet harmoniously, the sense of the reality and significance of self so essential to the belief that means power must be identical with that sense of the reality and supreme worth of its object which is so essential to love. Our joy in the object must be one with our belief in ourselves.

This requirement leaves us with the question: What must the nature of that object be which we can intimately identify with our own selves? It must be at least personal, or we could not identify ourselves with it. Moreover, the view that we take of the nature of our own personality must be of such a kind that we can conceive it as identified with this personal object without being lost or absorbed in it. If the self is lost in its object, the sense of power, the belief, will also go, and there will be no reconciliation of belief and love. Thus, if belief is to be love's belief, if faith is to be love's faith, the object of love must be such that communion with it heightens our sense of personality and makes us more truly ourselves than we were before.

But, it may be objected, when I really love anything, is it not one of the most satisfying features of this experience that I get away from myself? How can I surrender myself to the call of the great starry spaces of ether or of spirit and yet continue to be impressed with the importance of my own individuality?

The question goes to the root of all ethical inquiry. It compels us to recognize that there is something which we currently call our individuality, which is yet too weak to subsist in the presence of what is really sublime in the universe and in history. This individuality, which grapples itself to a finite body and shrinks from all the great things, from the infinite, from sacrifice and from death, how is it possible to conceive any organized sentiment or passion fulfilling itself within the limits of such being as this? Sooner or later it must strike its roots home into deeper personal ground. Only a self which has these roots of the infinite about its heart can ever ask the question out of which the true science of self emerges. Only in this infinite self can the will to love and the will to power prove no longer tendencies that are mutually destructive.

2. **The ethics of love.**—We have spoken of love as a sentiment or passion. We have spoken of it also as a power. We might go one step further back and speak of it as an instinctive power or an instinct, as a deep-rooted conative tendency shaped and determined in connexion with the supreme end of the preservation of life, i.e. of natural or spiritual existence whether in the individual or in the race. There is indeed good ground for claiming love as an instinct, provided we do not forget the fundamentally conative character of all instinctive behaviour, or insist that instinct shall from the outset have at its disposal some mechanism through which it operates. There is no such mechanism in the passion for the ideal, and yet this passion has the originality and fundamental force of an instinct. But this is not the place to attempt a systematic vindication of the independence of the spiritual life. It will be enough if we assume as the fundamental postulate of ethical science that the life animated by the ideals of truth, beauty, and right is not a mere derivative from the natural life of the body, but, as a *φύσιν οὐκ ἐγγειον ἀλλ' οὐράνιον*, in Plato's memorable phrase¹—a heavenly and not an earthly plant—has independent instincts of its own, instincts of spiritual self-preservation, instinctive passions for the ideal and the heroic, and that the instinctive passion *par excellence* is love.

Virtue is love.—When love is conceived in this ultimate way as the creative power of a new life, it is legitimate to look upon it as the supreme virtue. By virtue we understand the special power (*δύναμις*) and special excellence (*ἀρετή*) which enable us to live the best life. Now the question 'What is virtue?' received in the ancient world a great variety of answers; but of these, three stand out as of conspicuous interest and importance. Taken together they show a progressive deepening of the conception of virtue, so that the last of the three answers, properly interpreted, is not only the maturest, but also the most inclusive answer of the three. Of these three solutions—(1) Virtue is knowledge (Socrates), (2) Virtue is the habit of right willing (Aristotle), (3) Virtue is love (the solution of Christian ethics)—the second supersedes and includes the first, and the third supersedes and includes the second. With Aristotle virtue is primarily a matter of habit and not of mere rational insight; none the less the habit of right choosing, in which virtue essentially consists, is guided by the practical reason; for to choose rightly is in all things to choose the mean, and the practical reason alone can show where the mean lies. Thus with Aristotle we reach a more inclusive conception of virtue than that given by Socrates. The Aristotelian conception is a substitute for the Socratic only in the sense that it is a deepening or transcending of it. The Socratic 'reason' is taken up into the Aristotelian 'will' and made to function in its service. Similarly the definition 'Virtue is love' does not supersede the Aristotelian definition. It simply deepens, and by so doing develops and reorganizes it. To do justice to the value of habit we must look deeper than the habit. Moral habits grow from their instinctive foundations, not automatically, but through the enthusiasm which we put into the task of their formation. Hence, when we say 'Virtue is love,' we are far indeed from denying that it involves habits of right willing. We simply emphasize the motive power which is at the root of the formation of all habits of right willing. If enthusiasm for what is good fails to express itself in decisions and habits, it is no virtue; it is no more than the capacity for virtue.

But it is especially in relation to the varied

¹ *Timæus*, 90 A.

emotions and impulses, to 'whatever stirs this mortal frame,' that love stands out as the great transforming and inclusive agency, and therefore as the ultimate virtue of the spiritual life, of the life which aims at a universal or common good. Working through the emotion of anger, it is the root of moral indignation and of justice;¹ through that of fear, it makes the object loved the object whose hurt is feared. It regenerates the self-regarding sentiments, transferring their affection from the atomic, private ego to the personal and inclusive self; the competition of others, directed as it is against the merely individual self, is no longer felt as an injustice to one's true personality and therefore excites neither envy nor ill-will.

¹ There is no remedy but love, writes Goethe, 'against great superiorities of others.'²

Nor can the inclusiveness of true love tolerate the exclusive passion of jealousy. Moreover, with the complete passing of exclusiveness not only jealousy, but pride also, is transfigured, for love is not truly inclusive until it shows itself as ready to be grateful as it is to be generous, as ready to receive as to give. Love again is inseparable from reverence, and as such is the great security of true personal dignity. The negative element is never absent from love's sense of its own freedom. Inclusiveness does not mean loss of distinction between self and not-self. Intimacy with a friend through love means increased respect for his or her personality. There is thus in all love an element of reverence which guarantees that as intimacy grows so also does the value set upon personality. Again, we reverence the object of our love because we have a joy in it for its own sake, as an end in itself, and this joy is rooted in our sense of its reality, and most intimately associated also with the sense of our own reality. Belief or faith, an emotional belief in the intrinsic value of its object, is therefore essential to love, for faith is just this sense of personal reality.³ Once again—and this is a central point—love is the source and also the very substance of moral volition. For by 'will' we mean the whole personality as active in deliberation, decision, and resolute conduct. And, when the whole personality is volitionally active in this broader sense of the term, and this activity is motivated by the idea of a common good, then we seem justified in affirming that the power which vitalizes such activity, and the moral excellence which characterizes it—in a word, its virtue—is love. Finally, love is essential to knowledge, so that, if virtue is knowledge, it is for that very reason, and still more fundamentally, love. Love, at the root of our thinking, inspires the tendency to abandon ourselves to our object and identify ourselves with it. This has the effect of facilitating concentration and whole-hearted interest; the power of cleaving to a problem through thick and thin comes with the devotion of love. The best reason is love's reason, the reason born of sympathetic insight.

³ Sympathy is the general principle of moral knowledge, and the reason is that 'it furnishes the most reliable and efficacious intellectual standpoint.'⁴ 'Quickened sympathy means liberality of intelligence and enlightened understanding.'⁵ Or, again, 'genuine moral knowledge involves the affection and the resolute will as well as the intelligence. We cannot know the varied elements of value in the lives of others and in the possi-

⁴ J. Dewey and J. H. Tufts, *Ethics*, London, 1909, p. 385; cf. also G. Stanley Hall, *Adolescence*, ii. 186: 'Even knowledge at its best is a form of love. Interest is intellectual love, and one of the best tests of education is the number, intensity, and distribution of interests. . . . Even philosophy is not the possession, but the love and wooing of wisdom.'

⁵ Dewey-Tufts, p. 389.

bilities of our own, save as our affections are strong. Every narrowing of love, every encroachment of egoism, means just so much blindness to the good.¹

So Plato, as we see in the *Republic*, connects the philosophical element in human nature very intimately with that which 'makes him fond of what he understands, and again makes him want to understand what he is attracted to,' for 'the understanding and the attraction go together.'² Indeed the very word 'philosophy' implies this.

But there is still one question to be faced if the inclusiveness of love as a virtue is not to be misconceived. There is such a thing as love's hate, for the lover of good is the hater of evil.³ Hence, so long as evil actually exists, love must exclude it with all the force of its being. Now, in order that evil may actually exist, it must graft itself on to the good. For evil is a source of disintegration, and nothing can be wholly evil without being wholly disintegrated. Plato points out, in the first book of the *Republic*, that it is only in virtue of there being honour among thieves that the gang can subsist at all. Evil, in fact, can subsist in actuality only in virtue of the good which it possesses and enslaves. Hence, if love, through successive redemptions of all the elements of good contained in things evil, becomes inclusive of all good, evil as an actuality must cease to be. We cannot, indeed, think of it as annihilated, but we can conceive it as depressed to an infra-actual level of reality. At best it could survive as a real possibility of evil, real, that is, in relation to the will. As an actuality it would have vanished from the world. Then, and not till then, will love be inclusive of evil as of all else. For, though love cannot include actual evil, it must include at all times the possibility of evil, seeing that the possibility of evil is implied in the possibility of good, and all moral choice is ultimately a choice between possible evil and possible good. Hence, when evil shall have been reduced to the status of a real possibility, it will cease to lie outside love. Love will then be all-inclusive.

W. R. BOYCE GIBSON.

LOVE (Primitive).—The passion or emotion of love is as difficult to define as life itself, and probably for the same reasons. The following statements are useful:

'Simple et primitif comme toutes les forces colossales, l'amour paraît pourtant formé des éléments de toutes les passions humaines.'⁴ Again, in its 'fully developed form the passion which unites the sexes is perhaps the most compound of all human feelings. Mr. Spencer thus sums up the masterly

analysis he has given of it:—"Round the physical feeling forming the nucleus of the whole, are gathered the feelings produced by personal beauty, that constituting simple attachment, those of reverence, of love, of approbation, of self-esteem, of property, of love of freedom, of sympathy. These, all greatly exalted, and severally tending to reflect their excitements on one another, unite to form the mental state we call love."¹ Mantegazza, speaking of it as a colossal force, and Spencer, in his reference to exaltation, rightly emphasize the most remarkable characteristic of sexual love. This is the temporary raising of the individual to a higher power, the intensifying of all his capacities. A woman of the people said: 'When I am not in love, I am nothing.'² Nietzsche has eloquently described this result:

'One seems to oneself transfigured, stronger, richer, more complete; one is more complete. . . . It is not merely that it changes the feeling of values; the lover is worth more.'³ For Plato love was a 'divine madness'; he was thinking of its automatism, its sweeping away of reason and even consciousness. It was perhaps this aspect that led Schopenhauer and others to condemn it as an illusion. But 'love is only a delusion in so far as the whole of life is a delusion, and if we accept the fact of life, it is unphilosophical to refuse to accept the fact of love.'⁴ Ellis defines love 'in the sexual sense' as 'a synthesis of sexual emotion (in the primitive and uncoloured sense) and friendship.'⁵ It is a minimum definition.

There is no doubt that the various forms of love—sexual, parental, fraternal, filial, and social—are kindred emotions. Their relative intensity decreases from the sexual to the social, but, as this decreases, extension increases, and more and more persons may be embraced. It is unnecessary to do more than mention the sociological truth that in all its forms love plays a part in society only less important than that of the instinct to live. It brings together the primal elements of the family, it keeps the family together, and it unites in a certain fellow-feeling all members of a race or nation.

I. SEXUAL LOVE.—Especially in its sexual grade, love has certainly during the progress of civilization become not only more refined and complex but more intense.⁶ This is shown by a comparison with modern savages. Not only is the impulse weak, but the physical development is inferior, and consequently the difficulty of obtaining sexual erethism is great.⁷ A social result of this last condition is the orgy, a method of periodic artificial excitement (see below). Jealousy is frequently absent, among the Central Australians to a remarkable degree.

'Amongst the Australian natives with whom we have come in contact, the feeling of sexual jealousy is not developed to anything like the extent to which it would appear to be in many other savage tribes.'⁸

Jealousy, however, seems to have little or no connexion with sympathetic love, but to be entirely concerned with animal instinct and the sense of property, and many savages show jealousy to as remarkable a degree as the Central Australians show its absence.

The question remains, and it is important for the study of the origin of the family, whether primitive love was merely organic desire. *A priori* it is conceivable that the family could have been established, monogamy made the type of marriage, and

more or less permanent unions fixed in social habit, merely by the operation of animal instincts. Similar results of the same causes are sufficient in the case of the animal world to preserve the race and render it efficient.

The accounts available vary from pessimistic denial of anything but reproductive impulse to fulsome predication of refined and romantic emotion. The contrast illustrates the difficulty of penetrating to the psychological processes or even the social feelings of the lower races.

The Australian bride is generally dragged from home to the man to whom she is allotted. But 'love' may come after marriage from kind treatment.¹ It is pointed out that 'love' must be assumed in Australian marriages by elopement, which was a recognized form of marriage.²

The Papuan language possesses no word for 'love'.³ The Hos have no word for it; but 'they feel it all the same'.⁴ The Paharias are said to form 'romantic' attachments.⁵

An observer remarks even of the Arabs that 'the passion of love is, indeed, much talked of by the inhabitants of towns; but I doubt whether anything is meant by them more than the grossest animal desire'.⁶

This statement is probably too sweeping, as also is the statement that the Bible contains no reference to romantic love.⁷ Love-songs are rare among the lower races,⁸ probably a mere result of the imperfect development of literature. But Polynesian peoples are adept at love-poetry,⁹ which may be regarded as proving some degree of an emotional refinement, or rather irradiation, of the passion of love. At the other extreme, physical contact, it has been remarked that kissing and caressing are rare among savages, except towards young children.¹⁰

Yet among the Eskimo 'young couples are frequently seen rubbing noses, their favourite mark of affection, with an air of tenderness'.¹¹ Suicide, which is fairly frequent among the lower races, is often prompted by unrequited passion.¹² But there are many trivial reasons for suicide which indicate merely a rudimentary development of character, and special conditions of social structure must also be considered. It may be regarded as a general rule that love, of any degree or character, is not an essential basis of marriage. Among the majority of early tribes marriage is a matter of arrangement; spouses are allotted by the relatives, often in infancy. In many cases such 'betrothed' couples are prohibited from all association until marriage takes place. That love, however, may be a basis of permanent marriage is another matter. It is probably as essential as the needs of the offspring. Marriage by arrangement and 'the marriage of convenience' were often contracted among the Greeks and Romans. They were frequent in mediæval Europe, and occur in modern civilization. But it is certain that social developments during the last century have involved a general adoption of the principle that marriage should be based on previous mutual attachment.

In the majority of early societies the two sexes are strictly separated, at least after puberty. Such a condition precludes much sympathy between youths and maidens when marriage is to be

undertaken. This segregation sometimes extends to married life; in other words, there is a development of sex-clannishness, due either to natural inclination or to a certain subjection of women. Hence it is not surprising that among peoples like those of Eastern Africa it is regarded as disgraceful in a wife to show affection for her husband.¹ Among most rude peoples the man treats the woman with more or less roughness. This is to some extent the case in barbarism and among the lower classes of civilized society.² The ancient Greeks, Chinese, Hindus, and Muslims represent that stage of culture in which woman is a slave, a prisoner, or both. Notions of female inferiority combine with a sense of property and of proprietary jealousy, and polygamy in some cases is a contributory factor.

The conditions indicated above show that love in 'primitive' society had little chance of development except in and after marriage. 'Love comes after marriage' is a proverb used by Plutarch and by the Eskimo savage; it is common all over the world. What is termed 'romantic' love is rare, even in the highest societies, when the married state has been established for some time. Conjugal love is more affection than passion, and affection depends on intellectual and moral sympathy; community of interests, habitual association, and mutual care of children contribute to the complete character of the emotion. These factors also are sufficient to produce permanence in marriage and to bind the family together. It is therefore unnecessary to call in the aid of teleology in general, or natural selection in particular, to explain the origin of the family. Nor is it possible to argue that 'love has played little or no part in the institution of the family' (see below, § 1). The cannibal Niam-niam are said by a good observer to show an affection for their wives which is 'unparalleled',⁴ and similar statements have been made of many savage peoples.⁵

It is a justifiable conclusion that conjugal love was real, though elementary. Combined with occasional rough treatment, it was still genuine affection, based on sympathy as well as on the sexual impulse.⁶ Similarly, of primitive love in general it may be concluded that it possessed the same elements, in a less developed state and capacity, as modern love in its best manifestations. We need not accept either the frequent denials of any form of love or the attribution of 'chivalrous' love to Bushmen and Congo savages.⁷ Lastly, in estimating the evidence of observers, it must be remembered that their diagnoses of love are not based on one invariable scientific definition of the emotion.

1. Development of conjugal love.—The extension of the elementary sexual impulse into conjugal affection with its complex associations should be regarded as, sociologically, the most important feature in the natural history of love. This emotion seems to have developed sufficiently in primitive society to assist in breaking down collective methods of mating, which apparently (as in Central Australia) were often liable to be induced by the hard conditions of savage life. The hypothesis is frequently put forward that the family and social organization are essentially antagonistic. But the pacific way in which they work together in existing races, both civilized and barbarous, and

¹² Westermarck, *Hum. Marr.* 2, pp. 358, 502.

also the fact that crude types of social organization have been broken up by the family, strongly oppose this partial view.

It is right to notice that a time came 'when the conditions of life became favourable to an expansion of the early family, when the chief obstacle to a gregarious life—scarcity of food—was overcome.'¹ But before that there was a different type of gregariousness, which, so far as it went, did possess elements antagonistic to conjugal affection, at least. It is probable that increased security of subsistence assisted the growth of this emotion and strengthened thereby the family bonds. Westermarck has argued:

'Where the generative power is restricted to a certain season—a peculiarity which primitive man seems to have shared with other mammals—it cannot be the sexual instinct that causes the prolonged union of the sexes, nor can I conceive any other egoistic motive that could account for this habit. Considering that the union lasts till after the birth of the offspring and that it is accompanied with parental care, I conclude that it is for the benefit of the young that male and female continue to live together. The tie which joins them seems, therefore, like parental affection, to be an instinct developed through natural selection. The tendency to feel some attachment to a being which has been the cause of pleasure . . . is undoubtedly at the bottom of this instinct. Such a feeling may originally have induced the sexes to remain united and the male to protect the female even after the sexual desire was gratified; and if procuring great advantage to the species in the struggle for existence, conjugal attachment would naturally have developed into a specific characteristic.'²

This is an important statement and calls for consideration. In the first place, the assumption that even the earliest paleolithic men were capable only of periodic impulse is insecurely based. That a more or less regular capacity did ultimately develop from a periodic is a different matter. Secondly, even admitting the above-mentioned view, no account is taken of the phenomena of habit. Habit is the essential factor to-day, and must always have been, in the development of conjugal affection from the primary incidence of the sexual emotion. And here habit is reinforced by many associations, one of which is the care of children. Another, itself a strong emotion, is the proprietary feeling, strengthened by habit. Even the rudest savage woman feels a right of property in 'her man,' however badly he treats her. Again, the invocation of 'natural selection' is, when analyzed, merely rhetorical. Westermarck admits that the sexual impulse is 'at the bottom' of conjugal affection and prolonged union, but he here ignores improved environment. Neither of these factors can, except by a metaphor, be identified with the agents or machinery of 'natural selection.'

The fact is that improvement of conditions and development of nerve and intelligence have been accompanied by an increase both in emotions and in their control; the emotion of love in all its grades has been no exception. To apply the doctrine of the survival of the fittest to such a development within the species is a misapplication of Darwinism, or, rather, an unnecessary extension of the doctrine.

2. Development of sexual love.—In order to estimate aright not only the course of development, but the character, of modern love in its typical form, it is necessary to note some further elements—in particular, complementary elements—in the love of man and woman. Male love is active and dominant; female love is passive and subservient.

'In men it is possible to trace a tendency to inflict pain, or the simulacrum of pain, on the women they love; it is still easier to trace in woman a delight in experiencing physical pain when inflicted by a lover, and an eagerness to accept subjection to his will. Such a tendency is certainly normal.'³ Hence various aspects of married life and of courtship:

'Among the Slavs of the lower class the wives feel hurt if they are not beaten by their husbands; the peasant women in

some parts of Hungary do not think they are loved by their husbands until they have received the first box on the ear; among the Italian Camorrista a wife who is not beaten by her husband regards him as a fool.'⁴ In courtship, animal and human alike, the male plays the more active, the female the more passive part. During the season of love the males even of the most timid animal species engage in desperate combats with each other for the possession of the females, and there can be no doubt that our primeval human ancestors had, in the same way, to fight for their wives; even now this kind of courtship is far from being unknown among savages. Moreover, the male pursues and tries to capture the female, and she, after some resistance, finally surrenders herself to him. The sexual impulse of the male is thus connected with a desire to win the female, and the sexual impulse of the female with a desire to be pursued and won by the male. In the female sex there is consequently an instinctive appreciation of manly strength and courage.'⁵

A connected result of male superiority in strength, activity, and courage is the element of protection in male love, and of trust on the side of the female. The pugnacity observed in the males, both of animals and of wild men, is one aspect of the general increase of capacity effected by passion. The intimate psychology of love reveals not only an impulse for union, but an association in the male psychosis with an impulse for destruction, and even for devouring. Love often uses the language of eating. The natural modesty and coyness of the female play an important part both in stimulating the love of the male and in refining it. 'La pudeur,' says Guyau, 'a civilisé l'amour.'⁶ Connected with these differences is the relative slowness of the growth of love in woman; it proceeds by long circuiting. In men its growth is relatively rapid, and its duration generally less. Love, again, is 'only an episode in a man's life, whereas for a woman it is the whole of her life.'⁷

Biologically, courtship is a stimulus of love, a means of producing tumescence. Owing to the differences of secondary characters noted above, the love of the male is expressed chiefly in acts of courtship, that of the female in receiving them. If the preservation of love in a permanent union is analyzed, it will be found that it depends on a more or less continuous process of courtship.

A remarkable development of sexual love was made by the early Christians. This was the practice of close but chaste unions between the virgins and young men (see art. CHASTITY). The poetic or romantic exploitation of love to which the custom led (as is shown by the literature) was perhaps the only sociological result. It is possible that this became a tradition and thus influenced the mediæval valuation and practice of chivalrous love. 'For a mediæval knight the chief object of life was love.' It became a formal cult, and theoretically was defined as 'the chaste union of two hearts by virtue wrought.'⁸ Dante's love for Beatrice is the highest type of the practice. Its essential condition was that the passion should be hopeless and should not be consummated in marriage. But, as with a similar ideal of love in ancient Greece, so in this case, the reality was generally immoral. The lady as a rule was the wife of another, and adultery was frequent.

In European civilization to-day the factor of intellectual and moral sympathy in love has become more pronounced with the greater freedom and higher education of women. Sympathy strengthens affection, and affection strengthens sympathy. The element of equal friendship in love has been greatly increased, and thus, curiously, in spite of the levelling which has taken place to some extent in class-distinctions, has made love between members of different social spheres more rare.

A 'gentleman' to-day 'seldom falls in love with a peasant

girl, or an artisan with a "lady."¹ Again, 'to a cultivated mind youth and beauty are by no means the only attractions of a woman; and civilisation has made female beauty more durable.'²

Meanwhile, the importance in marriage of compatibility, physical and psychical, is becoming more and more recognized by the law.

3. **Social habits.**—(a) *Restrictions on love.*—The majority of primitive peoples impose restrictions on the physical gratification of love except in the marriage relation. This tendency thus harmonizes with the biological law that mating is the final cause of love. But an errant tendency is inevitable, and many peoples have permitted it, with a proviso. Thus, the Jakuts see nothing immoral in free love, provided only that nobody suffers material loss by it.³ In many of these cases the temporary possession of a lover is regarded as a test of complete womanhood, and in most of them the practice actually serves as a kind of trial-marriage. The case is very different in civilization.

(b) *The law of parity.*—A social and a biological tendency act as complementary factors, the one discouraging and the other encouraging love between biological similars. The one tendency is expressed in the remarkable rules of exogamy;⁴ the other, which may or may not be connected, is the tendency for those persons to be mutually attracted who are of the same grade of pigmentation. It has long been a popular belief that fair persons are attracted by dark, and *vice versa*; even that short persons are attracted by tall, and *vice versa*. A. Bain speaks of 'the charm of disparity.'

'But da Vinci affirmed clearly and repeatedly the charm of parity. . . . Men fall in love with and marry those who resemble themselves.'⁵ Modern investigations have established this conclusion.⁶

One of these began from 'the popular notion that married people end by resembling each other.' The explanation was that they began by so doing. On the other hand, persons are not attracted to members of the opposite sex 'who are strikingly unlike themselves in pigmentary characters.' 'With this feeling may perhaps be associated the feeling, certainly very widely felt, that one would not like to marry a person of foreign, even though closely allied, race.'⁷ But the barriers between widely different races are occasionally broken by love.

(c) *Seasonal love.*—Among primitive peoples there is a constant practice of what may be termed the periodic love-feast. Types of these are to be found among the Central Australians and the Dravidians of India. Certain festivals of mediæval Europe have been classed in the same category, with little foundation.⁸ A prevalent deduction from these 'periods of licence' was that the morals of savages were degraded and licentious. But a closer study of savages makes it certain that their existence is 'just as little a prolonged debauch as a prolonged idyll' (as was the still earlier view, instituted by Rousseau).⁹ A more recent deduction was that among the earliest men and the lowest modern savages pairing took place only in spring and at harvest.¹⁰ The festivals in question would be 'survivals' of a primitive pairing-season. Among mammal and other animals (though not domestic), a periodic rut is general, though not universal. A doubtful statement has been made of so relatively a high type of people as the Cambodians that they exhibit a rut twice a year.¹¹ It

is a fact that spring and harvest are among savages, barbarians, and modern peasants regular seasons both for general festivity and for special development of the sexual feelings. The reason may be partly biological, partly climatic, and partly connected with the food-supply. The probable conclusion is that, the conditions being favourable for any sort of expansion and perhaps specially so for amorous expression—an increase in the sexual impulse during these periods is established for modern peoples—the opportunity is taken by societies, which express themselves only socially, to stimulate their normally feeble sexuality and to obtain organic relief.¹

The principle of dramatization, which is at the root of magical ceremony, may be noted in love-charms, of which all folk-custom, from the Australian to the European, has a store, and in a large class of primitive marriage ceremonies, which generally typify union. The latter are organized love-charms.²

The connexion between love and religion is of the same nature as the connexion between love and art and life generally.

'Very much of what is best in religion, art, and life, owes its charm to the progressively widening irradiation of sexual feeling.'³

4. **Homosexual love.**—Sexual love between individuals of the same sex is a not infrequent abnormality. 'It probably occurs, at least sporadically, among every race of mankind,'⁴ and in post-Homeric Greece it became, so far as the male sex was concerned, almost a 'national institution.'⁵ Cases of congenital perversion are very rare; habit and environment have been largely overlooked by investigators.⁶ The majority of barbarian and civilized peoples have condemned the habit; in mediæval Europe it seems to have been regarded as connected with witchcraft and heresy.⁷

II. **NON-SEXUAL LOVE.**—1. **Parental love.**—As in the case of conjugal love, observation of primitive peoples is contradictory; but it is certain that maternal affection is universal, and paternal affection, though less intense, and often defective, is normal in the human race.⁸

According to Aristotle, parents love their children as being portions of themselves.⁹ Espinas regards this love as a modified love of self or property.¹⁰ A. Bain, however, derived parental love from the 'intense pleasure in the embrace of the young.'¹¹ But, as Westermarck notes, 'if the satisfaction in animal contact were at the bottom of the maternal feeling, conjugal affection ought by far to surpass it in intensity; and yet, among the lower races at least, the case is exactly the reverse, conjugal affection being vastly inferior in degree to a mother's love of her child.' He adds: 'It seems much more likely that parents like to touch their children because they love them, than that they love them because they touch them.'¹² According to Herbert Spencer, parental love is 'essentially love of the weak or helpless.'¹³ Westermarck observes that 'when the young are born in a state of utter helplessness somebody must take care of them, or the species cannot survive, or, rather, such a species could never have come into existence. The maternal instinct may thus be assumed to owe its origin to the survival of the fittest, to the natural selection of useful spontaneous variations.'¹⁴ But, as stated above, it is unnecessary to regard these instincts as cases of natural selection.

2. **Filial love.**—'Children's love of their parents is generally much weaker than the parents' love of their children. . . . No individual is born with filial love.' But 'under normal circumstances the infant from an early age displays some attachment to its parents, especially to the mother. It is 'not affection pure and simple, it is affection mingled with regard for the physical and mental superiority of the parent.'¹⁵

Conversely, parental and, still more so, paternal affection includes a regard for weakness and helplessness. Filial love is proved to be normal in primitive races; as with other forms of love, it is both less intense and less complex than in civilization.

3. **Fraternal and social love.**—All peoples exhibit 'altruism of the fraternal type, binding together children of the same parents, relatives more remotely allied, and, generally, members of the same social unit.'¹ In primitive tribes social organization is the outcome of social needs, and a real social affection and friendly sympathy are proved. As before, Westermarck applies the doctrine of natural selection to this development.² With progress in culture social affection becomes a marked feature of religious and ethical practice and theory. Noteworthy examples are the doctrine and duty of charity,³ in Christianity idealized by the Founder's love for all mankind and by the theory of brotherly love, and the Oriental systems, such as the *ahimsā* of Hindu religions.

The philosophical literature which exploits the idea of love is enormous. Plato developed the view that love is the creator of beauty, though beauty must have an objective element. Greek, Christian, and mediæval thinkers developed the connexion between love and faith, love of good and love of God. The *amor intellectualis Dei* of Spinoza is paralleled by many Oriental theories of contemplation. Throughout, love in religion stands midway between the philosophical and the human conceptions.

III. **LOVE-GODS.**—Deities embodying the abstract notion of love are hardly developed until the higher stages of barbarism are reached, but some points may be noted in the previous evolution. Animistic thought may produce, by a process of normal 'hallucination,' the belief that evil spirits, at a later stage various neutral or good spirits, behave as lovers of human beings. The peoples of the Dutch East Indies believe that evil spirits take the shape of handsome men and love their women.⁴ Primitive psychology, by analogical reasoning, explains love as made of fire (the Malay notion⁵), or the state of love as one of possession. The latter animistic view is connected with any departure from the normal; the new character of the individual is regarded as due to the entrance of a spirit. The West Africans attribute love to possession by the god Legba, or Elegbra. Dreams of love are explained in the same way as in mediæval Europe with its ideas of the *incubus* and *succuba*.⁶ Such a deity might develop, as others to be cited might have or actually have developed, into a deity 'of Love.' But, as usual, a deity has an indirect connexion only with this or that emotion. Many peoples, like the Finns,⁷ have regarded love as a form of insanity (a variety of possession). It is doubtful whether the description of this or that deity as 'patron of love' has any more definite meaning than an indirect connexion, such as is usually the case with 'possession.' The Finns regarded the god of evil as the patron of love.⁸ The Yoruba 'patroness of love,' Odudua, is 'worshipped' at erotic feasts.⁹ Her connexion with love is probably indirect only. Such a connexion is frequent in the case of 'deities of fertility.' The Scandinavian Freyja, goddess of love and fruitfulness, seems to have been synthe-

sized with Frigg, goddess of marriage.¹ Among the early Semites the Baal (like any local fetish of a hunting, pastoral, or agricultural tribe) was a source of fertility and a 'heaven-god,' and his wife, the Baalat, was therefore a goddess of fertility and of heaven. Some process, as yet uncertain, developed from this the figure of Ishtar, Astarte, Ashtoreth, worshipped at Erech as the goddess of love, and identified with Nana, the Sumerian goddess of the planet Venus (see artt. BAAL, ASHTART). The Heavenly Aphrodite of the Greeks is derived from this figure.² It is possible that the Hindu god of love and desire, Kama, was developed in connexion with some such festival as the spring *Vasanta* of 'prosperity and love,' which is primitive in character, though his figure is a direct personification of an emotion.³ A connexion is often made in early thought between love and the moon—possibly a case of the regular attribution of fertilizing power to the satellite. The serpent is occasionally connected with myths of the origin of love, and demons take the serpent-form in order to prosecute amours, or change from the human to the serpent-form on discovery.⁴ The arrows of love, in folklore and poetry, seem to be due to an obvious analogy from the incidence of the emotion. Metaphor, throughout the world, speaks of the effect of love as a wound.

LOVE (American).—The psychology and social habits of the aboriginal American peoples are, on the whole, in line with those of other races at equivalent stages of development. But they exhibit one or two distinctive features. As an instance of the usual conflicting results of observations, there is Morgan's statement that the 'refined passion of love is unknown to the North American,'⁵ and that of Catlin, that the N. Americans are not 'behind us' in conjugal, filial, and paternal affection.⁶ An accidental case of difference, not due to observers, is the remarkable fact that the Nahuas possessed no word for love, while Quichua, the ancient language of Peru, had six hundred combinations of the word meaning 'to love.' Observation of this fact has led to an interesting analysis by Brinton of the expression of the idea in N. American dialects. He distinguishes four methods of linguistic reaction to the emotion of love: (1) inarticulate cries, (2) assertions of identity and union, (3) assertions of sympathy and similarity (2 and 3 are clearly not distinct), and (4) assertions of a desire. It is noted that the Mayas possessed a radical word for the joy of love, which was purely psychical in significance.⁷ 'Romantic affection' is predicated, as usual, by certain observers.⁸ It is clear that the Americans compared favourably with other races in the combination of love with female chastity, and in the filial and social forms of altruism. It is, for instance, stated that the Central Americans at the time of the Spanish invasion were remarkable for their brotherly love and charity to the needy. The Naudowessies

(Dakota), Californians, and Eskimos, among others, are mentioned as being exemplary in their regard for aged parents;¹ but their care for children, though marked, is not above the standard of contemporary races.² In short, they exhibit a slightly more highly developed stage of the social form of affection. It is worth noting that all observers attribute to the Northern Indians a measure of chivalrous feeling.

One abnormality, namely, homosexual love between individuals of the male sex, was curiously prevalent; it is sufficient to refer to the remarkable list of authorities adduced by Westermarck.³ It is possible that the military tone of N. American life—and the practice was chiefly characteristic of the Northern aborigines—was a predominant factor, as in the cases of the Fijians and ancient Greeks.

The personification of love in the figure of a deity and the worship of erotic forces are perhaps less conspicuous, as might be expected, than in other societies. The Nahuatl peoples celebrated, it is said, 'a month of love,' during which many young girls were sacrificed in honour of the goddesses Xochiquetzal, Xochitecatl, and Tlazolteotl, who were patronesses of sexual love.⁴ But the Central American deities, with the exception of the leading members of the pantheon, were extremely vague personalities; it is generally doubtful whether two names refer to one deity or two, and it is still more problematical what forces or properties the divine names represented. But the name Tlazolteotl seems to have a definite connexion with love, though we cannot, with Camargo, regard her absolutely as 'the Mexican deity of love.'

'Her home,' he states, 'was in the ninth heaven, in a pleasant garden, watered by innumerable fountains, where she passed her time spinning and weaving rich stuffs, in the midst of delights, ministered to by the inferior deities. No man was able to approach her, but she had in her service a crowd of dwarfs, buffoons, and hunchbacks, who diverted her with their songs and dances. . . . So beautiful was she painted that no woman in the world could equal her . . . whoever had been touched by one of the flowers that grew in the beautiful garden of Xochiquetzal [sic] should love to the end, should love faithfully.'⁵ She not only inspired and provoked acts of love, but was able to hear confessions and to give absolution. The last detail has been emphasized by Spence,⁶ in connexion with the meaning of her name, to reduce the goddess to the status of a Mexican Cloacina. But, in spite of the priestly rhetoric of her description, there is enough in its latter portion to establish her as a deity of love, though probably illicit. Brasseur de Bourbourg regarded a volcanic symbol and Boturini Benaduci the high god Tezcatlipoca, as deities of love, without any foundation.⁷ Equally unfounded, except in the sense of indirect connexion, are the cases of the moon (especially among the most northerly peoples) and of fire.⁸ The N. Americans are slightly behind their contemporaries in the development of deities of love.

LITERATURE.—This is given in the article.

A. E. CRAWLEY.

LOVE (Buddhist).—The way in which early Buddhist literature takes account of the emotion of love is many-sided. It cannot adequately be settled, as some have tried to settle it, by a treatment that is too abstract or, again, too specialized. The hunger for unity or simplification leads some historians to assign to every departure in religious

or philosophical thought one fundamental or leading idea—a view that may be attained by closing the vision to all but a few considerations. No great teacher ever discoursed systematically, or even mainly, on one subject. And it is as misleading to say, of early or any Buddhism, that love is its 'ground-thought' as to substitute any other single emotion, idea, or aspiration in place of love. A glance at the scheme drawn up by the present writer of how, and with what frequency, or other emphasis, such things are envisaged in the saints' anthology of early Buddhism¹ should suffice to give pause to such generalizations. There it is shown that the inner, or upper, circle of adherents to what was first known as the Sāsana (rule, order), or Dhamma (norm, doctrine), of the followers of the Sākya's son found, in the goal that they had reached, not a unison, but a diversity of aspects. And it is hardly wise for interpreters of another age and tradition to contradict them.

Further, Buddhism was a movement set on foot with a view to the needs and ideals not solely, or even mainly, of the academy or the cell, but of 'all sorts and conditions of men,' in so far as these were represented among dwellers between Himālaya and Ganges. Its doctrines were not promulgated only among a chosen few; its teachers went afield without delay, waiting in the groves by village and city to converse with all and any who came to hear. It is true that its ideals, like those of Christianity, stretched far beyond and away from the range of notions and wishes common among average errant mortals. But there was that in the one movement, as in the other, which availed to draw to it the hearts of the many as well as the aspirations of the few. And among the needs and the emotions covered by the word 'love,' the teachers of Buddhism and the compilers of its sacred literature met and dealt with every variety of channel, and every degree of refinement or the reverse. We may, for clearness of reference, set out those channels of normal love as follows: (1) parental, especially mother-love; (2) filial love; (3) fraternal and kin love; (4) friendship; (5) sex love; (6) love of a superior for an inferior; (7) love of an inferior for a superior; and (8) æsthetic and ideal love. It is easy to see that other emotions are blended with these, wherever they are found, but it is no less true that the word 'love' is much used for each one of the eight.

As a doctrine based with great and very frequent emphasis on the generally current fundamental principles of morality, or social conduct (such as the veto on murder, theft, loose sex-morality, harmful speech, and intemperance), Buddhism had homilies and a benediction for all channels of love so practised as to draw men together in mutual goodwill and domestic and social happiness. These are scattered about the *Nikāyas* (collections of *Suttas*, or discourses). But the homily to Sīgāla² is the most comprehensive in its scope. The Buddha is represented as interrupting the open-air morning orisons of a young layman. The latter is rendering homage to the four quarters of the firmament, the nadir, and the zenith, presumably to the several devas—the 'four great rājas' and others—who presided over them, though they are not mentioned. The layman performs these rites out of loyalty to his dead father's wishes. The Buddha substitutes for these objects of worship six objects of devotion and service as more desirable, viz. the devotion of children to parents and of parents to children, that of learners to teachers and conversely, that of husband to wife and conversely, that of friend to friend, that of master

to servant and conversely, and that of layman to recluse or Brāhman and conversely. The practical forms which these six several modes of devotion or worship should take are simply and concisely described. For our present purpose it is chiefly interesting to note that they are prescribed not as mere duties or moral acts, but rather as ways of giving expression to a spirit of 'compassion' felt by the agent. Thus not only should parents in five ways take compassion on (*anu-kampanti*, lit. 'vibrate towards or after') their children, and teachers in five other ways take compassion on their pupils, but wives, in yet other five ways, should take compassion on their husbands, friends and colleagues, in yet other five ways, should take compassion on any honourable man (*kulaputta*; this would refer pointedly to Singāla and his companions), in yet other five ways servants should take compassion on their master, and in yet other six ways recluses and Brāhmins should take compassion on the laity. The corresponding term in the other six cases of reciprocated service—e.g., of children to parents, husbands to wives, etc.—is 'ministering to,' or 'waiting upon.' And the choice of these two Pāli words, differing as they do from those that we should find in a similar European catalogue, is interesting. The former word—to show, take, feel 'compassion'—while it is here applied, for instance, to the devotion of the good servant, is very often used in the *Suttas* for the supreme instance of the reciprocal devotion—that of a superior for inferiors—to wit, the compassion moving a Buddha to spend himself 'for the welfare, the happiness of many folk, for the good . . . of gods and men,'¹ and 'to live perpetually moved towards the welfare of all that lives and breathes.'² It was this spirit that he prescribed for those whom he sent forth as missionaries.³ For all these six forms of mutual service or devotion a Christian catalogue would probably use the word 'love,' however much the sources and outlets of the emotion so termed are shown to differ. The fact that the Buddhist catalogue does not bring in its ethics to supplement, or flow from, Singāla's religious beliefs, but supersedes the latter by the former, and, again, the fact that it substitutes the 'divine emotion' of compassion and the practical devotion of ministry for our more familiar and pregnant 'love' show us the need that there is for caution in making affirmations about love in Buddhism. It may help us further towards some, or away from other, conclusions if we examine in brief detail some of these forms as met with in the five *Nikāyas*.

1. **Parental love.**—The typical form of intense and self-surrendering devotion is that of mother-love, just as the type of overwhelming sorrow is that of the bereaved mother.⁴ The wise man should cleave to a genuine friend—a watchful, loyal, sagacious, sympathizing friend—as the mother is devoted to her child.⁵ And not only to his friends:

'E'en as a mother watcheth o'er her child,
Her only child, even with life itself,
So let us for all creatures, great or small,
Develop such a boundless heart and mind,
Ay, let us practise love for all the world,
Upward and downward, yea, before, behind,
Uncramped, free from ill-will and enmity.'⁶

This simile is quite in keeping with the chosen term 'being moved, or vibrating towards,' or 'compassion,' since mother-love contains so large an element of passionate, protecting pity.

⁵ *Digha Nikāya*, iii. 188.

⁶ *Khuddaka Pāṭha* (PTS, 1915), p. 8.

2. **Sex love.**—No case is found of a woman seeking death or religion through the death not of her child, but of her husband. *Sati* does not appear in Buddhist literature. The anthology mentioned above has one case, vouched for by the Commentary only, of a man leaving the world because of his young wife's death from snake-bite.¹ And women are recorded, in text and commentary, as having left the world because their husbands had forsaken it for religion. The power of sex to enthrall is fully acknowledged,² as is that of sex-repulsion.³ But there was no one ancient and moving 'Canticle' of sex-love calling for spiritualized annexation to the Buddhist books, such as we possess in the legacy left by Hebrew Scriptures to the Christian apostles. No allegory of the 'compassion' of a Buddha for his adherents is found in the pretty love-song of the *Sutta* called 'The Questions of Sakka.'⁴ Conjugal love—a blend of sex-feeling, parent-feeling, and friendship—finds beautiful expression in old Indian literature, but in poems that are younger than early Buddhist books. This is possibly the outcome of a social evolution—an evolution which a century or two of Buddhist ethics as to the right devotion in husband and wife may have done much to bring about. It may be noted in this connexion that the Aśoka rock and pillar edicts, although they are now and then didactic on family relations, are silent as to conjugal life. Again, it is perhaps a pathetic touch in the Anthologies that shows woman at her best ready for the comradeship, but man blind to it. Mahā-Kassapa, who headed the Order at the Buddha's death, and Bhaddā Kapilāni, famed as a preacher, were, by commentarial tradition, husband and wife, and not in their final birth only. They left the world by mutual agreement, having gone through the form of marriage to please their kin. She, in the poems attributed to her, glories in her ex-husband's gifts and in their 'spiritual friendship' and common vision of the truth. His much longer poem reveals him as both the anchorite and the friend of mankind, even of the outcast, but has no word concerning her.⁵ It is conceivable that the larger, more heterogeneous group composing the family in ancient India may have hindered the evolution of the conjugal relation. According to the sidelights thrown by the *Suttas* on domestic life, a girl left her home to enter the house not of her husband, but of her father-in-law.⁶ She became more or less the servant of him and his wife as well as of her husband. Reference also is occasionally found to a second wife:

'Woeful when sharing home with hostile wife.'⁷

3. **Love towards the Buddha.**—Filial love alone is the form wherein early Buddhist devotees gave expression to their feeling for the founder of their rule and doctrine. They confessed themselves not seldom as the 'own mouth-born' sons and daughters of the Buddha⁸—a sentiment which, in the later commentarial records, finds an echo in these children being termed severally 'my son,' etc., by the Master.⁹ Yet, so far as the present writer knows, none of the usual terms for love or affection is applied to him, and certainly no one is spoken of as loving him by 'taking compassion upon' him. He, as father, teacher, 'recluse,' is ministered to or waited upon; it is he who 'takes compassion' on children, disciples, and laity. Honour, worship, or homage, faith or confidence, and the term *pasanna*, which may be rendered 'resting in,'

⁹ *Dhammapada Commentary*, i. 21, 480, etc.

‘satisfied with’—such are the expressions for the emotion felt, but not ‘love.’ The Indian words for love were not sufficiently elastic to cover this relation—a relation which was not the less deep and genuine, whether it was expressed in terms of the self-surrendering devotion of a believing and adoring ‘heart’ or of the intellectual love of the philosophic mind :

'I see him with my mind as 't were mine eyes,
By night, by day, incessant, watching ever.
I reverence him while waiting for the morn.
And thus methinks I'm ever with him dwelling.

Truly my mind with him is joined, O brāhman.'¹

The emancipating force of his teaching drew the imagination:

'So I, leaving the men of vision cramped,
Come as the swan flies to the mighty sea,'²

And the charm or majesty of his presence drew by
way of sense :

'O wondrous fair the All-enlightened shines

Like a great storm-cloud in the summer sky,
Thou on thy followers pourest precious rain,
 noble of aspect, whose skin
Resembleth gold, say, what is friar's life
To thee with presence so supremely fair ? '8

This adoration for his person is usually accepted, but not always:

‘Long have I wished, lord,’ said the devoted Vakkali on his deathbed, ‘to draw near to behold the Exalted One, but now is there no more strength left in me to come !’ ‘Let be, Vakkali, what hast thou to do with seeing this poor frame of me? He who seeth the Norm, he it is that seeth me; he that seeth me is he who seeth the Norm.’⁴

And indeed it was the conviction that, in this man of the long and tireless ministry, carried out purely from sweet compassion for the sons of men, such wisdom and goodness, charm and power, were combined as to banish, while and where he lived, the need for superhuman objects of worship from his followers, and which, long after he had passed away, aided the theological evolutions of Mahāyānaism—the conception, namely, of Mañjuśrī, and Avalokiteśvara, wisdom and compassion personified. And Maitreya or Metteyya, the future Buddha, has been conceived as one who will revive the spirit of lovingkindness among men.⁵

4. Love towards deities.—For deity, or the deities of its age, early Buddhism finds no need of adoring devotion. No deities in our sense of the word exist for it. All *devas* are more like our conception of angels, beings differing from mankind only in degree and in quality of physical and mental characteristics. They inhabited other more or less adjacent worlds or spheres. On earth were nature-spirits or fairies, usually termed *devatā* (lit. 'deity'). All were to be treated with goodwill and friendliness, but nothing further. They were believed to have the power of communicating with man, and are found rebuking and admonishing the lax or lazy recluse. But in the case of the chosen few—a Buddha and his Arahants—it is the *devas* who render homage and minister to the man, not the reverse.⁸

5. Ideal love.—The emotion of ideal love, though it was not reserved for any personified deity in Buddhism, and though it played largely round the person of the founder, was not otherwise atrophied. It never appears as associated with the whole of that cosmodycy which, for the more intellectual Buddhists, takes the place of a theodicy. Devotion bestowed on a 'cosmic mechanism,'⁷ not planned by divine wisdom, and involving for each and all so much unspeakable suffering, was not to be looked for. But the Norm, as doctrine and as a part of that cosmos, in Pāli *dhamma* and

⁷ H. Oldenberg, *Buddha*⁶, Stuttgart, 1914, p. 367.

VOL. VIII.—II

dhammatā, constituted for the intelligent adherent a source of austere affection (*rati*). Admiration for *dhammatā* is a refrain in the Brethren's anthology,¹ and the expression 'love for the Norm' (*dhammagatā rati*) is met with; e.g. (here called 'the Ideal'):

'Is his love set on the Ideal.

Other loves that Love surpasseth.' 2

The same emotion is aroused by the idea of Nirvāṇa (*nibbānābhirati*, a stronger form of *rati*):

'All my heart's love is to Nibbāna given,'³

and by that of the Sāsana, or 'religion,' 'rule' (sāsanarati).⁴

6. Friendship. — 'Goodwill and friendliness' (*avyāpāda, adosa, mettā*) express, better perhaps than the overburdened word 'love,' that expanded sentiment of amity to all living things which the average man can cherish only for personal friend or comrade. The cultivation of amity (*caritas*), pity, sympathetic gladness, and equanimity formed a sort of sublimated or higher *sīla*, or code of morals, the first three of them forming a development of that 'vibrating towards,' or compassion, which is so essential an attitude in Buddhist ethics. It is to these that the Elder Revata refers in defending himself against the charge that he lived in the woods to receive stolen goods :

' Since I went forth from home to homeless life,
 Ne'er have I been quested conscious wish or plan
 On Arjuna or linked with enmity.
 Ne'er mine name has come, all this long interval :—
 " Let's snute our fellows wrongfully, let us slay,
 Let them be brought to pain and misery ! "
 Nay, love I do awo, made infinite.
 Well trained, by orderly progression grown,
 Even as by the Buddha it is taught
 With all am I a friend, comrade to all,
 And to all creatures kind and merciful ;
 A heart of amity I cultivate,
 And ever in goodwill is my delight.
 A heart that cannot drift or fluctuate
 I make my joy ; the sentiments sublime
 That evil men do shun I cultivate.' 6

If, as certain writers think, we should refrain from applying so warm-blooded a term as 'love' to *mettā*, 'amity,' this may be justified, perhaps, on etymological grounds, and on the ground that Buddhism sets itself against passionate feeling. But it cannot be justified either by lukewarmness in the exordiums to practise *mettā* and sympathy with pain or joy or by sluggishness in the carrying out of these virtues by leading Buddhists.

It would be hard to find in ancient literature any exordium so aglow with 'goodwill towards men' as that of the so-called Four Brahma-vihāras, i.e. Best Dispositions, or Four Infinitudes :

'Suffusing, tender and compassionate, such an one with the rays of our loving (or sympathizing) thought, and from him forthgoing suffusing this and that quarter, the whole world with loving consciousness far-reaching, . . . beyond measure ;⁸ or, again, as that of the emancipation of mind through 'amity' :

'All the means that can be used as bases for right doing . . . are outshone in radiance and glory by this, which takes all those up into itself.'⁷

If this be amity only, we can let love stand aside!

There is no specific and positive injunction to 'love your enemies,' but this is only because the true spirit of the Dhamma would label no fellow-creatures as enemies. All were either to be 'ministered unto' with honour or to be taken compassion upon in that spirit of grave tenderness for the burden of ill on earth—and in the heavens too—which is Buddhism at its emotional best. 'Conquer the wrathful by mildness, . . . the stingy by giving, the liar by truth!'⁸ is the prescribed line of action.

7. **Altruism.**—Among the channels for catholic altruistic sentiment, however termed, the giving of

worldly, and the giving of spiritual, goods, Buddhist missionary labours from the earliest days are well known, and, from Asoka's days, are matters of history. The *Sutta* describing a conversation between the Master and Punna of the *Supāparanta*s—a *bhikkhu* whose labours were crowned with martyrdom—is typical of the incorrigible unfaltering 'amity' of the missionary spirit.¹ Of the other kind of giving, while *dāna*, 'liberality,' is recommended, especially as a pious and profitable return to the dispensers of spiritual gifts, the absence of any systematic inculcation of 'charity,' or poor relief, is noticeable. There were poor folk and beggars, for the ideal king is described as giving largely to such.² But the fact that the religious 'friar' was termed almsman (*bhikkhu*), and took his place as a beggar among beggars (save that he never 'begged,' but only passed by), seems to indicate that the practice of charity at the door and in kind was a matter of course, not calling for special exhortation. Royal donors gave their charity in almshouses at each city gate.

A noteworthy feature in the developments of secedent Buddhism is the expansion, in eschatological hypotheses, of the altruistic spirit so strongly fostered, for life on earth, by the original teaching. In the early Dhamma concentrative self-training receives relatively more emphasis than any exercise in the expansion of emotional imagination. But in the altruistic patience and faith of the Bodhisattva ideal we see the mother-germ reaching a sublimity unattained in the poetic idealism of any other creed.

Fischel, *Leben und Lehre des Buddha*, Leipzig, 1908, p. 78 f., criticized in H. Oldenberg, 'Der Buddhismus und die christliche Liebe,' *Aus dem alten Indien*, Berlin, 1910, p. 11.

C. A. F. RHYS DAVIDS.

LOVE (Celtic).—1. Gauls.—The Celts do not appear to have had at any time in their history any special god or goddess of love. In later times the numerous goddesses of fertility often possess the attributes of love-patrons; and it is, therefore, probable that this conception was identified with them, if at any time it formed a special subject of worship among the Celts. We have, for example, among the goddesses of ancient Gaul one who is equated with Diana, but who possesses at the same time some of the characteristics of Venus (G. Grupp, *Kultur der alten Kelten und Germanen*, Munich, 1905, p. 160). It is possible, then, that there was a tendency among the primitive Celts to assign love-attributes to some of their deities. Thus, we are not yet certain of the form of cult addressed to the *Matres*, who were the special patrons of women, presiding at child-birth; but it was without doubt a kind of love-worship, especially that of motherhood, since these goddesses are usually represented with a child in their arms. In Christian times these wooden figures, blackened with age, were often mistaken for those of the Virgin, and, under the name of *Vierges noires*, were given a place of honour in the churches (J. A. MacCulloch, *The Rel. of the Anc. Celts*, Edinburgh, 1911, p. 45 f.; cf. also *ERE* iii. 280). Another class of divinities called *Virgines* were also closely associated with the *Matres*—in fact, this title may have been but an appellative of the latter. They were served by priestesses, whose existence has been explained by the hypothesis that many Celtic divinities were at first female, and were, therefore, served by women possessed of the tribal lore (*ib.* 317). Strabo (iv. 6), copying from Pytheas, who visited the western seaboard of France about 322 B.C., gives an account of the mystic rites practised by some Samnite women who inhabited a small island in

the ocean near the mouth of the Loire; and, though Strabo calls these rites Bacchic, it is very probable that they were connected with some form of love-worship.

In the betrothal rites of the founders of Marseilles there appear to be indications of the existence of a love-god. We are told that the daughter of the king, after a splendid repast, entered the room with a full cup in her hand, and extended it, by chance or otherwise, to a stranger. The father sanctioned it at once, declaring that it was a god who wished it (Aristotle, quoted by Athenæus, xiii. 36 [p. 576]). According to Plutarch (*Amatorius*, xxii., *de Mulierum virtutibus*, xx.), it was customary among the Asiatic Celts for the betrothal to take place before the altar of the goddess, who, in the case which he cites, happened to be Artemis. It is impossible to say how far those rites were influenced by the customs of the Greeks.

In spite of the miserable condition to which women were reduced among the Gauls, they were renowned for their devotion and fidelity to their husbands (see ETHICS AND MORALITY [Celtic], I. 2). Yet by the 4th cent. A.D., if we may accept the statement of the Emperor Julian (*Orat.* ii., text and tr. W. C. Wright, London, 1913, i. 218 f.; also *Ep.* 19; G. Dottin, *Manuel pour servir à l'étude de l'antiquité celtique*, Paris, 1906, p. 141), a sad change had taken place in the character of the Celtic women, especially among the Eastern Gauls.

Julian relates that the Celts took the Rhine as a judge of the fidelity of their wives. When a child was born, the father placed it on a shield and set it on the river. If the child was legitimate, it floated on the surface of the water; but if, on the contrary, it was illegitimate, it was swallowed up by the waves. We are uncertain, however, whether the tribes referred to were Celtic or German. The love-motive also existed without doubt in the cult of the Earth, the great mother of gods and men, but to what extent it is impossible to say (cf. C. Jullian, *Histoire de la Gaule*, Paris, 1908, ii. 123).

2. Irish.—In his well-known hymn St. Patrick prayed against the 'spells of women, smiths, and druids' (W. O. E. Windisch, *Irische Texte*, Leipzig, 1880 ff., i. 56). The women to whom the saint refers were probably those of the *side*, who rejoiced in eternal youth and beauty, and whose capacity for love was so great that they would go forth themselves to woo and win mortals. Once the spell was cast, not even the greatest hero could resist. The important rôle played by these divine women in Irish mythology is revealed in the account of the adventures of Connla, where even the powerful magic of druidism fails to remove the spell.

Connla, walking on the hills of Usnech in company with his father Cond, who was supreme king of Ireland from A.D. c. 122 to c. 157, saw a beautiful damsel approaching. She was attired in a strange garb; and, when Connla asked her whence she came, she replied: 'We are the great *sid*, hence we are called the people of the *side*, i.e. of the mound or hillock. The father wished to know with whom his son was speaking, so the damsel informed him that she had come to invite Connla, whom she loved, to the Mag Mell, 'Plain of Delight,' where dwelt King Boadag. 'Come with me,' she cried, 'Connla the Red, of the speckled neck, flame-red, a yellow crown awaits thee; thy figure shall not wither, nor its youth nor its beauty till the dreadful judgment.' Cond then bade Corán the druid, who, like the others, heard but did not see the damsel, chant a magic song against her. She departed, but not before throwing Connla an apple, which was his sole sustenance for a month, and yet nothing diminished from it. After a while longing seized Connla for the damsel, and at the end of a month he beheld her again, when she addressed him thus: 'It is no lofty seat on which Connla sits among the short-lived mortals awaiting fearful death. The ever-living beings (*bá bithé*) invite thee. Thou art a favourite of the men of Tethra, for they see thee every day in the assemblies of thy father's house among thy dear friends.' Again the king urged the druid to chant against her, but she made answer: 'O Cond of the Hundred Battles, druidism is not loved, little has it progressed to honour on the Great Strand. A just man [probably an allusion to St. Patrick inserted in the saga] will come with a great following; and his law will destroy the incantations of druids from passing the lips of black, lying demons.' She then told Connla of another land, in which was no race save only women and maidens. When she had ended, Connla gave a bound into her ship of glass, and they sailed away. From that day to this they have never been seen, and no one knows whither they went (for the text of this saga see Windisch, *Irish Grammar*, tr. N. Moore, Cambridge, 1882, pp.

¹ *Majjhima*, iii. 287 f.

² Rhys Davids, *Dialogues*, i. 177.

134-136; Fr. tr. in d'Arbois de Jubainville, *L'Épopée celtique en Irlande*, Paris, 1892, pp. 384-390; and a summary in K. Meyer and A. Nutt, *Voyage of Bran*, London, 1895-97, i. 145 f.).

Oengus, the beautiful, sometimes called Mac Ind Óc, 'Son of the Young Ones' (i.e. of Dagda and Boand), is also a god of growth and fertility who possesses in a marked degree the attributes of a god of love. He has been called the Eros of the Gaels, because he was patron of Diarmaid, beloved of women, and because his kisses became birds which whispered thoughts of love to youths and maidens.

The love-motive occurs very frequently in the stories of the Tuatha Dé Danann, the youth and beauty of whose women were supposed to be unfading (S. H. O'Grady, *Silva Gadelica*, London, 1892, ii. 203). One of the earliest concerns Eri, sister of Bres, who was son of the Pomorian Elatha.

The love-motive is equally prominent in the Voyages of Bran and Maelduin, which are close parallels to the adventures of Connlán. In both of these stories the happy mortal is allowed to visit Elysium, which he finds to consist of an island inhabited by an amorous queen, who gladly welcomes the mortal visitor and is equally reluctant to let him depart.

A most interesting example of the development of the primitive love-theme is found in 'Cúchulainn's Sick Bed.'

This saga relates that one day Cúchulainn was struck with a horse switch by two strange women, one of whom was attired in green and the other in red, and in consequence of this blow he lay till the end of the year without speaking to any one. Then came a stranger who sang verses promising health and strength to the hero, if he would accept the invitation of the daughters of Aed Abrat, to one of whom, Fann, it would give heartfelt joy to be espoused to Cúchulainn. Fann, daughter of Manannán mac Lir, who had been abandoned by her husband, had conceived a great affection for Cúchulainn, and the stranger, whose name was Liban, had been sent by her own husband, Labraid of the Quick Hand on the Sword, to tell Cúchulainn that, if he would come and fight against Labraid's enemies, he should have Fann as his wife. After sending his charioteer Lóeg to visit the Plain of Delight, the great hero accepted the invitation and went to overthrow the opponents of Labraid. After remaining a month with Fann, he returned to Ireland, promising to meet her again at a trysting place. Emer, his wife, having heard of this, went with fifty maidens, all armed with knives, to attack the lovers, and, when Fann saw them, she appealed to Cúchulainn for protection, which he promised. He was then bitterly upbraided by Emer for having disgraced her before all the women of Erin. Once they were together in dignity, and they might be so again if he desired. Cúchulainn took pity on her; and a contest then arose between the two women for the possession of the hero. The fairy queen finally yielded to the mortal, saying:

'Woe! to give love to a person,
If he does not take notice of it;
It is better to be turned away
Unless one is loved as one loves.'

When Manannán became aware of this, he came east to seek Fann, and no one could see him but Fann alone. He gave her choice to remain with Cúchulainn or go with him. She answered: 'There is, by our word, one of you whom I would rather follow than the other, but it is with you I shall go, for Cúchulainn has abandoned me—thou too hast no worthy queen, but Cúchulainn has' (d'Arbois de Jubainville, *Épopée celtique*, pp. 170-216; Nutt and Meyer, i. 153-157; ed. Windisch, i. 205-227).

Without multiplying examples, it is obvious that the woman is usually the aggressive figure in Irish mythology. In Christian times where beliefs revealing the pagan love-theme have survived, the method of procedure is different, the man pursuing the woman, often against her wishes. Thus, when King Fiachna was fighting against the Scots and in great danger of his life, a stranger appeared to his wife, announcing that he would save her husband's life if she would consent to yield herself to him. She agreed with reluctance; and the child born of this union was the 7th cent. King Mongán, of whom the annalist says: 'Every one knows that his real father was Manannán' (*Leabhar na hUídhre*, facsimile reprint, Dublin, 1870, p. 133^a, 19).

In the Cúchulainn cycle the love-motive is usually one of wild lust; and, as these stories doubtless reflect, to a great extent, the condition of society at the beginning of the Christian era, we can form from them an idea of the status of woman at that

period. In his analysis of the *Táin*, the great epic of Ireland—which depicts to a great extent the morals of Connaught—H. Zimmer has pointed out that Medb, the heroine of the expedition, had been the wife of Conchobar, but, having abandoned him, married in succession two chiefs of the same name, Ailill, the second of whom is her husband at the beginning of the account ('Der kulturgeschichtliche Hintergrund in den Erzählungen der alten irischen Heldensage,' *SBAW*, 1911, pp. 174-227).

An idea of the unusual prominence of the love-motive in the early Irish saga can be formed from the list of titles given in d'Arbois de Jubainville's *Essai d'un catalogue de la littérature épique de l'Irlande* (Paris, 1883).

Thus on pp. 34-37 there are twelve stories bearing the title *athed*, or 'elopement,' among the more important of which are *Athed Blatnate*, *ingine Puill*, *maire Fhíadag*, *re Coinchulainn*, or 'Elopement of Blatnat, daughter of Pall, son of Fíadach, to Cúchulainn' (cf. G. Keating, *Hist. of Ireland*, tr. J. O'Mahony, New York, 1866, pp. 282-284); *Athed Dordrenn re maccarb Usnig*, or 'Elopement of Dordrenn to the sons of Usnech,' identical with *Longes mac n-Usnig*, or 'Exile of the Sons of Usnech' (ed. Windisch, i. 67-82); and *Athed Grainne re Diarmait*, or 'Elopement of Grainne to Diarmait' (*Book of Lecan*, fol. 181; Brit. Mus., Harley MSS, 5280, fol. 25). In addition to *Cath na Suirghe* and *Cath Tochmarca*, 'Battle of the Demand in Marriage' (d'Arbois de Jubainville, p. 82 f.), there are six sagas bearing the title *compert*, or 'conception' (92-94), of which the most famous are *Compert Conchobair*, or 'Conception of Conchobar' (*LL* 106), and *Compert Conculainn*, or 'Conception of Cúchulainn' (Windisch, pp. 134-145, 324 f.). *Eochtra an Phalars Dhroidhachtamhul*, or 'Adventures of the Enchanted Palace' (d'Arbois de Jubainville, p. 124), is concerned entirely with love, as is also *Oen-ét a-mnas Ailella*, or 'Single Jealousy of Ailill' (178). There are five stories with the title of *serc*, or 'love' (205 f.), of which *Serc Fhinn go críochaib Lochand*, or 'Love of Finn in Norway,' deserves to be mentioned (Roy Ir. Acad., Ossianic MS, 1789-1818). As for those with the title of *tochmarc*, or 'demand in marriage,' there are at least twenty (224-231). Of these, mention may be made of *Tochmarc Becfolia* (ed. and tr. B. O'Looney, *Proceedings of the Royal Irish Academy*, i. [1870] 174-183), *Tochmarc Emer re Coinchulainn*, or 'Demand in Marriage of Emer by Cúchulainn' (Windisch, p. 324 f.), *Tochmarc Étdáine* (ib. 117-133), etc.

3. Welsh.—In Brythonic mythology the naturalism common to the Irish sagas has been greatly refined, and magic, especially in the form of the love-potion, assumes greater prominence. The nearest approach to a goddess of love is found in Branwen, 'White Bosom,' daughter of a sea-god, who has been called the 'Venus of the northern sea' (C. I. Elton, *Origins of English History*,² London, 1890, p. 291). She was in all probability a goddess of fertility, but reappears as Brangwaine in romance, giving a love-potion to Tristram, which in itself is perhaps a reminiscence of her former attributes as a goddess of love. Dôn, the Welsh equivalent of Danu, was also perhaps a goddess of fertility, and had for her children Gwydion, Gilvæthwy, Amæthon, Govannon, and Arianrhod (MacCulloch, p. 103). All these divinities play a more or less important part in the story of Gilvæthwy's illicit love for Goewin, the 'foot-holder' of Math in the *Mabinogion*.

Resorting to magic, Gwydion succeeded in obtaining for Math from the court of Pryderi certain swine sent him by Arawn, king of Annwn, for the purpose of aiding him in his love affair. The trick was discovered, and a battle ensued, in which Gwydion slew Pryderi by enchantment. Having discovered that Gilvæthwy had seduced Goewin, Math transformed him and Gwydion successively into deer, swine, and wolves. It is also implied that Gwydion was the lover of his own sister Arianrhod, by whom he had two children. MacCulloch suggests (p. 106) that these are mythic reflexions of a time when such unions, perhaps only in royal houses, were permissible. Arianrhod, on her part, while being the mistress of her brother, pretends to be a virgin and refuses to acknowledge her children.

The more or less universal type of the treacherous wife is found in the story of the unfaithful dawn-goddess, Blodenwedd, who discovers the secret of her husband's life and then places him at the mercy of her lover (T. W. Rolleston, *Myths and Legends of the Celtic Race*, London, 1911, p. 383).

In the Welsh romances the element of love, due principally to foreign influences, assumes the aspect of woman-worship. This new attitude towards

love is already apparent in Kulhwch and Olwen, which is comparatively an ancient tale, and is further developed in later stories like Peredur and The Lady of the Fountain (see A. Nutt, *Celtic and Medieval Romance*, London, 1899). It is the main symptom of the extent to which, in comparison with the Irish, Welsh literature had lost its pure Celtic strain (Rolleston, p. 345 f.). The relations between the sexes in Wales have already been discussed in ETHICS AND MORALITY (Celtic), III. 1-7.

LITERATURE.—This has been sufficiently indicated in the article.
JOHN LAWRENCE GERIG.

LOVE (Chinese).—The importance of love as an ethical principle is recognized by Chinese moralists. This can be made sufficiently evident from the classical books.

When asked about benevolence (*jên*), Confucius replied: 'It is to love all men' (*Anal.* xii. 22). 'Jên is the characteristic element of humanity, and the great exercise of it is in loving relatives' (*Doct. of Mean*, xx. 5). 'The benevolent embrace all in their love; but what they consider of the greatest importance is to cultivate an earnest affection for the virtuous' (Mencius, vii. 1. 45).

From these passages it appears that the general affection of love is modified in accordance with the claims of kinship and virtue. The ethical nature of true love is further brought out in such sayings as these:

'The Master said, "It is only the truly virtuous man who can love or who can hate others"' (*Anal.* v. 8). 'The Master said, "Can there be love which does not lead to strictness with its object?"' (*ib.* xiv. 8).

The importance of love as an ethical principle may also be seen in what is said of 'reciprocity' (*shu*). This is '*jên* in action, to put oneself in another's place.' Primacy is given to it as the rule of life (*Anal.* xv. 23). It is not merely 'Not to do to another what I would not have done to myself,' but, more positively, 'To serve my father as I would require my son to serve me . . . to set the example in behaving to a friend as I would require him to behave to me' (*Doct. of Mean*, xiii. 3). In the Confucian ethic, however, the exercise of love is limited by retributive justice.

'Some one said, "What do you say concerning the principle that injury should be recompensed with kindness?" The Master said, "With what then will you recompense kindness? Recompense injury with justice, and recompense kindness with kindness"' (*Anal.* xiv. 28).

Specially interesting in connexion with the place of love in Chinese ethics is the philosopher Mencius and his doctrine of universal love, as the bond of a perfect social state. The Confucian ethic has its religious counterpart in the classical representation of Shang-ti as benevolent and righteous (cf. art. GOD [Chinese]).

Of love in the narrower sense as between the sexes, neither its more romantic aspects nor its depravations are unreflected in Chinese literature from the *Shi King* and *Shu King* down to present-day novels. In view of too evident grossness of thought and life, one is surprised to find the religious sphere so clean. There is, e.g., polytheistic superstition, but no grossness in the religious worship reflected in the classics, though it is true that regrettable features appear in popular superstition—spiritual beings may be attracted by the fair looks of maidens and call them to the other world to be their wives; prostitutes may worship a goddess of their own.

According to B. H. Parker (*Studies in Chinese Religion*, London, 1910, p. 7), 'there is a considerable amount of disguised linga worship, especially in the south of China.' He adds, 'In any case, prayers for children, offered up by women, are common enough in every province.'

Such prayers are in themselves innocent, but in some cases the accompanying ritual worship of the idol invoked is somewhat suspect, and is shy of publicity. Still it is substantially true that there is in China no deification of vice or any public practice of immoral rites.

LITERATURE.—In the classical religion and ethics, see the relevant vols. of *SBE*; and E. Faber, *Mencius*, Shanghai, 1897. For examples of popular superstition cf. H. C. Du Bose, *The Dragon, Image, and Demon*, London, 1880, chs. 19, 21.

P. J. MACLAGAN.

LOVE (Christian and New Testament).—1. **Divine love.**—The highest and most satisfying faith which the human mind has attained, or can attain, is formulated in the sublimely simple confession, 'God is love' (1 Jn 4th 16). 'This is interpreted as meaning not only that God, self-conscious and moral, creates, sustains, and orders all things in love, but that love is His very essence; and the spiritual conflict of the ages has been, and is, waged against the forces opposing this first principle of religion and ethics, the acceptance or rejection of which leads logically to optimism or pessimism. A few expressions of the belief that eternal love subsists at the heart of all things, and manifests itself through them, may be chosen as typical.

'Let me tell you why the Creator made the universe. He was good . . . and desired that all things should be as like Himself as possible' (Plato, *Tim.* 29 E). 'The Lord is good to all; and his tender mercies are over all his works' (Ps 145th). 'For thou lovest all things that are, and abhorrest none of the things which thou didst make; for never wouldst thou have formed anything if thou didst hate it' (Wis 11th). 'And we know that to them that love God all things work together for good' (Ro 8th). 'O tender God, if Thou art so loving in Thy creatures, how fair and lovely must Thou be in Thyself' (Suso, quoted by W. R. Inge, *Christian Mysticism*, London, 1913, p. 302). For lovers of Nature Wordsworth expresses the conviction that nothing

'Shall e'er prevail against us, or disturb
Our cheerful faith, that all which we behold
Is full of blessings' (*Tintern Abbey*, 132 ff.).
There is no dubiety in R. C. Trench's large utterance:
'. . . We and all men move
Under a canopy of love,
As broad as the blue sky above'
(*The Kingdom of God*, 4-6);

or in Browning's *cri du cœur*:
'God! Thou art love! I build my faith on that'
(*Paracelsus*, v. 51).

And in Carlyle's words there is at least a wistful longing to believe:

'O Nature! . . . Art not thou the "Living Garment of God"? . . . Is it, in very deed, He, then, that ever speaks through thee; that lives and loves in thee, that lives and loves in me?' (*Sartor Resartus*, 'The Everlasting Yea').

It is common knowledge, however, that this splendid creed of three syllables is not only severely tested but strenuously contested. The notion that love is the ultimate reality of things—that transcendent love is Creator and Lord of the world, and immanent love the life which pulsates through it, the Spirit ceaselessly operant in Nature and humanity—is pronounced by many to be a delusion and a snare. One of the champions of popular free-thought thus emphatically expresses himself:

'That God is love is a very lofty, poetical and gratifying conception, but it is open to one fatal objection—it is not true' (R. Blatchford, *God and My Neighbour*, London, 1907, p. 23).

One of the leaders of philosophic thought confesses that in the loss of this faith 'we are confronted by one of the great tragedies of life' (J. M. E. MacTaggart, *Some Dogmas of Religion*, London, 1906, p. 297). So manifest and repellent is the blending of good and evil in human lives that Swinburne makes the chorus of one of his dramas sing:

'The high gods
. . . wrought with weeping and laughter,
And fashioned with loathing and love . . .
The holy spirit of man'

(*Atalanta in Calydon* [Poems, London, 1904, iv. 259]).

The bitter pagan belief, that the gods take the same pleasure in the sufferings of mankind as cruel children in the torture of flies, still has its adherents, finding expression, for example, in Thomas Hardy's pessimistic dictum, 'The President of the Immortals (in Æschylean phrase) had ended his sport with Tess.' Some critics of the world-order do not hesitate to declare that 'for all the Sin wherewith the Face of Man is blacken'd' God needs to take as well as give man's forgiveness (Omar Khayyâm, quatrain lviii.). Worst of all,

science hesitates to say that God is love. The belief so dear to the heart of Linnæus, that the phenomena of Nature bear witness to the benevolence of the Creator, is supposed to have received a staggering, if not a fatal, blow from the principle of evolution, so that no comforting rod or staff, but only a broken reed, appears to be left in the hand of the man

'Who trusted God was love indeed
And love Creation's final law—
Tho' Nature, red in tooth and claw
With ravine, shriek'd against his creed'
(Tennyson, *In Memoriam*, lvi.)

Confident assertions on the one side and the other help at least to make the issue clear, while they may also suggest that strong feeling is apt to be generated in the attempt to solve the problem of problems. Every man admits 'the one absolute certainty that he is ever in the presence of one Infinite and Eternal Energy, from which all things proceed' (H. Spencer, *Ecclesiastical Institutions*, London, 1885, p. 843). The question is whether that Energy is controlled by love, or, rather, is identical with love—whether the All-Great is the All-Loving.

(a) What answer comes from the heart of Nature? That a struggle for existence, with a resultant survival of the fittest and extinction of the unfit, has gone on through geological ages and is still going on is one of the demonstrated truths which modern science has added to the sum of knowledge. And many evolutionists find it difficult, if not impossible, to imagine a God of love ordaining and witnessing that secular conflict. But do they fairly interpret the struggle? The indictment against Nature which was frequently heard in the early and somewhat hysterical days of the evolution doctrine is now generally admitted to have been based upon half truths. Unqualified assertions that 'nature is one with rapine,' that any little wood is 'a world of plunder and prey' (Tennyson, *Maud*, iv. iv.), that 'the cosmic process has no sort of relation to moral ends' (T. H. Huxley, *Collected Essays*, London, 1898, p. 83; cf. 197), that all progress is attained by the methods of the gladiatorial show or the battle-field, are seen to be almost a libel. For the whole range of life upon the earth—vegetal, animal, social—bears witness to something quite different from hatred and strife. The two main activities of all living things are nutrition and reproduction, and, while the object of nutrition is to secure the life of the individual, the object of reproduction is to secure the life of the species. If one great factor of evolution is concerned with self-assertion, another is concerned with self-sacrifice, and it is not too much to assert that the world is not only an abode of the strong, but a home of the loving.

'Nature has more to say than "Every one for himself." There has been a selection of the other-regarding, of the self-sacrificing, of the gentle, of the loving' (J. A. Thomson, *The Bible of Nature*, Edinburgh, 1908, p. 179).

If Rousseau erred in closing his mind to everything but the love, peace, and harmony of Nature, we are equally at fault if we find in her nothing but discord and cruelty.

'Love is not a late arrival, an after-thought, with Creation. It is not a novelty of a romantic civilization. It is not a pious word of religion. Its roots began to grow with the first cell of life that budded on this earth.' It is 'the supreme factor in the Evolution of the world. . . . The Struggle for the Life of Others is the physiological name for the greatest word of ethics—Other-ism, Altruism, Love' (H. Drummond, *The Ascent of Man*, London, 1894, pp. 276-281). 'The principles of morality have their roots in the deepest foundations of the universe, and 'the cosmic process is ethical in the profoundest sense' (John Fiske, *Through Nature to God*, London, 1899, p. 79).

If, then, creative evolution is God's theophany—His method of unfolding His purpose and revealing Himself—the facts of the case, on a wide and impartial survey, go far to prove that His central energy, or ruling motive, and therefore His true

Name, is Love. And to Divine overtures of love the human heart cannot fail to respond. Viewing the world as mysteriously 'full of God's reflex,' Charles Kingsley exclaims, 'I feel a gush of enthusiasm towards God' (*Charles Kingsley's His Letters and Memories of his Life*, London, 1877, i. 56).

It must be admitted, however, that there is another side. Nature's physical and vital forces do not all inspire confidence, making us 'very sure of God' and ready to acclaim the sentiment, 'All's right with the world.' There are times when it is not easy to 'rise from Nature up to Nature's God,' or to maintain that He has done all things well. The facts that disturb one's faith in the benevolence of the Creator are too many and too conspicuous to be ignored. The life of the forest and the jungle is not all idyllic. The wolf does not lie down with the lamb, nor the lion eat straw like the ox. The tiger and the tarantula are no less real than the fawn and the dove. It is impossible to forget Nature's ruthlessness to the unfit or her savage outbreaks of fire and flood and tempest. Over against Natura Benigna we have always to set Natura Maligna, as T. Watts-Dunton does in a group of sonnets (*The Coming of Love*). And the existence of positive evil in the world has driven not a few observers, especially those who have been victims, to the conclusion that God, whether personal or impersonal, is no more than an irresistible and inexorable Force, indifferent to pain, regardless of life, and therefore to be dreaded, hated, or scorned, rather than trusted and loved. This is the view which lends a tragic pathos to the *Prometheus Vincit*, the book of Job, and other literature of religious doubt.

With the best 'will to believe,' many a man cannot wholeheartedly affirm that 'the Variety of Creatures . . . is so many Sounds and Voices, Preachers and Trumpets, giving Glory and Praise and Thanksgiving to that Deity of Love, which gives Life to all Nature and Creature' (William Law, *The Spirit of Love* [Works, London, 1892-98, viii. 363]).

At the best the evidence is conflicting. Nature speaks with two voices. We can never be quite sure whether she is a kind mother or a cruel step-mother. Love is not seen at a glance to be her primal law. The men of science who decipher the testimony of the rocks do not feel constrained to proclaim with one accord that God is good, and, though they may comfort themselves with the reflexion that in Nature's infinite book of secrecy only a little has been read, and acknowledge that there is no religion without mystery, yet the inquiring spirit of man is troubled. Devout but open-eyed spectators of the world-drama are sometimes 'perplexed in the extreme.' They feel as if Nature were betraying the heart that truly loves her.

'God is love, transcendent, all-pervading! We do not get this faith from Nature or the world. If we look at Nature alone, full of perfection and imperfection, she tells that God is disease, murder and rapine' (H. T. Tennyson, *Alfred Lord Tennyson; A Memoir*, London, 1897, i. 314).

And, if 'to be wroth with those we love doth work like madness in the brain,' it is the crowning sorrow to doubt the God whose lovingkindness is better than life (Ps 63³).

(b) But the God who speaks ambiguously through Nature reveals Himself also through humanity. He has His dwelling 'in the mind of man' (Wordsworth, *Tintern Abbey*, 99). Here it must not be forgotten that the isolation of the human species from the rest of the sentient creation is now known to be unscientific. This fact only makes the growth of ethical ideas and ideals the more wonderful. The basis of society is the family, and the cosmic process which has brought into existence the conscious personal relation between mother and child cannot be said to be indifferent to ethical ends; rather it may be held to exist for the sake of such ends. While Huxley is right enough in maintaining (L. Huxley, *Life and Letters of Thomas*

Henry Huxley, London, 1900, ii. 268) that moral purpose, in the strict sense, is 'an article of exclusive human manufacture,' he is wrong in denying it a place in the cosmic process. Human nature is an integral part of nature. If Nature is personified, human life is her crowning achievement.

The development of 'the moral sentiments, the moral law, devotion to unselfish ends, disinterested love, nobility of soul—these are Nature's most highly wrought products, latest in coming to maturity; they are the consummation, towards which all earlier prophecy has pointed' (J. Fiske, *op. cit.* p. 130).

Now, these constitutive elements of the moral life are the root and ground of that assurance of Divine love which must be regarded in the first instance as an instinct or intuition of loving hearts. The writer of the Song of Songs makes a Hebrew maiden, inspired by her passion of holy love, exclaim: 'For love is strong as death . . . the flashes thereof are flashes of fire, a very flame of the Lord' (8⁶). This means not only that the pure love which glows and burns in the human breast is a fire kindled and cherished by God, but that it is an emanation from, and in quality identical with, His own uncreated flame of love. He 'never is dishonoured in the spark He gave us from his fire of fires' (Browning, *Any Wife to Any Husband*, iv.). Follow the gleam, and it leads to God. The natural is seen to be supernatural. 'The spirit of man is the lamp of the Lord' (Pr 20²⁷). The prophet Hosea, made wise by a patient love outwearing mortal sin in his own home, had the truth flashed upon his mind that a human affection which bears, hopes, believes, endures all things, and never fails, is explicable only as a radiation from the love of God, a revelation of the heart of the Eternal. His own ideal conduct in the supreme moral crisis of his life sensitized his mind to receive a new and true image of the Absolute. His forgiving pity, his redeeming love, his confidence in the ultimate triumph of good, gave him an unerring insight into the controlling principle of the Divine character. Love, he sees, is paramount in heaven and earth, and justice is its instrument. Love is therefore the *Leitmotiv* of his prophecy, his master-key to the mysteries of religion and history. He dares to make his own *confessio amantis* the preface to a stupendous love-tale, of which the scene is the world and the hero is God. He represents Israel's patient Divine Friend as saying, 'I delight in love, and not in sacrifice. When Israel was a child, then I loved him. . . . I drew them with cords of a man, with bands of love' (8⁶ 11¹⁻⁴; cf. 3¹ 14⁴). Later prophets and lawgivers reiterate Hosea's teaching in many beautiful forms—'I have loved thee with an everlasting love: therefore have I continued lovingkindness unto thee' (Jer 31³). 'He will rest in his love, he will joy over thee with singing' (Zeph 3¹⁷; cf. Dt 4³⁷ 7¹³ 10¹⁵, Is 48¹⁴ 63⁹). 'But it is not too much to say that the entire faith and theology of later Israel grew out of Hosea, that all its characteristic views and ideas are first to be found in his book' (C. H. Cornill, *The Prophets of Israel*⁴, Chicago, 1899, p. 53).

(c) Jesus linked His gospel with the prophecy of Hosea by repeatedly quoting the words 'I will have mercy and not (ritual) sacrifice' (Mt 9¹³ 12⁷). No one was so swift as He to discover the evidences of Divine love in Nature. The beauty of flowers, the ways of birds, the benediction of the rain, the glory of clouds, and the splendour of the sun in its strength spoke to Him of a goodness that was over all and in all. He sanctioned the religious use of Nature. He assumed that God is omnipresent in the external world. But that was not His whole message. Nature's goodness was not His evangel. Least of all did He worship Nature.

'Know, man hath all which Nature hath, but more,
And in that more lie all his hopes of good.'

(M. Arnold, *To an Independent Preacher*, 51.
(*Poet. Works*, London, 1890, p. 51).

And it is the spirit of the Ideal Man—His personal expression in word and deed—that constitutes mankind's surest evidence of the love of God. In His compassion for the multitudes, His tenderness to sinners, His hope for the vilest, His yearning to bring back the lost, His forgiveness of those who 'know not what they do,' He is the Revealer of God. He changes Israel's Lord of Hosts into mankind's 'Our Father.' The writer of the Fourth Gospel represents Him as saying, 'He that hath seen me hath seen the Father' (Jn 14⁹), and the love of God which is in Christ Jesus our Lord is a fact which science must reverently accept. Christ is indeed the crown of evolution, fulfilling not only the spiritual ideals of Israel, but the æonian ethical strivings of Nature.

Our first reason, then, for believing that God is Love, is the authority of Jesus Christ—His declaration and manifestation of the fact as God incarnate. That is to say, all the cumulative and complex proofs of Christianity are proofs to us of this fact, which simply is the kernel of Christianity. If Christianity is true, God is Love' (J. R. Illingworth, *Christian Character*, London, 1904, p. 87).

(d) The apostles always interpret Divine love in the light of Christ's sacrifice. The love which inspired the early Church was more than that of the Father who makes His sun to shine on the evil and on the good. It was that of the Father who withheld not His own Son, but delivered Him up for us all; that of the Son who laid down His life for the sin of the world. In the NT the identification of Divine love with atonement is axiomatic. 'Herein is love'—in a Divine initiative which provided a propitiation for sin (1 Jn 4¹⁰). Personal faith centres in 'him that loveth us, and loosed us from our sins by his blood' (Rev 1⁵), in 'the Son of God, who loved me and gave himself for me' (Gal 2²⁰). It was His Spirit of sacrifice that conquered the intellect as well as the heart of the ancient world. His age-long empire is the expression, not of the love of power, but of the power of love. He can never cease to be hailed as

'Strong Son of God, immortal Love.'

2. Human love.—Great and true conceptions of love have not been confined to any single nation. In the Greek classics love is often something much higher, purer, and nobler than sensual passion or natural desire. This fact appears clearly in the cosmogonic myths. The Eros of Hesiod is not 'erotic' in the later sense of the word. His Love is the fairest of the gods, who rules over the minds and councils of gods and men, the great uniting power, who brings order and harmony among the conflicting elements of Chaos. To the lofty mind of Plato love is the sympathy of affinities, the instinctive rushing together of kindred souls, the harmony of spirits, not without such a touch of natural feeling as strengthens without dishonouring the union. And the Stoics laid the foundation of a noble ethic in their conception of the brotherhood of men, regarded as akin to God, or even as children of one great Father.

'For we,' says the *Hymn* of Cleanthes, 'are Thine offspring, alone of mortal things that live and walk the earth moulded in the image of the All' (cf. *Ac* 17²⁸).

But Christianity raises love to a higher mood, smites it with a new ardour, purifies it by the touch of God, making the natural love of man and woman sacramentally holy, and changing the bitterest foe into a potential friend as 'the brother for whom Christ died.' The very vocabulary of love is changed, Eros, a word too often profaned, giving place to Agape. The natural elements of conjugal love, real and imperious enough, but consecrated now to the highest uses, have superadded to them the intimate communion of heart and soul. The genius of love is seen to be sacrifice, which has its source and sanction in God's eternal self-giving.

'Thrice blest whose lives are faithful prayers,
Whose loves in higher love endure'

(Tennyson, *In Memoriam*, xxxii.).

Only of such lives can it be safely said that 'love is an unerring light, and joy its own security' (Wordsworth, *Ode to Duty*, 19f.). The strongest affection decays unless it is rooted in idealism. The house of life cannot be built on the shifting sand of passion. Love faints and fails unless it is braced by the sense of duty. Lovelace's hero, going to the wars, says to Lucasta:

'I could not love thee, dear, so much,
Loved I not honour more.'

It is always the 'higher love'—patriotism, the passion for liberty, the enthusiasm of humanity, the zeal for God's Kingdom, any one of which may claim love's final sacrifice—that gives the affections of the home a purity and an intensity never dreamed of in the life of pampered individualism. When Christ says, 'He that loveth father or mother . . . son or daughter, more than me is not worthy of me,' He is calling men to the ideal life, which includes whatsoever things are pure and lovely and of good report. 'We needs must love the highest when we see it' (Tennyson, *Guinevere*, ad fin.).

The truth is that the heart's deepest instinct—its passionate 'amoris desiderium'—cannot be satisfied with an earthly affection. The Hebrew poet speaks for the human race when he says that, as the hart pants for the water brooks, so his soul pants after God, thirsts for the living God (Ps 42. 2).

'The most philosophical students of love from Plato and Plotinus to Augustine and Dante have felt that it demands, in the last resort, an infinite object and an infinite response' (Illingworth, p. 88).

Modern science has immeasurably widened man's mental horizon, and the vaster the material world becomes the greater is the spirit's unrest in its cage of sense. It suffers from 'the malady of the ideal,' and is restless till it rests in God. The deepest thoughts of a nation are expressed by its artists and poets. Rossetti painted human love languishing for fullness of life, but evermore fearing death. Watts painted divine love leading life *per aspera ad astra*. Tennyson protests that his love would be half-dead to know that it must die (*In Memoriam*, xxxv.), while his faith in immortality stays itself on his deathless love of a friend.

'Peace, let it be! for I loved him, and love him for ever: the dead are not dead but alive' (*Vastness*, ad fin.).

At the close of life his supreme wish was to

'learn that Love, which is, and was
My Father, and my Brother, and my God!'

(*Doubt and Prayer*, 71.).

Browning repeats in a hundred forms his reasoned conviction that

'There is no good of life but love—but love!
What else looks good, is some shade flung from love—
Love gilds it, gives it worth'

(*In a Balcony* (*Works*, London, 1885, p. 17)).

And he is certain that love cannot be quenched by death.

'No: love which, on earth, amid all the shows of it,
Has ever been seen the sole good of life in it,
The love, ever growing there, spite of the strife in it,
Shall arise, made perfect, from death's repose of it'

(*Christmas Eve*, v. 97-100).

If love is thus proved to be the essential character alike of God and of the sons of God, this result profoundly affects all human relationships. (a) True intercourse with God Himself is a fellowship of love. To be right with Him is to have the heart of a lover or a child. Though the OT breathes many passionate longings for such an intercourse, the NT alone exemplifies it in its perfection. The bare notion of such a divine fellowship was strange to the Gentile, whose relation to the object of his worship was always cold and distant. Jesus lived in uninterrupted filial communion with His Father, teaching His followers to do the same. It is their high privilege to keep themselves in the love of God (Jude 21), and so to have His love shed abroad in their hearts by the Holy Spirit given to them (Ro 5⁵).

(b) The knowledge of God can be attained only

through love. In love's lore a 'dry light' helps but little. Theology at its best, like 'divine philosophy,' is always charged with feeling. 'Pectus facit theologum.' Selfishness absolutely disqualifies the student of divine things. God reveals Himself to those who tread, like Himself, the 'love-way'—the path of lowly service. 'Even as the eye,' said Plotinus, 'could not behold the sun unless it were itself sunlike, so neither could the soul behold God if it were not Godlike' (*Ennead*, I. vi. 9). Not to sympathize is not to understand. Love is the great hierophant of the mysteries of God. He that willeth to do the will of God shall not doubt His highest teaching (Jn 7¹⁷); but he that loveth not his brother whom he hath seen, and therefore cannot love God whom he hath not seen (1 Jn 4²⁰), has lost 'the key of knowledge' (Lk 11⁵²).

(c) The ideal society consists of persons animated and united by the spirit of love, each seeking the good of all and all of each. The programme of Christianity is the renewal of human life and the reconstruction of human society, on the basis of the faith that 'God is love.' While hatred has a fatal power of division, love is the bond of perfectness (Col 3¹⁴). Human associations are strong and stable in proportion as they are welded together by that brotherly love which is the law of the kingdom of heaven.

'Love rules the court, the camp, the grove,
And men below, and saints above
For love is heaven, and heaven is love'

(Scott, *Lay of the Last Minstrel*, III. II. 5-7).

(d) As man's chief good, love is a task as well as a gift—an *Aufgabe* as well as a *Gabe*. It is not a passive sentiment or an involuntary emotion. The verb 'to love' has an imperative mood, which the greatest lawgivers—Jesus as well as Moses—frequently use. To this extent Christianity as well as Judaism is legalistic. The practice of love is the highest exercise of freedom. 'The love of the will' is no less real than that of the heart (Illingworth, p. 101). Love's rise and progress are dependent on a continuous effort, and the more perfect it becomes the more does it embody the inmost desires and strongest impulses of the soul. It is more than good-nature, which is no satisfactory basis for ethics; more than good intentions, which are proverbially delusive; it is a good will—which, according to Kant, is the one absolutely good thing in the universe.

(e) All duties spring ultimately from the one duty of love. It is more than a poetic fancy, it is a literal fact, that, 'as every lovely hue is light, so every grace is love.' Augustine describes virtue as the unfolding of love—'Virtus est ordo amoris'—and in reference to the cardinal virtues he says:

'I would not hesitate to define these four virtues which make such an impression upon our minds that they are in every man's mouth: temperance is love surrendering itself wholly to Him who is its object; courage is love bearing all things gladly for the sake of Him who is its object; justice is love serving only Him who is its object, and therefore rightly ruling; prudence is love making wise distinctions between what hinders and what helps itself' (*de Moribus*, I. 15 [25]).

The law of love is called the royal law (*νόμος βασιλικός*, Ja 2⁸), because, being supreme in dignity and power among the principles which control human action, it brings all the others into subjection to itself.

'All thoughts, all passions, all delights,
Whatever stirs this mortal frame,

All are but ministers of Love,
And feed his sacred flame' (Coleridge, *Love*, 1-4).

(f) And love is perfected when even its most laborious duties are performed with gladness. It is true that 'tasks in hours of insight will'd can be through hours of gloom fulfill'd' (M. Arnold, *Moral-ity*, 5f. [*Poet. Works*, p. 256]). But the moral life needs the heart to aid the will. It never flourishes long if its roots are left dry. Its strength and fruitfulness are always traceable to hidden springs of

affection. Schiller was justified in complaining that Kant made too much of the categorical imperative and too little of the æsthetic side of morality—the beauty of holiness. Duty is not perfectly done unless a great love makes the yoke easy and the burden light. Under this potent influence, each of a thousand thoughtful deeds becomes a 'labour of love' (*κόπος τῆς ἀγάπης*, 1 Th 1²). Ferdinand in *The Tempest* (III. i. 7) says that the mistress whom he serves makes his 'labours pleasures,' and Jacob's seven years seemed to him but so many days because of his love (Gn 29²⁰). Moral education advances rapidly when a man can say from the heart, 'To do Thy will, O Lord, I take delight.' It is not enough that morality be 'touched' by emotion; it needs to be transfused with the spirit and transfigured by the glory of love.

'No heart is pure that is not passionate; no virtue is safe that is not enthusiastic' (J. R. Seeley, *Ecce Homo*³, London, 1886, p. 8).

It thus becomes evident that, before the activities of love can be spontaneous, a man's very nature must be changed. 'Every one that loveth is born of God' (1 Jn 4⁷). That which is natural, the self-life, is first, and afterwards that which is spiritual, the life of self-renunciation. And nothing changes the natural into the spiritual like the contemplation of the sacrifice of Christ.

'Thou hast no power nor may'st conceive of Mine,
But love I gave thee, with Myself to love,
And thou must love Me who have died for thee!'

(Browning, *An Epistle, ad fin.*).

Many have found it possible to conceive for Christ 'an attachment the closeness of which no words can describe' (Seeley, p. 187). To cherish a love for Him is to love His Kingdom, which ideally embraces the whole human race. Where the AV reads 'We love him, because he first loved us,' the RV has 'We love, because he first loved us' (1 Jn 4¹⁹), which may be rightly interpreted, 'We love the Son of Man and, for His sake, every son of man.' Christ's constraining love is at once the impulse and standard of all Christian love—'that ye should love one another, as I have loved you' (Jn 15¹²). Judaism supplied the law of love (Dt 6⁵, Lv 19¹⁸), Christianity supplies the power—the grace which came by Jesus Christ (Jn 1¹⁷). It seems *a priori* impossible to love the world that hates us, but it is morally impossible not to love the world which God has so loved. Faith works by love (Gal 5⁶), and works miracles.

'The gospel . . . desires the text "Love thy neighbour as thyself" to be taken quite literally. . . . Is, then, this demand reasonable, and is its fulfilment possible? The coolly reasoning, common-sense intellect answers "No," a thousand times over. . . . The gospel replies to this *No* with a decided, quiet *Yes*' (W. Bousset, *The Faith of a Modern Protestant*, London, 1909, p. 77 f.).

While, however, all finite love flows from God's infinite love, it is not always conscious of its source. It may well up pure and strong in a heart which has never been able by searching to find out God. And it is none the less acceptable to God though He is not yet its object. This truth is exquisitely expressed in Leigh Hunt's poem of 'Abou Ben Adhem,' who, though not yet one of those who love the Lord, has it revealed to him that, because he loves his fellowmen, his name stands first among those whom love of God has blessed. And it is expressed more authoritatively in Mt 25, where our Lord proclaims that deeds done in love to the least of His brethren are accepted as done to Himself. Those who do them are unconscious Christians. Their merit, of which they are astonished to hear, is real, and their reward, which they never sought, is sure.

'For they love goodness, and to love goodness is in fact to love God. . . . While, therefore, the unbelief of men who lead good lives must always cause regret to the Christian, the goodness of their lives need not perplex him, as being implicitly due to the same cause which has for himself become explicit' (Illingworth, p. 102).

George Herbert calls sin and love the 'two vast, spacious things' which it behoves every man to measure (*The Agony*, 4). The one seems, but the other is, infinite. And the stronger subdues the weaker. Where sin abounds, grace—which is Divine love in its redeeming energy—superabounds (Ro 5²⁰). And all hope for the world lies in the fact that a God of holy love is, through His Spirit in His children, for ever wrestling with its sin.

'Is not God now i' the world His power first made?

Is not His love at issue still with sin,

Visibly when a wrong is done on earth?'

(Browning, *A Death in the Desert*, 211 ff.).

Augustine uses a still finer figure than that of the arena. He speaks of 'the glory of love . . . alive but yet frostbound. The root is alive, but the branches are almost dry. There is a heart of love within, and within are leaves and fruits; but they are waiting for a summer' (*In Epist. Joannis ad Parth.* v. 10). The leaves of the tree are for the healing of nations torn by passions of hatred. And, with eyes opened by eating of the fruit, men find their *Paradiso* in letting their desire and will be turned,

'Even as a wheel that equally is moved,

By the Love that moves the sun and the other stars'

(Dante, *Par.* xxxii. 144 f.).

JAMES STRAHAN.

LOVE (Greek).—I. GODS OF LOVE.—1. Introductory.—Gods of love, whether co-ordinate with, or actually in opposition to, deities presiding over marriage and fertility, are products of a relatively late development. Doubtless, too, the moment of gratification gave rise to certain 'momentary gods,' and served to fix their permanent influence in the cultus; this group will include Aphrodite Ἀφροδίτη in Megara (Paus. i. xliii. 6), Aphrodite Πόρνη in Abydos (Athen. xiii. 572 C; cf. R. Meister, *Griechische Dial.*, Göttingen, 1882-89, ii. 230), Aphrodite Μυρωνίς in Cythium (Paus. iii. xxii. 1), and Aphrodite Περσασώ in Argos (Hesych. s.v.; Nicand. frag. 23 [Schneider]). In Provence the phallic demon Τέπρων was dedicated to her service (*IG* xiv. 2424), and the comic poet Plato (i. 648 [Kock]) enumerates a group of kindred figures in her retinue. Another special goddess is the Παψώ of an inscription from Phalerum (J. N. Svoronos, *Das athen. Nationalmuseum*, ii. [1903] 495), whose character may be deduced from the epithets δολοπλόκος and Μαχάρις (Paus. viii. xxxi. 6) applied to Aphrodite. With this single exception, however, Aphrodite is everywhere the most prominent figure.

2. Aphrodite.—Aphrodite was originally by no means merely a goddess of love; on the contrary, she also presided over the development of female life from the period of youth, and a relic of this conception survives in the story that she nurtured the daughters of Pandareus (*Hom. Od.* xx. 68). At marriages sacrifices were offered to her in conjunction with Hera and the Charites (*Etymologicum Magnum*, 220, 54) or else to her alone (in Hermione [Paus. ii. xxxiv. 11]); in Sparta the bride's mother made a sacrifice to Aphrodite Hera (*ib.* iii. xiii. 9). Aristophanes (*Nub.* 52, *Lysistr.* 2) speaks of Aphrodite Κωλιάς as specifically the goddess of women; and the Γενετυλλίδες, the goddesses of birth, belong to her circle (schol. to Aristoph. *Thesmoph.* 130, *Lysistr.* 2; Hesych. s.v.). In

an epigram of Theocritus (no. 13; cf. U. von Wilamowitz-Möllendorff, *Textgesch. der Bukoliker*, Berlin, 1906, p. 118) a woman of Cos thanks her for the fruits of her marriage. The prayers of widows for a second husband were directed to her (Nau-pactus [Paus. x. xxxviii. 12]); in Sparta she was entreated to retard the coming of old age (*ib.* iii. xviii. 1; *Carm. Pop.* frag. 2 [Bergk]).

In addition to these functions, however, she promoted increase and growth in the larger world of nature, as appears from such epithets as *Δωρίτις* (Cnidus [Paus. i. 3]) and *Εὐδωρῶ* (Syracuse [Hesych. s.v.]), which can hardly apply exclusively to the *δώρα Κόπριδος*. To her, as the goddess of fertility, the goat was sacred, and she rides upon it (A. Furtwängler, *SMA*, 1899, ii. 590 ff.; P. Gardner, *Mélanges Perrot*, Paris, 1902, p. 121 ff.).¹ Moreover, sacrifices of swine were offered to her, as to Demeter, at the festival of the *Τορτήρα* in Argos (Athen. iii. 96 A; the name of the festival is ancient, as is shown by the mode of its formation; cf. *Ἀνθετήρα*); as also in Cos (W. Dittenberger, *Sylloge inscrip. Græc.*, Leipzig, 1898, p. 621), Thessaly, and Pamphylia (Strabo, ix. 438).² And, just as goddesses of the field and of fertility, like the Charites and the Horæ (*qq.v.*), were often represented as triads, so we find three Aphrodites in one temple at Thebes (Paus. ix. xvi. 3), and also—probably derived therefrom—in Megalopolis (*ib.* viii. xxxii. 2).³ In this broader capacity she was worshipped along with Zeus, as was Dione (who in Homer is her mother) in Dodona (*ib.* iii. xii. 11; *IG* xii. 5. 220, where the names of Aphrodite and Zeus *Ἀφροδῖσιος* occupy the first place in a dedication; *ib.* 551 *additam.*). Her association with Hermes is, no doubt, to be understood in the same way (Paus. viii. xxxi. 3; *IG* xii. 5. 273; C. Michel, *Recueil d'inscr. grecques*, Brussels, 1896–1900, nos. 832, 33; *Ancient Greek Inscriptions in the British Museum*, London, 1874–93, iv. 796; F. Hiller von Gaertringen, *Inschriften von Priene*, Berlin, 1906, no. 183). To her as the tutelary goddess of the meadow and of fertility, of the prosperity of man and beast, pertain also the dedications made to Aphrodite—probably as thanksgiving for *εὐεργετία*—by those who were leaving office, as found in Halicarnassus (*Ancient Inscr. in the Brit. Mus.*, iv. 901), Cos (*IG* xii. 5. 552), Paros (*ib.* xii. 5. 220), Megara (*ib.* vii. 41), Acraë in Sicily (*ib.* xiv. 208 ff.), and elsewhere. As the protectress of a whole people she is called *Πάνδημος* (cf. *CGS* ii. 658), and in this capacity she was actually accorded a *πομπή* at Athens (*IG* ii. Suppl. 314c). She invites human beings generally, not merely the sexes, and is thus called *Ἑταῖρα* (Wilamowitz-Möllendorff, in G. Wentzel, *Ἑπικλήσεις Θεῶν*, Göttingen, 1890, p. 4) and *Ἀρμα* (Plut. *Amat.* xxiii., though a reference to marriage is also possible here).

Then the sinister aspect of her character as an earth-goddess is likewise duly brought out; she bears the epithets *Ἐρινός* (Hesych. s.v.) and *Μελαιρίς* (Paus. ii. ii. 4; Athen. xiii. 588 C; Paus. viii. vi. 5, ix. xxvii. 5), as does Demeter in Arcadia; in Thessaly there was a festival of Aphrodite *Ἀνορία* or *Ἀνδροφόνος* (Nilsson, p. 378), which, it is true, seems to have had a reference to female love;

¹ Gardner's attempt to find an Oriental origin for this feature is rendered abortive by the fact that the goat has no place in the Astarte cult; similarly Furtwängler's efforts to interpret Aphrodite *Ἐπιεργαία* as a goddess of light are futile, as the aureole with which she is occasionally portrayed merely implies that at a later period she was identified with *Οὐρανία*.

² Farnell (*CGS* ii. 646) and M. P. Nilsson (*Griechische Feste*, Leipzig, 1906, p. 886) are undoubtedly wrong in seeking to trace in all these instances a connexion with Adonis; such a connexion finds no support in tradition, and, so far as the Argive festival is concerned, is contravened by the fact that there was no State cult of Adonis in Greece.

³ Cf. H. Usener, in *Rhein. Museum*, lviii. [1903] 205, where he points out that the distinguishing names given by Pausanias must be of late origin.

probably *Περσιθέα* (Hesych. s.v.) is also to be interpreted by this conception. According to an ancient theogony, she, together with the Erinyes and the Moiræ, is descended from Kronos (schol. Soph. *Œd. Col.* 42). A kindred figure is the Nemesis of Rhamnus (Phot. s.v. *Ῥαμνουσία Νέμεσις*; cf. Wilamowitz-Möllendorff, *Antigonos von Karystos*, Berlin, 1881, p. 10), while in Smyrna, again, we find two *Νεμέσεις* (*CGS* ii. 595 B, C; interpreted by F. G. Welcker, *Griechische Gotterlehre*, Leipzig, 1857–63, iii. 34).

In Aphrodite was merged another goddess, the pre-Hellenic Ariadne or Ariagne; the result is most clearly seen in Delos, where she acquires the name Hagne (*BCH* vii. [1883] 308), and in Amathus, where a festival in which the two sexes exchanged garments was celebrated in the grove of Aphrodite Ariadne (Nilsson, p. 369). Then in Cyprus we find a goddess of Spring named Aphrodite *θεὰ Φηρηό(μ)πα* (R. Meister, *SSGW*, 1910, p. 247), who appears again in Crete as *Ἀρθεία* (Hesych. s.v.), and in Pamphylia, where her priestesses are called *ἀνθηφόροι* (*CGI* ii. 2821 f.). Certain glosses of Hesychius (s.v. *θάλλα* and *δόξα*) which bring her into relation with the May-pole have likewise to do with this aspect of her character. In Amathus she is thought of as androgynous under the name of *Ἀφροδύτος* (Hesych. s.v.); in Phæstus, similarly, we find the androgynous dæmon Leucippus (Nilsson, p. 270). It is usually supposed that the Aphrodite cult of this district was derived from the worship of Astarte, and that it spread thence over Greece (most recently Nilsson, p. 362; cf. also *ERE* ii. 118*). It has already been noted, however, that the Aphrodite cult of the Greek motherland presents certain features which cannot be explained as importations. There is also the fact that androgynous forms are unknown as regards Astarte (W. Baudissin, *PRE* ii. 156), and that such are shown to be Hellenic by the figure of Leucippus and the festival of Ariadne in Amathus. The epithet *Ἀνκάρως*, borne by the goddess in Cyprus (*SSGW*, 1910, p. 245), is certainly met with elsewhere only as an attribute of Oriental goddesses (O. Weinreich, *Äth. Mitt. des deut. archæolog. Instituts*, xxxvii. [1912] 29, note 1), but the name *ἄμαχος θεός* (Soph. *Ant.* 800) suggests that it was peculiarly congruous with Greek sentiment. Moreover, E. Sittig (*De Græcorum nominibus theophras*, Halle, 1911, p. 105) has noted that there are in Cyprus no Phœnician theophoric names formed with 'Astarte.' It is true that in the ancient Greek tradition likewise there are only 'comparative,' but no theophoric, names derived from that of the goddess of love,¹ but the same holds good as regards Eros (*ib.* p. 110). In view of the early relation between Cyprus and Arcadia, it is of great importance to note that her birth-place was transferred not only to Cyprus or Cythera, but also to the River Ladon (Hesych. s.v. *Λαδωνεύης*). On the other hand, it is not to be denied that the figure of Aphrodite shows a considerable admixture of Oriental features. Such are certainly the ritual prostitution of Paphos and Corinth (Nilsson, pp. 365, 376), the worship of Aphrodite *Οὐρανία* (*CGS* ii. 629), and perhaps the fact that her image was armed (*ib.* 654). Her relation to Ares, which is frequently ascribed to epic influence, has not been satisfactorily explained (cf. K. Tumpel, *Fleckeisen's Jahrb.*, Suppl. xi. [1880] 641). Another doubtful point is the Hellenic origin of Aphrodite *Εὐπλόια*, the goddess of navigation (H. Usener, *Legenden der heiligen Pelagia*, Bonn, 1879, xx.); she may quite well have been evolved from the goddess of Spring, who was brought across the sea from Cyprus (cf. Theognis, 1275 ff.). On the other hand, we must certainly assign a Semitic

¹ Even *Ἀφροδύτος* (*IG* vii. 685) and *Ἐπαφροδύτος* are 'comparatives'; there is no *Ἐπαφροδύτος* at all.

origin (see W. R. Smith, *Rel. Sem.*², London, 1894, p. 471) to the sacrifice of an *ovis polluta* to Aphrodite in Cyprus.¹ The worship of Aphrodite was also influenced by foreign deities in other districts; on the Black Sea there was an *Opavla* of Scythian origin (Herod. iv. 59, 67), the lady of Apaturon (B. Latisehev, *Inscrip. Pont. Eux.*, Petrograd, 1885-90, ii. 19).

The function of the goddess was in historical times narrowed down to that merely of the protectress of love. It is only as such, with the exception already noticed, that she is recognized in the Ionic epic, and it is therefore worthy of remark that her cult was introduced into Smyrna (Tac. Ann. iii. 63) and Ephesus (Michel, *Recueil*, 839 A 5, B25) by means of oracles. Even at a later period theophoric names formed from 'Aphrodite' rarely occur in Ionia proper (Sittig, p. 108). Her temples in that region were almost all devoted to the goddess of love. In this capacity, too, she absorbed Peitho, who had originally an independent cult (in Sikyon (Paus. ii. vii. 7)), but subsequently became sometimes an epithet (*IG* ix. 2. 236), sometimes an attendant, of Aphrodite (Weizsäcker, in Roscher, iii. 1797), as is aptly shown by the figure of Farnesina (*Mon. dell' Inst.* xii. [1885] 21). She usually appears as the goddess of female love, although the Aphrodite *Αφροδίτη* of Boeotia (Phanocl. ap. Clem. Alex. *Protr.* ii. 38 [*PG* viii. 17]; Athen. xiii. 603 D; Steph. Byz. s.v. *Αφροδίτη*) seems to have had to do with *ταυρίδος έπος*, as is certainly true of the Aphrodite *Σκωρία* of Phæstus (*Etym. Mag.* 543, 49; in Crete the boys were called *σκόρια* [schol. to Eur. *Alc.* 989]). As Aphrodite was brought into relation with the evening star in the myth of Phaon-Phaethon (Wilamowitz-Möllendorff, *Hermes*, xviii. [1883] 416 ff., *Sappho und Simonides*, Berlin, 1913, p. 33 f.), it is easy to see why maidens should murmur their love-pangs to the moon-goddess (schol. to Theocr. ii. 10; Hesych. s.v. *οπαρλα αἴξ*), just as in the Erotic Fragment (6) the lover invokes the stars and the *συνεπιδρα νύξ*.

3. Eros. — Besides Aphrodite the only Greek love-deity of real importance is Eros. He too had a more general function as a deity of procreation, viz. in Thespie, where he was worshipped as a stone fetish (Paus. ix. xxvii. 1), as also probably in Parion, in Laconia Leuktra (ib. iii. xxvi. 5), and in the sex-cult of the Lyeomids (ib. ix. xxvii. 2; cf. Furtwängler, *Jahrb. des deut. archäolog. Instituts*, vi. [1892] 116 f.). In Elis he is represented beside the Charites, and to the right of them (Paus. vi. xxiv. 7), i.e. as their leader, like Hermes elsewhere. From his procreative aspect arose the cosmic character which he bears in Hesiod and among the Orphics. In consequence of the obvious derivation of his name, however, he remained all along the god of sensual desire. His cult had only a narrow range. In Laconia and Crete sacrifices were offered to him before a battle (Athen. xiii. 561 C), and the connexion between these and pæderasty has been explained by E. Bethe (*Rhein. Mus.* lxii. [1907] 445). We are told also that in the Academy he had an altar which was supposed to have been erected in the period of the Pisistratidæ (Athen. xiii. 609 D; Plut. *Sol.* 1), but Euripides (*Hipp.* 538) asserts that offerings were never paid to him at all. In literature and art his figure was always a mutable one, and he is the subject of no clear-cut myth (J. Boehlau, *Philolog.* lx. [1901] 321, and cf. O. Waser, in Pauly-Wissowa, vi. 487). Alcman (frag. 38 [Bergk⁴]) calls him a boy; Anacreon sometimes obviously regards him as a youth (frags. 2, 47), while in other passages (e.g., frag. 62) one may

well doubt whether he thinks of him as a personal deity at all. But this indefiniteness of outline, which persists throughout the subsequent period, is counterbalanced by the magnificence of the associated conception. While Sappho (frag. 1) naively prays to Aphrodite, who inflicts and removes the pains of love, Æschylus (frag. 44 [Nauck²]) extols the might of that craving which pervades all that lives, and depicts the shattering effects of *ἀνερωπὸς έπος* (*Choeph.* 599); and the other two great tragedians give expression to similar ideas regarding the destructive and enravishing power of 'Epos (Soph. *Ant.* 781; Eur. *Hipp.* 525, 1268, *Iph. Aul.* 543). Thereafter philosophical speculation seizes upon the conception, and exalts it to heights before undreamed of. Plato (*Conviv.* 187 D), playing upon the etymology of the words, contrasts *Οὔρανια* and *Πάνδημος* as sacred and profane love—a contrast having no foundation in their essential meaning, but dominating their usage for the future.

4. Later developments. — In the sphere of common life the deities of love declined as the practice of hetærisism gained ground. In this period the 'Aphrodisia became a characteristically hetæristic festival (Nilsson, p. 374). Besides Eros we now find 'Ιμερος and 'Ιδέος, 'Longing' and 'Fulfillment' (Paus. i. xliii. 6; on the meaning of 'Ιδέος cf. Wilamowitz-Möllendorff on Bion's *Adonis*, v. 58), and in other districts 'Αντρέως (Paus. i. xxx. 1, vi. xxiii. 3, 5). The earlier tradition still makes itself felt in the verses in which the bearded Eros of Simias (*Bucolici Græci*, ed. U. von Wilamowitz-Möllendorff, Oxford, 1905, p. 147) describes his powers, but coincidentally, from the period of the vase paintings ornamented with gold, a multitude of dallying Erotes find their way into art and literature, as shown by the epigrams of the Anthology and the paintings found in Pompeii. Among the Hellenistic societies the Aphrodisiasts were largely represented (F. Poland, *Griechisches Vereinswesen*, Leipzig, 1909, p. 189 ff.), though it is true that there were among them numerous foreign (Syriac) cults. The high favour enjoyed by Adonis also served to revive the worship of Aphrodite; the deities of love in general now reached their highest vogue, and it is in this period that we first meet with theophoric names derived from Aphrodite, though no doubt—with but few exceptions—in the lower ranks of society (Sittig, p. 108). Aphrodite and Eros are no longer deities of the procreative impulse, but are the guardian spirits of love in the modern sentimental sense. It is worthy of note that unhappy lovers now frequent the supposed tomb of Rhadine and Leontichos, the heroine and hero of the romance of Stesichorus (Paus. vii. v. 13). Syncretism once more laid hold of the figure of the love-goddess, and combined it with that of the healing mother of the gods (*IG* iii. 136), while the recollection of her larger function survives in the literary tradition, as appears in the Proem of Lucretius, and as reveals itself also, immediately before the collapse of the ancient religion, in the *Fervigilium Veneris* (*Anth. Lat.* i. 144 [Riese and Bücheler])—the last memorial of antiquity to the goddess whose influence pervades the universe.

LITERATURE. — The more important works have been cited in the course of the article. The reader may also consult: W. H. Engel, *Kypros*, Berlin, 1841, ii. (materials); A. Enmann, 'Kypros und der Ursprung des Aphroditenkults', in *Mém. de l'Acad. Imp. de St. Pétersbourg*, xxxiv. [1886] p. xiii; L. Freller and C. Robert, *Griechische Mythologie*, Berlin, 1887-94, i. 845, 501; W. H. Roscher, art. 'Aphrodite', in Roscher; A. Furtwängler, art. 'Eros', ib.; P. Weizsäcker, art. 'Peitho', ib.; K. Tümpel, art. 'Aphrodite', in Pauly-Wissowa (to be used with caution); O. Waser, art. 'Eros', ib.

KURT LATTE.

II. ETHICAL IDEAS.—I. The Homeric age.—It remains to examine what ideas concerning the

¹ The πρόβατον καθύψις ἀκροαγμένον (Joh. Lydus, *de Mens.* iv. 65) is doubtless to be understood in this sense; cf. J. Marquardt, *Privatleben der Römer*, Leipzig, 1886, p. 476.

emotion of love and its ethical value were characteristic of the Greeks; and the survey will reveal considerable development in consequence of political and social movements, together with a certain variety of contemporary opinions in the most important eras. The charming pictures of domestic affection which are to be found in the Homeric poems, such as the parting of Hector and Andromache (*Il.* vi. 370 ff.) or the meeting of Odysseus and Penelope (*Od.* xxiii. 85 ff.), and even occasional comments like 'there is nothing mightier and better than when husband and wife keep house with united hearts' (*Od.* vi. 182 ff.), and the tenderness of the allusion to the soft voices of the youth and maiden while they are courting each other (*Il.* xxii. 128), reflect a condition of society in which wedded love was highly prized. This was the natural outcome of the respect with which women were treated, and of the comparatively high degree of liberty which they enjoyed.

2. *Post-Homeric development.*—The causes which led to the disappearance of the Achaean monarchies are imperfectly known to us (see art. KING [Greek and Roman]), and the evidence available does not enable us to trace the course of the changes which lowered women in public estimation by depriving them of their earlier freedom. But signs of their depreciation may be observed even in the utilitarian precepts of Hesiod regarding marriage (*Works and Days*, 700 ff.); and the same tone pervades the invective of Semonides of Amorgos (frag. 7), whose pattern wife is the offspring of the busy bee blessing with material increase the gathered store of her mate (line 83 ff.). It is remarkable that the same simile is employed by Ischomachus in describing to his wife the duties which he expects her to perform (*Xen. Econ.* vii. 32), and the whole of the training prescribed in Xenophon's dialogue (*op. cit.* vii.-x.), as well as casual allusions to domestic happiness, shows that the Attic ideal was satisfied by the loyalty of a careful and thrifty housewife (*Lys.* i. 7). In historical times an ordinary Greek marriage was so entirely prompted by motives of convenience that we read without surprise the typical sentiment of the Athenian orator:

'While we keep a mistress to gratify our pleasure and a concubine to minister to our daily needs, we marry a wife to raise legitimate issue and to have our property carefully preserved' (*Dam.* i. lx. 122).

3. *Sappho.*—It must not be supposed that in the meantime the passionate outpourings of the lover failed to find adequate expression in literature. In this respect the poems of Sappho occupy so peculiar a position that an attempt must be made to define it. Sappho, a poetess of such eminence as to have been accounted the rival of Homer and to have earned the title of the tenth Muse (*Anth. Pal.* vii. xiv. 15; cf. Strabo, p. 617), owed most of her reputation to the fervour of her love-poems. Yet in estimating their tendency we encounter unusual difficulty, partly because, notwithstanding the additions made in recent years, only scanty fragments of her writings survive, and partly because comic poets and later gossip-mongers have shrouded her name in unmerited scandal. It is generally admitted that the story of her unrequited love for Phaon and of her despairing leap from the Leucadian rock are fictions due, perhaps, to a misunderstanding of her own words (U. von Wilamowitz-Möllendorff, *Sappho und Simonides*, Berlin, 1913, pp. 24-40). The grosser suspicions, such as those indicated by Seneca in his reference (*Ep.* lxxxviii. 37) to the discussion of Didymus 'an Sappho publica fuerit,' are not to be supported by such doubtful evidence as frag. 52, and are contradicted no less by the soundest part of the tradition, which represents her as a wife and a mother (*Suid. s.v.* Σαπφώ; cf. Sappho, frag. 85), than by the

sincerity and freedom of her genuine utterances. The psychological problem presented by frags. 1 and 2 and Berlin frags. 2 and 5 is to understand how the yearning affection inspired by the loss or departure of one of her girl friends came to be expressed in terms usually reserved for the rapturous emotions of sexual love. The solution, so far as the evidence permits us to form a definite conclusion, is to be sought in the character of a remarkable personality. If Sappho was the inspiring genius of a society of beautiful and high-born maidens, who sought at her hands instruction in the poetic art (frag. 136), and with whom she lived on terms of intimate affection, there was no reason why she should not, with a different intention, have anticipated the behaviour of Socrates to his young disciples, by giving utterance to her whole-hearted devotion in the language of passionate love. The parallel was drawn in antiquity by Maximus Tyrius (xxiv. 9), who was, doubtless, not the first to suggest it; and in modern times the good name of Sappho has been defended by F. G. Welcker (*Kleine Schriften*, Göttingen, 1816, ii. 80-144) and, more recently, by von Wilamowitz-Möllendorff (*op. cit.* pp. 17-78).

4. *Tragic and other poets.*—The poetic treatment of love was usually confined, as, e.g., by Mimnermus and Anacreon, to its sensual aspect, and it is clear from the history of the tragic stage that a serious preoccupation with the causes, symptoms, or effects of love was considered unworthy of a poet who aspired to be true to his calling. Hence Aristophanes (*Ran.* 1043 f.), in the character of Aeschylus, attacked the degeneracy of Euripides in exhibiting on the stage the lust of Phaedra and Sthenoboea, whereas the elder poet had never been guilty of describing a woman in love. The unfairness of this criticism is sufficiently demonstrated by the nobility of the female portraits to be found in the extant plays; but it is particularly important to observe that here, as in some other respects, Euripides was the herald of a new development in imaginative literature of which the climax has probably been reached in the extraordinary popularity of the romantic novel during the last hundred years. To this we shall presently return. If we exclude certain features in the psychological studies of Euripides, however, the dominant conception of love figured its victims as entirely passive, since love was an over-mastering force which, entering into a man's body, permeated it so completely that he was no longer able to control his impulses. Love was a particular phase of possession by a demonic being as popularly conceived (cf. *Plut. Amat.* xviii. p. 763 A), and was consequently described as a disease (*Soph. Trach.* 544) or a madness (*Eur.* frag. 161). The medium which conveyed the mysterious influence was the faculty of sight (*Aesch. Ag.* 427 f.; *Thuc.* ii. xliii. 1; *Arist. Eth. Nic.* ix. 5. 1167a 4). The lover's glance was a physical emanation from the eye, which, making its way straight to the eye of the beloved object, was met in its course by the responsive gaze speeding as fast towards the lover (*Soph.* frag. 433; *Heliod.* iii. 7; *Plut. Quæst. Conv.* v. vii. 2, p. 681 B). The shaft of light then came to be regarded as a weapon (*βέλος, τόξον*) which inflicted a wound upon its victim (see *CLR* xxiii. [1909] 255 ff., where copious illustration is given). But the love-god had his wings as well as his bow and arrow (*Eur. Hipp.* 530 ff.). For, by another figure, every violent transport of emotion, including poetic inspiration (*Pind. Isthm.* v. 64) and fear (*Apoll. Rhod.* iv. 23), as well as frenzy (*Eur. Bacch.* 332) and love (*Plat. Phædr.* 246 D, etc.), was represented in the guise of soaring wings, as if under such influences the agent were lifted out of his normal sphere into a higher region by some supernatural force. Sophocles, in

a famous fragment (frag. 855 N.²), characterizes the love-goddess, here a personification of the passion itself, in the following words:

'Love is not love alone, but is called by many names; it is Death, it is immortal Might, it is raging Frenzy, it is vehement Desire, it is Lamentation; in Love is all activity, all peace, all that prompts to violence.'

Over and over again stress is laid upon the irresistible power of Love: he is the mightiest of all the gods (Eur. frags. 269, 430; Menand. frag. 235, iii. 67 K., frag. 449, iii. 129 K.); and not one of them (Soph. *Trach.* 443), not even Zeus himself (Eur. frag. 684; Menand. frag. 209, iii. 60 K.), can withstand his attack.

'He is not wise,' says Deianira in the *Trachiniae* (441.), 'who stands forth to contend with Love, like a boxer at close quarters.'

It is not difficult to imagine the result of this assumption upon the attitude of the average Athenian citizen. The celebrated *ἑρῶδουλοι* of the Corinthian Aphrodite (cf. Pind. frag. 122 and art. *ἩΕΡΟΔΟΥΛΟΙ* [Græco-Roman]) help to explain the absence of moral reproach directed against the notorious *ἐραῖραι* of Athens. Resistance to the onset of Love is no less reprehensible than it is futile (Eur. frag. 340), though excessive indulgence is as much to be deprecated as entire abstinence (Eur. frag. 428). Such self-control as was exhibited by Agesilaus in refraining, despite the violence of his passion, from accepting the kiss offered by a beautiful Persian boy (Xen. *Ages.* v. 4 f.) was so rare that the historian felt it to be altogether marvellous.

5. Pæderasty.—The passage last quoted confronts us with that form of the love-passion, the love of boys, which has come to be known as 'Greek love,' and has tarnished the whole fabric of Greek morality. There is no trace of this custom to be found in the Homeric poems; for the assertion of such relations having existed between Achilles and Patroclus is not, so far as we can tell, earlier than Æschylus (frag. 136 [*Tragicorum Græcorum Fragmenta*², Leipzig, 1889, p. 44]). But there is no doubt of its antiquity, at any rate, among the Dorian branch of the Greek race. This is established by the evidence of certain Theraic inscriptions (*Inscriptiones Græcæ insularum maris Ægei*, ed. F. Hiller von Gaertringen, iii. [1904] 536 f.); by the relation between the *εἰσπνήλας* and *άτρας* in the disciplinary system of Spartan training (Plut. *Lyc.* xvii. f.; *Ælian, Var. Hist.* iii. 10, 12); and by the curious custom of the Cretans, according to which the lover carried off his favourite by a show of force, and was more or less seriously resisted according to his supposed merit (Strabo, pp. 483, 484). The inveteracy of the habit may be attributed to its long descent from a primitive period when continuous military service involved a scarcity of women (Bethe, in *Rhein. Mus.* lxii. 438 ff.). Moreover, it is fair to admit that the results of such companionship were by no means invariably bad.

T. Gomperz has well remarked that 'the sentiment in question appeared in as many, if not more, varieties and gradations, than the love of women at the present day. Here, as elsewhere, a noble action was often grafted upon a savage stock. Devotion, enthusiastic, intense, ideal, was not infrequently the fruit of these attachments, the sensual origin of which was entirely forgotten' (*Greek Thinkers*, Eng. tr., London, 1901-12, II. 380).

Such an elevation of sentiment is the easier to understand if we bear in mind the continually increasing segregation of the sexes to which reference has already been made, and which, owing to the natural craving for sympathy and affection, left a gap to be otherwise filled. Widely spread as the evil undoubtedly was,¹ there were many—probably an increasing number—who were keenly alive to its disgrace. But sentiment varied among different communities, and, as compared with Athens,

¹ The free use of the word *παῖδικά* in this relation is itself significant.

Thebes and Elis were subject to an unenviable notoriety in this respect (Xen. *Symp.* viii. 34; Plat. *Symp.* 182 D).

6. Philosophic love.—Such was the state of society when the teaching of Socrates began to open a new era in the progress of morality. By putting sexual desires more or less on the level of the other bodily wants (Xen. *Mem.* iv. v. 9, *Symp.* iv. 38), Socrates scarcely advanced beyond the prudential standpoint of the ordinary person. But his character, so completely vindicated by Alcibiades in the *Symposium* (215 A ff.), was free from any suspicion of vice; and, though he sometimes ironically pretended to be enamoured of beauty (Xen. *Mem.* vi. i. 2, *Symp.* iv. 27), and actually described himself as the lover of his younger companions and pupils (Xen. *Symp.* viii. 2), yet he energetically repressed the erotic tendencies of his associates (Xen. *Mem.* i. ii. 29, i. iii. 8), and required that a spurious love should be converted into a true friendship aiming solely at the moral improvement of the beloved object (Xen. *Symp.* viii. 27). Plato developed his master's teaching on this subject by connecting it with the innermost core of his philosophical system, and, in the dialogues *Symposium* and *Phædrus*, he expounded with matchless literary skill his doctrine respecting the true nature and purpose of love. The argument in the *Phædrus* (250 A) starts from the hypothesis of the immortality and pre-existence of the soul, which in its ante-natal state was associated with the eternal verities of the ideal world. Now, the ideas of Justice and Temperance are scarcely visible in their earthly counterfeits, and their apprehension is difficult and seldom attained. But Beauty is always so conspicuous that its phenomenal representation attracts at once the admiration even of those who are strangers to the mysteries of wisdom, and are engrossed in their mortal surroundings. Thus souls from which the glories of the images once beheld have faded by contact with earthly clogs, so far from being sanctified and inspired by the sight of beautiful forms, are stirred only with fleshly desire. But it is different with the lover who is also a philosopher, and his progress is described in the lecture of Diotima reported by Socrates in the *Symposium* (pp. 210, 211). The true lover, by contemplating the beauty of the beloved object, is immediately reminded of absolute Beauty itself. With his personal admiration for his beloved freed from the trammels of bodily fetters, he sees even more keenly the beauty of mind and character of which the outward form is only the reflexion. Presently he perceives the common kinship of beauty wherever it is manifested in action or thought, and learns that its complete apprehension is the task of a single science. Lastly, passing entirely from the individual to the universal, his soul is so greatly purified as to become re-united with the idea of Beauty itself, which is the ultimate source of all beautiful persons and things belonging to the phenomenal world. Such is the significance of τὸ ὁρθὸς παιδεραστεῖν (*Symp.* 211 B), or τὸ παιδεραστεῖν μετὰ φιλοσοφίας (*Phædr.* 249 A).¹ Plato's philosophy left its mark upon subsequent ethical speculation, but was too much exalted to affect the opinion of the ordinary citizen. Aristotle distinguished perfect friendship between good men based upon character from the spurious friendship of lover and beloved aiming at pleasure or utility (*Eth. Nic.* viii. 4. 1157a 1 ff.). Whereas the Epicureans entirely rejected love as a violent impulse attended by frenzy and distraction (Epic.

¹ J. Burnet has recently undertaken to show that the whole of the doctrine commonly attributed to Plato was actually propagated by Socrates (*Greek Philosophy*, I., 'Thales to Plato,' London, 1914, p. 140). It is obviously impossible to discuss the question here.

frag. 483 [Usener]), the Stoics followed closely in Plato's footsteps by recommending it to the Wise Man as an attempt to produce friendship with youths who displayed in their beauty a capacity for virtue (Diog. Laert. vii. 129; Stob. *Ecl.* ii. p. 115, 1 [Wachsmuth]; Cic. *Tusc.* iv. 70, etc.). Plotinus, as might be expected, adopted the rules laid down in the *Symposium* as a means of approach to the supra-rational and transcendent First Being (Porphyry, *Vit. Plotin.* xxiii.). On the other hand, Plutarch, whose dialogue entitled *ἑρωτικός* aimed at reconciling conflicting views by a return to the commonsense point of view, while he was largely influenced by Platonic imagery, vindicated the claim of woman as the proper object of a divinely inspired passion (21, p. 766 E ff.). We even find Plato condemned altogether as unworthy of serious attention by such writers as Dionysius of Halicarnassus (*de Admir. vi dicendi in Demosth.*, p. 1027), Athenæus (508 D), and Heraclitus, the author of the Homeric Allegories (76, p. 101, 19).

7. **Romantic love.**—In the meantime we are able to trace the growth in Greek literature of the romantic love-story in which the hero and heroine, who have fallen in love at first sight, after a series of adventures are at last happily united. The realistic treatment by Euripides of certain tragic subjects was undoubtedly one of the causes which contributed to the appearance of the domestic drama known as the New Comedy. Among the stock elements in the plots of Menander and his rivals we find the intrigue of the son of a rich citizen with a slave-girl who often proves to have been originally a free-born Athenian exposed by or otherwise lost to her parents; the overreaching of an unsympathetic parent or a rascally pander by the cunning of a devoted slave or parasite; and the ultimate reconciliation of all parties, leading to the marriage of the happy lovers. But pathos and sentiment were entirely alien to the cold atmosphere and artificial mechanism of these plays. A new tone—that of sympathy with the fortunes of the lovers—asserted itself for the first time in some of the masterpieces of Alexandrian literature. Whether this was merely the result of the diffusion of the Hellenic spirit outside the confines of the city communities through the countries which then constituted the civilized world, or more specifically of closer acquaintance with popular Eastern tales such as that of Abradates and Panthea in Xenophon (*Cyrop.* v. i. 3, vi. i. 31 ff., iv. 2–11, vii. i. 29–32, iii. 2–16; see J. P. Mahaffy, *Greek Life and Thought*², London, 1896, p. 254; E. Rohde, *Der griechische Roman*², p. 583 ff.), it is impossible now to determine. The vigour of Alexandrian love-poetry receives its best illustration in the third book of Apollonius's *Argonautica*, where the growth of Medea's passion for Jason, the conflicting interests prompting her to struggle against it, and her final submission to an irresistible emotion are depicted with poetic power of a very high order. There is no doubt that Vergil made Apollonius his chief model when constructing the well-known episode of the loves of Dido and Æneas. Another example was the love-story of Acontius and Cydippe described by Callimachus in the course of a digression in the *Ætia*, the conclusion of which has recently been discovered in one of the Oxyrhynchus Papyri (no. 1011 [=vii. [1910] 15 ff.]). The various features which became common to the writers of these romantic narratives have been summarized (A. Couat, *La Poésie alexandrine sous les trois Ptolémées*, Paris, 1882, pp. 140–160; J. P. Mahaffy, *op. cit.* p. 256 ff.) as follows: (1) the minute portraiture of the personal beauty of the lovers; (2) the sudden interposition of the love-god at their first meeting; (3) the record of the misfortunes obstructing the fulfilment of their wishes; (4) the

description of the pangs of thwarted love; and (5) the importance attached to the preservation of the virgin purity of the heroine amidst all her trials and dangers until her final reunion with the hero. It is unnecessary to follow in detail the influence exerted by the art of Callimachus and Philetas upon Latin poetry, and especially upon the works of Catullus, Propertius, and Ovid; but mention should be made of the *Μηλεγικά* of Aristides, which had an extensive circulation in the Roman era (Ovid, *Trist.* ii. 413; Lucian, *Am.* i.). This was a collection of erotic tales put together in the 2nd cent. B.C., whose general character may be inferred from Petronius, Apuleius's *Metamorphoses*, and Lucian's *Asinus*. The work of Parthenius dedicated to Cornelius Gallus was different in both scope and purpose: it consisted of excerpts relating to the misfortunes of lovers and drawn from various historians and poets. The characteristic features of the romantic love-story enumerated above were closely followed by the later romance-writers (*ἑρωτικοί*; cf. art. FICTION [Primitive] (j)), who were the direct inheritors of the Alexandrian tradition and became extremely popular in the Middle Ages (I. Bekker, *Anecd. Græca*, Berlin, 1814, p. 1082). The best of these novels was the *Ἰθιοπικά* of Heliodorus (3rd cent. A.D.), who was preceded by Xenophon, the author of the *Ephesiaca*, and followed by Achilles Tatius (*Leucippe and Clitophon*) and Chariton (*Chæreas and Callirrhoe*). The *Daphnis and Chloe* of Longus was constructed according to the same plan, but under the influence of the pastoral *Idylls* of Theocritus. To these names should be added the fictitious love-letters of Alciphron and Aristænetus, which aimed at restoring the Attic flavour of the New Comedy.

LITERATURE.—Several of the authorities consulted have been indicated above. Certain portions of the subject-matter are covered by E. Bethe, 'Die dionische Knabenliebe,' *Rhein. Mus.* lxxi [1907] 438 ff.; E. Rohde, *Der griechische Roman*², Leipzig, 1900. For the ethical development in general, see the authorities quoted under ETHICS AND MORALITY (Greek), and especially L. Schmidt, *Die Ethik der alten Griechen*, Berlin, 1888, i. 204–208; J. Denis, *Histoire des théories et des idées morales dans l'antiquité*², Paris, 1870, ii. 122–154.

A. C. PEARSON.

LOVE (Jewish).—The dictionaries define love as 'a feeling of strong personal attachment, induced by that which delights or commands admiration.' The subdivisions of this sentiment comprise the impulses of attachment, due to sexual instinct, or the mutual affections of man and woman; the impulses which direct the mutual affections of members of one family, parents and children, brothers and other relatives; the attachment that springs from sympathetic sentiments of people with harmonious character, friendship; and, finally, the various metaphorical usages of the word, as the love for moral and intellectual ideals. To the last class belongs the religious concept of love for God, while the particular Biblical conception of God's love for Israel is closely related to the idea of paternal affection.

I. Sexual love.—Love for woman as an irresistible impulse is most strongly represented in Canticles in the words:

'Love is strong as death; jealousy is cruel as the grave: the flashes thereof are flashes of fire, a very flame of the Lord. Many waters cannot quench love, neither can the floods drown it: if a man would give all the substance of his house for love, he would utterly be contemned' (8⁶).

The passion of sexual instinct which must be elevated by a feeling of love is repeatedly referred to in the same book (2¹⁴ 3⁵ 5^{2, 8} 8⁶; see also 1² 7 2⁴ 3¹⁻⁴ 5. 10 7⁷), and sensuous life of the low physical type is often mentioned either directly (Pr 7¹⁸) or as the most natural metaphor for reprehensible inclinations (Hos 3¹). The Biblical stories give us repeated instances of the power of sexual passion, as in the case of Samson (Jg 14¹⁸ 16^{4, 15}), where the

demonic power of woman over man leads man to ruin. Similar is the case of Shechem (Gn 34), though in his case the love for Dinah is not of the strictly carnal nature which characterizes the relation between Samson and Delilah. The love of King Solomon for many strange women—a prototype of the baneful influence of the harem on politics in the Orient—is given in the Bible (1 K 11¹) as the cause of the downfall of the wisest of kings. The Rabbis consistently prove from this story that it is impossible for any man to guard against the influence of woman, and use this fact as support for the theological doctrine that law is unchangeable; for even Solomon, who thought he was wise enough to be safe from having his heart turned away by women (Dt 17¹⁷), fell a victim to their influence (*Ex. Rabbā*, ch. vi., *Tanḥūmā*, *Ex.*, ed. S. Buber, Wilna, 1885, p. 18).

With equal force sexual passion is described in the case of Amnon, raping his stepsister Tamar (2 S 13), when, after the gratification of the brutal impulse, Amnon's passion turns into hatred and disgust (v. 15), a story which has a remarkable parallel in Max Halbe's tragedy *Jugend* (Berlin, 1893). The term 'love' is also used with regard to other physical pleasures, as love for delicacies (Gn 27⁴).

2. Matrimonial and parental love.—The higher conception of matrimonial love as an attachment which elevates sexual relationship, just as the latter without such relationship is degrading, is often referred to both in principle and in illustrative story. The case of Jacob, who was willing to work seven years in order to gain Rachel, and the remark that those seven years passed by like 'a few days' (Gn 29²⁰), as well as the hope of Leah that the birth of her third son would make Jacob love her (v. 34), show that ideal matrimonial relations are to be governed by spiritual affection. Thus the marriage of Isaac and Rebekah, arranged by their parents, ripens into love (Gn 24²⁷). A further stage to the relation of Jacob and Leah is that of Elkanah and Hannah (1 S 1³), where the husband tries to console his wife, longing for the blessing of children, by saying, 'Am I not better to thee than ten sons?' David is spurred by the love of Michal to do great acts of valour (18²⁶)—a conception of life akin to that of troubadour times. Even in the story of Esther the king's love for the queen (Est 2¹⁷), while in many ways showing the characteristics of an Oriental despot, willing to give half of his kingdom away in order to gratify the whim of an odalisque, is presented as an attachment seizing the king with the force of a sudden passion. Such passion is referred to in the case of a captive of war, and the law requiring that she be allowed time to become assimilated to her environment is dictated by a delicate understanding of womanly feelings (Dt 21¹⁰⁻¹⁴). The placing of duty above personal feeling underlies the law for the conduct of a man who has two wives, one of whom is beloved, and the other hated (vv. 15-17). It is worthy of note that Rabbinical apologetics explains the love as a tribute of piety and hatred as being 'hated by God' (*Sifrā*, ed. M. Friedmann, Vienna, 1864, p. 113). At the same time Rabbinic ethics derives from this law a condemnation of polygamy as leading to domestic trouble (*ib.*). In a warning against sexual licence the author of Proverbs advises (5¹⁹) devotion to 'the loving hind and the pleasant doe'; and the author of Ecclesiastes gives as a recipe for happiness the advice:

'Live joyfully with the wife whom thou lovest all the days of the life of thy vanity . . . for that is thy portion in life' (9⁹).

It is significant that such advice was put in the mouth of King Solomon. In full harmony with this conception of domestic felicity, as the highest ideal of life, are many Rabbinical statements.

'Of him who loves his wife like himself and honours her more than himself, Scripture (Job 5²⁴) says: "Thou shalt know that thy tent is in peace"' (*Peḥemōth*, 62b).

Closely related to this conception of love is the love of children, so often referred to in the OT, and already implied in the many passages praising the happiness derived from the possession of children (Ps 127³⁻⁵, 128³, Pr 17⁶) and the misfortune of not having children, as in the case of Rachel, who would rather die than live without them (Gn 30¹), and in the similar case of Hannah (1 S 1). The love of Jacob for Joseph, because 'he was the son of his old age' (Gn 37³²), and the love for Benjamin, who, in addition to being a son of his father's old age, was the only one left of his mother (44²⁰), are so naturally presented that they show the psychological continuity of human nature. The same feature of truly human life is seen in the story of Jacob and Esau, where the father loves the daring hunter Esau, while Rebekah feels more affection for Jacob, the young man of domestic habits (25²⁹). Such affection does not rest in the blood, but is often stronger in persons attracted by congenial feelings. There is hardly in the whole world's literature a nobler expression of devotion than the words spoken by Ruth to Naomi (Ru 1¹⁶⁻¹⁷), and the words of felicitation spoken to Naomi on the birth of Ruth's son, that Ruth's love for her is greater than that of seven sons (4¹⁵), are felt by the reader of to-day as a profound truth, just as they were at the time when they were written. A similar feeling of affinity is that of the faithful servant, of which the law takes cognizance in the case of a slave who would rather stay in the house of his master than go free (Dt 15¹⁶, Ex 21⁵).

3. Friendship and wider love.—The love of friends is naturally presented in comparison with that arising from sexual and blood relationship. David says of Jonathan: 'Thy love to me was wonderful, passing the love of women' (2 S 1²⁶). A true friend is one 'that sticketh closer than a brother' (Pr 18²⁴). False friends who fail in the hour of need are often referred to (Ezk 16³²⁻³⁶, 23³⁻⁹, Hos 2⁹⁻¹², La 1¹⁹, Ps 109⁴⁴). The happiness that friendship brings in poverty is contrasted with abundance and hatred (Pr 15¹⁷). In correct interpretation of this experience the Rabbis speak of the natural friendship of the ostracized for each other, naming the proselytes, slaves, and ravens (*Talm. P'sāḥim*, 113b). As specimen of the highest love the Rabbis give the case of David and Jonathan (1 S 20¹⁷), and contrast it with that of Amnon and Tamar, showing that the first, because unselfish, lasted, while the second, being based on carnal passion, could not last (*Abōth*, v. 16).

Love, as not limited to friends, but extended to all mankind, is a principle the priority of which Jewish and Christian theologians have been contesting with one another. On the Jewish side it was claimed that the command, 'Thou shalt love thy neighbour as thyself' (Lv 19¹⁸), is universal. As proof for this conception it was adduced that the commandment of love in the same chapter is extended to the stranger, 'for ye were strangers in the land of Egypt' (v. 34),¹ and that, therefore, it expresses implicitly the idea of Hillel (*q.v.*)—a teacher of the 1st cent. B.C.—'What is hateful unto thee do not unto thy neighbour; this is the whole Torah, and all the rest is its commentary' (*Talm. Shabbath*, 31a). It is claimed that in the same sense Rabbi Aqiba, a teacher of the 2nd cent., said: "'Love thy neighbour as thyself" is a great principle² in the Torah' (*Sifrā*, *Q'dōshim*, ch. 4; *Yerushalmi N'dhārīm*, x. 3). Christianity, on the other hand, claims that Jesus, in the parable of the Good Samaritan (Lk 10²⁹⁻³⁷), was the first to answer the question, 'Who is my neighbour?', in

¹ See also Dt 10¹⁸.

² Or the fundamental principle.

the universalistic sense.¹ One might introduce the argument that the Rabbis interpret the commandment, 'Love thy neighbour as thyself,' as teaching a humane method of execution, evidently implying that even the criminal remains our neighbour (Talm. *Pes.* 75a). The Hebrew word *dhēbh* ('lover') for friend is also used in the social sense, as in the case of Hiram and David (1 K 5¹⁵ [EV 5¹]).

True love is tested by the sincerity which will not hesitate to rebuke and which will accept rebuke (Pr 9⁸), but, on the other hand, loving friendship will overlook faults (10¹² 17⁹). In the same sense the Talmud reports that Johanan ben Nūri praised his companion Rabbi Aqiba for having loved him more each time that their teacher chastised him on the ground of a charge made by Johanan (*Arākhn*, 16b). For this reason controversy on religious questions between father and son, teacher and disciple, will promote their mutual love (*Qiddūshn*, 30b). At the same time it is commanded to suppress hostile feelings. In Talmudic casuistry the question is asked, What precedes, if a man see at the same time his enemy's and his friend's ox or ass lying under his burden (Ex 23⁸)? The answer is given that he must first help his enemy 'in order that he train himself in subduing passion' (*Bābhā M'eš'ā*, 32b). Love is also used in the plain social sense, as when it is said that 'breakfast removes jealousy and brings love' (*ib.* 107b). The making of friends is true greatness. He is a strong man who can turn his enemy into a friend (*Abhōth R. Nāthān*, ch. 23). Just as true friendship is praised and recommended, so false friendship is condemned. The Rabbis warn man to keep at a distance from high officials, for 'they pose as lovers, when they have use for you, and will not assist you in the time of distress' (*Abhōth*, ii. 3). The utilitarian point of view in friendship is presented in the case of Canaan who—so the Talmud says—admonished his sons to love one another, but at the same time to love all vices (*P'sāh'm*, 113b). On the other hand, it is cited as an expression of true love, when Rabbi Judah han-Nāsī, while the spiritual head of the Jewish community, repealed his own decision in a legal case when he heard that Rabbi Jose had decided differently.

4. Metaphorical uses.—Love in the metaphorical sense is used very frequently in connexion with wisdom, especially in the introduction to Proverbs (4⁸ 8¹⁷); see also the counterpart of loving folly or hating wisdom (1²² 8³⁶). As true wisdom is identical with the Torah, we find the love of the Torah (Ps 119⁹⁷, 168) and of God's commandments (vv. 47, 189) monotonously repeated in the long Psalm, which evidently is the work of an early Pharisee who anticipates the ideal presented in the sayings of the Fathers:

'Turn it [the Torah] over and turn it over, for everything is in it, speculate over it, grow old and grey with it, and never depart from it, for there is no higher conception of life than this' (*Abhōth*, v. 22).

This conception is repeated innumerable times in theory and story. In commenting on the passage, 'This day thou art become the people of the Lord thy God' (Dt 27⁹), the Rabbis say:

'Israel had indeed become God's people forty years previously, but Scripture wishes to say that to one who studies the Torah earnestly, it becomes new every day' (*B'erākhnōth*, 68b). As an example of such devotion Joshua is quoted (*M'e'nāhōth*, 99b), to whom God said, not in the sense of a commandment, but in the sense of a blessing, that the Torah should not depart out of his mouth (Jos 1⁸).

The love of instruction—in Hebrew synonymous with reproof (Pr 12¹)—wisdom (29³), purity of heart (22¹¹), righteousness (Ps 45⁷), and kindness (Mic 6⁸) are characteristic traits of the pious, just as to love

¹ M. Lazarus, *Die Ethik des Judentums*, Frankfurt, 1898, pp. 144–183.

their opposites is characteristic of the wicked (Ps 52⁶). The injunction of Micah (6⁸) to do justice, to love mercy, and to walk humbly with God is presented by a Rabbi of the 4th cent. as the sum-total of 'the 613 commandments of the Torah' (*Maklōth*, 24a). The true disciple of Aaron is, according to Hillel, 'he that loves peace and pursues it' (*Abhōth*, i. 12; cf. Ps 34¹⁴). To Rabbinic theology ethical conduct and ritualistic conformity are equally divine commands (*ib.* ii. 1), and therefore the righteous is he who practises God's laws without regard to material advantage. Moses took care of Joseph's remains (Ex 13¹⁹) while the Israelites were busy trying to secure the booty of the drowned Egyptians, which shows how he loved God's commandments (*Sōtāh*, 13a), for to bury the dead is the highest of the cardinal virtues (see To 1¹⁷–19 28², Mt 8²¹, Lk 9⁵⁹). Fulfilling God's commandments at a great personal sacrifice is another proof of love. The legend reports that Rabbi Gamaliel bought a palm-branch at a thousand drachmæ to fulfil the divine commandment (Lv 23⁴⁰) even while on board a ship (*Suklāh*, 41b). A similar story of a great number of ducats paid for an *ethrog* (citron used on the same occasion) is told by L. Münz, *Rabbi Eleasar genannt Schemen Rokeach*, Trèves, 1895, p. 115. God's sanctuary, as a place where only the righteous may set their foot (Ps 15¹), is also an object of love for the righteous (26⁸). In a eudæmonistic sense love is advised for the practical pursuits of life in the Rabbinic saying:

'Love M'e'ākhnā [work in the sense of man's occupation], avoid office and seek not the acquaintance of those in power' (*Abhōth*, i. 10).

As devotion to practical pursuits, love is mentioned in the case of king Uzziāh, who is praised as one who 'loved husbandry' (2 Ch 26¹⁰). Perhaps the obscure passage in Ec 5⁹ is to be interpreted in this sense of a king who is devoted 'to the field.' The popularity of a king is referred to as love in 1 S 18¹⁶. As a love of the ruler for the people the Rabbis define the devotion to public improvements in the case of Joshua, who is said to have built roads and erected public buildings (*Erābh'n*, 22b). Time-serving is implicitly condemned in those who 'love the rich, while the poor is hated by his own neighbour' (Pr 14²⁰). Prophets who seek their own material advantage are denounced as 'watchmen loving to slumber' (Is 56¹⁰), and the people steeped in materialism are said to 'love cakes of raisin' (Hos 3¹).

A special theological aspect of love in the metaphorical sense is the use of the word as referring to the mutual relation of God and Israel, both in Biblical and in Rabbinical literature. The traditional liturgy speaks very often of God's love for Israel in giving it His commandments, especially Sabbath and holy days, and this love is often referred to in the Bible as the love of a father for his children, as that of a loving husband, and especially as that of a bridegroom (Dt 7⁸, 18 23⁷, 1 K 10³, 2 Ch 21¹³ 9⁸, Is 43⁴ 63⁹, Hos 3¹ 9¹⁶ 11¹ 14⁴, Mal 1² 2¹¹). Inasmuch as Israel is ordained to maintain the heritage of Abraham to do justice (Gn 18¹⁹), God loves justice and righteousness (Ps 33⁸ 37²⁸ 146⁸, Is 61¹) and hates him 'that loveth violence' (Ps 11⁵). As Zion stands for the embodiment of all that is noble, God loves Mount Zion (78⁶⁸); and, as Israel's patriarchs were the living representatives of this ideal, God loves them and, for their sake, their descendants (Dt 4²⁷). Just as Israel is not selected by God for His power, but for His righteousness (Dt 7⁸ 10¹⁶; cf. Pr 15⁹), so He loves the humble (Is 66²) and His symbol, the stranger (Dt 10¹⁸). Prosperity is not a sign of God's love, and affliction is not a sign of His hatred, for the Lord often 'correcteth him that he loveth' (Pr 3¹²; see Job 5¹⁷). Yet prosperity is

repeatedly quoted as a token of God's love, as in the case of Solomon (2 S 12²⁴). In a satirical sense the correctional value of suffering is referred to in a Talmudic story.

R. Hānina calls on his friend R. Johanan who is ill, and asks him whether he loves his sufferings. Johanan answers: "Neither the sufferings nor their reward" (*Brākhoth*, 5b).

The case of king Manasseh (2 Ch 33¹²) is quoted as proof that suffering ought to be received with love (*Sanhedrin*, 101b).

As a fundamental doctrine R. Aqiba presents the principle that God loved mankind, for He created man in His image; He loved Israel, for He called them His children; and, furthermore, Israel is beloved by God, for He gave them a most precious gift, His Torah (*Abhoth*, iii. 14). R. Aqiba evidently wishes to grade God's love as the love of mankind in general, of Israel in particular, and of the law-observant Israelite as the best beloved. God, according to Rabbinic ethics, loves especially the humble and peaceful (*Brākhoth*, 17a), and more generally him who is beloved by his fellow-men (*Abhoth*, iii. 10). Modesty is the best means to gain God's love.

"I love you, says God to Israel, because, when I elevate you, you humble yourselves, for Abraham called himself 'dust and ashes' (Gn 18²⁷), and Moses said of himself and Aaron: 'What are we?' (Ex 16⁸), and David called himself: 'I am a worm, and no man' (Ps 22⁶)" (*Hullin*, 89a).

God loves, says the Talmud in a different passage (*Pesākim*, 113b), him who is calm, temperate, and humble, but hates him who is a hypocrite, who does not offer testimony when he knows something of the case, and who sees his neighbour commit a wrong and testifies, although he is the sole witness (gossip). Most probably in the sense of condemning luxury in the building of synagogues R. Hisdā, who lived in Babylonia in the 3rd cent., says, commenting on Ps 87²:

"God loves the gates, ornamented with the Hālākāh [play on words: *ṣṭūn*, 'heap of stones,' and *ṣṭōn*] more than all synagogues and schoolhouses" (*Brākhoth*, 8a).

It is consistent with this principle that the true Israelite who is beloved of God is in the sense of St. Paul (Ro 2²⁸) the spiritual Israelite, and therefore the heathen who came to Hillel to be converted, and desired to be assured that he might become high priest, was satisfied when he heard that 'the stranger who comes with his staff and wallet has the same rights as the Israelites who are called God's children' (*Shabbath*, 31b). Israel is beloved by God, for the *Shēkhinah* accompanies them wherever they are exiled (*Meḡillah*, 29a). A distinctly polemical idea is found in the statement of R. Jose, who says: 'God loves Israel so that they need no mediator' (*Yōmā*, 52a), probably an antithesis to the statement in the Gospel of John (3¹⁶ 14⁶). Yet the Rabbinic theologians considered also a miracle a proof of divine love (*Hagigah*, 26b; *Ta'anith*, 20a).

The correlate term to God's love for Israel is Israel's love for God. It is enjoined as a duty in Dt 6⁵, and this section is the principal part of the daily morning and evening devotion, thus practically enjoining the doctrine of Jesus (Mt 22³⁷), which makes this the principal commandment. The injunction to love God is typical of the Deuteronomic code (5¹⁰ 7⁹ 10¹² and often) and of the Psalms, where the pious are called lovers of God, of His salvation, or of His righteousness (5¹¹ 31²⁸ 40¹⁸ 97¹⁰ 119¹⁸² etc.). To those who love Him God will do good (Ex 20⁶, Dn 9⁴, Neh 1⁵ 13²⁸, Mal 1²), and therefore Abraham (Is 41⁸, 2 Ch 20⁷) and Solomon (1 K 3⁹) are called lovers of God, and Jehoshaphat is reproved for loving God's enemies (2 Ch 19²), whom the pious must hate (Ps 139²¹).

An important theological discussion, leading back to the early days of Christianity, is carried on in the Talmud between R. Eliezer and R.

Joshua, whether the piety of Job is to be found in his love or in his fear of God (*Sōtāh*, 27b). The love of God is characterized in the Talmud by man's conduct, which sheds lustre on his religion (*Yōmā*, 86a). As Zion stands for Israel's ideal, the pious are those who love Zion (Ps 122⁶) and the wicked those who love strange gods, often presented by the metaphor of adultery and sinful love (Is 57³, Jer 2²⁵ 8², Ezk 16¹⁶, Hos 2¹⁷ 4¹⁸). From a practical point of view the Talmudists say that one who marries his daughter to a Rabbi (*K'ethūbhōth*, 111b), or one who studies the Torah with no expectation of worldly glory (*N'dhārīm* 62a), loves God. A special sign of the love of God is submission to His decrees, as in the case of Hananiah ben Hezekiah and his school, who wrote down 'the scroll of the fasts' (a chronicle of Israel's misfortunes) because they rejoiced at the tribulations, thus exemplifying the spirit of Job, who served God out of love.

See, further, 'Semitic and Egyptian' section below, §§ 2, 4.

G. DEUTSCH.

LOVE (Muhammadian).—Although in the Qur'ān the vengeance and wrath of Allāh are more forcibly depicted than His mercy and love, any one reading the successive revelations in chronological order, as far as possible, will observe that the latter conception was gradually gaining ground from the hour when the Prophet's struggle for recognition began to the day when his victory was no longer doubtful. The epithet *wadūd* ('loving') is applied to Allāh in a *sūra* of the oldest Mecca period (lxxxv. 14); but, with this exception, and a few others dating from the period immediately before the Prophet's migration, all the Qur'ānic references to divine love occur in those chapters which were revealed at Medina. It is likely that his settlement in a city where he could not fail to be brought into contact with Christian ideas co-operated with the happy change in his fortunes and caused him to emphasize the milder aspects of Allāh in a corresponding degree. Of these references, which are about thirty in number, most are brief statements that God loves various classes of men—e.g., the beneficent, the patient, those who trust in Him, fight for Him, keep themselves pure, and so on—and that He does not love various other classes, such as the transgressors, the proud, and the unjust. Muhammad denies the claim of the Jews and Christians to be the children and, in a peculiar sense, the beloved of Allāh (v. 21). Man's love of God is mentioned in three passages: some men take idols which they love as much as they love Allāh, but the faithful love Allāh more than anything else (ii. 160); those who love God must follow His Prophet, then God will love and forgive them (iii. 29); if any of the faithful apostatize, Allāh will fill their places with men whom He loves and who love Him (v. 59).

Many traditions ascribed to the Prophet on the subject of divine love go far beyond the somewhat arid and perfunctory allusions in the Qur'ān, but there is no reason to suppose that they are genuine. They belong to the mystical doctrine which developed under Christian influence in the 2nd cent. of Islām, and which in the course of time established itself, as a guiding and inspiring principle, at the centre of Muhammadianism. The following examples are often cited by Ṣūfi authors:

'When God loves a man, his sins hurt him not; and one who repents of sin is even as one who is without sin' (*Qūt al-qulūb*, Cairo, 1310 A.H., II, 50 15).

God said: 'False are they who pretend to love Me, but when the night covers them sleep and forget Me. Does not every lover love to be alone with his beloved? Lo, I am near to those whom I love. I hearken to their secret thoughts and prayers, and I am the witness of their moaning and lamentation' (*ib. n. 60, 22*).

God said: 'My servant draws nigh unto Me by works of devotion, and I love him; and when I love him, I am the ear by which he hears and the eye by which he sees and the tongue by which he speaks' (cf. al-Qushayrī, *Risāla*, Cairo, 1318 A.H., 169, penult; there are several versions of this tradition).

It is obvious that the doctrine of divine love will assume different forms according to the relative orthodoxy of its exponents. We often find it linked with mysticism of an ascetic or devotional type, while in other cases it accompanies a thorough-going pantheism, or occupies various points between those extremes. The subject is exhaustively treated by Ghazālī in bk. vi. of his *Ihyā* (Būlāq, 1289 A.H., iv. 280-349). Only a brief abstract can be given here, but this will suffice to show the scope and development of the doctrine as it is set forth in the most popular and authoritative encyclopædia of Muhammadan ethics.

Love (*ḥubb*) is the natural desire for that which gives pleasure; when that desire grows intense, it is called 'passion' (*ishq*). Each of the bodily senses takes pleasure in different objects. Similarly, the spiritual sense, whose organ is the heart (*qalb*), has its own objects of pleasure which are imperceptible to the bodily senses. Ghazālī enumerates five chief causes of love: (1) *Self-interest*. Every one desires to preserve his life or to make it as perfect as possible. Therefore men hate death and seek wealth, children, etc. (2) *Benevolence*. Men love those who benefit them. This is indirectly a species of self-love. (3) *Disinterested love of good*. Sometimes a good man is loved for his own sake, not for any advantage that may be derived from him. (4) *Love of beauty* (moral or spiritual), when the whole pleasure which it gives consists in the perception of it. (5) *Spiritual affinity*. Ghazālī then proceeds to demonstrate that all these motives have their ultimate source in God, who is the sole object of true and perfect love, although love of God necessarily includes love of the Prophet and the saints. The strongest and rarest motive, he says, is spiritual affinity. Man is called to an *imitatio Dei* in respect of certain attributes, according to the tradition, 'Form yourselves on the moral nature of God' (*takhalluqū bi-akhlaq Allāh*). He becomes near to God through his acquisition of knowledge, benevolence, compassion, and other virtues. But, underlying this, there exists between God and man a real and intimate relation, of which Ghazālī speaks with the utmost caution as an ineffable mystery which is revealed to theosophists. It is indicated by the verse of the Qur'an where God says that He breathed His spirit into man, by the divine command given to the angels to worship Adam, and by the tradition that God created man in His own image.

Every human sense and faculty seeks a particular end, which constitutes its pleasure. The spiritual faculty—it is described by different names, e.g., reason, faith, illumination, insight—seeks to know the essences of all things. God is the highest object of knowledge; therefore knowledge of God is the highest pleasure. The gnostic (*arif*) inevitably loves that which he knows and contemplates; and his love increases in the same degree as his knowledge. Both spring up together in his heart when he has purged it of worldly desires and sensuous impressions. What he longs for is perfect contemplation and perfect knowledge. The former, though it is not attainable in the world of phenomena, may be enjoyed in the beatific vision hereafter, but perfect knowledge of the Infinite Reality can never be reached either in this world or in the next. Consequently the gnostic's longing (*shawq*) is everlasting; even in the bliss of union with God he moves unconsciously towards an unrealizable perfection.

Having defined love as the soul's desire for that which gives it pleasure, Ghazālī points out that the term is metaphorical in its application to God, who wants nothing and regards nothing except His essence and His essential attributes. When it is said that God loves certain men, the intended meaning may be expressed as follows: God raises the veil from their hearts in order that they may behold Him spiritually, and enables them to draw nigh unto Him, and has eternally willed that they should so draw nigh by means of works of devotion, which are the cause of their becoming pure within, and of the raising of the veil from their hearts, and of their attaining to the rank of nearness to God. All these are acts of favour, involving no change in the divine perfection, but inwardly transforming the person who is the object of them. How shall a man know that God loves him? Ghazālī answers this question by enumerating the signs which characterize the lovers of God, since their love of Him is the best proof that He loves them. The true lover yearns to meet God and therefore desires death, or, if he be unwilling to die, it is because he feels that he is not yet ripe for the heavenly vision; he is assiduous in worship and good works, for disobedience cannot co-exist with perfect love; he loves recollection (*dhikr*) of God, and he loves the Qur'an, which is the Word of God, and the Prophet and his fellow Muslims and

all God's creatures, yet he has no joy but in solitary communion with his Beloved, knowing that the more he loves God in this world the greater will be his bliss in the world to come. Some long for paradise, and they shall enter it, but God will give Himself only to those who have fixed their desires on Him. According to Ghazālī, true love always contains an element of fear: the lover dreads lest God should turn away from him or deprive him of contemplation, not on account of such sins as are committed by ordinary men, but to punish him for the hidden deceit (*al-makr al-khafī*) of insincerity, spiritual pride, preoccupation with spiritual delights, and similar offences against divine love, from which no one except the firmly grounded theosophist is secure.

In his concluding chapters Ghazālī explains the meaning of two terms, *uns* and *riqā*, which denote states connected with the fruition of mystical love. *Uns* is the joy of immediate contemplation of the divine beauty without regard to any possibility that the present experience may be transcended at some future time. Such persons flee from intercourse with mankind, and when they appear in the company of others they are really alone. God allows them to address Him familiarly and to use a freedom of speech that would be considered blasphemous in any one less enraptured. *Riqā* ('satisfaction') signifies willing acquiescence in whatever God has ordained. The lover cheerfully accepts tribulation and suffering at the hands of men, because he sees that God is the only real agent, and that all good and evil is divinely decreed. Ghazālī shows that prayer is not incompatible with *riqā*. He also refutes those who use the doctrine of *riqā* as an argument in favour of antinomianism.

In more advanced and pantheistic forms of Sūfism the term 'love' becomes a symbol for the soul's aspiration to attain *fanā*, i.e. to lose itself in union with God. Especially do the Islamic mystical poets exhaust all the resources of erotic imagery in order to describe the subtleties of a passion that is wholly pure and spiritual; though sometimes the same style may be deliberately adopted as a mask for other sentiments or as an artistic device. The selflessness associated with the highest types of human love makes it an apt emblem of the ecstasy in which the mystic passes away from consciousness of his individuality and lives only in the eternal and universal. The following lines by Hallāj are often quoted:

'I am He whom I love, and He whom I love is I;
We are two souls dwelling in one body.
When thou seest me, thou seest Him,
And when thou seest Him, thou seest us both'
(L. Massignon, *Kitāb al-Tawāṣūt*, Paris, 1912, p. 134).

As the true lover thinks only of his beloved, so the true mystic thinks of nothing but God. Such meditation, however concentrated it may be, cannot in itself produce love, which is a divine gift of rapture beyond the reach of learning; it is the inevitable effect of love, not its cause. By emancipated Sūfis the word 'love' is constantly employed to denote the essential spirit of all religion as contrasted with particular creeds, the ardent inward feeling of adoration as distinguished from ritual ceremonies and forms of worship. Love is the harmonizing and unifying element that transcends sectarian differences.

'Because He that is praised is, in fact, One,
In this respect all religions are one religion'
(Jalāl ad-dīn Rūmī, *Masnawī*, abridged tr., by E. H. Whinfield, p. 139).

'None of the two and seventy sects with mine
Agrees, nor any faith but Love Divine.
Saint, sinner, true believer, infidel,
All aim at Thee: away with name and sign!'
(Omar Khayyām, ed. E. H. Whinfield, London, 1901, no. 237 [translated by R. A. Nicholson]).

Thus the value of religious systems, including Islām itself, is only relative, and depends on their power to inspire love. Acts of devotion inspired by any other motive are worthless. There is no paradise except union with the Beloved, and no hell except separation from Him. These doctrines lead many Sūfis into a position that practically coincides with free thought. On the other hand, if love of God stands in sharp antithesis to conventional religion, it is equally opposed to logic, philosophy, and every form of intellectual activity. Real knowledge does not come through the mind; it is a divine revelation that flashes upon the hearts of those whom God loves. Possessing 'the light of certainty,' the lover wants no evidence for

his faith, and scorns the demonstrative arguments of the theologian.

REYNOLD A. NICHOLSON.

LOVE (Roman).—Nothing is more significant of the practical character and the prosaic morality of the early Roman than his attitude towards love. In the earliest known period of Roman religion, the so-called 'religion of Numa,' we do not find a single trace of any deity connected with love. Now, inasmuch as all phases of life had their representatives in the world of the gods, the conclusion would seem to be inevitable that, while there was, of course, natural affection, there was no pronounced development of sentiment, along either moral or immoral lines. Immoral expression was checked by that extraordinary self-restraint which characterized a people who were instinctively conserving all their energies for future conflicts; and expression along moral lines was discouraged by the severely practical view of marriage merely as an institution for the propagation of the race. So far as we are able to tell, therefore, we have in the case of the early Romans a people without any deity of love. In the course of Rome's development she was destined to receive a goddess who was eventually to represent in her world all that the Greeks included under the concept of Aphrodite. This goddess was known as Venus, and was, from about the year 300 B.C. onwards, identified with Aphrodite; but she did not exist in Rome before Servius Tullius, for we have absolutely no trace of her in the 'calendar of Numa.' On the other hand, the name *Venus* seems Latin, and it is certainly Italic and not Greek;¹ and the fact that, when the Romans learned of Aphrodite, they called her by this name seems to indicate that she was known to them before Aphrodite was, and that there was sufficient resemblance between her and Aphrodite to make an identification possible. Our first task, therefore, is to find what is known about Venus in the period before Aphrodite arrived. All books on Roman religion, except a few of the most recent ones, are full of information about an Italic, a Latin, and even a very early Roman Venus. It is our duty first to examine these statements.

1. The question of the Italic Venus.—In general the assertion is made that in very early times there was present throughout Italy the cult of a goddess who was called Venus. But a closer examination shows that many of the facts adduced to prove this statement are of very doubtful value. (1) It has been repeatedly said that this goddess of gardens was especially worshipped in Campania, that, in other words, she is the Venus so famous at Pompeii, the *Venus Pompeiana*. But this is false, for the Venus Pompeiana is the Venus whom the veterans of Sulla brought to Pompeii when they were settled there, the goddess of the *Colonia Veneria Cornelia*, a combination of Venus-Aphrodite and Felicitas (see below, § 3). Her cult, therefore, does not antedate the first cent. before Christ. (2) We hear of the worship among the Oscans of a goddess akin to Venus, a certain *Herentas* (mentioned in three Oscan inscriptions: two from Herculaneum [R. von Planta, *Gramm. der oskisch-umbrischen Dialekte*, Strassburg, 1892-97, ii. 510], and one from Corfinium [ib. ii. 546]). In one of these inscriptions *Herentas* has the cognomen *herukinas* (= *Erucina*, i.e. the Aphrodite of Mount

¹ On the word see especially A. Walde, *Lat. etymolog. Wörterbuch*, Heidelberg, 1910, p. 818 f.

Eryx in Sicily). This proves, therefore, that the goddess resembled Aphrodite; it tells nothing of Venus, so far as any early Italic cult is concerned.¹

(3) We are in a similar position regarding *Frutis*, for whom we have two passages: Cassius Hemina, quoted by Solinus, ii. 14, who tells us that in the country of the Laurentes Æneas dedicated the statue of Aphrodite, which he had brought from Sicily, to 'Mother Venus who is called Frutis'; and Paulus, in the excerpt from Festus (p. 90), who says that the temple of Venus Frutis was called *Frutinal*. But these passages show merely that an otherwise unknown goddess Frutis² was identified with Aphrodite, and again nothing is gained for the old Italic Venus. (4) There are, however, traces of a very early Venus cult at Lavinium and Ardea. Strabo (p. 232) tells us that Lavinium had a temple of Venus which was the common property of all the Latin cities (i.e. the Latin league), and that it was in charge of priests from Ardea; further, that near Ardea itself there was a shrine of Venus, which served as a meeting-place for the Latins. These statements must be taken at their full value, in spite of the fact that suspicions readily suggest themselves. It is suspicious, for instance, that Pliny (*HN* iii. 56) and Pomponius Mela (ii. 4) refer to a place in this region as Aphrodisium—an unfortunate name for an old Latin cult. Following the ordinarily sound principle that on solemn occasions the Romans often made sacrifice at the mother-city of a Roman cult, Wissowa tries to prove (*Religion und Kultus der Römer*², p. 289) that Ardea was the source of the Venus-cult in Rome, because in 217 B.C. the Decemviri (later Quindecimviri), who had charge of the Sibylline books, commanded the Romans to sacrifice to Venus at Ardea (Liv. xxii. i. 19). The Roman cult may well have come from Ardea, but this reference scarcely proves it, for the sacrifice was made under Greek auspices, and the connexion of Ardea and Rome in the Æneas-legend was likely to suggest such an act, merely as one step in the metamorphosis of the Æneas-legend into a State dogma, which was taking place during the 3rd cent. B.C.

2. Traces in Rome of the early worship of Venus.—If a search for early traces of an Italic Venus is not very rewarding, an attempt to discover early traces in Rome itself is still less so. The three old cults of Venus ordinarily quoted are Venus Cloacina, Venus Libitina, and Venus Murcia, all of them old, but not one of them originally or at any time officially connected with Venus. (1) *Venus Cloacina*. Cloacina was the goddess of the *cloaca*, and possessed a shrine on the north side of the Forum, near the Comitium, at a point where the Cloaca Maxima entered the Forum.³ No ancient writer refers to her as Venus Cloacina until Pliny (*HN* xv. 119, and, depending on him, Servius, *ad Æn.* i. 720) makes Cloacina a cognomen of Venus. Starting from this, a passage in Obsequens (8, from the year 178 B.C.), where he speaks of a fire in the Forum as having absolutely destroyed the temple of Venus, has been interpreted to mean a temple of Venus Cloacina. On the contrary, the presence of an old Venus-temple near this point may have been the origin of the false association of ideas.⁴ (2) *Venus Libitina*. The old Roman goddess Libitina, whose cult was connected with the burial of the dead,

¹ On the etymology of the name see Walde, p. 369.

² For etymology see Walde, pp. 821, 870.

³ Cf., on the recently discovered remains of this sanctuary, D. Vaglieri, *Bull. arch. com.* xxviii. [1900] 61; C. Huelsen, *Röm. Mitt.* xvii. [1902] 45, note, xx. [1905] 62 f., *Roman Forum*, Eng. tr., Rome, 1908, p. 132.

⁴ On Cloacina cf. Plant. *Cura*. 471; Livy, ut. xlviii. 5; Pliny, xv. 119; Obseq. 8 [62]; for her image on a coin see H. Cohen, *Description historique des monnaies de la république romaine*, Paris, 1867, 'Mussidia,' 6, 7; cf. H. Dressel, *Wiener Studien*, xxiv. [1902] 418 ff.

and whose sacred grove on the Esquiline was the headquarters of the undertaking establishments of Rome, had originally no connexion with Venus. Later she was popularly confused with Venus, forming Venus Libitina—a combination which never existed in the actual cult. It is easy to see two or three things which led to this: the presence eventually of a temple of Venus not far from the shrine of Libitina; the association of Aphrodite with graves, and her cognomen *ἐπιρρησία*; lastly, Venus's own cognomen *Lubentina*, or *Libentina*, which was readily confused with Libitina.¹ (3) *Venus Murcia*. Murcia was an old Roman goddess, whose nature was entirely forgotten in the closing centuries of the Republic, but whose name was kept alive by association with a shrine (*sacellum*) in the valley of the Circus Maximus on the Aventine side. The locality was known as *ad Murcia* or, later, as *Murcia vallis*. Subsequent generations, trying to find who Murcia was, connected her with *Murtia*, *Murtea*, *Myrtea*, and so thought that they had found in her a cognomen of Venus, the goddess of the myrtle.²

Little thus remains of an old Venus-cult in Rome, except the temple near the shrine of Libitina, which need not be older than the 3rd cent. B.C. We have seen, therefore, that there are very slight traces of early Italic Venus-worship, and still slighter ones of specifically Roman worship. The existence of the Italic name Venus, by which Aphrodite was known at her introduction into Rome, compels us to presuppose some sort of an Italic deity with that name, who was known and worshipped before the coming of Aphrodite. There is another possibility, which we venture merely to suggest, namely, that we have in Venus a case which resembles in part the case of Hercules and Castor-Pollux, and in part that of Mercury. Like Hercules and Castor-Pollux, she may have been originally a Greek deity, who moved up through Italy, and became nationalized into a Latin cult at Ardea, just as Hercules was at Tibur and Castor-Pollux at Tusculum. On the other hand, the name may have been derived, like that of Mercury, from the translation into Latin of an explanatory cognomen. But, whether Venus was from the beginning a Latinized form of Aphrodite or an original Italic goddess later identified with Aphrodite, one clue to her character is afforded us in the fact that, when the directly Greek Aphrodite came (and, of course, she came before the Æneas-legend), it was especially her function as a goddess of gardens that appealed to the Romans. This function, secondary in Greece, seems to have been primary in Rome.³

3. The coming of Aphrodite.—We do not know exactly when or how the Aphrodite-cult came into Rome—probably not at first by order of the Sibylline books. She came, however, before the Æneas-legend, though, of course, Aphrodite and Æneas were subsequently inseparably connected. The first datable temple is in 295 B.C., and the first official proclamation of the Æneas-dogma by the State was in the year 282 B.C. Naturally Aphrodite was known before 295 B.C., and the Æneas-legend had been circulated privately before it was publicly proclaimed. The two oldest temples of

Venus-Aphrodite in Rome were the one in the grove of Libitina, the date of whose foundation is unknown, but was probably in the 3rd cent. B.C., and the one founded in 295 B.C. near the Circus Maximus. The dedication day of both these temples was August 19th, which was also the festival of the *holitores*, or kitchen-gardeners (Varro, *de Ling. Lat.* vi. 20)—a proof of the emphasis laid upon Aphrodite's function as goddess of gardens. The temple of 295 B.C. was, however, in its origin connected with Venus-Aphrodite as a goddess of love rather than of gardens, for it was built by the ædile, Q. Fabius Gurgus, from the fines obtained from the punishment of women taken in adultery (Livy, x. xxxi. 9). During the First Punic War the Romans became acquainted with the cult of Aphrodite on Mount Eryx in Sicily; during the Second Punic War, in the year 217, this goddess, under the name of Venus Erycina, was formally introduced into Rome at the command of the Sibylline books, and given a temple on the Capitoline. A generation later, in 181 B.C., another temple⁴ of Venus Erycina was built outside the Porta Collina. But, though Aphrodite may have come in first as the goddess of gardens, this deity of Mount Eryx was pre-eminently a goddess of love, with a pronounced accent upon illegitimate love. A reaction was inevitable, and about the beginning of the 2nd cent. B.C. an altar was erected to Venus Verticordia (*Ἀφροδίτη Ἀποστρεφία* [cf. Paus. ix. xvi. 3; L. Preller and C. Robert, *Gr. Myth.*, Berlin, 1894, i. 368]), who 'turns the heart back' from evil passions (cf. Val. Max. viii. xv. 12; Pliny, *HN* vii. 120; Solin. i. 126). In 114 B.C. a temple was erected to this same goddess (Ovid, *Fasts*, iv. 133 ff.; Obseq. 37; cf. Oros. v. xv. 22) as an atonement for a prodigy which showed the anger of the gods on account of the unchastity of three Vestal virgins. We do not know where this temple was (Servius, *ad Æn.* viii. 636, wrongly places it in the valley of the Circus Maximus, confusing it with Murcia). Thus by the end of the 2nd cent. B.C. Rome was equipped with two forms of the worship of the goddess of love—the Venus of Mount Eryx, representing licentious love, and the Venus Verticordia, domestic affection. Finally, during the last century of the Republic, Venus assumed three more forms. First, under the leadership of the dictator Sulla, who translated his name *Felix* into *εὐαφρόδιτος* and devoted himself especially to the worship of Aphrodite, we have the rise of the cult of Venus Felix, a combination of Venus and Felicitas. This is the Venus Pompeiana (cf. *CIL* iv. 26, 538, 1520, 2457) of whom we find so many pictures at Pompeii; secondly, we have Venus Victrix, for whom, in company with Felicitas, Pompey erected a temple in connexion with his theatre, in 55 B.C.; and lastly comes the Venus Genetrix of Julius Cæsar, the mother of the Julian house, for whom the dictator built a temple in the middle of his Forum (46 B.C.). Thus the tradition was established that Venus was the especial protectress of the Imperial house—a tradition which must have influenced Hadrian in the building of his magnificent temple of Venus and Roma (on the site of the present church of S. Francesca Romana), in A.D. 135.

It is scarcely necessary to add that Amor, Cupid, etc., are merely the Latin translations of the names of Greek gods of love, and that they are confined in Rome entirely to poetry and art, and were never the recipients of an actual cult.

Thus we have seen that, so far as we are able to tell, Rome began life without any deities of love; that her first genuine goddess of love was the

¹ On Libitina cf. Dion. Hal. iv. 15; Plut. *Quest. Rom.* 23; Ascon. *in Milon.* 24; *CIL* vi. 9974, 10022.

² On Murcia cf. Varro, *de Ling. Lat.* v. 154; Livy, i. xxxiii. 5; Pliny, xv. 38; Fest. p. 148; Serv. *ad Æn.* viii. 636.

³ On Aphrodite as the garden-goddess cf. the cult-name *Ἀφροδεία* (Hesych. s.v.); the gardens at Paphos, *Ἀφροδεία* (Strab. p. 688); the *Ἐρῆς* in Kipros in Athens (Paus. i. xix. 2); and the Aphrodite *ἐν καλάρους* at Samos (Strab. p. 843; Athen. xii. 573 F). On Venus as garden-goddess in Rome cf. Nævius, quoted by Paulus, p. 58, where Venus = *holera*, 'vegetables'; Plaut. *Men.* 371 (cf. Phryg., *HN* xix. 50); Varro, *de Re Rust.* i. i. 6, Fest. p. 265; *CIL* iv. 2776; and the frequent references in *CIL* vi. to the Venus Hortorum Sallustianorum; cf. Huelsen, *Rom. Mitt.* iv. [1889] 270 ff.

⁴ This temple is not to be confused with the Venus Hortorum Sallustianorum (e.g., *CIL* vi. 132), which R. Lanciani thought he had located (*Bull. arch. com.* xvi. [1888] 3 ff.; cf. Huelsen, *Rom. Mitt.* iv. 270 ff.).

Greek Aphrodite; that even here the Greek ideas of Venus Erycina were offensive to her feelings, so that a corrective was sought and found in Venus Verticordia; that in the last century of her Republic three of her great rulers paid homage to Venus as their especial protectress; and, finally, that the example of Julius Caesar's cult of Venus Genetrix elevated Venus into the goddess of the Imperial household during a large part of the Imperial period which followed.

JESSE BENEDICT CARTER.

LOVE (Semitic and Egyptian).—1. Among the primitive Semites.—No written records or oral traditions have come down to us from that remote time when the forefathers of the several branches of the Semitic race dwelt together in the desert of Central Arabia. Our knowledge of that period is derived solely by the comparative method of research, which assumes that common elements in the life, thought, and language of the later Semites are an inheritance from their early ancestors. The love-songs of the Babylonians, the Egyptians, the Hebrews, and the Arabs disclose many common features that we may unhesitatingly assume to have belonged to primitive Semitic thought.

The poems of the pre-Muhammadan Arabs in particular have preserved the ancient type with remarkable fidelity. For generations this poetry was transmitted by oral tradition, but in the second, or the third, century of Islam the songs were collected and written out by the grammarians. The most important collections are the *Hamāsa*, which contains 884 songs, or fragments; the *Mu'allakāt*, or seven most famous poems; the *Mufaḍḍaliyyāt*, a collection of thirty odes, the *Diwāns*, or collected poems, of Labid; and the *Kitāb al-Aghāni*, which contains the traditions in regard to the lives of the poets and the circumstances of the composition of their songs.

Love is the emotion that finds most frequent expression in the old Arab poetry. Every *kasida*, or ode, begins normally with an account of the poet's affection for some woman and his grief at separation from her, and continues with a description of the way in which he solaces himself for her loss by war, or by adventure on his fleet camel or horse. The *kit'a*, or fragment, the other main type of Arabic lyric, is often merely a portion of an ode. Where it is an independent composition, it usually has love for its theme. The seven *Mu'allakāt* are all love poems, and the 124 songs of the fourth division of the *Hamāsa* all treat of this subject.

These poems show that, although Arabian society had already passed into the patriarchal stage in the pre-Muhammadan period, yet many traces of a primitive matriarchal organization still survived (see *ERE* ii. 116^b). The greatest liberty existed in the relations between the sexes; and women were free not only to choose their husbands, but even to receive in their tents lovers of other tribes. During the winter the rainfall was sufficient to cover the great steppes of the Nejd with scanty verdure, and to replenish the springs that dried up in summer. Then the tribes forsook their permanent headquarters by the perennial springs, and wandered far and wide over the plains. The clans

were brought into new temporary relations, and their men and women had the opportunity to become mutually acquainted. The result was numerous inter-tribal attachments.

The poets relate how they first met their lady-loves, and were captivated by their charms. Imra al-Kais hid the clothes of 'Unaiza while she was bathing, and would not return them until she promised to carry him home with her on her camel. Duraid fell in love with al-Hansa, herself a poetess, while, scantily clad, she was anointing a sick camel with pitch. Under such circumstances it is not surprising that the bards were able to describe the charms of their mistresses with as great detail as those of a favourite she-camel. Large parts of the poems are devoted to word-pictures of the beloved that are as circumstantial as the praises of the 'fairest among women' in the Song of Songs. As among the modern Orientals, fatness and heavy perfumes are specially admired in women. When an attachment was established, the poet made secret visits by night to the tent of his innamorata. If she were a maiden, she went out with him into the solitude of the desert, dragging a heavy garment behind her to obliterate the footprints in the sand (*Mu'allakā* of Imra al-Kais, 28 f.). If she were a mother, she remained in her tent, receiving his caresses with one hand, while with the other she stilled her babe (*ib.* 18). The poet protested his devotion and fidelity, and besought her to cease coquetry, and give him her love; and, he assures us, his entreaties were not in vain. Often the lady belonged to a hostile tribe, and such visits were accomplished only by stealing past the sentries at the risk of life (see *ERE* ii. 116^a). The poems are full of accounts of such love-adventures, and Imra al-Kais even boasted to 'Unaiza of the number of women that he had loved in the past (*op. cit.* 7, 18).

All this came to an end with the cessation of the winter rains and the drying up of the springs and the pasture. Then the tribes moved away to their distant homes, and the lovers were separated.

The poets tell us how they visited the spot where the tent of the beloved had stood and found it deserted. They called to mind the happy hours that they had once spent there, and shed bitter tears, and refused to be comforted. All the poems of the *Mu'allakāt* begin with this theme, and they show rare beauty and pathos in its treatment.

Love of family and friends also finds frequent expression in the old Arab poetry, particularly in the laments, one of the most numerous and most beautiful products of the lyric art.

This passion, like all strong human emotions, was ascribed to the direct influence of a divinity. Possibly in the earliest times a special daemon presided over love in distinction from the powers that presided over reproduction and birth. Traces remain of an old Arabian god Wadd, i.e. 'love' (see J. Wellhausen, *Reste arabischen Heidentums*³, Berlin, 1897, pp. 14-18; *ERE* i. 662). Little is known about his character, but he may be a personification of love similar to other Semitic gods such as Gil, 'joy,' and Pahad, 'fear' (Gn 31^{45, 46}). His erotic character is evident from a verse of Nabigha preserved by Ibn Ḥabib and cited by Wellhausen (p. 17):

'Farewell Wadd, for sporting with women is no longer permitted us, since religion is now taken seriously' (i.e. since the introduction of Islam).

However this may be, it is certain that, long before the separation of the Semitic races, the function of inspiring love had been assigned to the great mother-goddess 'Ashtar, the giver of springs and the producer of life in all realms of the organic world. Under the varied forms that this divinity assumed in different Semitic lands she was everywhere the goddess of love. The love that she inspired was not merely sexual, but also maternal, paternal, fraternal, and social. In the ancient Arab poetry she is occasionally mentioned by the titles al-Lāt, 'the goddess,' and al-'Uzzā, 'the strong,' and the infrequency with which she appears is almost certainly due to Muslim substitution of Allāh for al-Lāt. In other Semitic literatures she is constantly described and invoked as the awakener of love (see ASHTART, vol. ii. p. 115 f.; ATARGATIS, *ib.* 165 f.; ISHTAR, vol. vii. p. 430).

This goddess was the chief divinity of the Semites in their primitive matriarchal stage of social organization. She was the analogue of the human matriarch, free in her love, the fruitful mother of her clan, and its leader in peace and in war. In

her supremacy there was a potentiality of monotheism peculiar to the Semites; and it is a fact of deep importance for the growth of the religion of Israel that its starting-point in primitive Semitic religion was not the deification of nature, but the deification of maternal love. In the cult of the mother-goddess there existed in germ the message of the Prophets that God is most truly revealed in unselfish human love, and the message of the gospel that the supreme revelation of God is the perfect love of Jesus Christ.

2. Among the Hebraic Semites. — When the matriarchal form of society gradually gave place to the patriarchal, it was no longer natural to think of the chief deity of the tribe as a mother, but rather as a father. Two things might then happen to the old mother-goddess 'Ashtar. (1) She might be degraded to the position of consort of one or more male gods. This was the step taken in Babylonia, Syria, Canaan, and most other parts of the Semitic world. It involved a surrender of the incipient monotheism that was characteristic of primitive Semitic religion, and an adoption of polytheism. It also involved an over-emphasis of the sexual element in the conception of deity. (2) 'Ashtar might change her sex and become a father-god. Thus the monotheistic tendency of primitive Semitism would be preserved, and the paternal element would be blended with the maternal in the conception of the tribal god. This was what happened in the branch of the Semitic race to which the Hebrews belonged. In S. Arabia, Abyssinia, and Moab, 'Ashtar changed her sex and became the masculine 'Athtar (= 'Ashtar) who retained feminine characteristics (see *ERE* ii. 115^b; cf. also vii. 429^b). In Ammon and Edom also the tribal god was masculine and had apparently no feminine associate. Jahweh was originally a god of this sort. He was the father of His people, who united maternal characteristics with paternal, and who reigned without a consort. This is a phenomenon of great interest in the development of Hebrew monotheism. By its sexual dualism, the curse of other Semitic religions, was avoided, and at the same time maternal tenderness was retained as a fundamental element in the conception of the deity.

3. Among the ancient Egyptians. — Our knowledge of love and gods of love among the Egyptians is derived partly from the pictures and inscriptions on the monuments, and partly from occasional references in the elegant literature, but mainly from collections of popular love-songs. The chief of these are the London MS (Harris 500), which dates from about 1400 B.C.; the Turin MS, which dates from about 1200 B.C.; the Gizeh ostrakon, from about 1350 B.C.; and the Paris fragment, which may be a copy of an original of the Middle Empire. These were first published by C. W. Goodwin, *TSBA* iii. [1874] 380, and G. Maspero, *JA*, 8th ser., i. [1883] 5; and in a much more correct edition and translation by W. M. Müller, *Die Liebespoesie der alten Ägypter*. They contain true folk-poetry, free from the artificialities and tediousness of the conventional Egyptian classics and of the ordinary Oriental literature, and in their simplicity and directness they make a strong appeal to modern taste and interest. The poems in these MSS show the same loose arrangement that is seen in the Hebrew Song of Songs.

The Egyptians belonged to the Hamitic stock, which was closely related to the Semitic; and from the earliest times they were mixed with infusions of Semitic population. It is not surprising, therefore, that their conceptions of love were similar to those of the ancient Semites. In the earliest times they seem to have been organized matriarchally (see A. Erman, *Life in Anc. Egypt*,

Eng. tr., London, 1894, p. 155), and at this time their marriage was exogamous; but with the adoption of agriculture they passed over to a patriarchal organization and endogamous marriage. In order to retain their small farms in the family, marriage with a sister, or half-sister, became a common practice, just as among the Hebrews and settled Arabs marriage with a cousin on the father's side was usual (*ib.* p. 154). Hence in the poems the regular name for 'lover' is 'brother,' or 'sister,' as in the Song of Songs the 'fairest among women' is called 'sister,' i.e. 'kinswoman.'

In spite of the patriarchal endogamous organization of society, the ancient freedom of the matriarchal exogamous organization was still accorded the Egyptian women, as among the pre-Muhammadan Arabs. The liberty of the Egyptian women was without a parallel in the ancient world, and is rivalled by only a few of the most progressive modern communities. In every respect, legally and socially, they were on an equality with men. In sexual relations they were as independent as their brothers. They were free to marry the men of their choice, and a case is on record of a daughter who threatened to starve herself if she were not permitted to marry as she pleased. Under these conditions the danger of sexual licence was as great on the part of the women as on that of the men (*e.g.*, Potiphar's wife, Gn 39); at the same time an honest, equal love was attained between men and women that has not since been possible until modern times.

An interesting result of this independence was that women wooed men as often as men wooed women. In the love-poems the 'sister' speaks more frequently than the 'brother.' The maiden is sent out by her mother to catch wild fowl in nets, but she confesses that she has been so distracted by thoughts of her beloved that she has caught nothing all day (Müller, *Liebespoesie*, p. 22). She invites her beloved to walk with her in the park between Memphis and Heliopolis, and runs to meet him with her hair decked with flowers and a flower fan in her hand (*ib.* 29); she invites him to hunt with her in the green marshes that are full of birds and flowers (*ib.* 20), she takes him bathing with her, and lets him see her charms through a dress of fine diaphanous linen (*ib.* 41). When he does not respond quickly enough to her advances, she plies him with wine until he becomes more yielding (*ib.* 30); and, when this means fails, she resorts to love-philtres, though she knows that this is punishable by beating with rods (*ib.* 17). She asks him why he does not take her to cook for him, since she is so lonely without him (*ib.* 23). When she has won his love, she describes her transports of joy, and tells how she silences his every excuse for leaving her (*ib.* 14). She chides the dove (the bird of 'Ashtar) for disturbing the meeting with her lover by its cooing (*ib.* 24). When he has left her, she walks in the garden, and every flower tells her something about him (*ib.* 26). The fig offers its shelter to her as a trysting place (*ib.* 30), the pomegranate threatens to tell her secrets (*ib.* 39), the sycomore promises not to reveal what it has seen (*ib.* 40). Sometimes, as in other lands, the lover does not come when he is expected; then the maiden mourns for him, suspects that he has stayed with another girl, and hopes that he may make the new love as miserable as he has herself (*ib.* 25). Sometimes the 'sister' is cast off by her 'brother'; then she raises a bitter lament, and prays the gods to restore him to her (*ib.* 23).

The 'brother' also expresses his emotions, although less often than the 'sister.' Unlike the Semites, the Egyptians did not admire fatness, but preferred a girlish, undeveloped figure. Their beauties had a fair complexion, large dark eyes, whose expressiveness was enhanced by pointing the edges of the lids with stibium, masses of jet black hair, red lips, white teeth, quantities of jewellery, particularly earrings, garlands of flowers on the head and around the neck, and, above all, plenty of heavy perfumery. The poems dwell on the 'scent' of the beloved more often than on any other feature (*cf.* Ca 13). The 'brother' is smitten by the charms of his 'sister' (Müller, pp. 16, 44); her love fills him as honey mixes with water, or as a strong spice penetrates a perfume (*ib.* 15); he is ensnared by her locks, as a wild goose is caught in a net (*ib.* 16); he is sick from love, and cannot be cured until she comes to him (*ib.* 18). When he goes on a pilgrimage to a temple, he can think of nothing better to ask of the gods than a meeting with her, and he begs each of them to give her his favourite flower to adorn her for his coming (*ib.* 18). He longs to be her slave, to be scolded or beaten by her, if only he may be with her (*ib.* 19), her handmaid, that he may see her lovely form, her washerman, that he may smell the perfume of her garments, her ring, that he may be ever on her hand (*ib.* 43). He swims a river full of crocodiles in order to meet her, and is filled with ecstasy when he sees her (*ib.* 42). Her kiss intoxicates him like beer (*ib.* 42).

In connexion with these poems a number of gods, such as Ptah, Sekhmet, Nefer-Atum, and Amon (*ib.* 18, 23), are invoked to favour one's suit; but the proper divinity of love was Pet, 'the sky,' who, under the forms of Nut, Neith, Bast, Hathor, and a variety of other local names, was the chief Egyptian goddess. She was conceived either as a celestial cow, whose belly formed the dome of the sky, or as a woman raised up from the embrace of her brother-husband, the earth-god Keb. Under the form of Hathor, 'abode of the sun,' at Denderah she attained the greatest glory, and became one of the chief divinities of the empire. Here she was depicted as a benevolent-faced woman with the ears of a cow, or with a head-dress consisting of the horns of a cow enclosing the solar disk (see *ERE* vii. 430^a). Since she was originally a sky-goddess, her function as love-goddess must be regarded as secondary, and as due to Semitic influence. The Semites who settled in Egypt in the earliest period found in her characteristics as mother and as cow the nearest counterpart to their own mother-goddess 'Ashtar, and accordingly attributed to her all the erotic qualities of the latter. Thus she early became the Egyptian form of 'Ashtar, and the two goddesses were regarded as identical both by the Asiatic Semites and by the Egyptians. The Canaanite 'Ashtar was depicted with the attributes of Hathor, and Hathor with the attributes of 'Ashtar. During the XIXth dynasty 'Ashtar received extensive worship in Egypt under her own name, or under the epithet of Kadesh (see *ERE* iii. 182^a, 184^b).

4. Among the Hebrews.—We know that love-poetry existed among the ancient Hebrews from such incidental allusions as Am 6^a, Is 5ⁱ 23¹⁶, but specimens of these compositions have as a rule been excluded from the books of the OT. Only the Song of Songs, thanks probably to an allegorical exegesis, has found a place in the sacred canon. This is to be regarded as a collection of folk-songs, similar to those found in modern Palestine, which were sung at weddings in the villages round about Jerusalem. As such it is an invaluable source of information in regard to the Hebrew conception of love. The collection as a whole dates from the Persian or Greek period, but its individual songs may have a much greater antiquity. Besides these primary sources, we have numerous incidental references to love in the other books of the Bible.

The earlier writings of the OT show that women enjoyed much of the freedom that existed among the primitive Arabs and the Egyptians. They dared to love even before they had been wooed (1 S 18²⁰), and they were allowed to express their choice in marriage (Gn 24⁵⁸). In the Song of Songs the woman is fully as ardent as the man.

The same passionate intensity that existed among the primitive Semites was found also among the Hebrews. The Song of Songs bears a close resemblance to the love-poetry of the ancient Arabs and of the Egyptians. It describes the physical charms of the beloved with the same sensuous detail (*e.g.* 4¹⁻¹⁸ 7¹⁻⁷ 5¹⁰⁻¹⁶), and it praises the joy of love with an ardour that is surpassed by no other literature ancient or modern (*e.g.*, 1², 4²⁻⁵ 4⁹, 10¹⁶ 5¹ 7¹⁰⁻⁵⁴). This erotic tendency led the early Israelites into all sorts of sexual excesses. Polygamy, concubinage, and prostitution remained unchecked down to a late time, and brought no disgrace to either man or woman. Married women were required to be chaste, but no limits were set to the licence of the men. Love led often to crimes of violence (Gn 34³, 2 S 11. 13); but, on the other hand, it also produced beautiful instances of self-sacrificing devotion (Gn 24²⁷ 29²⁰, Hos 3¹) and of persistent, though unrequited, love (Gn 29¹⁸, 32). The OT

shows also numerous cases of strong paternal love (Gn 25²⁸ 37³, 2 S 12¹⁶⁻¹⁷ 18³³), and the love of David and Jonathan stands out conspicuously as the most perfect friendship in all literature (1 S 18¹ 20¹⁷, 2 S 1²⁶).

With all these forms of love Jahweh, the God of Israel, was closely connected in the early Hebrew consciousness. There is strong evidence that He was originally the tribal god of the Kenites who dwelt at Mount Sinai, and that He first became the God of Israel through the work of Moses. Among the Kenites He can have had no consort, for otherwise she would have been adopted by Israel at the same time when He was accepted; but in the old Hebrew religion we find no trace of any such goddess. Jahweh must, accordingly, have belonged to the class of Semitic gods that have been considered above (2), namely, mother-goddesses that were transformed into father-gods in consequence of the transition from the matriarchal to the patriarchal form of society. As such He united with paternal characteristics all the maternal characteristics of the ancient Semitic chief goddess 'Ashtar. (1) He was a god who manifested Himself in life-giving springs (*ERE* ii. 285^b). (2) He was the producer of vegetation, and sacred trees stood in His sanctuaries (*ERE* ii. 286). (3) He was the creator of animals; the Passover was celebrated in acknowledgment of His gift of the young of the flock, though these were still known as *ashtarôth* (Dt 7¹⁸ 28⁴ 35). (4) He presided over sexual love; circumcision, a primitive Semitic rite of preparation for marriage, was the special badge of loyalty to Him (Ex 4²⁴, Gn 34). In swearing by Him the hand was placed 'under the thigh' (Gn 24², 9 47²⁰). The *āshērā*, the symbol of the mother-goddess, stood originally beside His altar (2 K 13⁶ 18⁴ 21⁷ 23⁶⁻¹⁵). The *q'dheshām* and *q'dheshôth*, or temple-prostitutes (see art. *HERODOULOI* [Semitic and Egyptian]), were connected with His temples in pre-prophetic times, and did not disappear until after the Deuteronomic reformation (1 K 14²⁴ 22⁴⁶, 2 K 23⁷, Hos 4⁴, Dt 23¹⁸). (5) He was the giver of children (Gn 21¹ 30^{2, 22}, 1 S 1²⁶). His most characteristic blessing was 'be fruitful and multiply' (Gn 1²² etc.). A plausible etymology of His name is that it means 'He who causes to live,' *i.e.*, gives children and the young of the flocks and herds. To Him as the giver of offspring the first-born of animals and the first-born child were originally sacrificed, as to the mother-goddess 'Ashtar (Ex 22³⁰ 34¹⁹ 22²⁹, Ezk 20²⁴⁻²⁶, 31). (6) He showed maternal love in His care of His people (Hos 11¹⁻⁴, Is 49¹⁵ 63⁹). (7) He was the moral governor of His people (Ex 21-23. 34). (8) He gave oracles for the guidance of His people (1 S 14¹⁸⁻²⁰, 36-42 28³ 30⁷). (9) Like the old mother-goddess, He was a god of war, who fought for the defence of His children (Ex 15³, 17¹⁶, Jg 5²³, 2 S 5²⁴, Dt 23⁴⁴). (10) By a natural association of thought He was also, like 'Ashtar, a storm-god, who came in the thunder-cloud to fight for His people (Jos 10¹¹, Jg 5⁴, 1 S 12¹⁷, Ps 18). (11) He was the destroyer as well as the giver of life (Gn 7. 12¹⁷, 2 S 24¹⁸). For the analogies of these traits in 'Ashtar-Ishtar see *ERE* ii. 115 f., vii. 429-431. These facts seem to show that the Kenite Jahweh was the old Semitic goddess of love and fertility who had been transformed into a father. These maternal traits were never wholly lost in the later development of the religion of Israel.

The message of Moses, that Jahweh, the God of the Kenites, had taken pity on Israel and had determined to rescue it from the bondage in Egypt, laid an altogether new emphasis upon the love of this god. His affection for Israel was not necessary, like that of a parent for a child, but was free and moral, like that of a husband for a wife. Hence-

forth the redeeming love of Jahweh in the deliverance from Egypt and in the gift of the land of Canaan became the keynote of the religion of Israel. From His people He demanded exclusive worship and a love for Him like His love for them. As early as the Song of Deborah His worshippers are called His 'lovers' (Jg 5²¹). It is clear also that from the first Jahweh demanded a kindness to fellow-Israelites similar to that which He had shown when He delivered the nation from bondage. Thus for Israel Jahweh became the God of love in an ethical sense that had not yet appeared in any other Semitic religion.

After the conquest of Canaan Israel was confronted with the problem of the relation of Jahweh to the gods of Canaan. This problem was solved by the identification of Jahweh with the *b'alm* and other male divinities of the land, so that their sanctuaries and rites became His, and they ceased to exist by being absorbed into Him (ERE ii. 291^b). With 'Ashtart, 'Anath, and other goddesses the case was different. They could not be identified with Him, and He had no consort with whom they could be combined; consequently they remained His rivals with whom He waged war to the death. In all the pre-Exilic literature Jahweh is never once said to inspire sexual love, although this was certainly one of His primitive functions, apparently because this was regarded as the work of His rival 'Ashtart. Everything connected with the sexual life and with birth rendered one 'unclean,' that is, 'tabu' from participating in the worship of Jahweh, because of the association with the hated mother-goddess; yet, with curious inconsistency, Jahweh was still regarded as the giver of children.

In the Prophets from Hosea onwards the moral love of Jahweh that had appeared already in the Mosaic religion received fresh emphasis. In his love for his wife Hosea saw 'the beginning of Jahweh's speaking' unto him (Hos 12). When she forsook him for her lovers and plunged into the depths of degradation, he found that he could not give her up, and, when the opportunity came to buy her as a slave and to take her back to his home, he eagerly embraced it (31-3). Through this experience of unselfish love in himself he received his vision of the love of Jahweh for Israel. Jahweh had taken Israel as His bride at the time of the Exodus and had loved her ever since with unflinching fidelity; she had forsaken Him for the *b'alm* of Canaan, yet He could not give her up. He must send her into exile to reform her, yet He would not cease to love her; and, when she repented, He would restore her. This message of Hosea is echoed by all the other pre-Exilic prophets, and finds its noblest expression in the words of Jer 31³, 'I have loved thee with an everlasting love.' It is the recognition that in unselfish human love the truest revelation of the character of God is found.

In return for His love Jahweh demanded the undivided love of Israel. This teaching found its classical expression in Dt 6⁵, 'Thou shalt love Jahweh thy God with all thy heart, and with all thy soul, and with all thy might.' The recognition of Jahweh's love for Israel carried with it the realization that He required love in the Israelite's treatment of fellow-Israelites. This thought runs through all the pre-Exilic prophets, and is finally summed up by the Holiness Code (c. 600 B.C.) in the words, 'Thou shalt love thy neighbour (i.e. fellow-Israelite) as thyself' (Lv 19¹⁸). Even the alien residing in Israel was to be treated kindly (Dt 10¹⁹, Lv 19³⁴), but the extension of such treatment to the foreigner was not yet imagined (Dt 14²¹ 15³, Lv 25⁴⁴). The interpretation of Jahweh's love in the terms of wedded love reacted also upon the conception of marriage. In the post-Exilic period monogamy became the

rule, prostitution was condemned, and men were urged to cleave in fidelity to the wives of their youth (Pr 5²⁻²³ 9¹⁵⁻¹⁸ 31¹⁰⁻²¹). This higher ideal of marriage is nobly expressed in Ca 8⁶: 'Love is as strong as death, passion as insatiable as Sheol. The flashes thereof are flashes of fire, a very flame of Jahweh. Many waters cannot quench love, neither can the floods drown it. If a man should give all his possessions in exchange for it, would any one despise him?' Here wedded love is regarded as more precious than all worldly possessions, and as a flame kindled by Jahweh Himself in the soul. An utterance of such purity and profundity concerning love is not found in the whole range of classical literature.

Jesus took up the prophetic conception of the love of God for Israel, and clarified and intensified it by teaching that love was not merely an attribute, but the very essence of the divine nature. The Prophets said, 'God has love'; Jesus taught, 'God is love' (1 Jn 4⁸). He also declared the universality of God's love, which had not yet been grasped by the Prophets (Jn 3¹⁶). He reaffirmed the old commandments, 'Thou shalt love Jahweh thy God with all thy heart,' and 'Thou shalt love thy neighbour as thyself,' and gave them new meaning by His juxtaposition of them, through which love to man became the supreme expression of love to God, and by His new interpretation of 'neighbour' as meaning every fellow-man (Mk 12³⁰, Lk 10²⁵⁻³⁷). He recognized that in Himself God's love to man and man's love to God and to man were perfectly manifested, and therefore He proclaimed Himself as the supreme revealer of God and the reconciler between God and man.

See, further, 'Jewish' section above.

LOVE-FEAST.—See AGAPE.

LOYALTY.—1. Derivation and definition.—The connexion between the common meaning of this word and its derivation is obscure enough to suggest that a clearer apprehension of its significance may be gained by considering its probable origin. 'Loyalty' is the Anglicized form of the French *loyauté*; its base is *loi*, and corresponds to the English 'law' and the Latin *lex* (stem *leg*). French has also *légalité* and English 'legality,' the late Latin abstract term being adopted without change either of meaning or of form.

Now *loi* in French, and more particularly in the derivative *loyal*, means in respect of its denotation much more than 'law' in the limited sense of a definite written code. It is a generic term, and stands for that which ought to be obeyed; its source may be the will of an acknowledged ruler or ruling class, or it may be popular consent, or it may be personal agreement, whether by contract or by voluntary allegiance. It stands, moreover, for the law of nature and the dictates of reason and conscience, more especially and imperatively if these are conceived in terms of religion as manifestations of the Divine command. Law to the ancient Hebrew of the last few centuries before our era meant this last, and, in so far as it evoked his sentiment of loyalty, it meant little else. To every man the object of his loyalty is as *loi*, or 'law,' in the sense of our inquiry—the authority

whose claim on his allegiance he, as a true man, admits. Furthermore, in the natural exercise of his quality, the loyal man applies it to all persons and groups of persons in whom he recognizes any claim of bounden duty or faithful service.

But not only is the range of application wide; the claim for loyal service goes very deep: it is the service of those who desire to serve, and to do so up to the limit of their ability. The law is to be within them, written on their hearts, as the Scripture says, and incorporate in their will. The whole of Ps 119 is, indeed, an expression of the loyalist spirit in application to the Divine law. The devotion expressed by this loyalist in religion is entire; the Divine law is conceived as not perfectly apprehended by him, but he sets no limit to his desire to fulfil it to the end. It is by this note of unlimited purpose, upheld by faith and chastened by humility, that the loyalty of the Psalmist stands out in contrast to the spirit of precise legality, limited by the letter of the law and its tradition, that marked certain developments of a later era. This distinction between the loyalist and the legalist may be found in all times and all places. It applies to allegiance of every kind, whether it be to the supreme law however conceived, or to human ordinance by ancient tradition, modern statute, authoritative utterance of prophet or king, the word of a leader, the rule of a commander. There is the legalist who does what he is told, breaks no rules; he keeps faith to the word that is written and can be read. There is the loyalist who does this but can by the very nature of the spirit that is in him be counted on for more, who puts his whole mind into his duty, who forms his spirit in accordance with the spirit of the purpose to be served.

Loyalty, then, may be defined as the quality of character which issues in free devoted service to the appointed person or the appointed cause. Thus the perfectly loyal person is certain to obey, to serve, despite all obstacles, at all costs, to the best of his ability. And the best of his ability implies that he uses all means to make himself efficient in knowledge and skill and in understanding the requirements laid upon him. The perfect loyalist of story corresponds to this description. We always find him carrying out his instructions—which are his *loi*—with zealous care to undertake them so that, by fulfilling them in the spirit as well as in the letter, the purpose may be accomplished even should the letter fail. He has to be intelligent, alert, resourceful—not merely obedient to precise instructions given—and these qualities he needs the more in proportion to the importance and difficulty of his task. It follows that the development of perfect loyalty throughout a company requires that the duties should be accurately apportioned in accordance with the abilities of each member. It requires also that opportunities for the training and exercise of latent abilities should be given to all. This ideal does, in fact, appear, both in pagan heroic story and in mediæval romance, as characterizing bands of pre-Christian heroes and bands of Christian knights.¹ The unwritten law—not mere personal law, but a pact of comradeship—that bound the Round Table knights to mutual loyalty, and to the king above all, is a notable case in point. The two chief cycles of Irish Gaelic story are noteworthy also in this connexion. Later comes the age of chivalry with its blossom of romantic lore. Fealty and loyalty are main dramatic motives in all these.

2. Loyalty and fealty.—‘Fealty,’ from Latin *fidelitas*, ‘faithfulness,’ has an equivalent in all the Romance languages, and so has ‘legality.’ But

¹ Thomas Malory, *Morte d'Arthur*; see also the Celtic originals in the Welsh *Mabinogion*

loyalty was neither of these. English adopts the French *loyal* to mean ‘law-fulfilling’ in the sense of the Sermon on the Mount, and distinguishes it from ‘lawful,’ or ‘legal,’ which means allowable, and from ‘law-abiding,’ which connotes submissiveness to the law, the passive quality of the orderly citizen. German translates by specialization and slight change of significance, using such words as *Untertanentreue* (fidelity in a subordinate) and *Vaterlandstreue* (fidelity to the Fatherland); the quality, of course, exists in many diverse applications, and, though fidelity or fealty is not identical with loyalty, the one characteristic is apt to be accompanied by the other. Loyalty connotes a certain specialization of good faith and faithfulness towards the person, principle, ideal, or covenant in respect of which it is expressed; it lays stress on this obligation of specialized fealty rather than on any wider duty of humane comradeship and general goodwill. Nevertheless, there is close affinity between those qualities, the deeper motives of which so widely overlap. The good comrade who, in time of danger or trouble, takes up his responsibilities with settled mind and faithfully sustains them is apt for loyal service wherever his allegiance is given. This is often understood to be given when it is not as a fact, in which case we have either the sturdy rebel or the disloyal man.

The giving of allegiance is in effect a vow to serve; the standard case of loyalty coincides, therefore, with the standard case of fealty in which a pledge of service is given, as, for instance, by oath of allegiance to a king, by marriage vows between two persons, or by acclamation—and vote—in tribal assemblies, when law was promulgated and accepted thus. The standard cases are the same, but in the development of thought the two ideas differ. Loyalty specializes in respect of the object of service, fealty in respect of faith to the pledge. Of these the latter is the more necessary for virtuous character, and so it has been judged by the common sense of mankind, as the testimony of language shows. So long as men were either free or under strict rule, they were simply required either to keep their covenants in the former case or to do what they were told in the latter; faith and obedience were their primal social virtues. The conception of religion, for instance, as consisting in a covenant with the god, was a distinct advance on its conception as a slave service by which he was to be propitiated. The Bible as a whole contains the story of man's progress in religion from the slave service of the bondsman, through covenant, to the free man's willing recognition of a law which it is at once his bounden duty and his delight to obey, and thence to conformity of mind with the Divine purpose for mankind and thus to ‘the glorious liberty of the sons of God.’ Here we have the specific evolution of loyalty in its highest application, as at once the supreme duty, the supreme delight, and the social virtue of man. On a much smaller scale of motive and in a murkier atmosphere we might trace it in application to finite secular affairs.

3. Personal honour expressed in devotion to social ends.—The free development of fealty by self-discipline to social ends, and of loyalty as a particular case, may be studied in the literature of chivalry and romance. The practice of knightly vows, however, is much older and pre-Christian; so far as records go, it was specially characteristic of the people and the social conditions reflected in Celtic hero lore. The champion of the Gaelic stories is essentially a free man, free of feudal and—except for the spirit that binds him—free of tribal bonds. Social affection binds him too, but honour is his only law. The young hero from his

childhood is educated carefully in all manly accomplishments, and in all social courtesies, including respect for women, children, and grey hairs. He emerges from his tutelage free, comradelike, and courteous, a strong individual. But this is not all. Not the least important part of his education is the contribution which he makes to the formation of his character by laying bonds or obligations (in the Gaelic *geis*) on himself that he will or will not do certain things. The obligation never to refuse assistance to a woman frequently occurs, and may supply occasion for the turning-point of the story. Others are of the nature of obligations to a king, leader, or comrade, or to all the members of a band. King Arthur and his Round Table come to mind, or, for those who know Gaelic story, Fionn and the band of heroes whose story has been a fund of moral instruction for western Irish children to this day. Some stories turn on a conflict of two loyalties, each claiming dominion over the loyal soul. The discussion of such difficult situations, however, is not in terms of loyalty, but in terms of keeping faith; in a certain typical case where the vows appear to be of equal weight the decision is given on grounds of common sense quite modern in complexion, whether one agrees with them or not.

This practice of self-made vows in the social interest has, no doubt, been a principal factor of moral education, in its best form of self-discipline for the sake of service, among the peoples of N.W. Europe, where mild forms of government by loose tribal organization of free men prevailed. Faith to a self-made vow covers all cases of voluntary allegiance, and so, as the feudal system was established throughout Europe, it availed itself instinctively of this free man's social virtue by the institution of the oath of fealty from the feudal subordinate to his over-lord. At this point loyalty emerges; fealty and respect for authority maintain each the other and are fused. Fealty, however, is not exhausted in the compound. It remains as the quality of faith to the pledge once given, the central virtue of the self-respecting hero who cannot be false to his word. Carried to the point of fulfilment in spirit, rather than merely in letter, this implies not being false to the reasonable expectations involved in mutual understandings between his fellows and himself. The ideal of the honourable man signifies all this. Such a one is 'loyal,' or 'leal,' so far as his conduct goes, but in his motive he is primarily 'feal.' It may be that only he himself is aware of the difference. As a rule, no doubt, the motives are mixed, but it seems probable that in many, or indeed most, cases either one or the other is the backbone of the composite characteristic. If so, it is important that in the education of each person sufficient demand should be made on the leading trait to evoke it strongly, and sufficient social opportunity given to direct its practical expression in terms of the other—the faithful soul realizing itself in service to others, the loyal spirit fulfilling its service by self-reliant intelligence and steadfast faith.

4. **Political loyalty and its object in feudal and modern times.**—Loyalty connotes attachment to some definite authority which has a right to be served. The growth of the feudal system in Europe was favourable to the special personal turn which its application took. The political problem was the organization of many small groups into one large inclusive group, or nation, especially for purposes of defence against some common foe. The moral strength of such a national organism consisted largely in the series of loyalties from man to master that bound each to his feudal superior, from the lowest vassal upwards to the supreme over-lord or king. Each primary group was sufficiently

small, and grouped round a leader sufficiently well known, to bring out men's normal instincts to follow their chief, to cleave to him truly, to give him allegiance, acclaim him lord, and be his men. This is loyalty of the most picturesque and primitive type, steeped, moreover, in a high mood to which religious enthusiasm is akin. What the man was to the lord, the lord was to his over-lord, and so the national system was linked up unit by unit into larger units all under the supreme over-lordship of the king. The system of loyalties, as signified in this actual system of political allegiances, would in the perfect State have likewise been linked up, all loyalty centring in the king. When the kings of France succeeded in making all the under-feudatories take the oath direct to the king, they established themselves as the centre beyond all doubt. Under absolute personal government the king stands for *la loi*; his will—bound more or less by his coronation oath—is the standard and subject-matter of service due; his under-lords are subordinates commissioned to use their subordinates as his servants in so far as he may require.

The reality, to be sure, was never so systematic, and bred many other qualities, bad and good, besides its modicum of high-toned loyalty. It is, however, certain that such a system would profit by encouragement given to so useful a quality. Thus the situation was favourable to much praise of loyalty as a prime virtue in the mouths of the upper classes and, for this and other better reasons, in the mouths of their dependents—poets and men of letters generally, lawyers and all who had to do with the executive government, whether on the national or on the local scale.

As feudalism declined, or was broken up, the source of authority gradually defined itself anew as duplex in form: (1) the king administering the realm in accordance with the law, and (2) Parliament, *i.e.* the *élite* of the nation, Lords and Commons, wielding sole power by joint action with the king to change the law. The Lords were, in the first instance, the true peers of the king—the displaced feudal lords—and the old sentiment of feudal loyalty continued for long to be expected more or less by them and conceded less or more. As local magnates of one sort or another, they have in this country had a prolonged and honourable reign. In France they disappeared from view politically, as did the king himself, at the Revolution, and as later did the pseudo-king or emperor in 1870. England is still in process of change as regards the sentiment of the rural masses towards the aristocratic classes; but certainly it is no longer necessary to consider loyalty as a sentiment greatly affecting the relations between ordinary people and the Parliamentary peers who are lords of the soil. No historic sentiment of the kind attaches personally to the elect of the people in the House of Commons. Each commands the loyalty of his own supporters in his own constituency, so long as he and they are in general agreement on political issues. But he is not in any sense *la loi* to them, except in so far as he adopts, and with sufficient ability expounds, those principles of national policy which are common to them and him. Their feeling to him is rather that of fealty—not the maximum of fealty—than of loyalty: they support him so long as he continues to support that policy with which they continue to agree. Personal loyalties, of course, emerge, but they are not in the nature of the case. There is a very real loyalty, however, to 'the party' as a whole—either party—and to the leader of the party, also, more especially when he is an outstanding figure satisfactory to the moral sense, arresting to the imagination, strong and of a good courage.

But for the civilized world of Europe in general little importance in the first instance attached to

Parliament in any form as an object of loyalty. The king and the law emerge from the feudal system as claimants by moral right on the service of men. The sphere of service to which loyalty properly applies lies beyond and includes the sphere of duties and restrictions enforced under fear of punishment. Loyal service to the king included, as of course, loyal obedience to the law; but loyalty, no doubt, was more consciously directed to the king and fused with a sentiment rising to passionate personal devotion. The Bourbons in France and the Stuarts in England assumed themselves to be kings by Divine right after the manner of the Roman emperors—in effect, claimed all loyalty, and from many obtained it, as due to the king. The revolt in England took its stand on the law as binding on the will of kings, and claimed restitution of the people's rights as guaranteed by ancient charter. The English Revolution of the 17th cent. was, in effect, not a revolution but a restoration of the ancient constitution, cleared, however, of feudal complications, the great Whig families standing with the common people, and the Royalists, who more especially esteemed themselves as loyalists, with the defeated dynasty. In due course there emerged from the welter of pitiful plots and gallant endeavour on the one hand, and conflicting interests around the court *de facto* on the other, the British Constitution—or rather its first edition—with all its 20th cent. characteristics latent, and sure to develop, in it.

Here it is, a sufficiently complex object of loyal regard:

(1) The law of the land as the one authority which *all* must obey; and all commands by persons in office must be in accordance with it.

(2) King, Lords, and Commons making one Parliament; and these three only, and by consent of each, can change that law, order taxation, or decree the appropriation of the revenue to the uses of the Executive Government.

(3) The King and his ministers, by whose advice all his decrees are made, whom he appoints by the established custom of the constitution from the leaders of the political party which commands a majority in the House of Commons; the maintenance of this custom is guaranteed by the Commons' hold on the Power of the Purse.¹

So there emerged slowly in England the modern State, which has emerged elsewhere more suddenly and with less of the attractive complexity of detail which links it with its own historic past. This is what stands for *la loi* to the modern Englishman. As an object of loyalty it has advantages over some other examples of the 'Mixed State.' Not only is the British Constitution built as it is in order to preserve intact the ancient liberties of the people, but it has been built, bit after bit, by the very act of maintaining them. It is apt, therefore, to excite a high degree of enthusiasm in the minds of all those who care about history, all those who lay store by the liberties of the people and the powers of the House of Commons. To them the members of that House, and especially the two front benches, whichever party is in power, constitute the political aristocracy, in the fine Platonic sense. If they are loyal citizens, they will be loyal in the full sense to their own front bench, and law-abiding to the other front bench if it happens to be in power. In stormy times, when great principles, on one or other or both sides, are at stake, the adherents of the party likely to be defeated steady their minds to bear the shock by a very real loyalty, pitched finely in the more abstract key of devotion to the Crown and Constitution, whatever betide. This sentiment is effec-

tively upheld by the consciousness of historic continuity throughout all changes, each having been effected by self-evolution within the Constitution itself; the King's prerogatives that have come under the power of the Commons have done so by the King's consent; the House of Lords, too, in 1911, submitted to the limitation of its veto.

5. Grades and modes of loyal sentiment in modern life.—Among persons outside the large circle who take deep interest in political problems the sentiment of political loyalty is probably in many cases practically non-existent, or at least very shallow, except, indeed, when roused by some real or imaginary national danger. This, no doubt, is the reason why some newspapers bristle with intimations of national danger when, a general election being at hand, it seems necessary to awaken the latent patriotism of voters. Of the others—the great majority, it may be hoped—there are those to whom the ideal of the nation to be served, in some small way or other as one can, makes a constant appeal as steady as that of his lord to the devoted henchman. For some this social service lies entirely outside the sphere of State control; for others it consists in service under, or co-operation with, the State. In all cases it is better done by those who understand the ways of the public administration as it is related to their work, so that they may use it to better effect by working loyally with it. State Insurance, Old Age Pensions, and recent legislation for the benefit of children are cases in point; voluntary workers disposed to loyal co-operation can do much. No form of loyalty is more honourable than this.

Quiet, non-political people, whose sphere of work or leisure does not impinge at all on public affairs, do very often, nevertheless, take a keen interest in the doings of the State and have a certain loyalty for King and Constitution, or King and Country, which, though not productive of any service, is quite real in its way. Without party-bias for the most part, they are proud of the whole complex system under which they live, with preferences in attachment, it may be, to one or other constituent in it. This class includes all 'armchair politicians' except that large section of 'armchair political critics.' There is the 'philosophic radical,' watching for signs of the social millennium in the House of Commons. There is the Tory gentleman of 'the good old school,' who has not lost faith in the future, and still sees the Constitution as he would wish to see it. There is the genuine Royalist, who anticipates great things in the future, of which he seldom speaks, from the character and ability of the Royal family, and believes generally that events are moving steadily in the direction of absolute monarchy, world-wide and British, a century or so hence. Others there are, without any preconceptions as to an absolute best towards which we are tending, who have a comfortable loyalty for things as they are. These, if they have votes, tend to support the ministry of the day. Their existence is one reason why it is better in general, when the sands are running out, for the ministry to dissolve than to resign.

6. Loyalty in the public services.—Persons who are in the service of the State are, of course, the servants of the Executive. Efficient service according to agreement, reticence in confidential matters, and abstinence from public comment on the policy either of the ministry they serve or of the opposition they may have to serve—these make up the obvious minimum of their bounden duty. To reach the maximum two things are needed: (1) zeal in the service because it is the service, and (2) self-identification with the instructions under which they work, or loyal adherence to the leader under whom they serve. Under adverse circumstances

¹ Since the battle of the Constitution had been fought to a large extent on the people's claim to be taxed only by their own consent, given by a majority of their elected representatives in the House of Commons, it was inevitable that the Power of the Purse should be stoutly claimed and rigorously retained by the Commons; and from this it followed, by the logic of events, that no ministry could remain in power that did not command the confidence of the Lower House.

these conditions may fail to be possible in whole or part; in that case the loyal temper still shows itself by putting the best face upon the matter and keeping silence.

It is in the military and naval services more particularly that the idea of service, as to the king direct, counts for most. Here we are back to primitive requirements. The soldier is under bond to risk his life at the word of command. Respect for this word is vital to his character—respect without limits—and this, in the last resort, is self-devotion unto death. The good soldier's loyalty, no doubt, is often fealty pure and simple, as, *e.g.*, it certainly is when he has naturally no sentimental tie to the service in which he finds himself. Normally, however, we may take it to be a compound mixed in various proportions, into which enter loyal attachments to his sovereign, his country, his leader, his comrades, and the flag he follows, the last being a symbol of all these things and of his own self-respect as bound to stand or fall by them.

7. Problems arising from the complexity of the modern State.—Casual reference has been made above to non-political loyalty as between friends, lovers, kindred, and the members of a voluntary group or a natural social order. Clearly this is not the primary application of the word, but the tendency to use it in this, rather than in the political, sense appears to be on the increase. This is due, no doubt, to that confusion of ideas as to the political object of loyalty consequent on the complexity of the modern State. Angry politicians are apt to use the word 'disloyal' rashly to denote persons who differ from themselves as to the right balance of power in the State and the focus, consequently, of right loyalty. Thus claims have sometimes been made in the name of loyalty to right of attack on the lawfully constituted State, as, *e.g.*, in the case of constitutional reform to which a minority strongly objects. This implies confusion of ideas between the State in some special sense—*e.g.*, apart from the principle of development which it contains—and the State as it is, including its provision of a sovereign authority empowered by law and precedent to make changes in all things, including itself. A somewhat wilful confusion of ideas to the opposite effect is also possible between hostility to the *personnel* and policy of the ministry of the day, which is the normal motive-force that sways the political pendulum, and disloyalty to the sovereign Parliament which happens to be led by that ministry, and the majority of which takes responsibility for its doings. The complex character of the modern State lends itself to such confusion of feeling in times of stress and change. Every attempt at large reform divides the citizens into two camps, each vowing loyalty to its own ideal of the State in some particular. This is party loyalty, which is quite consistent, as the inner circles fully understand, with perfect loyalty to the actual State as by law established—that self-conserving, self-developing organization of King, Lords, and Commons with which we are all familiar. An attractive focus for the loyal sentiment of the simple or careless citizen, who makes no attempt to join issue in the political dialectic, is provided by the presence in the trio of the hereditary monarch in his uplifted place, holding his supreme veto to be used only on the side of the majority in the House of Commons, subject to the delaying powers of the House of Lords. The number of persons in Britain whose sole effective loyalty centres in attachment to the Crown is probably large; it counts doubtless for much also in the British colonies.

8. The focus of loyalty in republican nations.—

In republican States this focus is supplied—so far as it is supplied at all—by a more vivid consciousness of the organized nation as a self-governing whole, the ark of whose covenant is the Constitution. The ideal of the republic as the lode-star of loyal sentiment is highly developed in France. The French mind has perhaps a natural genius for the concrete ideal, as indeed is perhaps implied by its turn of speech in favour of thought—eloquent thought—by means of generic terms that fire the imagination. In the United States of America loyal affection is rather to the composite nation in reference to all its interests, each more or less on its own—a wonderful 'Union' of diverse elements, run by a carefully planned political machine, which would do its work much better if all the citizens in every section were more enthusiastic in serving it according to their lights. The ideal of the Republic as an organization of free citizens for purposes of self-government seems to have lost for a time something of its pristine freshness and attractive force. At any rate, it is of the United States rather than of the United States Republic that many Americans think as the focus of their political loyalty. This much may be said in their defence. The good of the nation is, of course, in all cases the ultimate end of the political art, and the final object, therefore, of that sentiment which reveres as its proximate end the national institutions.

9. The ideal of loyalty.—To be loyal is to be much more than law-abiding. Whether the object be a person to whom we owe duty or affection, the community of persons to which we belong, the institutions under which we live, the service to which we are pledged, or the law—human or divine—by which we ought to regulate our conduct, the loyal man is distinguished from the law-abiding man as one who serves with his whole heart and mind, making of himself a veritable organ of expression for the purpose, or the master, or the mandate, under which he serves. No voluntary sins of commission, omission, or ignorance does he permit himself. We realize him at his time of special effort in a passion of service, every faculty awake and urgent to achieve his end. And in the intervals of passivity his mind is clear and steady—stayed, as it were, on his whole nature as a rock. Self-training to this effect in any school of wholesome service must work like a leaven on character as a whole. Even under questionable conditions of service it goes far, as all experience of public service shows, to make a man. But it must be remembered that, without either a morally attractive cause or wise and sympathetic leadership, the loyal sentiment which is the motive of self-training is not adequately evoked.

History and literature abound in examples. Three lines of thought, independent of each other and contrasted, may be distinguished in their logical order here.

(a) *The heroic romance of Western Europe*, developing through the centuries from its original sources in Classic, Celtic, and Norse or Germanic lore, deals largely in loyalties within the smaller social sphere, intimate, personal, and glorified by affection. Patriotic loyalty in this dawn of the civilized world has little to do with government, but is steeped in a vivid idealism; the race-life and the home-land are seen as of infinite value, objects in effect of religious faith, worthy of devotion through all suffering unto death. These are the primitive loyalties—to kindred, friendship, race, and land. Nor is the spirit which forms them dead; it does not die so long as a race either vaguely or clearly believes in itself as having a part of some kind in the fulfilment of human

destiny. This is why the history of any nation true to itself is capable of being treated as the development of an ideal implicit from the first.

(b) For the ideal of personal virtue relative to civic institutions, and for the fundamental theory of the State even as we know it to-day, we go back to the Greeks, and specially to *Plato in The Republic and The Laws*. It is his conception of the individual soul in relation to the State that concerns us here. The ideal of the State, as he teaches, should be built up within the soul. Thus—wedding his thought to our inquiry—we may say that the soul of the loyal citizen is trained, or trains itself, into accordance with the ideals realized in the constitution of the State. Thus he exceeds the law-abiding, and is the loyal, man. Further, it is implied in Plato's thought that of those who have political power the loyal ones are they who cultivate their philosophic aptitude to perfect the ideal of the State in the soul, in order that they may labour to develop the organization of the real State and bring it into harmony with the ideal.

This obviously is what the sincere modern statesman does, or thinks he is doing. It is a necessary part of his loyalty that he should spare no pains to do it. Moreover, in the modern self-governing State, every enfranchised citizen shares this duty.

(c) Finally, we find in *post-Exilic Judaism* the supreme example of a people held together by allegiance to the law—the law embodied in a written code that he who runs may read. The Davidic monarchy had come to an end; the high priest held the supreme office as chief ruler in the little theocratic State. But from the time that Ezra had read in the ears of the people all the words of the book of the law which he had brought from Babylon,¹ the Jew who was faithful and pious felt that the law was above the priesthood and that he was to obey it and understand it for himself. Externally the Jewish people had many masters after this; internally—in his own mind—each pious Jew spent all his loyal sentiment on the law of his God. This was no short commandment, but the whole law, dealing with conduct in all social relations and with ceremonial ordinances in considerable detail. The Jew who loyally obeyed the law was, in quiet times—except for taxation—to all intents and purposes a free man. The ideal of his State in its essentials was built up in the mind of the properly instructed Jew; if a professing Jew, he obeyed, whether grudgingly, willingly, or loyally, *i.e.* with his whole heart seeking to understand and to obey more perfectly. In that perfect inward obedience his freedom was realized, though it was not his quest. The Psalms and the Prophets abound in expressions of this loyalist spirit applied to the Supreme Law:

'Teach me, O Lord, the way of thy statutes;
And I will keep it unto the end.
Give me understanding, and I shall keep thy law;
Yea, I shall observe it with my whole heart' (Ps 119:33-37).

So runs the Psalmist's typical prayer, and it continues in the same strain, asking for help to go in the path, to incline his heart aright, to turn away his heart from vanity, to establish God's word unto his servant. In NT times, when the elaborated legalism of the latter-day Pharisees prevailed, the great Master Teacher set over against it the true doctrine of loyal observance, the fulfilment of the law by being the kind of person who expresses its purpose naturally in all his acts. 'I am not come to destroy, but to fulfil' (Mt 5:17). 'A good man out of the good treasure of his heart bringeth forth that which is good' (Lk 6:45). And later, St. Paul, following the same line of

¹ 'The law of thy God which is in thine hand' it is called in the decree of the great king Artaxerxes (Ezr 7:14).

thought, attains to the vision of the 'liberty of the sons of God' (Ro 8:21). Thus the cycle of reason on the highest as on all lower planes is complete, from the free man's fealty through loyalty to the higher liberty of devoted service to the ideal in his soul.

LITERATURE.—Little of note appears to have been written dealing directly with this subject. (1) It enters into the history of the development of the State more especially as a serviceable motive-force in the mediæval growth of the feudal system: see *Cambridge Mediæval History*, II. (1913), ch. xx., 'Foundations of Society' (Origins of Feudalism), and F. Warre Cornish, *Chivalry*, London, 1901; *Essays on Romance and Chivalry*, do. 1870, containing reprints from Hallam and Sir Walter Scott, are also interesting. (2) The primitive ideal of heroic character to which the political virtue corresponds may be studied in Celtic and Teutonic hero lore and in their later developments, (a) under the influence of mediæval chivalry, and (b) in recent years. Sufficient exemplification will be found in *Volunga Saga* and *Grettir the Strong*, tr. E. Magnusson and W. Morris, *Three Northern Love Stories*, London, 1875; E. Hull, *Cuchulainn, the Hound of Ulster*, do. 1911; T. W. Rolleston, *The High Deeds of Finn*, do. 1910; T. Malory, *Morte d'Arthur*, ed. do. 1894, and its primitive prototype, the Welsh *Mabinogion*, tr. Lady Charlotte Guest, do. 1877. S. BRYANT.

LOYOLA.—St. Ignatius Loyola, the founder of the Jesuits (*q.v.*), was the youngest of the eight sons of Don Beltrán Yañez de Oñez y Loyola. The name Lopez de Ricalde, by which Ignatius is often designated (so, *e.g.*, in *AS* and in the British Museum Catalogue), is a simple blunder, due originally to the carelessness of a notary. He was born in the house, or *casa*, of Loyola near Azpeitia in the Basque province of Guipuzcoa. The year of his birth is disputed. Astrain (*Hist. de la Compañía de Jesús*, I. 3 ff.), the best modern authority, assigns it to 1491, but others have thought 1495 more probable (cf. Tacchi Venturi, in *Civiltà Cattolica*, 21st July 1900). The name Ignatius, by which Loyola is now generally known, was not that which he himself used in his youth. Down to 1537 Inigo (not, however, Iñigo, as Astrain prints it) was his invariable signature, but he then began to use sometimes Ignacio, sometimes Inigo, and after 1542 Inigo hardly occurs at all. It seems certain, though early biographers intent on edification have glossed over the fact, that the future ascetic passed an unbridled youth, following the course which was then almost inevitable for all who adopted the career of arms (Astrain, I. 12-16). But at the siege of Pampeluna in 1521 he was dangerously wounded by a cannon-ball, and in a long convalescence which followed he gave himself up to reading the lives of Christ and the Saints, with the result that, after many inward conflicts, he determined to make a complete change in his own way of living. As soon as he was able to travel, he journeyed to the monastery of Monserrat, made a very devout confession, and, after a sort of vigil of arms, divested himself of his knightly attire and went forth to beg his bread. He then took refuge for nearly a year in a cavern near Manresa. The life that he led in this retreat was one of terrible self-maceration, marked by tempestuous inward trials of which he has left a relatively full account in the autobiography. It was during his stay at Manresa that he drew out at least the broad outlines of that manual of ascetical discipline so widely famed under the name of the *Book of the Spiritual Exercises*. There seems no reason to claim such originality for this system of spiritual training as to exclude the influence of earlier ascetical writers like Garcia de Cisneros of Monserrat (see J. M. Besse, in *Revue des questions historiques*, lxi. [Paris, 1897] 22-51) and especially Gerard de Zutphen and Johannes Mauburnus, Brothers of the Common Life; but, as Watrigant has shown, the combination of these materials into one instrument employed for a clearly recognized and uniformly consistent purpose is entirely the work of Ignatius,

and bears the imprint of his eminently practical mind.

It must always be remembered that the *Spiritual Exercises* is not a book intended merely for reading and reflexion, but a manual of training to be put into practice. In this it differs *toto caelo* from such a work as A Kempis's *Imitation of Christ*, and it would be as vain to expect literary graces in the *Exercises* as in a proposition of Euclid. After some preliminary considerations on the end of man, the exercitant is directed, during a week or ten days and always under the advice of a competent spiritual guide, to occupy his mind with the recollection of his past sins and of the punishment which they have deserved, and to cultivate a sense of shame and sorrow, bringing external adjuncts to bear to deepen the impression—e.g., by depriving himself of light, warmth, unnecessary food, and all intercourse with his fellows. After this preliminary discipline, he is introduced to the study of the life of Jesus Christ, who is set before him in two powerful military parables as a chieftain appealing for volunteers to aid Him in the task of reconquering the world from the dominion of sin and the devil. It is easy to see that Loyola's thought had been powerfully influenced by the still vivid remembrance of the struggle to rescue the soil of Spain from the yoke of the infidel. The meditations of this 'second week' of the *Exercises* are estimated to occupy another ten days. By this time it is assumed that the well-disposed exercitant will have been brought to the point of resolving to leave all things and follow Christ if God should make it plain that He was calling him to a life of humiliation and self-sacrifice. A formal election of a state of life is introduced, accordingly, at this stage, and the two remaining 'weeks' of the *Exercises* are intended to confirm the choice so made. In the third week the exercitant is bidden to use much bodily penance and to meditate upon the Passion of Christ; in the fourth he is directed to allow the body its meed of rest and refreshment, while the mind is occupied with consoling thoughts derived from the consideration of the Resurrection of our Saviour and the remembrance of the joys of heaven.

It was natural that one who laid so much stress upon the study of our Lord's life upon earth should feel the need of coming as closely as possible into contact with the scenes of those events with which his mind was filled. Accordingly, in Feb. 1523 Ignatius set out on a pilgrimage to Jerusalem, living on alms and, to a large extent, travelling on foot. He passed through Rome and Venice, and thence sailed to the Holy Land, so that almost a year elapsed before he found himself back in Barcelona. That he was specially called to labour 'for the greater glory of God' had by this time become a deep conviction, but the precise manner in which he was to further the work of Christ on earth does not seem to have been made clear to him until many years later (see F. Van Ortoy, 'Manrèse et les origines de la Compagnie de Jésus,' in *Analecta Bollandiana*, xxvii. [1906] 393-418). Still, he seems to have realized, at least vaguely, that to become an efficient instrument for good he required a better education than he then possessed. Thus we find him at the age of 33 learning the rudiments of Latin with the school-children of Barcelona (1524-26), and thence proceeding to the Universities of Alcalá and Salamanca (1526-28). A personality like that of Loyola was bound to influence men wherever he went, and it is not altogether surprising that he fell under the suspicion of the Inquisition, on account of the disciples who gathered round him and who imitated in some measure his own austerity of life. At first he seems to have been careless of what men said of him, conscious of his own integrity; but later he found that these sus-

picious hampered his influence for good, and he went out of his way to court and even to insist upon a judicial inquiry. The proceedings before the Inquisition, so far as they have been preserved, are printed in the *Scripta de Sancto Ignatio*, i. 580-629. Partly on account of the hindrances to his work for souls which these suspicions engendered, partly, it would seem, in the hope of finding companions more in harmony with his ideals than any whom he had yet met (see Fouqueray, *Histoire*, i. 7f.), Ignatius, in Feb. 1528, made his way to the University of Paris. There at the Collège de Montaigu and afterwards at that of Sainte-Barbe he pursued his studies for the priesthood. At Sainte-Barbe he must, at least occasionally, have encountered Calvin, who had studied there himself and still visited it in 1533. For his support Ignatius, owing in part to his unselfish generosity to his countrymen, had to depend upon alms, and during the begging expeditions made in the vacation season to that end he visited London, Bruges, and Antwerp. Contradictions and persecutions in abundance were also still his portion, but in Paris he found at last what his heart had always craved—a group of companions capable of sympathizing in his high ideals, and of an intellectual force which lent real weight to any cause which they undertook. The story of his conquest of Francis Xavier by the constant repetition of the words 'What doth it profit a man if he gain the whole world and suffer the loss of his own soul?' is well known. An even earlier recruit was Peter Le Fèvre, whose position in the University was already an influential one. To them were added James Laynez, Francis Salmeron, Simon Rodriguez, and Nicholas Bobadilla. Laynez and Salmeron were destined to play a great part as theologians in the Council of Trent. Laynez was also to be Loyola's successor as second General of the Society. But even in 1534, when on 15th Aug. these friends met together in the chapel of St. Denys at Montmartre, and at the mass of Le Fèvre, who was so far the only priest amongst them, took vows of poverty and chastity (Astrain, i. 79), there seems to have been as yet no clear design of founding a religious Order. The third vow, which they added to the other two, pledged them only to make the attempt to undertake apostolic work in the Holy Land; but if, after a year's waiting, it was found impossible to obtain passage thither, in that case they were to place themselves at the disposition of the pope, for any work that he might assign them. This it was that actually happened. In the middle of 1537 war broke out between the Sultan Sulaimân and the Venetian Republic. There was no longer any possibility of obtaining a passage to the Holy Land. The little band of companions waited the prescribed year, and meanwhile Ignatius himself was ordained priest at Venice (24th June 1537), and he and his companions spent the interval in serving in the hospitals and in apostolic work in many different Italian towns. Eventually it was decided that they ought to address themselves to the pope, then Paul III., and, in spite of contradictions, they had a most favourable reception. It was apparently only at this time that the desirability of organization as a formally recognized religious society living under obedience seemed to take shape in their minds. It was characteristic of Ignatius that he always attached much more importance to the inward spirit than to the written letter. Even after he had recognized the fact that in order to perpetuate their work they must be bound together in some regular institute, he was reluctant to provide written constitutions. But the various stages in the development of the Order now followed rapidly. Already in 1537 the companions had found it necessary to give themselves a collective

name, and they agreed that, if interrogated, they should describe themselves as belonging to the 'Company of Jesus' (Astrain, i. 89). When they had found favour with the pope, the scheme of a definite religious institute (*formula instituti*) was drafted, and approved in the bull *Regimini militantis ecclesiae*, 27th Sept. 1540. On 4th April 1541 Ignatius, in spite of his own reluctance, was elected superior, and from that date until 1550 he busied himself at Rome in compiling constitutions. The spread of the Society was extraordinarily rapid, and, as the twelve volumes of his correspondence attest, the official business connected with his office of General steadily increased day by day until his death on 31st July 1556. Ignatius was interested, and he considered it the duty of his subjects to be interested, in every form of religious work which was for the greater glory of God. Although the Society of Jesus was the backbone of the Counter-Reformation movement, it would be a mistake to regard the Order as having been instituted with the conscious design of counteracting the religious teaching of Luther and Calvin. The central idea, which is found alike in the *Exercises* and in numberless passages of the *Constitutions*, and which may be taken as the dominant conception of the whole Ignatian spirituality, was the desire to assist in and carry on the work of rescue and sanctification for which Jesus Christ had come on earth. Loyola was not in any way a man of brilliant intellectual gifts, but he possessed clear judgment and indomitable energy; and, contrary to the idea so often formed of his religious descendants, he was by the testimony of all who knew him a man who was absolutely fearless and straightforward in all his relations with others. He was beatified in 1609 and canonized in 1622.

LITERATURE.—The first place among the sources for the life of Ignatius Loyola must always be given to the so-called 'Autobiography,' dictated by the Saint to Luis Gonzalez de Camara. A Latin version is printed in *AS*, 31st July, vii., but a more accurate text in the original, partly Spanish and partly Italian, has been provided in the *Monumenta Ignatiana, Scripta de S. Ignatio* (i. 81-98), which form part of the great collection of *Monumenta Historica Societatis Jesu* (Madrid, 1894 ff.), edited by the Spanish Jesuits. In fact, the whole contents of the *Monumenta Ignatiana*, which include a critical ed., in 12 vols., of Loyola's own letters and official documents, are of first-rate importance. An Eng. tr. of the *Autobiography* (by E. M. Rix), with notes, appeared under the title *The Testament of Ignatius Loyola*, London, 1900. See also J. Susta, 'Ignatius von Loyola's Selbstbiographie,' in *Mitteilungen des Inst. für österr. Geschichtsforschung*, xxvi. [1898] 45-108. A vast number of papers and letters which bear upon the history of Ignatius and his first companions may be found in the other volumes of the *Monumenta Historica Soc. Jesu*. The biography of Ignatius by Pedro Ribadeneira, which appeared originally in more than one redaction—the first at Naples, in 1572—is also re-edited in *AS*, loc. cit. A young disciple of the saint, who knew him and lived with him, Ribadeneira is an important authority. Translations of this life have been published in French and many other languages. Of the 17th cent. biographies of Loyola by far the most valuable is that of D. Bartoli, who had important original materials at his command. The best available ed. is in French, with supplementary notes, by L. Michel (Bartoli, *Histoire de S. Ignace de Loyola*, 2 vols., Lille, 1898). Of other lives the best are C. Genelli, *Das Leben des heil. Ignatius von Loyola*, Innsbruck, 1848, Eng. tr.², London, 1881; 'Stewart Rose, *Life of St. Ignatius Loyola*', London, 1891; F. Thompson, *Life of St. Ignatius*, do. 1910. An excellent short sketch is that of H. Joly (*St. Ignace de Loyola*, Paris, 1904, Eng. tr., London, 1899). But by far the most trustworthy source of information among modern works is to be found in A. Astrain, *Historia de la Compañia de Jesús*, i., Madrid, 1902, this volume being entirely devoted to the period of the life of Ignatius. It may be supplemented for French affairs by H. Fouquerey, *Histoire de la Compagnie de Jésus en France*, i., Paris, 1910; and for those of Italy by P. Tacchi Venturi, *Storia della Compagnia di Gesù in Italia*, i., Rome, 1909. See also J. Creixell, *San Ignacio en Barcelona*, Barcelona, 1906. Few of those who have studied the life of Loyola from an antagonistic or Protestant standpoint seem to have taken the trouble to acquaint themselves accurately even with the facts of his career. The best is perhaps E. Gothein, *Ignatius von Loyola und die Gegenreformation*, Halle, 1896, but on this see *Analecta Bollandiana*, xv. [1896] 449-454. Even more fantastic is H. Müller, *Les Origines de la Compagnie de Jésus*, Paris, 1898, on which cf. *The Month*, xiv. [1899] 618-626. Some valuable materials and criticisms are, however, contained in the

work, very hostile in tone, of the ex-Jesuit M. Mir, *Historia interna documentada de la Compañia de Jesús*, Madrid, 1913. Other points of criticism are dealt with by B. Duhr, *Jesuiten-jahrbuch*, Freiburg i. B., 1904; H. Stoeckius, *Forschungen zur Lebensordnung der Gesellschaft Jesu im 16ten Jahrhundert*, Munich, 1910 ff.

The only works of St. Ignatius besides his letters are the *Spiritual Exercises* and the *Constitutions of the Society of Jesus*. A facsimile of the 'autograph' of the Spanish original of the *Ejercicios Espirituales* was published in Rome in 1908; innumerable other editions, including several English translations, have been published in every language. The most illuminating discussion of the genesis of the *Exercises* is supplied by H. Watrigant, *La Genèse des Exercices de S. Ignace*, Amiens, 1897. As to the *Constitutions*, a facsimile of the original Spanish text has appeared, *Constituciones de la Compañia de Jesús*, reproducción fotolípica, Rome, 1898, with valuable illustrative material.

HERBERT THURSTON.

LUCIAN.—See ANTIOCHENE THEOLOGY.

LUCK.—See CALENDAR, CHARMS AND AMULETS, DIVINATION.

LUCRETIVS.—Titus Lucretius Carus was a Roman poet (99 [?]–55 B.C.) who, in the last century of the republic, accepted the philosophy of Epicurus, and expounded it to his countrymen in a noble didactic poem, entitled *de Rerum Natura*.

i. Life and writings.—Little is known of Lucretius except a notice in Jerome's additions to the Eusebian chronicle, under the year of Abraham 1923 (= 94 B.C.):

'Titus Lucretius poeta nascitur. Postea amatorio poculo in furorem versus, cum aliquot libros per intervalla insanie conscripsisset, quos postea Cicero emendavit, propria se manu interfecit anno aetatis quadagesimo quarto.'

This strange story of madness and suicide, which Tennyson has made familiar, is no doubt derived ultimately from Suetonius, *de Vir. Illust.*, and, if it comes from such an antiquary, probably has a basis of fact (cf. Lachmann on i. 922, p. 63 of his ed.; Munro², ii. 1 ff.; Sellars, *Roman Poets of the Republic*, p. 283 ff.). But there is an error of four or five years either in the birth year or in the age assigned to the poet, most likely in the former. According to Donatus (*Vit. Verg.*), Lucretius died on 15th October 55 B.C., and not, as Jerome's figures would imply, in 51 or 50 B.C. This is confirmed by the earliest extant mention of the poem in a letter of Cicero to his brother Quintus (*ad Quint. fr.*, ii. ix. 4). This letter, written early in 54 B.C., presupposes the publication of the poem and, presumably, the poet's death. For on internal evidence alone most scholars agree that *de Rerum Natura*, like Vergil's *Aeneid*, never received a final revision from the author's hand; certain passages, especially in the last three books, seem to be afterthoughts or additions imperfectly adjusted to their context. In the dearth of external testimony, something may be gleaned from the poem itself. It seems clear that the author was a Roman noble, well acquainted with the luxury of the time (ii. 24-28, iv. 75 ff., 973, 1121) and with the rivalry and ambition of political life (ii. 11 ff., 40 ff., v. 1120 ff.). Strongly impressed by the crime and bloodshed of the civil wars (i. 29 f., 40-43, iii. 70-74, v. 999 ff.), he deliberately chose, almost alone among the Romans, a contemplative life (i. 922 ff., ii. 1 ff., iii. 1 ff.). Further, we see that he possessed a poet's clear, minute, exact observation with a poet's love of nature and delight in open-air scenes (i. 280 ff., 305, 326, 404 ff., ii. 144-149, 323-332, 342 ff., 349 ff., 361 ff., 374 ff., 766 f., iv. 220, 575, v. 256, 991 ff., vi. 256-261, 472), that he had unbounded reverence for Epicurus, both as a scientific discoverer and as a moral reformer (iii. 9-30, v. 1 ff., vi. 1 ff.), that Democritus and Empedocles were also objects of respectful admiration (i. 729-733, iii. 371, 1039), and that he never mentions the Stoics or the Socratic Schools, although sometimes alluding to their doctrines, 'quod quidam fingunt' (i. 371; cf. 690 ff., 1083, ii. 167-176). He dedicated the work

to Memmius, the patron of Catullus, who was praetor in 58 B.C., and at that time an opponent of Caesar. He addresses Memmius as an equal; the Lucretii belong to a gens distinguished in the early annals of Rome, and the cognomen Carus is said to be attested by an inscription. The author's purpose in writing a philosophical treatise in verse is clearly explained (i. 54 ff., esp. 106-145, 922-950, iv. 1-25). His aim is genuinely scientific—to gain our assent to certain propositions concerning the atomic theory (bks. i. and ii.) and its applications to the relations of mind and body (bk. iii.), the wraiths or images whence he deduces the popular belief in the future life (bk. iv.), the origin of our world, of civilization, and of language (bk. v.), and the phenomena of sky or earth which are supposed to come from the vengeance of the gods, such as thunder, tempests, earthquakes, and volcanoes (bk. vi.). He admits that the system which he advocates is unpopular (iv. 13 ff.), and fears that Memmius will some day fall away (i. 102 ff.). He therefore provides an antidote. Poetry is the honey at the edge of the cup which shall make palatable the medicine of truth. It is no less obvious that the sympathy evoked in the reader, the effect upon his imagination, is bound up with the philosophic poet's soaring frenzy ('furor arduus'; Statius, *Sil.* II. vii. 76). A philosophical argument is ill-adapted for hexameter verse, but the mental power and perseverance displayed in so arduous an undertaking call for unstinted admiration. The difficulties of his task spur the poet on, and to overcome them so far as may be is at once his merit and his delight. His grasp of his subject with all its perplexities and problems bespeaks a logical mind, and he is eminently successful in discovering and marshalling whole groups of particular facts which lead up to and illustrate a general principle (i. 159-214, 265-328, ii. 333-380, 581-699), in the use of analogies, and in vividly picturing the consequences of hypotheses (i. 215-264, 968 ff., 988-995). It has been conjectured that the poet followed the larger epitome of Epicurean doctrine mentioned by Diogenes Laertius (x. 39 f., 73 [Giussani, i. 10]). Whether this is so or his choice and arrangement of topics are dictated by his own immediate purpose must remain an open question. In any case the idolatry of the disciple and his close study of the master's writings (iii. 10) afford a reasonable certainty that he introduced no innovations in substance, although the exposition, with its flights of imagination, its flashes of feeling, and its insight, is all his own. In what follows attention is directed to those parts of the system only where Lucretius fills a gap in the scanty outlines left by Epicurus himself or gives a fuller treatment of particular doctrines (see EPICUREANS).

2. Atomic theory.—Lucretius begins by advancing the two propositions (1) that nothing can arise out of nothing, and (2) that nothing can be annihilated, which he proves separately from the order and regularity of the processes of nature, as especially seen in the generation of the species of organic life. The obvious objection that we cannot see the particles dispersed when a thing is destroyed is met with a series of analogies from the potent invisible agencies at work in the world. The existence of empty space (vacuum or void) is then proved from the impossibility of otherwise accounting for motion, which all the facts of experience confirm. The opposite view, that the world is a plenum, is next refuted mainly by the consideration that condensation and expansion no less than motion imply the existence of a vacuum. Next, the existence of any *tertium quid* other than body and empty space is denied. All other nameable things, even time itself, must be regarded as the qualities (whether essential properties or transient

accidents) of these two forms of reality. Body is then divided into simple and composite, according as it is or is not conjoined with void. The composite are what we call things (*res genitae*), the simple bodies are atoms (*materiae, corpora genitalia, semina rerum, principia, elementa*, or simply *corpora*). To postulate the existence of atoms is to deny the infinite divisibility of matter. And here again Lucretius employs his favourite negative procedure, following out the consequences of infinite divisibility to absolute annihilation, which he has proved impossible. Infinite divisibility would be incompatible with the natural laws (*foedera naturae*) which regulate the production of things and the permanence of organic species; for, unless the constituent atoms of things are unchangeable, there will be no uniformity of nature, and it will be uncertain what can and what cannot arise.

Summing up these arguments and collecting what is said elsewhere in the poem, we arrive at the following conception: an atom is a little hard kernel of matter, quite solid and therefore immutable and indestructible (since heat, cold, and moisture, the destroyers of the composite things about us, cannot enter where no void exists). Each atom is a distinct individual ('solida pollentia simplicitate'); it is perfectly elastic; it has minimal parts, of which, however, it is not compounded, for they have no independent existence; hence it has size, shape, and weight, but no secondary qualities, no colour or temperature, no sound, flavour, or smell, no sentience, the different qualities of composite things being due to the variety of atomic shapes, which, though very great, is not infinite.

After refuting the divergent views of Heraclitus, Empedocles, and Anaxagoras (i. 635-920), Lucretius proves by a variety of arguments that both matter and space are infinite, and refutes the opposing view that all things tend to the centre of the universe and the assumption of antipodes which it involves. He subsequently deduces from infinite space and infinite matter an infinite number of worlds, which come into being, grow to maturity, and ultimately perish (ii. 1023-1174).

3. Clinamen or swerving.—Atoms are in constant motion. They move through space (1) by their own inherent motion, and (2) in consequence of collision. Some atoms of intricate shape form after collision a close union, thus giving rise to the things we call hard; others rebound to greater distances and thus form softer substances; others, again, do not unite at all, but wander freely through space. It is next shown how by imperceptible motions (*motus intestini*) atomic groups or molecules increase in complexity and size until they reach the limits of visibility, like motes in the sunbeam (ii. 125-141). It will help us to understand the relation between these internal atomic movements and the motion of the group of atoms as a whole, if we take Giussani's admirable illustration (i. 111 ff.): as a swarm of insects moves slowly through the air in one direction, the individual insects of which it is composed are executing all manner of far more rapid movements, some of them in divergent or even opposite directions. The first motion of atoms, always through empty space, is inconceivably rapid and uniformly in the same downward direction; the apparent upward motion of some sensible things is shown to be not inconsistent with this. But at quite uncertain times and places atoms, travelling downwards by their own weight, and therefore in parallel lines, swerve a very little from the perpendicular. The least possible change of inclination must be assumed, although it is imperceptible to the senses. Otherwise atoms would never collide, so as to unite and give birth to things, for in empty space, where there is no resisting medium, heavy and

light atoms fall with equal velocity, so that the heavier would not overtake the lighter. There is a further proof of this in the consciousness of spontaneous initiative, the power by which each living creature goes forward whither the will leads, the something which struggles and resists when we move involuntarily under compulsion (ii. 216-293). For our spontaneous movements originate in sole atoms, and their existence at all can be explained only by assuming a certain indeterminism or contingency in the movements of such sole atoms. Thus the mind does not feel an internal necessity in all its actions, nor is all motion linked together in an unending chain of cause and effect (as the Stoics maintained), but atoms initiate motion, breaking through the decrees of fate. It will be seen that the postulate of uniformity—the decrees of nature which govern the birth and growth of organic species—to which appeal is so often made in the poem, is subject to certain limitations of which our information is imperfect. This being the case, it is not altogether strange that, while M. J. Guyau deduces from the *clinamen* universal contingency in the Epicurean scheme of nature, T. Gomperz and Usener incline to regard it as no more than a consistent determinism in opposition to Stoic fatalism (Giussani, i. 125-167).

4. *Isonomy*.—The atomic motions which go on now are the same as they have always been and always will be. What they have produced they will again produce; for, the sum of matter being constant, there can be no complete change of conditions and no change in the order of nature. The main distinction is between motions which tend to foster birth and growth and those which tend to destroy, whether the aggregate formed be inanimate or an organism. The forces of production and destruction alternately prevail (ii. 1105-1140), but are so evenly balanced that, if we look to the whole universe, the result is equilibrium, as in an indecisive battle (ii. 569-580, v. 380-415). This principle of equable distribution is best known from Cicero, *de Nat. Deor.* i. xix. 50, but undoubtedly it was familiar to Lucretius. Combined with the infinity of atoms of every shape, it guarantees that fixity and perpetuation of species to which he so often appeals as a fact. That in an infinite universe the possible is also the real is the premiss underlying some of the astronomical portions of the poem (cf. v. 526-533).

5. *Psychology*.—The poet undertakes to prove that the soul is as much an actual part of a man as the hand or foot, and has therefore to refute the theory once current and last represented by Aristoxenus (iii. 130-132) that it is a harmony or immaterial relation subsisting between corporeal elements or parts of the body. Though a single nature, it consists of two parts, mind (*animus, mens*) and vital principle (*anima*), the seat of feeling, the former lodged in the breast, the latter diffused all over the frame. The single nature which mind and feeling unite to form is, like everything else, material—an atomic aggregate formed of the very finest atoms of (1) wind, (2) heat, (3) air, and (4) a nameless something in which sensation begins. The preponderance of one or other element in the single substance compounded of the four explains the diversity of character and the variety of the emotional states in animals and men. Soul and body, like mind and vital principle, form one whole, so constituted that neither can exist without the other (iii. 94-416), and this is enforced by twenty-eight arguments against the immortality of the soul (iii. 417-829), whence it follows that man's fear of death is unreasonable. The impassioned discourse on death in which these conclusions are driven home (iii. 830-1094), while sharing the defect of all attempts to 'make fear

dig its own false tomb,' is yet by its moral earnestness and depth of feeling one of the most impressive passages in literature.

The atomist theory of perception is developed at great length in bk. iv. Images or films (*εἰδωλα*) are continually parting from the surface of things and streaming off in all directions, but we see them only when and where we turn our eyes to them. An image pushes before it the air between it and the eye. This air sweeps through the pupil and thus enables us to judge the distance of the object seen. This takes place almost instantaneously; we do not see the images singly, but there is a continuous stream of them whenever an object is seen (iv. 239-258). The theory of images is applied to those cases where the senses seem to be mistaken. The square tower at a distance looks round, because the images are blunted in their long journey through the air. In this and similar instances the eyes are not deceived. What they see they rightly see; it is the mind that errs in the inference which it draws. The error lies in the opinion which the mind superinduces upon what the senses really perceive. The sceptic contradicts himself. For how does he know that nothing can be known? By what criterion does he distinguish knowing from not knowing? The senses are true, all equally true, for each has a distinct power and faculty of its own which the others cannot challenge or convict of error, nor is a single sense at one time more certain than at another. Reasoning, since it depends upon the senses, must be false if they are false, and with the overthrow of reason life itself would be impossible (iv. 469-521). The mind, too, receives its impressions from images, but these images are finer than those by which we see, hear, taste, and smell. Moreover, they do not all come directly from the surface of actual objects; sometimes images from several distinct things unite, as a centaur, or they may be spontaneously formed by atoms in the air. In sleep, when senses and memory are inactive, images still find their way to the mind, wraiths or ghosts of the departed being one special kind. Dream images appear to move because some are coming, some going, in continuous succession, so that they appear to be the same in different postures. In the least sensible time many times are latent in which images can appear. Unless attention is directed to them, they pass unheeded. This explains why we think of what we will, and different men have different thoughts.

6. *Cosmogony*.—The working of the causes which produce, build up, and ultimately destroy worlds such as ours is described in outline as a corollary to the doctrine of the infinity of matter and space (ii. 1023-1174). The details are filled up in bk. v. The world is not eternal, as some philosophers held. Lucretius starts by proving that it is mortal, i.e. had a beginning and will have an end (v. 91-109, 235-415). It must be dissoluble, for it is neither impenetrable like the atom nor intangible like space, nor, like the sum of reality, can it be said to have nothing outside it into which it could pass and out of which destructive forces may come. Our world began with a chaotic jumble of discordant atoms. By the escape of the lighter atoms from the heavier this mass broke up into horizontal layers, ether at the top over air, air over the other two elements, water and earth, the sea being nothing but the moisture squeezed out as the earth condensed. In the infancy of the earth and of the world, vegetation began with herbs and bushes, and then tall trees shot up; animal life followed, first birds, then quadrupeds, last of all man, all sprung from the earth—not from the sea—and nourished by Mother Earth. The existing species are a survival out of a far greater number which the earth first tried to

produce. The monstrous births perished because they could not grow up and continue their kind. Many species must have died off, because they lacked natural weapons of defence or could not be utilized and protected by man. But the union of two incompatible natures in the fabled creations—centaurs, chimeras, mermaids—is impossible. At no time did they exist (v. 878-924). This account mainly follows Democritus, but in the primeval monsters the influence of Empedocles is discernible.

7. **Anthropology.**—Civilized society is the product of a long course of development. The sketch of man's gradual advance from primitive savagery (v. 925-1457) is not without interest and value even in the present day when so much fresh material has been accumulated and is continually enlarged. Men at first were harder and more like the brutes than now. Knowing nothing of tillage, they lived on acorns or berries, without fire, clothes, or houses, without law, government, or marriage. Their foes were the beasts, from whose fury they suffered. Civilization began with the use of huts and skins and the ties of family life. Then came compacts with neighbours for friendship and alliance; and then speech, a natural impulse quickened by need, not due to any single inventor. The next step was the discovery of fire from lightning or the friction of branches. Further improvements led to the building of cities, the allotment of lands, and the discovery of gold. With the origin of political life is linked the origin of religion. Another important discovery was the use of metals, especially iron and copper, which were accidentally discovered when the burning of woods caused the ore to run. Hence came improvements in warfare, the extension of agriculture, and the invention of weaving. The art of music followed. When a knowledge of all the useful crafts had thus been attained, progress was complete.

8. **Religion.**—The popular faith, with its whole apparatus of prayers, vows, offerings, and divination, had been rejected not only by Epicurus, but by almost all philosophers since the feud between poetry and philosophy began with Xenophanes and Heraclitus. Lucretius is bitterly hostile; his indignation at the evil wrought by religion glows throughout the poem as fiercely as in the famous description of the sacrifice of Iphigenia (i. 80-101). But it is not merely popular superstition that he condemns; he is equally opposed to the philosophic monotheism or pantheism of Plato and the Stoics, and, in fact, to whatever is meant by the term 'natural theology.' The negative propositions which he maintains are all-important. (1) There is no purpose in nature; the argument from design is disallowed in advance; adaptation is the product of experience.

*Nihil ideo quoniam natumst in corpore ut uti possemus; sed quod natumst, id procreat usum' (iv. 834 f.). The bodily organs were not given in order to be used. On the contrary, the eye preceded seeing, and man had a tongue before he could speak. Thus the activity of the senses is explained on mechanical principles without assuming final causes, and a similar explanation holds for all other activities, nourishment by food, and growth, walking and locomotion generally, sleep and dreams. Hence (2) there is no divine providence. The course of nature is not sustained by a divine power working for the good of mankind. The flaws in the world ('tanta stat prædita culpa') at once and for ever dispose of that hypothesis (ii. 165-181; cf. v. 195-234). Hence, too, (3) the world is not divine. So far is it from being conscious and intelligent that it is the most fitting example of what we mean by insensible and inanimate (v. 110-145). (4) The world was not created by the gods. What could induce them to take such trouble inconsistent

with their majesty? Or, supposing them willing to create, whence came their notion or preconception (*πρόληψις*) of man before he existed (v. 181-186)? On the contrary, the world and all that is therein was gradually formed by mere natural causes through the fortuitous concourse of some part of an infinity of atoms in some part of infinite space (ii. 991 ff., v. 187-194).

But negative criticism is not all. On the positive side the existence of gods is proved by the agreement of all nations, although the fables and legends told of them (ii. 600 ff.) must be rejected. The gods are blessed and immortal. They need nothing of mankind, bestow no favours, take no vengeance (ii. 646-652). Their abodes, which in fineness of structure correspond to the impalpable nature of the divine body, too delicate for our sense to perceive, are in the *intermundia* (a word not used by the poet), or lucid interspaces between the worlds. They touch nothing that is tangible for us, since that cannot touch which cannot admit of being touched in turn (v. 148-152). There is a significant reference (iii. 819-823) to the conditions under which alone immortality is possible, namely the absence of destructive forces or their being kept at bay, or being held in equilibrium by conserving forces (see Giussani, i. 239). Not content with proclaiming the true doctrine, Lucretius goes on to explain how the false arose. The belief in gods arose from the images seen by the mind in waking hours and still more in sleep. The shapes thus seen were of more than mortal size, beauty, and strength. As these shapes were ever present, and as their might appeared so great, men deemed them to be immortal and blessed, and placed their abodes in the heavens because the unexplained wonders of the heavens had already excited awe. Thus all things were handed over to the gods, and the course of nature was supposed to be governed by their nod. This fatal error sprang from the instinctive fear which associates with divine vengeance the calamity and ruin wrought by storms and earthquakes (v. 1161-1240). Lucretius more than once exults at the overthrow of this delusion (i. 62-69, ii. 1090-1104, iii. 14-30). On the other hand, it is obvious that he has gone too far in his concessions to anthropomorphism. The criticism which he successfully applies to the incongruous creations of legend, centaurs, and chimeras would, on his own grounds, be just as valid against the blessed immortals. The superhuman beings whom he reverences as gods are simply the Homeric divinities purified, refined, and rationalized.

9. **Ethics.**—In a poem professedly dealing with physics we hardly expect to find a systematic treatment of ethics, yet there are enough short notices or digressions in which the subject appears (ii. 16-61, 172 ff., iii. 14-16, 459 ff., 978-1023, v. 9-51, vi. 9-41) to establish the author's complete agreement with the teaching of Epicurus. The end is pleasure—in other words, to secure that pain hold aloof from the body, and that the mind, exempt from cares and fears, feel its own true joy (ii. 16-19). Whoever has been born must want to continue in life so long as fond pleasure shall keep him (v. 177 f.). Gratification of desires which, though natural, are not necessary affords no true happiness. The tortures of conscience make a hell upon earth. Tantalus and Sisyphus and the like are types of men tormented in this life by various lusts and passions. The pangs of remorse are emphasized as well as the constant apprehension that, though the wrong-doer has hitherto eluded gods and men, he cannot keep his secret for ever (v. 1156 f.). Epicurus is extolled as the saviour who, seeing the miserable condition of mankind, partly from ignorance, and partly from mistaken fear of the gods and of death, proclaimed those truths which

alone can bring salvation: that death is nothing to us, that the gods do not interfere with the course of nature, that the world is a fortuitous and temporary concourse of atoms, and man himself a still more ephemeral combination in that world. These are the doctrines which, he thinks, will redeem mankind. But, while master and disciple are perfectly agreed in the literal acceptance of these propositions, there is a marked difference in the spirit of their teaching. Starting with the proposition 'There is no joy but calm,' Epicurus deduces his ideal of a simple, almost ascetic life of intellectual enjoyment, spent in the society of congenial friends. By a life thus regulated according to circumstances he sought to attain the maximum of pleasure. Lucretius, too, advocates an austere hedonism; the pleasure which is the universal law and condition of existence is not indulgence, but peace and a pure heart (v. 18). From all who would live worthily he demands fortitude, renunciation, and unswerving loyalty to truth. No ancient writer was more profoundly impressed with the mystery of existence, and the ills that flesh is heir to. He assailed the foundations of belief with fanatical zeal which rises, one might almost say, to the intensity of religion. Under this aspect, his earnestness has its counterparts in the *Divina Commedia* or *Paradise Lost*.

LITERATURE.—Editions by C. Lachmann (Berlin, 1850, 1871), H. A. J. Munro (Cambridge, 1864, 1886), F. Bockemüller (Stade, 1873), C. Giussani (Turin, 1896-98), supplemented by *Note Lucreziane*, do. 1900, W. A. Merrill (New York, 1907), also bk. iii. by R. Heinze (Leipzig, 1897); H. Lotze, in *Philol.* vii. [1852] 696-732; P. LUGH.—See CELTS, FESTIVALS AND FASTS (Celtic).

LULLISTS.—Among the figures of the 13th cent. none is more picturesque, none more representative of the great forces, spiritual and mental, of the age than Raymond Lull, 'The Illuminated Doctor,' logician, philosopher, scientist, poet, missionary, and martyr. He was born at Palma, in Majorca, in 1236, when the first spiritual enthusiasm of the Franciscan movement was dying away. During his boyhood the spiritual Franciscans were making desperate, but vain, efforts to maintain the simplicity of the original vow of poverty which had been the joy of their founder. Human nature made it inevitable, however lamentable, that an Order should possess property. Another deviation from the singleness of mind of St. Francis was, happily, inevitable also. During his life a brother was not allowed to possess a book, and learning seemed as alien as riches. But true devotion cannot be permanently content without the offering of the realms of mind as well as of soul and body. Thus we find in the lives of Roger Bacon and Raymond Lull, members of Franciscan Orders of the next generation, an enthusiasm for learning linked with

an enthusiasm for Christ as intense as that of Brother Giles and Sister Clare. These are the figures whom we find toiling amid the dim foundations of the great Palace of Science, blackened by the suspicion of the narrow-minded orthodox, strenuously maintaining the nobility of the offering of science, knowledge, and thought at the foot of the Cross. They were fervent lovers of Christ who stood at the parting of the ways of Scholasticism, still recognizing and using its words and its processes, but adding the facts and inferences of a dawning science of Nature. Their lives were enthusiastic fulfilments of the command, 'Thou shalt love the Lord thy God with all thy mind.'

Lull was seneschal of the household of James II. of Majorca, and till the age of thirty he lived the ordinary life of a libertine noble. Suddenly conscience was aroused, and in his chamber, as he was writing love poems, he beheld the vision of Christ on the Cross, and heard Him say, 'Oh Raymond, follow me henceforth.' Then came the agony of conviction and the determination to forsake the world and follow Christ entirely. Two aims at once filled his life—to gain martyrdom, and to convert to Christianity the Saracens around. He would use no carnal weapons; he would go to the Holy Father and to Christian kings, and induce them to endow colleges for the learning of the languages of the unbelievers. For himself he would write a book so irrefutable as to ensure the conversion of Saracen, Jew, and heretic to the Catholic faith. A sermon on the renunciation of St. Francis of Assisi completed his resolution; he left wife and children with sufficient for the necessities of life, sold all else, and went forth in coarsest attire to the new life. He kept a cell for himself on Mount Randa, and there during nearly ten years he sought to fit himself for his work. By the advice of his friends he chose this solitary study in preference to the University of Paris, the centre of the intellectual life of Europe. He learnt Arabic from a Saracen whom he bought as a slave, and narrowly escaped being murdered when this infuriated Muslim realized the object of his study. The crown of his long preparation came when eight days of profound meditation were succeeded by an illumination which Lull himself always claimed as a direct divine inspiration. Under this impulse he wrote the *Ars Magna*, the first of the great works associated with his name. By its methods he felt sure that the truths of Christianity could be so irrefragably stated that the infidels could not possibly refuse acceptance of them. Nothing is more striking in the subsequent history of the philosopher and his followers than the absolute conviction, which they all shared, of the direct divine origin of the mode of reasoning here initiated. The assertion is crystallized in the title 'The Illuminated Doctor' by which he is always known among succeeding generations of Lullists. The woodcuts adorning the great folios in which Salzingar has issued his works all represent the divine beam of light shining down upon him. Enthusiastic disciples confidently appeal to the logical power of the processes as more than possible to unaided human intellect. The unbiased judgment of our own day fails to discover the same immense value or power.

It may be briefly characterized as a mechanical method by which all possible subjects may be subjected to all manner of questions, and thus a complete category of statements may be obtained. The apparatus in its original form is a number of concentric circles divided into compartments denoted by letters of the alphabet. These letters denote in different circles different ideas. Thus we have in one nine subjects: God, Angel, Heaven, Man, the Imaginative, the Sensitive, the Negative, the Elementary, the Instrumental. In another circle we have nine predicates: Goodness, Magnitude, Duration, Power, Wisdom, Will, Virtue, Truth, Glory. In another we

have nine questions: Whether? What? Whence? Why? How large? Of what kind? When? Where? How? One of these circles is fixed, the others rotate, and we thus obtain a complete series of combinations, first of questions and then of statements. The precise form of the mechanism varies; in some works we have triangles of various colours intersecting each other; in others we have a tree with roots, trunk, branches, twigs, each labelled with some term contracting from the universal to the special. Letters vary in meaning with the apparatus. But in every case the general idea is the codifying of every possible statement on all subjects. The method, intended first solely as a Christian apologetic, was speedily found to be as applicable to other subjects, and among the numerous works assigned to Lull are many in which the *Ars* is applied to Medicine, Chemistry, Mathematics, Physics, and Astronomy.

Lull commenced at once to use his new weapon with all the enthusiasm of the direct emissary of God. He gave a series of lectures on its application at the Universities of Montpellier and Paris and in the monasteries of France, Italy, and Spain. The failure of his persuasions to induce monarchs or pontiff to develop fresh enterprise for the conversion of the Saracen led Lull himself, at the age of fifty-six, to land as a missionary in Tunis, there confidently expecting to win all to Christianity through his reasoning. Imprisonment and expulsion did not check his zeal; we find him ardently continuing his work wherever there were Muslims or heretics. His own islands, Cyprus, and Armenia certainly saw many converts, and the ban of death did not prevent his returning twice to Africa. The assertions of his much wider travel need further proof.

Lull's scheme for colleges for the study of missionary languages bore fruit for a time in a foundation by his own king, in 1276, of a college for Arabic at Miramar in Majorca, but it was not until the Council of Vienne, in 1311, that papal authority was given for schools for Hebrew, Greek, Arabic, and Chaldean in the Roman Curia, Oxford, Bologna, Salamanca, and Paris. It is interesting thus to realize that in Lull's enthusiasm we have the germ of the Hebrew professorships at our English Universities, as well as the broader ideas of missionary education which he and Roger Bacon alike impressed upon the Church. The same instinct which sent Lull to talk to Saracens in Arabic led him to overleap the limits of tradition and to write many of his works, both devotional and logical, in his native Catalan. He was a pioneer in that movement which, by entrusting to vernacular languages thoughts hitherto imprisoned in the Latin of the learned, gave a new dignity to national speech and a new impulse to the development of the common people: his great religious romance *Blanquerna* was written in Latin, Arabic, and Catalan; his ecstatic hymns entitled *Hours of the Virgin*, with many others of his works, in Catalan alone.

Round Raymond Lull there has gathered a misty halo of romance and unorthodoxy through his incursions into the world of alchemy. His Franciscan supporters are eager to free him from this charge, which has repeatedly brought him within danger of the censure of the Church. He is stated to have learnt from Arnould of Villeneuve the secret of the philosopher's stone. There is a tradition, exceedingly doubtful but not entirely discredited, of a visit to England to make gold for Edward II. in return for his help against the unbelievers. Certain it is that a number of works on alchemy are assigned to his name which were obviously not written by him. It is proved that on Lull has been fixed the discredit of certain works on magic by another Raymond of Tarrega, a renegade converted Jew, which were condemned by Pope Gregory XI. But we must remember that alchemy was the beginning of natural science, that the early alchemists were religious men who commenced their works in the name of the Trinity, and that the man who believed that he had discovered a

universal transmuter of the elements of thought might not unnaturally aim at a universal transmuter of the elements of matter. Lull's dominating idea was that there is one great principle running through the universe, since it is the expression of one divine mind. Scattered among his acknowledged works are repeated references showing that he thought much on alchemy, though he did not expect impossibilities from it. We can well believe that he wrote as well as thought on the subject. Indeed, Roger Bacon (*de Emendandis Scientiis*, bk. iii.) refers to the fact of such writing.

The last period of Lull's life revealed a foe within the Church against which he fought unceasingly. Round the name of Averroes (Ibn Rushd, † 1198; see AVERROES, AVERROISM), the Arab interpreter of Aristotle, had been gathering the thoughts and theories of Muslim, Jewish, and Scholastic successors, diverging gradually into the banishment of the Deity beyond the reach of prayer or care for the individual, the denial of individual immortality, and ultimately even asserting the identity of the soul of all men. Averroism thus, while using the name of a single devout Muslim, was really the composite deposit of a century of more or less sceptical thought; through Maimonides (*g.v.*) and Michael Scot it gained the ear of a section of Scholasticism and won over as votaries many in the University of Paris, the intellectual focus of the world. In attempting to save its orthodoxy it asserted that what might be true in faith might be false in philosophy. This was the special heresy against which Lull spent his life; the authorities at Paris eagerly sought his assistance in combating the heresy which threatened to capture the whole University. The contest was so keen that Lull himself was obliged repeatedly to obtain certificates of his own orthodoxy. At the Council of Vienne Lull worked hard, though apparently without success, to secure an edict forbidding the teaching of Averroism in Christian schools. It lingered for a couple of centuries longer, more and more tending to materialism and finding its chief sphere in the medical school of Padua. Lullism always provided its strongest foes.

When nearly eighty years of age, Lull set off on another missionary journey to Africa; his fervid exhortation roused the fury of the Muslim mob, and he was stoned to death at Bugia on June 30, 1315, thus gaining the coveted crown of martyrdom. The body was carried to Palma and was there interred amidst the laments of his nation.

The immense mental activity of Lull left a vast number of works, many of which have never been printed. Salzinger in his great (incomplete) edition (1721-48) gives a list of 205 treatises as undoubted, besides 93 others more or less probably assigned to his name. Perroquet (1667) names 488, and states that several authors of weight assign no fewer than 4000 to his pen. A large number of enthusiastic pupils, gathered from the lecture-halls of Paris and of the Franciscan monasteries, continued and applied his methods, and in many places Lullist schools grew up side by side with the older-established Thomists and Scotists. The aim of the Lullists was to apply a logical method to the proof of doctrines of the faith, to fight Averroism, and to fit men for missionary work. Enthusiasm for his methods was the special characteristic of the followers of the great enthusiast. This enthusiasm was speedily met by a bitter opposition. It is almost certain that Lull had been a member of the third Order of St. Francis. Rivalry between the great religious Orders, however, belittled his growing fame. The Dominican Eymeric, Inquisitor-General in Aragon (1320-99), initiated the campaign by an accusation of

heresy in 500 passages taken from Lull's works. Franciscan apologists assert that Eymeric was a disbeliever in the doctrine of the Immaculate Conception, which was the special enthusiasm of the University of Paris and was warmly advocated by Lullists, and that this was the seed plot of Eymeric's opposition. The Inquisitor asserted that 200 Lullist errors had been condemned by Gregory XI. in 1376. This bull has never been found, though the papal archives have again and again been searched, and N. de Pax (1519) and L. Wadding († 1657), the annalist of the Franciscans, have made out their case that Eymeric invented it, or forged it, or confused it deliberately or accidentally with the condemnation of the works of Raymond of Tarrega, already referred to (most conveniently accessible in *AS*, June, vii. 618-623). Eymeric was degraded and subsequently sent by King John of Aragon into exile; Lullism was declared sane and wholesome in 1386 by the Inquisitor Eman-gaudius at Barcelona.

In 1483 Ferdinand the Catholic founded the University of Majorca, with a 'studium generale' for the study of Lull's method. Naturally it is the native island of the founder that has been most devoted to the propagation of his philosophy and has fiercely fought for its recognition. But its fortunes have varied elsewhere. In the University of Paris at times students were officially warned against its study, but about the year 1515 it attained great glory there under the inspiring teaching of Bernard de Lavinhetta. Its doctrines were again and again assailed as unorthodox, and as earnestly defended. A favourable sentence was obtained from the Council of Trent and from the Inquisition at Madrid. But its foes procured the inclusion of Lull's works on the Index Expurgatorius under Paul IV. They were finally removed from the Index in 1594. The hold of Lullism on the University of Palma continued into the 18th century. In 1635 Urban VIII. ordered that its scholars during their last two years of study should daily hear lectures on the *Ars*. In 1673 Maria Anna of Austria issued an edict assigning precedence to Lullists even over scholars senior to themselves. Objections, insufficient to prevent Lull's beatification, have obstructed his canonization, though the process recounting the miracles at his tomb was presented by the bishop of Majorca in 1612. The principal charges were due to unguarded utterances that seem to ignore the necessity of faith and to bring the truths of religion within the powers of human reason. Others considered the processes of the *Ars* mere word-chopping. Later apologists like Perroquet confess that sciolists made it their boast that by this method they could speak on any subject, to any length, at a moment's notice, and Perroquet laments the undeserved obloquy which such charlatans have brought on their master (*Vie*, p. 118 f.). The specimens given of the method explain why it has now passed away. Ps 20 and Wis 6 are expounded by Perroquet as samples. We find a careful analysis of the subjects and predicates of each verse, and an exhaustive statement of their combination—the whole producing a somewhat commonplace expository commentary. Lull has become the national saint of the Balearic Isles. Here the enthusiasm never died, but the philosophic method gradually merged itself in an enthusiasm for the memory of the saint and a national pride in collecting and publishing the Catalan poems and imaginative works on which Lull's fame will finally rest. The Lullists of to-day are a number of patriotic and cultured men who are proud of their national literature and its great exponent.

LITERATURE.—*AS*, June, vii. [1867] 581-676 (30th day), gives life, and history of the disputes on orthodoxy; I. Salzinger,

Opera Raymundi Lullii, Mainz, 1721-48, vols. i.-vi., ix., x.; A. Perroquet, *Apologie de la vie et des œuvres du bienheureux Raymond Lulle*, Vendôme, 1867; K. Prantl, *Geschichte der Logik*, Leipzig, 1867 (vol. iii. deals with Lull's system); A. Helfferich, *Raymund Lull und die Anfänge der catalanischen Literatur*, Berlin, 1883, deals with his place in literature. Modern lives are M. André, *Le Bienheureux Raymond Lulle*, Paris, 1900 (edifying but unentitled); S. M. Zwemer, *Raymund Lull, First Missionary to the Moslems*, New York, 1902; and W. T. A. Barber, *Raymond Lull the Illuminated Doctor*, London, 1903. For further bibliography see U. Chevalier, *Répertoire des sources hist. du moyen âge, bio-bibliographie*, new ed., Paris, 1905-07, cols. 8591-8593.

W. T. A. BARBER.

LUMBINĪ.—A pleasaunce, or small wood, mentioned in Pāli records as the birthplace of the Buddha. It is now occupied by the shrine of Rummindē in Nepāl, approximately in 83° 20' E. long., 27° 29' N. lat., about four miles north of the frontier between the British possessions and the Nepālese Tarai, and half a mile west of the river Tilār.¹

The references to it so far traced in the N. Indian Pāli books are only three. One is in an old ballad, containing the prophecy of the aged Asita about the infant Buddha, this Asita story being the Buddhist counterpart of the Christian story of Simeon. The ballad is certainly one of the very oldest extant Buddhist documents, and must be earlier than 400 B.C. It is now included in the anthology called the *Sutta Nipāta*, and it states at verse 683 that the child was born in the village of Lumbinī (*Lumbineyye gāme*). The other two references are in the *Kathā Vatthu*, composed in the middle of the 3rd cent. B.C. by Tissā, son of Moggali. In that work (ed. A. C. Taylor for *PTS*, London, 1894-97, pp. 97 and 559) it is stated that 'the Exalted One' was born at Lumbinī (*Lumbiniyā jāto*).

Our next information is the inscription found on a pillar in Dec. 1896. The pillar had been known for years to be standing at the foot of the small hill on which the tiny shrine is situated, but the fact that the *graffiti* on the exposed part of it were mediæval and unimportant, combined with the difficulties resulting from its being in foreign territory, caused it to be neglected until 1896. When it was then uncovered, the top of an inscription was discovered three feet beneath the soil. The inscription is in old Pāli letters, and in a dialect which the present writer would call Kosālī—a dialect so nearly allied to the literary Pāli of the canon that other scholars prefer to call it Pāli. The translation is as follows:

'The beloved of the gods, King Piyadasi (that is, Aśoka), has come in person and paid reverence; and to celebrate the fact that the Buddha, the Sākiya sage, was born here, has had a stone horse (?) made and put up on a stone pillar; and because the Honourable One was born here has remitted the tax of one-eighth on Lumbinī village (that is, parish).'

There are slight differences in the translations by various other scholars, but not as to the double insistence on the fact that the Buddha was born at the spot where the pillar was erected.² The letters are beautifully clear, each being nearly an inch in height. When the present writer made a copy of them in 1900, though they had then been three years exposed to the light, they seemed almost as if freshly cut. In the dim light of the cell above, containing the shrine, can be discerned a bas-relief representing the birth-scene. But the Brāhman who claims the right to the petty income arising from the pence of the peasantry refuses any proper examination of it. So far as a cursory inspection permits of a decision, it seems to be much later than the inscription.

A legend in the *Divyāvadāna*³ purports to give

³ Ed. E. B. Cowell and R. A. Neil, Cambridge, 1886, p. 389.

the conversation between Aśoka and his guide Upagupta on the occasion of the visit recorded in the inscription. Perhaps the tradition that Upagupta, very possibly another name of the author of the *Kathāvatthu*, accompanied him is historical. The work in question is in Buddhist Sanskrit; and, though its date is unknown, it must be at least five centuries later than Aśoka, who spoke, of course, the language of his inscription, and would not have understood the words here put into his mouth.

Still later are certain references in the Pāli commentaries written at Kāñchīpuram¹ or Anurādhapura² (*qq.v.*). In order to explain how the birth took place in a grove, they say that the mother, on the way to be delivered among her own people, was taken with the pains of delivery half-way between Kapilavatthu, her husband's home, and Devadaha, her father's home. This is quite probable; but, on the other hand, it may have been suggested by the meagre facts recorded in the ancient books. Neither the Buddhist Sanskrit writers nor the Pāli commentators could have understood the long-buried inscription, even had they known of its existence.

It is very interesting to see that this spot, so deeply revered by all Buddhists, should have retained its original name through so many centuries of neglect and desertion. Watters says that 'according to some accounts' it had been named Lumbini after a great Koliyan lady who had dedicated it to public use.³ This is quite probable. There are other instances of a similar kind; but, unfortunately, Watters gives neither name nor date of any of the Chinese books to which he refers. But we know that both Sākiyas and Koliyas found difficulty in pronouncing the trilled *r*. Perhaps this was true of all Kosala. The inscription at Lumbini, for instance, has *lāja* for *rāja*; and Lumbini itself is often written in Pāli MSS with a dotted *L*, which may represent an untrilled *r*. Thus Rummindē stands for Lumbini Devī, the goddess of Lumbini. But that goddess was not really a goddess at all, nor even Lumbini, but only the mother of the Buddha. We have no evidence as to when or how the transformation took place. And in face of the stubborn opposition of the Nepālese Government, and of the Brāhman who has taken possession of the shrine, there is very little hope of any further excavation at the site to throw light on this question, or to explain the divergent statements of Chinese writers as to what they saw at the place.⁴

LUNACY.—See INSANITY.

LUSHAIS.—The Lushais are a composite community, consisting of those groups which were absorbed and reduced to a more or less complete unity by the skill and sagacity of the Thangur chiefs of the Lushai clan in the last century. They practise *jhumming*, a form of cultivation which involves constant moves from one site to another. In this fact is found a reason for some at least of their peculiar characteristics.

Each village is a separate State ruled by its own chief, who usually belongs to the Sailo clan, whose talent for government has made them the masters of nearly the whole of the area now known as the Lushai Hills. The sons, as they reached maturity, were provided with a wife and followers, and were

sent forth to found new villages. The youngest son was the heir general. Elders assist the chief in the village administration, and each village possesses, in addition to the council of elders, officers to settle where the *jhums* are to be made, a village crier, a blacksmith, and a wise man, *puithiam* (lit. 'much knower'). The population of a Lushai village consists of members of different clans and tribes brought under the unifying influence of their subordination to the Thangur chiefs. Their religion, therefore, exhibits traces of a mixed origin; there are features in it which recall some of the more notable characteristics of the systems of their congeners, east as well as in the more distant north, all of whom speak cognate dialects.

The Creator is a spirit called Pathian, beneficent, but with little concern in the affairs of men. Subordinate to Pathian is a spirit Khuavang, whose appearance to men causes illness. He is also spoken of as a personal genius—an idea which is still further elaborated in the belief in the *mivengtu*, the watchers of men. Each man has two souls, *thlarao*, the one wise and the other foolish. One *mivengtu* is good and the other evil. The *huai* are demons inhabiting water and land, are all bad, and are the causes of all sickness and misfortune; the *lashi* are spirits who are concerned only with wild animals, whom they control; the spirits of the dead need constant propitiation and receive offerings of firstfruits. Each clan has a spirit, or clan deity, *sakhua*, to whom a special chant is addressed by the *puithiam* (who must be a member of the clan), and identity of chants and ritual is a sure proof of membership of the clan.

The rites performed for the purpose of address to some definite spiritual being may be separated from the rites which seem to be efficacious without the intervention or mediacy of any definite spiritual being. The *sakhua* chants recorded by Shakespear are accompanied by sacrifices of a sow. The sacrifices to *huai*, supposed to frequent houses and villages, are various, now a pig, now a cock, and sometimes a goat being offered. Three sacrifices should be performed after marriage. Dreams afford an indication of the necessity for the performance of one of those rites. Temporary tabus, closely akin to those so common in the Nāga area, are part of the necessary liturgy. The ritual for appeasing the *huai* of the woods and waters is not dissimilar, but some of the most efficacious rites are the patent of certain clans. The villages close their gates on the occasion of an epidemic of cholera, so as to exclude all visitors from the infected area, and frighten away the demon causing the sickness by erecting a rough gate across the road leading to the distressed villages, which they man with straw figures of armed men; they suspend from the gateway the portions of the dog sacrificed in these emergencies, which are reserved for the demon—as a rule, the extremities with the heart, liver, and entrails. Some of the birth-rites are addressed to *huai*, while others are seemingly of almost automatic efficacy. In the second category of rites are those which are performed to bring back a straying soul (for men sometimes lose one of their souls), to produce children, to afford protection against sickness, to secure good hunting and to ascertain the luck of the intended chase, to benefit the crops, to obtain power over the spirits of animals and men killed in this world, and to secure freedom from the ghost of the slaughtered enemy. The series of five feasts which affect the future life in important ways are religious rites of a specially interesting nature. Most of the rites are accompanied by a regulation requiring that the social group concerned, be it a household or a whole village, shall abstain from all but the most

⁴ See Watters, *op. cit.*

necessary work, and shall not leave the prescribed area. The blacksmith's forge possesses sanctity, and is a place where persons who have accidentally come into contact with any noxious influence may take sanctuary and be purified. The priesthood consists of the *puithiam* and the members of special clans. Any one can acquire by purchase the *hla*, songs or charms which form the stock-in-trade of the *puithiam*, whose success must depend largely on luck and on short memories of his failures.

The first man, Pūpawla, or the ancestor Pawla, possibly in revenge for his death, stands armed with bow and pellets at the entrance to the spirit world. Except the *thāngchhuah*, i.e. those who have performed the series of five rites (fasts, as they are sometimes called) in this world, none can escape his aim. Yet he spares still-born children or those who die young, for he heeds their plea that, had they lived, they too might have performed the due ritual and so been free to enter with the *thāngchhuah* into Pielrāl, where all is pleasant. Those whom Pawla wounds go to Mithi khua. Their wounds swell painfully for three years, and for a like period the scar remains. Thereafter they die again, are born as butterflies, and then die again, to reappear as dew on the ground; as dew they enter the loins of a man, and are reborn as human children. In addition to the personal advantages of the *thāngchhuah* rites, the man may take his wife with him to Pielrāl, whence there is no return to reincarnation, and he may wear certain special clothes, build a verandah at the back of his house, enjoy a window in his house, and put an additional shelf near his bed.

The Lushais are a superstitious people, and believe firmly in witchcraft; not very long ago, to test the efficacy of the belief that the victim of witchcraft would surely recover if he could but taste the liver of the wizard, they killed three whole families who were thought to be bewitching an aged chieftainess, cut the livers of the wizards out, and carried them back, only to find that the old lady had died in their absence. Naturally *le voisin ennemi* is an expert at the black art, but their neighbours return the compliment to them in full.

Certain persons, especially women, can put themselves into a trance (*zawl*) and communicate with Khuavang, from whom they acquire information as to the particular sacrifice required to cure the sick. The process of divination employed on these occasions requires the use of an egg and a shallow basket of rice, in which appears the footprint of the animal to be sacrificed. Possession by the spirit of a wild animal (*khawring*) is contagious and hereditary, and takes the form of passing from the hostess to another woman, who speaks with the voice of the original hostess. The belief in the power of men to assume the form of a tiger is common.

· LUSTRATION.—See PURIFICATION.

LUTHER.—i. Life.—The career of Martin Luther naturally divides into three periods—the first, of preparation (1483–1517); the second, of protest (1517–21); the third, of construction (1521–46). He was born at Eisleben in Saxony on 10th Nov. 1483. His birthplace was only the temporary home of his parents. They had come thither from Moehra, the real home of the family, some 80 miles to the south-west. The father, as an older son, had no share in the paternal estate, and was, therefore, in straitened circumstances,

until, by his daily labour in the copper mines, and by economy and thrift, he became proprietor of mines and furnaces, and an influential member of the community. Both as a child in his home and in his early school days, Luther knew what the struggle with poverty meant. As he advanced, his father was at last able to provide him with the means for a liberal education. Both his father, John Luther, and his mother, Margaretta Ziegler of Eisenach, were deeply religious, and subjected him to a discipline, continued in the schools to which he was first sent, that was legalistic rather than evangelical. His childhood was spent at Mansfeld. His elementary training was received chiefly at Eisenach, among his mother's relatives, and his University course at Erfurt, an institution which, at his entrance in 1501, was over 100 years old, and the most numerously attended of the German Universities. Intended by his father for the legal profession, he devoted his first years at Erfurt to classical literature and philosophy. While he read with absorbing interest the Latin classics, and derived from them the benefit of a wider horizon and a deeper acquaintance with human nature, it is a great exaggeration to affirm, as some recent writers have done, that they made him more of a humanist than a theologian; for he read them with a critical eye, and reacted against the excessive devotion to the purely formal that dominated the humanistic school. His teachers in philosophy were nominalists, who introduced him to Occam, Biel, and Gerson, and instilled a critical disposition towards the current scholasticism. Attaining A.B. in 1502, and A.M. in 1505, he reluctantly began the study of Law, for which he had little taste. His dissatisfaction with the calling into which his father was forcing him was intensified by spiritual conflicts, brought to a crisis by the sudden death of a friend by his side—whether by a bolt of lightning or by assassination can scarcely be determined—and by his own narrow escape in the storm that is said to have destroyed his friend. In obedience to a vow made in the moment of peril, he turned his back upon the world two weeks later, and entered the cloister of the Augustinian hermits at Erfurt (17th July 1505). Purity of life, deep moral earnestness, devotion to the study of the Holy Scriptures, and ability as preachers distinguished the Saxon Augustinians; but it is incorrect to infer from their name any special interest in Augustine's doctrine of sin and grace. With all the intensity of his nature the young novice devoted himself to the scrupulous observance of every detail of the requirements of the Order, and rose rapidly in the esteem of his brethren and superiors. He found edifying spiritual advisers in an aged monk whose name has not been preserved, and especially in John Staupitz, his Vicar General. Some of his modern critics accuse him of morbid conscientiousness and needless scrupulosity in his conceptions of truth and duty. The rules of the Order came to him with all the claims of divine commands, which he could not decline to observe in all their strictness without, in his belief, sinning against God. Nor could he be satisfied with anything less than certainty with respect to his relations to God. It matters little that, as has been recently urged, in some of his earlier discourses, composed while he was still a monk, as, e.g., in the lately discovered lectures on the Epistle to the Romans, evangelical statements can be found foreshadowing his future position. For it is no uncommon circumstance for writers advancing towards a conclusion, amid many vacillations, not fully to grasp the meaning of their own words.¹ In 1507 he was ordained to the

¹ Cf. Otto Scheel, *Die Entwicklung Luthers bis zum Abschluss der Vorlesung über den Römerbrief*, Leipzig, 1910.

priesthood, and his father, with a large retinue of personal friends, honoured the occasion of his first celebration of the Mass; but that, even then, the breach between father and son was not completely healed appeared at the meal which followed, when the former in his blunt way reminded the clergy that obedience to parents is a command from which no dispensation could be given, and that what they esteemed a call from God might be nothing more than a delusion of Satan. Selected by Staupitz in Nov. 1508 as instructor in Philosophy in the University of Wittenberg, founded only six years before, Luther was delighted, when, four months later, as a Bachelor of Theology, it was his privilege to lecture also on the Holy Scriptures. Recalled the succeeding autumn to Erfurt, he was assigned the task of lecturing on the *Sentences* of Peter Lombard. Two years later (1511) he was sent to Rome to represent Staupitz in regard to certain business affairs of the Order. This visit was of the highest moment to Luther's subsequent career. His most recent Roman Catholic biographer, Grisar, candidly says that the Rome which he visited was the Rome of the then ruling Julius II. and his predecessor, Alexander VI.—Rome glorified by art, but the deeply degenerate Rome of the popes of the consummation of the Renaissance.¹ He was grieved by the many abuses forced on his attention; and, notwithstanding the credulity with which, as he afterwards acknowledged, he accepted much of what he there saw and heard, the hold which the papal name and authority had had upon him was greatly weakened. The story of his experience on Pilate's Staircase rests solely on the testimony published after his death by his son Paul. Rapid promotion followed, as a testimonial to the success of his mission. Receiving the degree of Doctor of Theology at the age of twenty-nine (1512), he accepted it as a special call 'to explain the Scriptures to all the world,' and broke the traditional modes of instruction by his method of lecturing. Although he retains the 'four-fold sense' of Scripture, he lays the chief stress upon finding allusions to Christ in all the prophecies of the OT, and interprets the Psalter by the gospel of the NT. From the OT books he turned to the NT, treating successively Romans, Galatians, and Hebrews. From the nominalists, Occam and Gerson, he had turned to Augustine, and from Augustine more and more to Paul. The mystical writer, John Tauler, and the anonymous author of *The German Theology* had a decided formative influence. His time, however, was largely absorbed by administrative duties. In 1515 he was appointed Vicar, with the oversight of eleven monasteries.

It was in the midst of these duties that he became involved in the controversy concerning indulgences (*q.v.*). The doctrine of indulgences was rooted in the denial of the completeness of the satisfaction for sins made by Christ. This satisfaction, it was taught, had value for original sin, and, beyond it, was made for actual sins only by commuting the penalty from one that was infinite, and beyond man's power to afford, to one that is finite and within his limitations, either in this world or in that which is to come. Penitence, it was further taught, consisted of contrition, confession, and satisfaction, made by the penitent. Such satisfactions could be made only for such sins as were recognized by the sinner. But, as in this life the knowledge of many sins escapes the notice of even the most faithful, purgatory was provided, where satisfactions could be rendered for sins unrepented of at death. Relief from such satisfactions would be found, however, in the fund of the superfluous merits of the saints acquired by their works

of supererogation—a fund upon which the Church, through its head on earth, could draw, so as to grant indulgence by the payment of an equivalent. Heretofore, no more had been claimed for a letter of indulgence than an abbreviation of the pains of purgatory for those who had already departed. As the granting of these letters afforded large revenue, abuses constantly grew. It was the most convenient and effective way of raising funds for Church purposes, with percentage allotted to the agents who collected them. The luxurious habits of Leo X. and especially the completion of St. Peter's church at Rome rendered this expedient very serviceable at this time. Albrecht of Brandenburg, Archbishop and Margrave, had contracted to collect fees from this source, with the stipulation that he retain one half. He commissioned as one of his agents John Tetzel, a Dominican monk and emotional preacher, who, by his appeals to the terror of his hearers, created great popular commotion wherever he appeared, and urged them to purchase his wares. It would not be difficult to accumulate from Roman Catholic writers abundant censure of the course of Tetzel. For more than a year Luther, entirely ignorant of the connexion which both Albrecht and the pope himself had with Tetzel's traffic, had been uttering protests at a distance; but, as Tetzel drew nearer Wittenberg, the revelations made to Luther as a spiritual guide in the confessional compelled him first to appeal repeatedly to his ecclesiastical superiors, and, finally, when these appeals were fruitless, to publish his Ninety-five Theses for an academic discussion in the University. The effect which they produced, as well as the publicity which they received, was beyond all expectation. While in these Theses he strikes boldly and remorselessly at the very roots of the abuse, he is evidently still feeling his way, and has not entirely freed himself from some positions that were afterwards very forcibly repudiated.

There were formal answers the next year by John Eck and Silvester Priemas, which called forth responses, with characteristic vigour, from Luther. There was a barren conference with Cardinal Cajetan at Augsburg (Sept. 1518), and another with Miltitz at Altenburg (Jan. 1519), followed by the Leipzig Disputation (beginning 23rd June), in which, after Eck and Carlstadt had argued for days, Luther's debate with Eck began (4th July) on Church authority, significant because of the advance shown by Luther upon anything that he had previously declared, in the maintenance of the fallibility of Councils, and the censure of the Council of Constance for condemning Hus. The aid offered from the camps of humanism Luther not only declined, but repelled, as he wished to make it clear that his protest rested upon entirely different grounds from theirs. The year 1520 is noted for three monumental treatises, two polemical, one irenic and constructive. Of the former, the first was his famous 'Appeal to the Christian Nobility,' which might appropriately bear the title, 'The Responsibility and Duty of the Laity in Spiritual Affairs,' and the second, 'The Babylonian Captivity,' a scathing criticism of the sacramental system of the Roman Church. The latter, 'The Liberty of the Christian Man,' has evoked the following tribute from one of his most prominent modern critics:

'One cannot help asking how the same hand which delighted to shatter as with a sledge-hammer all that had hitherto been held sacred and venerable, could also touch so tenderly the chords of divine love' (Janssen, *Gesch. des deutschen Volkes*, Eng. tr., iii. 289).

The bull of excommunication promulgated by the pope on 15th June 1520 did not reach Wittenberg until four months later, and was formally burned by Luther before the students of the

¹ H. Grisar, *Luther*, i. 41.

University (10th Dec. 1520). On 16th and 17th April 1521 Luther appeared before the Emperor, Charles V., at the Diet of Worms, and declared that he could not recant. There were too many political complications involved to enable the Emperor to act promptly against him, and before such action could be taken the Elector of Saxony, as a precaution, had Luther arrested, while returning from the Diet, and carried to the Wartburg, overlooking Eisenach, where he remained in retirement until the following spring.

The isolation of those ten months afforded opportunity to review his work at a distance from the scene, to mature his convictions by the close and uninterrupted study of Scripture, to form some plans for the future, and to begin his most important work, the translation of the Bible into German. The NT was translated, from the second edition of the Greek Testament of Erasmus, within three months from the time when it was begun. The translation was brought with him when he returned to Wittenberg from his exile (6th March 1522), and appeared the succeeding September. The translation of the OT was a much more difficult undertaking, in which he had the assistance of Melancthon, Aurigallus, Roerer, Foerster, and others, and was published in parts, until in 1532 the entire Bible appeared complete, followed by the Apocrypha two years later.

On his return to Wittenberg the character of his labours was much changed. He had at once to meet with decision the radical reaction against Rome, which had resorted in some cases to revolutionary, and in others to precipitate, measures. Three days after his return he began a series of eight sermons, preaching daily, into which he threw all his energy to check their excesses and, against them, to define the principles for which he had been contending. The reformation of the churches in districts no longer under the dominion of the old Church now became necessary, to prevent them from being misled by the confusion that had been introduced, and in order, by a re-organization, to build them upon solid evangelical foundations. Henceforth, while the polemic against Rome did not cease, and almost equal energy was directed against the opposite extreme, he was occupied largely with constructive work—the visitation of churches, the preparation of Church constitutions, the re-organization of schools, the revision of the liturgy, the writing of catechisms, the composition of hymns, and the publishing of popular sermons, not only for private edification, but especially as models for the inadequately prepared preachers, besides his lectures to his classes and incessant correspondence and conferences—until, from sheer exhaustion, he fell a victim to disease, while acting as a mediator between the counts of Mansfeld, and died in his native town of Eisleben (16th Feb. 1546). Among the more important events of this later period of his life are his marriage with Catherine von Bora (1525); the Marburg colloquy with Zwingli (Oct. 1529); his second period of isolation, at the castle of Coburg, during the Diet of Augsburg (1530); his conferences in 1535 with representatives of the English Church, which had an important influence on the English Reformation and its literary monuments; the Wittenberg Concord of 1536 with Bucer and other representatives of the Reformed Church; and the Schmalkald Articles of 1537. Probably the point that has occasioned most heated discussion was his relation to the bigamy of Philip of Hesse in 1540 (see W. W. Rockwell, *Die Doppelhe des Landgrafen Philipp von Hessen*, Marburg, 1904).

2. *Appreciation.*—The greatness of Luther lies largely in the versatility of his gifts and the readiness with which he could call them into service.

Intensity, concentration, earnestness, directness, and action are constantly present. Beneath his efforts there is always some important practical end. His scholarship has a higher end than mere love of learning. He availed himself of the weapons of humanism, so far as he could use them, without being in any sense a humanist. He had lectured for years on philosophy, only to repudiate both the Greeks and the scholastics. His writings abound in numerous historical allusions, without suggesting that he ever could be rated as a historical investigator. It is rather his experience as a Christian that is ever leading him the more deeply into the treasures of Holy Scripture, to find therein the solution of the problems of human life.

As a professor he was neither a scientific exegete nor a systematic theologian. He cut loose from all scholastic formulæ and methods. While he could not entirely escape from the influence of mediævalism, he was in constant antagonism to its authority. Even in the class-room he was a great preacher, stimulating the thought and life of his pupils, instead of retailing stereotyped definitions. His lectures were almost entirely confined to particular books of the Bible, which he expounded with great freedom of manner.

As an author, it is in his form rather than his matter that he reflects the present moment. Eminently conservative and slow to reach a conclusion, when once he has reached it he writes in an intense glow of feeling; words crowd one upon the other with great rapidity of thought, and with wealth of illustration often of the most homely character. He never has difficulty in making his meaning intelligible. He can write with equal ease as a scholar or for the plainest of the people. He loves paradoxes. He concentrates his attention so intensely on the particular form of the subject before him as to make no qualifications in order to forestall possible incorrect inferences or misrepresentations. The whole, real Luther can be read only by placing side by side his declarations under varying circumstances, and against opponents that widely differ. Few writers, therefore, can be so readily perverted by partisans. His language is not infrequently rough, and his allusions such as were in keeping with the rude age in which he lived.

He was master of the art of translation. Not verbal exactness, but the precise reproduction of the very shade of meaning of the original in the language of the simplest people of a later age, was his aim. His German Bible is a modern book, which at last fixed the form and became the standard of modern German. His hymns are paraphrases of Scripture, or free renderings of the old Latin hymns of the Church. His sermons are most frequently expositions of long passages of Scripture, and grow naturally out of the text, as applied to contemporary circumstances and conditions; and hence generally reflect that with which his attention at the time was chiefly occupied. They have come to us mostly as taken down in shorthand by some of his hearers, and not in finished form from his own pen.

His contributions to the re-organization of churches are embodied not only in documents that bear his name, but also in those of his co-labourers, Melancthon, Bugenhagen, and others, who applied the principles which he laid down, and acted with his constant co-operation and advice. He was the advocate of liberal culture, the study of the Greek and Latin classics, the education of women, and free public libraries. So far was he from precipitate and revolutionary methods of reform that he proceeded with the greatest caution, upholding what had been fixed and approved by long usage, until a break with the past was no longer avoidable, but, when the critical moment came, always acting with promptness and decision. His aim was not

even a restoration of Scriptural models, but the continuance of whatever in life, worship, and organization was not contrary to Scripture. External union was approved only as it was the expression of a preceding inner unity. Agreement as to the faith of the gospel was the condition of all attempts at Church union, which he esteemed valuable only as the servant of faith; hence the faith was never to be adjusted to the supposed expediences of union.

As a theologian, his chief effort, on the negative side, was to free theology from its bondage to philosophy, and to return to the simplicity of Scripture. He was dissatisfied with technical theological terms, because of their inadequacy, even when the elements of truth which they contained restrained him from abandoning them. He was not without a historical sense and a reverence for antiquity, provided that it was subjected to the tests of Holy Scripture. Scripture was not to be interpreted by the Fathers, but the Fathers were to be judged by their agreement or disagreement with Scripture. It was his especial privilege to have entered into the spirit of St. Paul as none before him, not even Augustine. Luther's theology is Pauline theology, in the language of modern times. It begins and ends with the revelation of God in Jesus Christ. Christology is the key to all knowledge of the nature and attributes of God and the doctrine of the Trinity. Christ is the interpreter of Scripture. All doctrines are to be considered in their relation to Christ. With Augustine, he taught the organic union of all men in Adam, and the organic union of all sins in original sin. Original sin is emphasized rather as the corrupt state resulting from the Fall than as the act itself whence this state proceeds—a state of spiritual death, from which man can neither of himself escape nor contribute towards his deliverance. The Incarnation presupposes man's sin. God became man in order, by His sufferings and death, to provide redemption. In the personal union, as the result of incarnation, the integrity of both natures is preserved, the divine inseparably pervading and energizing the human; the human bringing the possibility of suffering, and the divine sustaining and imparting to the human its infinite efficacy. The humiliation (*kenosis* [q.v.]) is not of the divine nature, but of the divine person in His human nature. Hence humiliation is not synonymous with incarnation, but is only a determination of the human nature, glorified from the very first moment of its union with the divine. Redemption is made for all men and all sins, although not received and realized by all. The doctrine of predestination, he insists, should always be treated as a supplement to Christology, since what God has predetermined concerning our salvation from eternity He has revealed in the gospel, and, therefore, the gospel itself exhibits the contents of God's eternal decree concerning salvation. The blessings of salvation, to be realized, must be appropriated by faith; but this faith is God's gift. Man cannot believe in Christ, or come to Him, by his own reason or strength. It is the office of the Holy Spirit alone to bring man to Christ and Christ to man, to call, enlighten, and regenerate. If man is saved, it is entirely by the work of the Holy Spirit in applying redemption through Christ; if he is lost, it is entirely by his own persistent resistance of the offers of divine grace. There are no degrees in justification; it is perfect and complete, however weak the faith that apprehends it, since the righteousness which it imparts is the perfect righteousness of Christ. If regarded as forgiveness, where the least sin is forgiven, all are forgiven, and where the least sin is unforgiven, none are forgiven. But justification is more even than forgiveness.

Christ and man have exchanged places; so that, while all the guilt of man is assumed by Christ, all the righteousness of Christ is transferred to man. Hence the confidence of man before God. Faith kindles love. As an active principle, faith not only receives what God offers, but also, through the new powers imparted with justification, exercises itself in obedience towards God, and in efforts for the good of man.

'It is as impossible to separate works from faith, as it is to separate heat and light from fire' (*Introduction to the Epistle to the Romans*, 1522 [*Works*, Erlangen ed., lxvii. 124 f.]). This passage has called forth the unqualified commendation of the Roman Catholic theologian, J. A. Moehler, although he incorrectly adds that it is 'in the most amiable contradiction with the Lutheran theory of justification' (*Symbolik*⁸, Mainz, 1872, i. 163, tr. J. B. Robertson, London, 1848, i. 185).

Furthermore, the Holy Spirit comes to men only in and through the Word and Sacraments, through the word of the Law, producing sorrow for sin, and through the gospel, i.e., the promise of the forgiveness of sins producing faith. The office of the Sacraments is to individualize the general promise of the gospel. The chief thing in baptism is not the water, but the Word, which, in and with the water, is applied to the person baptized. The chief thing in the Lord's Supper is not the bodily eating and drinking, but the assurance, 'Given and shed for you,' which is declared to the guests, and sealed by the elements and the heavenly mystery that they offer. Since, wherever this Word is preached, whether orally or visibly in the Sacraments, the Holy Spirit is active, Word and Sacraments become marks, designating where at least some truly believing children of God are to be found; i.e., they indicate the presence of the Church, which otherwise is a matter of faith, as the Creed confesses: 'I believe in the Holy Catholic Church, the communion of saints.' The direct relation of each individual to Christ, unmediated by any other agency than Word and Sacrament, creates the spiritual priesthood of believers, and obliterates the distinction between an order of priests and laymen. The ministry of the gospel is not a priesthood, but an office of the Church for the administration of Word and Sacraments, in which administration ministers are only the executives of the congregation, and, through the congregation, of Christ Himself, who has called and ordained them. Distinctions of rank among ministers are not admissible by divine law, but may be very advantageous when agreed upon simply according to human law. Uniformity of Church government and ceremonies is unnecessary, however desirable it may be as a matter of expediency. The Church has no power but that of the Word. Even in regard to those matters where the Word of God allows no freedom, we have no right to attempt to constrain others by any other means than by the preaching of the Word.

'I will preach and talk and write against these things, but no one will I attempt to force' (*Eight Sermons preached at Wittenberg, Lent, 1523* [*Works*, Erlangen ed., xxviii. 219]). 'The Word that has created the heavens and the earth must do this, or it will be left undone' (*ib.*).

The dualism in ethics that pervaded the mediæval religionism, according to which there is an inherent antagonism between the spiritual and the material, the heavenly and the earthly, entirely disappears in Luther. The separation caused by sin is removed by redemption and regeneration, and the spiritual now pervades the material, the heavenly the earthly. Hence the believer is not only a spiritual priest, but also a spiritual king, and lord over all things; and his chastened enjoyment of them belongs to that gratitude which he owes the Redeemer who has provided them for him. Nevertheless, while by faith lord over all, by love he is servant of all, and obeys God's law from an inner necessity of his regenerated nature.

(cf. C. E. Luthardt, *Die Ethik Luthers in ihren Grundzügen*, Leipzig, 1867, *Geschichte der christlichen Ethik*, do. 1893, vol. ii.).

Probably with only one exception in all history, no one has been so much praised or so bitterly and incessantly attacked as Luther. The discussion of his life and deeds is constantly renewed with all the interest of almost contemporaneous occurrences. His voluminous works, many of them reaching us through the notes of others instead of from the pen of the author himself, the memoranda of friends who jotted down from memory fragments of his conversations in the bosom of his family, his most confidential letters to his most intimate associates, humorous and satirical as well as serious, afford an inexhaustible mine for students of successive generations. Researches in archives heretofore closed and in libraries where they have lain unnoticed are bringing to light MSS of decided historical importance. Thus, in the last year of last century, his lectures on the Epistle to the Romans,¹ for which scholars had long been looking, were found in so public a place as the Berlin Library, shortly after a student's notes of the same lectures had been discovered in the Vatican, and succeeding only by a little over ten years the discovery of lectures on the Psalms, belonging also to his formative period. New biographies from both friends and opponents, as well as from those who profess to apply with rigid impartiality the highest standards of historical criticism, succeed each other with a frequency that is remarkable when it is remembered that he has been dead for over three centuries and a half, showing clearly that the last word has not been said on many questions that he started, and that cannot be answered without a thorough study of his own presentations.

LITERATURE.—(a) Of the more recent Roman Catholic critics of Luther and his work, the following may be mentioned: J. Janssen, *Geschichte des deutschen Volkes seit dem Ausgang des Mittelalters*, 8 vols., Freiburg im Br., 1879-94, Eng. tr., 16 vols., London, 1896-1911; H. S. Denifle, *Luther und Luthertum*, 2 vols., Mainz, 1906; H. Grisar, *Luther*, 3 vols., Freiburg im Br., 1911-12.

(b) Among the replies called forth are the following: J. Köstlin, *Luther und J. Janssen, der deutsche Reformator und ein ultramontaner Historiker*, Halle, 1883; R. Seeberg, *Luther und Luthertum in der neuesten katholischen Beleuchtung*, Leipzig, 1904; T. Kolde, P. Denifle, *seine Beschimpfung Luthers*, do. 1904; J. Haussleiter, *Luther im röm. Urtheile*, do. 1904; W. Köhler, *Ein Wort zu Denifle's Luther*, Tübingen, 1904; G. Kawerau, *Luther in kath. Beleuchtung, Glossen zu H. Grisar's Luther*, Leipzig, 1911. The results are condensed in: W. Walther, *Für Luther wider Rom*, Halle, 1908 (an exhaustive answer to the polemics of Janssen, G. G. Evers, and Denifle); and H. Boehmer, *Luther im Lichte der neueren Forschung*, Leipzig, 1914.

(c) The collected works of Luther have been comprised in seven editions of varying excellence and completeness: the Wittenberg (1539-59); the Jena (1555-58); the Altenburg (1561-64); the Leipzig (1729-40); J. G. Walch (1740-53), of which the St. Louis (1880-1910) is a thoroughly revised reprint; the Erlangen (beginning in 1826); the Weimar, the fullest and edited with greatest critical accuracy, under the patronage of the German Emperor. It was begun in 1833, and is still far from completion. For details concerning these editions see *PRE*, art. 'Luther.' A very convenient edition of select works, edited with critical care and with introductions, is that of G. Buchwald, G. Kawerau, J. Köstlin, M. Rade, and E. Schneider, 8 vols., with 2 supplementary vols., 8rd ed., Berlin, 1905. Of greater scientific value is O. Clemen, *Luther's Werke in Auswahl*, 4 vols., Bonn, 1912-14.

(d) The list of biographies begins with that of Melancthon, published the year after Luther's death, in the introduction to the second Latin volume of the Wittenberg edition of Luther's works. Mention may be made of the following: M. Meurer, Leipzig, 1843, 1870; J. Köstlin, 2d ed. G. Kawerau, Berlin, 1903; T. Kolde, Gotha, 1884-98; M. Rade, Neustadt, 1887; A. Hausrath, Berlin, 1904; and the English biographies of C. Beard, London, 1889; H. E. Jacobs, New York, 1898; T. M. Lindsay, Edinburgh, 1900, and esp. in his *History of the Reformation*, i., do. 1907; H. Preserved Smith, London, 1911; A. C. McGiffert, do. 1911. A very condensed, but most excellent and suggestive, classification of biographers and other writers on Luther, according to schools, is the work of

Boehmer, above cited, pp. 7-27. For a critical study of Luther's theology see the treatises on that title by T. Harnack, Erlangen, 1862-67, and J. Köstlin, Stuttgart, 1863, Eng. tr. of 2nd German edition (1883) by C. E. Hay, Philadelphia, 1897.

HENRY E. JACOBS

LUTHERANISM.—Notwithstanding the protests which Luther himself raised against it, the term 'Lutheran' was soon applied in the 16th cent. to the principles of which he was the chief advocate. However necessary plans for Church organization became when the attempt was made forcibly to suppress his protests, it had never been Luther's aim either to found a new Church or even within the historically existing Church to carry out any elaborately pre-arranged form of re-organization. Nor was the initiative for such re-organization taken by Luther or by those theologians who were most closely associated with him, but either by the radical extremists whom he repudiated or by the Protestant rulers, who justly realized that the churches in their realms could not be left without some form of administration.

Lutheranism starts with the assertion of the responsibility of the individual conscience to God alone in all matters of faith and life. But, in maintaining this position, it does not proclaim pure individualism, since the conscience is always bound by the Word of God, and that Word is not to be interpreted arbitrarily, but by comparing spiritual things with spiritual. In its treatment of the doctrine of the Church, the emphasis rests not so much upon the external institution, with a well-defined organization and codes of ecclesiastical laws, as upon the association of truly Christian people, maintained by their communion in the one faith of the gospel, through the activity of one and the same Spirit within their hearts and minds. The appeal, accordingly, is never made to the authority of any outward visible organization, but to the individual conscience. All Church power inheres in the Word of God.

¹This power is exercised only by teaching or preaching the Gospel, and administering the Sacraments' (*Augsburg Confession*, art. xxviii.).

The Church has no sword but that of the Spirit with which to enforce obedience. Nevertheless, as for the administration of Word and Sacraments, external association, as well as the internal communion of believers with each other, is necessary; the external Church must always be maintained, but the form of its organization must be determined by the circumstances in which the Church is placed, the preservation of the pure Word and Sacraments being the first consideration. The preference is always on the side of that which has been historically approved, a break in the existing order being justified only when such order cannot be maintained without impairing fidelity to God's Word. It was not by any concerted action among Lutherans, nor with any thought of a united Lutheran Church, that the Church constitutions of the Reformation period were formulated, but they were prepared in various countries and provinces according to the peculiar needs of each. Externally, there were many Lutheran churches, but no one Lutheran Church. The very first word of the first article of the Augsburg Confession ('ecclesiae apud nos') declares this. There was, however, an external bond in their common confession. This confession, properly speaking, is no particular historical document, however widely accepted among Lutherans, but the enunciation of those Scriptural principles for which the Lutheran Church peculiarly stands. Such confession, however, has found concrete expression in certain classical historical agreements that have greater or less recognition. It is not the Confession of Faith, but the faith of the Confession, that determines the Lutheranism of any individual teacher

¹ Critically edited and published, with historical introduction, by J. Ficker, *Luther's Vorlesungen über den Römerbrief*, 2 vols., Leipzig, 1908.

or Church body. Where the doctrines of the Confessions are held and confessed, even though the Confessions themselves be not subscribed, or even known, the Lutheran character of the teaching is established; while, on the other hand, where the contents of the Confessions are not cordially received, as a matter of faith, *i.e.* as derived from God's Word, and there is no subscription to such Confessions with qualifications expressed or with mental reservations, the test is not met. A real Confession of Faith is not so much a law as the joyful declaration of Christian freemen of the liberty that they have attained in Christ, and of the limits within which this liberty is to be found and exercised (cf. art. CONFESSIONS, vol. iii. p. 845).

What are known historically as the Lutheran Confessions are not attempts to summarize the doctrines of the Holy Scriptures, as are various other Confessions in Christendom that are, in reality, systems of doctrine. The confessional development of Lutheranism has proceeded on the principle that Holy Scripture is its own interpreter, and needs no formal explanation by Church authority, unless the meaning of Scripture be involved in serious controversies that greatly agitate the Church and call for the careful guarding of the purity of the gospel from those who would pervert it. Articles of faith that have not been attacked or misrepresented need no confessional treatment. A Confession, from this view, should never be an exhaustive presentation of the Church's faith, but there should be a readiness, as new controversies arise, to meet them with the same weapons and in the same spirit with which preceding controverted points have been treated. Hence the Augsburg Confession closes with the words:

'If anything further be desired, we are ready, God willing, to present ampler information according to the Scriptures.'

The Lutheran Confessions have thus been determined by certain practical ends in view at several crises in the experience of the churches that call themselves Lutheran.

Of these Confessions, the two Catechisms (cf. art. CATECHISMS [Lutheran], vol. iii. p. 253 ff.), both written by Luther in 1529, are handbooks of elementary religious instruction rather than theological documents. The four theological Confessions are: the unaltered Augsburg Confession, the Apology of the Augsburg Confession, the Schmalkald Articles, and the Formula of Concord. The first of these chronologically, as well as by general recognition, the Augsburg Confession, was prepared by Melancthon for presentation at the Diet of Augsburg in 1530. It is an irenic document, emphasizing the points of agreement with the Roman Church, in the hope that some way might yet be found to avoid a break in the Western Church. The term 'unaltered' is used to distinguish the Confession presented at Augsburg from unauthorized revisions made by Melancthon personally in 1540 and 1542, in the interests of a nearer approach to the Reformed. The fact that the term 'unaltered' may not strictly belong to even the best text—since the original copies placed in the hands of the Emperor Charles V. have both been lost, and Melancthon was compelled to reproduce the Confession from the very full notes of himself and his colleagues for publication the succeeding spring—does not justify the rejection of the distinction historically fixed between the two types of the Confession. The Apology of the Augsburg Confession (1531) is a full and learned defence, also written by Melancthon against the criticisms contained in 'The Confutation of the Augsburg Confession' by the Roman theologians at Augsburg. The Schmalkald Articles (1537), prepared by Luther, with a long Appendix by Melancthon, mark a

stage in the controversy with Rome when the differences were no longer reconcilable. The Formula of Concord (1577) gives a decision concerning controversies among Lutherans, as the other Confessions had treated those which had assailed them from without (see, further, art. CONFESSIONS, § 13).

Differences between Luther and Melancthon were intensified among their followers. These differences, due primarily to differences of temperament, training, and religious experience, caused no personal rupture between them. Melancthon, gentle, timid, and sensitive, loved the retirement and occupations of the study, and shrank from conflict. Far more of a humanist than Luther, he was swept by the force of events, and, much to his regret, from classical studies into the current of theological discussions. He had passed through no such inner spiritual conflicts as had Luther. Accordingly, he excelled in the sphere of the formal rather than of the material. No one could give such accurate and graceful literary expression to Luther's thoughts. But, when Luther's influence was removed, he was not only vacillating, but dominated by two principles, viz. a much higher regard than Luther for patristic authority, and a greater concern for the external peace and the impressiveness of the Church's government. He was frequently involved in negotiations with respect to Church politics, which compromised his position, and brought into prominence his great contrast with Luther in this particular. Notwithstanding his sharp arraignment of scholastic methods in the first edition of his *Loci Communes* (1521), he soon manifested a bent towards the principles which he had repudiated, placed undue importance upon the philosophy of Aristotle, and became the founder of Lutheran scholasticism. The perpetuation of these two types of thought has caused not only differences in regard to the attitude of their adherents to individual Confessions, but also a stricter or a laxer standard of Confessional subscription. The Formula of Concord is a formal repudiation of Melancthonism in its divergence from Luther.

Of the two principles of Protestantism, the formal and the material, it has often been observed that Lutheranism lays greater stress upon the material—'Justification by Faith alone'—than upon the formal—'The Sole Authority of the Holy Scriptures.' While, in fact, the two are never separated, the Scriptures are regarded as the absolute norm of revealed truth rather than as a magazine or receptacle in which the truth is stored. For it must not be forgotten that the gospel itself was proclaimed orally before it was committed to writing, and was no less the power of God unto salvation where thus preached, or where taught by those who had heard it from the first ear-witnesses, than when read on the printed page. Nor can the Scriptures be correctly apprehended except as in regeneration a new spiritual sense is imparted.

'When even the most able and learned men upon earth read or hear the Gospel of the Son of God, and the promise of eternal salvation, they cannot, from their own powers, perceive, apprehend, understand or believe and regard it true, but the more diligence and earnestness they employ to comprehend with their reason these spiritual things, the less they understand or believe, and before they become enlightened, or taught of the Holy Ghost, they regard this only as foolishness or fictions, 1 Cor. 2. 14' (Formula of Concord, pt. ii. ch. ii. § 8, Eng. tr., H. E. Jacobs, *Book of Concord*, p. 558).

The true interpretation of Scripture is to be found only as the relation of each part to Christ as the centre is correctly apprehended, and this is possible only by the regenerated man.

While protesting against all ecclesiastical authority that arrays itself against Holy Scripture, Lutheranism lays great stress upon the continuous witness to the truth of the gospel, given through

the Holy Spirit, as this truth is applied and developed from age to age in believing personalities. Such believers, according to its teaching, constitute the inner spiritual organism of the Church. In this respect its doctrine is in contrast with that of Rome, on the one hand, which lays so much importance upon the decisions of the externally organized Church, and that of the Reformed, on the other, which is apt to isolate the individual from his historical relations and the mediation of those through whom Word and Sacraments reach him. The same principle obtains in its conception of the relation of the Holy Spirit to Word and Sacraments, since, besides being a source of revealed truth, it regards the Word as a real means of grace through which alone the Spirit calls, illuminates, regenerates, and sanctifies; and the Sacraments as efficacious instrumentalities by which the promise of the gospel concerning the forgiveness of sins and the grace of God is individualized.

Like all ideals, those of Lutheranism suffer various modifications as embodied in a concrete form in external organizations. The union of Church and State in European lands has not only prevented the principles of Lutheranism from being applied in entire consistency to practice, but has also often interjected adjustments of theory and policy foreign to both its spirit and its teaching. As in the time of the Reformation, so at all times since, there have been those whose intense conservatism has shown the presence of a Romanizing, or whose greater freedom that of a Reformed, tendency. Indifferentism, Unionism, Mysticism, and Rationalism have had their learned advocates among those claiming the Lutheran name, and within Church organizations known as Lutheran, just as the Christian Church has much within it for which Christianity is not responsible.

LITERATURE.—For the study of the subject the Lutheran Confessions are indispensable. The best ed. is that of J. T. Mueller, Stuttgart, 1848, 10 Gütersloh, 1907, containing in parallel columns the official German and Latin texts, with exhaustive scholarly introductions and minute index, Eng. tr., ed. H. E. Jacobs, Philadelphia, 1882-83, 2 vols., vol. i. containing the Confessions, vol. ii. introductions and documents; condensed ed., containing Confessions alone, do. 1911.

Next in importance for an intelligent acquaintance with Lutheranism is Martin Chemnitz, *Examen Concilii Tridentini*, Frankfurt, 1566-78, and many other edd. (far more than a thorough criticism of the Decrees and Canons of Trent; it is a very full discussion also of the constructive principles of Lutheranism in doctrine, ethics, liturgics, polity, and pastoral theology); see also G. L. Plitt, *Einführung in die Augustana*, Erlangen, 1867; F. H. R. Frank, *Die Theologie der Concordienformel*, do. 1858-65; P. Tschackert, *Die Entstehung der lutherischen und reformierten Kirchenlehre*, Göttingen, 1910; F. Uhlhorn, *Geschichte der deutsch-lutherischen Kirche*, Leipzig, 1911; C. P. Krauth, *The Conservative Reformation and its Theology*, Philadelphia, 1871; T. E. Schmauk and C. T. Benze, *The Confessional Principles and the Confessions of the Lutheran Church*, do. 1911; treatises on Symbolics by G. B. Winer, Leipzig, 1824, 41882, Eng. tr., Edinburgh, 1871; H. E. F. Guericke, Leipzig, 1861; R. Hofmann, do. 1857; G. F. Oehler, Tübingen, 1876; K. H. G. von Scheele, Gotha, 1831; F. A. Philippi, Gütersloh, 1883, and E. F. K. Mueller, Leipzig, 1896; *Lutheran Cyclopedia*, ed. Jacobs and J. A. W. Haas, New York, 1899; *P.R.E.s, passim*; *Bureau of the Census, Special Reports*, 'Religious Bodies, 1906,' Washington, 1910, ii. 340-404.

HENRY E. JACOBS.

LUXURY.—I. Historical aspects of luxury.—One of the incentives towards social progress is the desire to procure a surplus after the needs of a mere physical existence have been met. Somewhere within the limits of this surplus is that portion of it which constitutes expenditure upon luxuries. What exactly is to be termed luxury depends to a large extent on the situation and condition of a community, and, in a somewhat less degree, upon its standard of life.

Once a tribe managed to procure a sufficient food supply to maintain itself, any increase rendered possible an unproductive consumption of the excess in the form of feasting, and under these circumstances a rude form of luxury would have been

evolved. Thus a primitive type of luxury must have come into existence in pre-historic times. In the early civilizations luxury made its appearance in well-defined and striking forms. In Egypt, Nineveh, and Babylon, and at Tyre and Sidon, the primary tendency towards decoration and display appears to have shown itself in relation to religious observances, and, closely connected with this, there was the pomp of the royal family, where, as in Egypt, it claimed divine authority. But the example of the supreme ruler extended sooner or later to the governing classes, and in this way luxurious expenditure by individuals manifested itself. The chief gratifications sought were the pleasures of the table in eating and drinking, of personal adornment (both in dress and by the use of costly perfumes), of buildings and monuments (such as the Pyramids), or of dwellings and their appurtenances (as, for instance, the hanging gardens of Babylon). Among the Greeks there were traces of luxury in the heroic age, such as rich armour and dresses, and artistic ivory work, but it was at Athens after the defeat of the Persians (490-480 B.C.) and in the time of Pericles († 429 B.C.) that sumptuous expenditure became a characteristic both of the State and of the individual citizens. Public festivals were conducted on a scale of great magnificence, while the erection of public buildings was carried on at an outlay which was very great for the times. What differentiates the luxury of the Greeks from that of the Eastern nations was the artistic aspect of the movement. On the Acropolis there was the Pinacotheca beautified by the frescoes of the painter Polygnotus, near which stood the immense statue of Athene Promachos, the work of Pheidias, and beyond was the Parthenon, also embellished by the sculpture of Pheidias. With the rapid increase of wealth private expenditure increased; vases for household use became more decorative, and dress was more ornate. The conquests of Alexander the Great (336-323 B.C.) introduced the somewhat crude display of the Eastern nations, and, to a large extent, degraded the externals of social life. In Rome luxury became marked after the Punic Wars. Gladiatorial games had been introduced in 264 B.C., and by 186 B.C. lions and panthers were brought long distances at great cost to stimulate the lust for sensation which was being shown by the people. Rich citizens began to spend profusely on food and table appliances—anchovies were brought from Pontus and wine from Greece. As the power of Rome grew, luxury increased, till it culminated under the Empire. Augustus claimed to have erected 408 marble pillars, and to have provided 8000 gladiators and 3000 wild beasts for the arena. Ostentation developed into the excesses of Caligula and Nero, which were copied by private individuals according to their means. In the Byzantine Empire luxury was, if possible, greater than at Rome; it was certainly more decadent. If at Athens art had glorified luxury, at Constantinople luxury debased art; the Byzantine style has almost become synonymous with over-elaboration and tasteless display. Even before the Renaissance luxury had become remarkable in Italy, more particularly at Florence; afterwards it developed and produced a by-product in the encouragement of art and commerce. The more generous expenditure of the upper classes in France during the reign of Philip IV. (1285-1314) was met by his attempted sumptuary legislation regulating dress. In England Edward III. considered that extravagance was diminishing the taxable resources of the country, and, in order to prevent the evil, the statute 'de Cibariis Utendis' was passed in 1336, by which the courses of meals were limited to two, except on the principal feast-

days, when three were permitted. In 1363 a further act was passed against outrageous and excessive apparel, while in 1463 there was a more detailed sumptuary law. The inflow of precious metals to Europe after the discovery of America, followed by the extension of foreign trade, increased the stock of several classes of goods which previously had been excessively rare and costly. Hence commodities which had been of great value became relatively less expensive. The improved organization of industry facilitated production, so that Adam Smith was able to point to the fact that the most common artificer's accommodation exceeded that of many an African king, 'the absolute master of the lives and liberties of ten thousand naked savages' (*Wealth of Nations*, bk. i. ch. i.). Sumptuary legislation in England may be said to have ended with the Tudors. Mercantilism, in its encouragement of manufactures, tended to permit the production of luxuries for exportation. The growth of foreign trade enabled seafaring nations to participate in it and in the re-exporting of rare and costly goods. Accordingly, though there remained a sturdy body of opinion against luxuries generally, and more especially against those luxuries brought from foreign countries, sumptuary laws ceased to be observed in England. In Scotland, on the other hand, as late as 1681 the Scots Parliament prohibited the importation of a long list of foreign commodities which were held to be 'superfluous.' The industrial revolution followed by the acceptance of the doctrine of *laissez-faire* (*q.v.*) made the State less disposed to interfere with private expenditure unless upon moral or social grounds, as, for instance, in the regulation of wines and spirits. In the 19th cent. the principle of the taxation of luxuries came to be more and more recognized, partly on the ground of restraining the consumer from a species of consumption which was hurtful to himself (*e.g.*, taxation of spirits), partly as raising revenue from what were admitted to be superfluities, and thereby collecting revenue from classes who would not pay taxes otherwise (*e.g.*, tea and sugar taxes). A few taxes may be regarded as having a sumptuary element, such as the tax on armorial bearings or those on male servants and on motor cars.

2. The economic questions arising out of the existence of luxury.—Social observers who approach the problem of luxury from the historical side are inclined to urge against it that it has been the cause of the fall of great empires. Frequently, if not invariably, luxury has been a symptom of decadence, but a closer analysis tends to show that the moral weakness had already shown itself, and, as it increased, it manifested itself in public and private extravagance, while extravagance again gave fresh impetus to the forces of political and social disintegration. In these cases it is clear that the evil lay in the abuse of luxury.

Some of the most powerful economic motives are to be found in the desire of men to realize an idea or scheme of life which seems to them an improvement on their present one. Once their mere bodily wants are satisfied, their further desires may be called luxuries. This, however, is not strictly accurate. In a great number of occupations the worker who is able to satisfy the former wants only would not be efficient. Therefore one must extend the meaning of the term 'necessaries' so as to include in it all those things which are required for efficiency. What is consumed beyond that point may well be described as consisting of luxuries. It follows that the term 'luxury' must be understood in relation to time, place, and the general circumstances. It is easy to determine whether any specific commodity is a luxury to a given individual in regard to whom the necessary

data are known; the problem becomes much more difficult in the case of a whole community. Certain forms of expenditure, as a rule, do not aid efficiency, and these can usually be classed under the head of luxurious outlay; certain others, again, are usually incurred with the object of conferring distinction on the spender, and, where such can be isolated, they fall into the same class. For the rest, all that is possible is to note with care what happens in the majority of cases in order to ascertain whether a certain type of expenditure is necessary or a luxury.

In the case of individual expenditure, luxury can arise only where there is a surplus beyond physical needs. If that expenditure is so directed as to cut into the margin required for efficiency, then inroads are being made into future income-earning power. But, after full provision has been made for efficiency, there is yet another claim on the surplus—namely, that for the accumulation of capital. It is this claim that has led many economists to condemn luxury. Expenditure on luxury repays or restores the capital which was temporarily locked up in the commodities consumed as luxuries. Therefore such expenditure cannot leave production much larger than it had been before the goods were purchased.¹ Wealth which becomes capital is also consumed, but in such consumption it becomes an instrument for further production. Thus that part of the surplus which is used as capital is more fruitful as regards production than the other portion which, in the phraseology of J. S. Mill (*Principles of Political Economy*, London, 1886, bk. i. ch. iii.), is consumed unproductively.

Consumption of luxuries has other consequences which are partly economic, but which are also of considerable social and ethical importance. Expenditure on superfluities has a tendency towards a relaxation of concentrated effort. In extreme cases it weakens the moral fibre and opens the way to dangerous excesses. It not only tends to injure the person whose life is luxurious, but reacts on others by the force of example. Thus there is a contest in the fixing of the prevailing standard of living between luxury and a wise and discriminating frugality. Even in periods of national and individual prodigality there were always moralists who pleaded for a simple life, and it is the relative degree of support which either class of precepts attracts that fixes whether a particular age or a particular class can be described as luxurious or not.

In the view of luxury that has been adopted the central point is the fixing of the standard of expenditure which is required for full efficiency. As society progresses and as further resources become available, it becomes possible for a community to increase enjoyments which are largely immaterial. The enjoyment of art is a case in point. If progress is conceived in a wide sense, the highest culture becomes an element in national efficiency. Accordingly, in a wealthy nation, where the inequalities of incomes are not too great, a condition is possible where the dividing line between luxuries and the necessities for efficiency is drawn at a much higher point than in another community which is less fortunately situated. And the higher standard of living can become a step towards further advance in civilization. But, at the same time, there is a somewhat insidious danger—namely, that consumption which was begun as conducive to efficiency may be continued much beyond that point. By becoming luxurious, it reacts on efficiency, and in the end results in a check instead of an increase in progress.

¹ The matter is stated this way to allow for the possibility that the producer of the luxury may save a portion of the profit which he has realized from its sale. Such savings would be available for new production.

W. R. SCOTT.

LYCANTHROPY.—The word 'lycanthropy' is used in two senses. (1) It may indicate merely a form of madness in which the patient imagines that he is an animal, especially a wolf, and acts as such. This disease was common in antiquity, and especially in the Middle Ages, doubtless as a result of the wide-spread belief that transformation into animal form was possible (§ 3). (2) It indicates the popular belief that on occasion a human being can actually transform himself, or be transformed, into a wolf or some other animal. In this form he slays and eats men. But, if wounded while in his wolf form, it is found that a corresponding wound exists on the human body from which the transformation has taken place. When wounded or killed, the werewolf's human form is restored. While the wolf transformation is that which is or was most common in Europe, it is by no means the only one. For this superstition is practically world-wide, and everywhere it is generally the fiercest and most dreaded animals whose shapes are taken. The wolf transformation has been most usual in all parts of Europe and in N. Asia from early times, but in the North of Europe the bear form is also general, and in modern Greece the boar. In Abyssinia and E. Africa the hyena form is taken; in other parts of Africa the hyena, leopard, lion, and sometimes the shark, crocodile, or even the elephant. In India and other parts of Western Asia the tiger form is usual; in Borneo and Siam the tiger or leopard; in China and Japan the tiger, fox, etc. In N. America the wolf form is mostly found; in S. America the jaguar. But, while in regions where such wild animals have become extinct the old tales are still told, now other less harmful animal forms are believed to be taken by witches or sorcerers—e.g., those of the cat, hare, etc.—and in these animal shapes considerable mischief is supposed to be done, while the idea of the wound being continuous in the animal and human shapes ('repercussion,' see § 5) also prevails.

'Lycanthropy' is derived from *λύκος*, 'wolf,' and *άνθρωπος*, 'man,' the Gr. form being *λυκάνθρωπος* (cf. *κυνάνθρωπος*, 'dog-man'). The common English name is 'werewolf,' lit. 'man-wolf,' A.S. *werewulf*, O.H.G. *weruolf*, Norman *guarwolf* ('wer,' 'man'; cf. O. Ir. *fer*, Lat. *vir*, and cf. 'wereld'). The French name for werewolf is *loup-garou*. In this case *garou* has been thought to be a corruption of *wer* and *loup*, but this is uncertain. The old French romances contain the forms *warouls*, *warous*, *vairous*, *vairals*. *Bisclavert* for *bleiz-garou* (bleiz='wolf') occurs in the *Laï* of Marie de France (31). The Slav names are O. Ch. Slav. *vlkodlak*, Slovenian *volkodlak*, Bulgarian *vlkodlak*, Polish *wilkolak*, White Russ. *wilkolak*, Russ. *wilkolak*, etc. The Serbian *wilkodlak*, however, means 'vampire,' hence, probably, modern Gr. *βρουκόλακας*, *βρουκόλακας*, 'vampire,' though occasionally 'werewolf.' The Slav form means literally 'wolf-haired,' or 'wolf-skinned.'

The wolf has long been regarded with superstitious awe. An old belief in Europe is to the effect that, if a wolf sees a man before being seen by him, the man is deprived of sight or hearing, or goes mad or dies (cf. Pliny, *HN* viii. 24; Verg. *Eol.* ix. 53; Theocrit. *Id.* xiv. 22; J. O. Lawson, *Modern Greek Folklore*, Cambridge, 1910, p. 10). J. Cardan (*de Subtilitate*, Lyons, 1554, p. 17) says that there is something in the eye of a wolf contrary to man, by which the breath is stopped, and consequently the voice. In European folklore the wolf is usually a creature of the devil (cf. the wolf-shape of Ahriman; see O. Dähnhardt,

Natursagen: eine Sammlung . . . Fabeln und Legenden, i., Berlin, 1907, p. 146 f.).

It is obvious that lycanthropy, in so far as it involves an actual belief in shape-shifting, is connected with the wider belief in transformation into animal form, which is of universal occurrence. Men, especially medicine-men, claim or are believed to possess this power, as well as that of transforming others; it is also ascribed to the gods, spirits, demons, and ghosts of the dead, as well as to animals, which sometimes assume human form, as some of the following paragraphs will show (see METAMORPHOSIS). But the actual origins of the belief are probably to be sought elsewhere (see § 3).

1. Extent of the superstition.—In one form or another the werewolf superstition is world-wide.

It was known to the ancient Greeks. In *Æsop* the thief who pretends to be a wolf says that when he has yawned three times he will become a wolf. Circe changed men to wolves, etc., by means of drugs. The superstition is also found embedded in the myths pertaining to the cult of Zeus Lycaeus, the Wolf Zeus. Lycaon, king of Arcadia, was said to have been changed into a wolf when he sacrificed a child on the altar of Zeus Lycaeus.¹ In other versions of the myth Zeus came disguised as a labourer, and the sons of Lycaon slew a child and mixed its flesh with the sacrificial food set before the guest. Zeus then changed them to wolves, or slew them and transformed their father.² These myths probably arose from werewolf stories current in Arcadia, a district where wolves abounded. The stories took two forms.

In one it was said that at the yearly sacrifice on Mt. Lycaeus he who at the sacrificial feast ate the flesh of the human victim mixed with that of animal victims became a wolf for ten years—a fate which is said to have befallen Demetrius, who afterwards became a victor in the Olympic games. If he abstained during that period from human flesh, he regained his human form.³ In another version lots were drawn by the members of a certain family, and he on whom the lot fell was led to a lake, where he stripped and, hanging his clothes on an oak, plunged in and swam across. Emerging on the other side, he became a wolf and herded with wolves for nine years. In this case also, if he did not eat human flesh he regained his own form at the end of that time.⁴

Perhaps such stories, based on an existing werewolf belief, may have been connected with the ritual of the cult of the wolf-god, if the priests wore a wolf-skin and ate part of a human victim. This ritual wearing of a wolf-skin occurred in the cult of Apollo Soranus on Mt. Soracte, where the guild of worshippers, the Hirpi Sorani, or 'wolves of Soranus,' apparently wore skins of wolves and acted as wolves. Possibly the cult was totemistic in origin, and the Hirpi were members of a wolf clan.⁵

In modern Greece the old belief in lycanthropy still exists, either as such or in other forms. The name *βρουκόλακας* is applied in Thessaly and Epirus to those who fall into a trance or catalepsy, while their souls enter wolves and raven for blood,⁶ or who in a state of somnambulism bite and tear man and beast. Stories exist of the *vrykolakas* being wounded, while next day a man is found with a similar wound, and he confesses to being a *vrykolakas*.⁷ More usually, however, this word signifies a vampire in Greece. In Southern Greece the name *λυκάνθρωποι* is applied to men known in other parts as *Karkantzari* or, more usually, *Kallikant-*

zari. The Kallikantzari are beings of monstrous form, hurtful and evil, who destroy men and carry off women, and sometimes make a meal of their prey.¹ Lawson considers that the Kallikantzari represent the ancient Centaurs, whom he regards as a Pelasgic tribe of Centaurs credited by the Achæans with shape-shifting. Some connexion also exists between them and the mummers of the Dionysia who represented the satyrs and Sileni. They appear and are feared from Christmas to Epiphany—the period of the Kalends when such mumming took place. In some districts, however, the Kallikantzari are equivalent to werwolves, and are regarded as men transformed into monstrous shapes, or seized with recurrent bestial madness at this period. This is attributed, *e.g.*, to the mountaineers of E. Eubœa. This madness may be congenital—*e.g.*, children born between Christmas and Twelfth Night are supposed to have a taste for human flesh. Lawson regards this as a modification of the original Kallikantzari belief caused by the werwolf superstition or by actual forms of insanity.² The name *λυκανθρώποι* is given to the Kallikantzari in Messenia and Crete, and in Macedonia they are called *λύκοι*. To escape these beings the house must be carefully closed at all openings; but a brave man may bind them with a straw rope. Various apotropaic and propitiatory rites are also in use to keep off these dreaded beings, who are 'a species of werewolves, akin to the Wild Boar and the Vrykolakas.'³ Wicked Turks gradually turn into wild boars before death, and rush through the land on all fours, attacking wayfarers or trying to get into houses. After forty days such a being goes to the mountains, remaining there as a wild beast, but still wearing on its foot the ring which the man wore on his hand (cf. the Abyssinian *buda*, below).⁴ The Bulgarians have a similar belief, but with them the transformation of the Turk takes place after death.⁵ In Albania the *lioungat* is a dead Turk with huge talons, wandering in his shroud, devouring what he finds, and strangling men.⁶ Here the vampire superstition is approached (§ 4). In the Cyclades witches are thought to turn into birds at will. They are called *σπύλας*, and are akin to the Harpies.⁷

The Romans also knew of lycanthropy, and called those who changed their form *versipelles*, 'turn-skins.'⁸ Vergil describes how by magic herbs Mœris became a wolf, and Propertius speaks of spells which have the same effect.⁹ But the most detailed account is found in Petronius.

Niceros tells how his soldier friend stripped off his clothes and addressed himself to the stars. Then he 'circumminxit vestimenta,' and all at once became a wolf, which ran howling into the woods. Niceros next heard from a widow whom he visited that a wolf had been worrying her cattle, and had been wounded in the neck. On his return home he found his friend bleeding at the neck, and knew then that he was a *versipellis*.¹⁰ This is a typical and early version of the werwolf story.

In more modern times the superstition survives in Italy. Straparola tells how Fortunio received from a wolf the power of changing to wolf form, and the superstition is also referred to by Basile. At the present day in Naples the werwolf, who is a man cursed by being born on Christmas night, is known by having long nails, and runs on all fours, but retains the human form, and tries to bite. If blood is drawn from him, his madness

ceases. This is a case of lycanthropy in its medical sense.¹ More akin to the true werwolf superstition is the general belief that witches can turn into black cats and do much harm, especially to children. In one case a woman caught such a cat and clipped its hair, whereupon it turned into the witch.²

Among the *Semites* lycanthropy was not unknown, but recorded instances of the belief are few. Among the Še'ar in Hadramaut part of the tribe could change into ravening werwolves in time of drought, others into vultures or kites.³ The Arabs also regarded some men as having the nature of a hyena, and said that, if a thousand men were shut up with one of these and a hyena came, it would go at once to him.⁴

The belief among the *Celts* is illustrated by a story told by Giraldus Cambrensis.

An Irish priest was met by a wolf in Meath and desired to come and see his dying wife. They were natives of Ossory, whose people had been cursed for their wickedness by St. Nialls, and were compelled to take two by two a wolf-shape for seven years, returning to their own form at the end of that time. The priest was persuaded to give the she-wolf the sacrament, for the other turned her skin down a little, showing that she was an old woman. Giraldus says that he was asked to give his advice on this case at the synod of Meath two years after, and that it was referred to the pope.⁵

A citation in the *Book of Ballymote* (140b) says that the 'descendants of the wolf' in Ossory had the power of changing themselves and going forth to devour people. St. Patrick is also said to have cursed a certain 'race' in Ireland so that they and their descendants are wolves at a certain time every seventh year, or for seven years on end.⁶ These may be explanatory legends about older wolf-totem clans, later accused of lycanthropy—an already current superstition—when totemism was requiring an explanation, as in the case of the wolf-clan in Arcadia. To the same category may be referred the statements of early English travellers in Ireland to the effect that the Irish took wolves as godfathers, prayed to them to do them no ill, and used their teeth as amulets. Lycanthropy ran in families, and here also it may point to an older totem clan. Laignech Fáelad and his family could take a wolf-shape at will and kill the herds, and Laignech was called Fáelad because he was the first of them to go as a wolf.⁷ In Irish and Welsh *Marchen* transformation to wolf-form of children by a stepmother or of a husband by a wife is not uncommon.⁸ Giraldus already refers to the belief that hags in Wales, Ireland, and Scotland can change to hares and suck cattle for their milk, but, with St. Augustine, regards this supposed change as a delusion of the senses.⁹ This belief is thus contemporary with that in lycanthropy, but long survived it. Later Celtic witches—Irish, Welsh, Manx, Scots—usually turn into hares or cats, less often into dogs, weasels, ravens, porpoises, whales, etc., for the purpose of doing mischief. In Donegal the change is said to be effected by a hair rope made of a stallion's mane and by the recital of charms. In some cases the transformation is confined to certain families. Such witch animals can be shot only with a silver bullet. When followed up, the woman has resumed her true form and is found to have a corresponding wound. A miller in Cork who saw a number of

cats attacking his flour threw his knife at them and cut off the leg of one. Next morning he found his daughter with her hand cut off, and concluded that she was a witch. Hares are usually thought to be unlucky, and are suspected of being witches in disguise. The ancient Welsh laws already speak of their magical character, regarding them as companions of witches, who often assumed their shape.¹

The Slavic werewolf belief is referred to under DEMONS AND SPIRITS (Slavic), vol. iv. p. 624*. Possibly the Neuri, mentioned by Herodotus (iv. 105), were a Slavic people (cf. E. H. Minns, *Scythians and Greeks*, Cambridge, 1913, p. 102 f.). The Scythians and Greeks said that every year each Neuri became a wolf for a few days and was then restored to human shape. Among the Magyars witches and wizards assume the form of horses, cats, etc. If the former are caught and shod or the latter injured, they are found next morning in human form with iron shoes on hands and feet or seriously wounded.² Hertz notes the sinister character of the belief through its connexion with that in the vampire, the names for both being interchangeable.³

The Serbians think that the *vukodlak* have annual gatherings, when they hang their wolf-skins on trees. Should such a skin be taken and burnt, the owner retains human form. A girdle of human skin laid across a threshold by a witch in a house where a wedding is taking place will cause all who step over it to become wolves. In three years' time, if the witch covers them with skins with the hair turned outwards, they resume their human form. This is a Polish belief. In White Russia the werewolf is sometimes a man transformed by the devil, and, contrary to the usual belief, he is harmless, but is driven to wander from place to place.⁴

In a Polish story a wolf seizes a girl at a merry-making and carries her off to the forest. Years after, one of the peasants meets his long-lost brother, who confesses that he was the wolf changed by sorcery, that he had carried off the girl, who had died of grief, and that then he was consumed with rage against all men and killed as many as he could. He had come to see his home once more, but must resume his wolf-form immediately, which he did.⁵ In another case a peasant, released from his wolf shape, returned home to find his wife married again. He cried, 'Why am I no longer a wolf that I might punish this woman?' Immediately he was re-transformed, and killed his wife and child. The neighbours came and slew the wolf, when the body was seen to be that of a man.⁶

Olaus Magnus says that at Christmas many werewolves collect and try to enter houses to drink in the cellars. Between Lithuania, Samogitia, and Livonia is the wall of an old castle whither thousands of werewolves come to try their skill at leaping. The unsuccessful one is beaten by one of the captains or by the devil. The method of the transformation was to drink to one in a cup of ale and mumble certain words. Then he could assume or lay aside the wolf form when he pleased. The Livonian werewolves collected at Christmas, and crossed a river which had the power of changing them to wolves, like the lake in Arcadia. They resumed their human shape at the end of twelve days. In Livonia a servant whose power as a werewolf was disputed went to the cellar and soon after came out as a wolf. The dogs bit out one of its eyes, and next day the man appeared with one eye.⁷

⁷ Olaus Magnus, *Hist. of the Goths*, London, 1658, p. 193 f.;

In *Scandinavia* and *Germany* the superstition was well known, and here the wolf, and in the former also the bear, were animals into whose form the transmigration took place. Boniface, Archbishop of Mayence in the 8th cent., mentions the belief.¹ The change was caused by a man himself—e.g., by donning a wolf-skin (*ulphamr*, hence the name 'skin-changer'; cf. Lat. *versipellis*), or a wolf-girdle, or a girdle of human skin; or it might be forced upon him—e.g., by throwing such a skin or girdle at him, or by shaking a wolf-skin glove at him. The girdle had sometimes magic signs on it, and was held in place by a buckle with seven catches. When the buckle was broken off, the transformation ceased. In such cases the man was a wolf or bear by night, and a man by day; or he assumed the animal form for nine days, or even for three, seven, or nine years, the eyes alone retaining a human appearance. He howled and devoured like the actual animal. Such persons were said to be *eigi einhamr*, 'not of one form,' or *hamramr*, *hamhleyga*, 'changing form.' In some instances the gift of transformation was imparted by trolls. Burchard of Worms speaks of certain *Parce* who at birth can cause that the child may later transform himself into a wolf or any other form.² In later times Finns, Lapps, or Russians were thought by Scandinavians to have the power of changing others to wolves or to bears at will,³ and were therefore disliked. The belief was apparently much mingled with and probably influenced by the fact that wild warriors and outlaws—e.g., the *berserkr*—wore wolf-skins or bear-skins over their armour or clad themselves in these, while they were often victims of ungovernable passion and acted as if they were animals.⁴ This is illustrated in the earliest Scandinavian instance of the werewolf belief—that contained in the *Volsunga Saga* (chs. 5-8).

King Volsung had ten sons and a daughter, Signy, who was married to King Siggeir. Siggeir later slew Volsung and bound his sons in the stocks. There nine of them were devoured by an old she-wolf—the mother of Siggeir, who had taken this form. Through Signy's craft the tenth son, Sigmund, overcame this werewolf and went into hiding. Signy exchanged form with a sorceress, and had a son by Sigmund, called Sinfjötill. He and Sigmund took to a wandering life and, on one occasion, came to a house where two men were sleeping, with wolf-skins hanging above them. For nine days they were wolves and on the tenth day came out of their skins. Sigmund and Sinfjötill donned the skins and became wolves, and each went his way, after agreeing that neither should attack more than seven men without howling for the other. In the sequel Sinfjötill slew eleven men without Sigmund's aid. The latter, hearing of this, flew at his throat and wounded him. When he was healed and the day had come for doffing their wolf-skins, they agreed to lay them aside for ever, and burned them in the fire. Of this wild tale Baring-Gould (p. 38) has said that it is 'divested of its improbability, if we regard these skins as worn over their armour.' While this is true, and while *vargr*, 'wolf,' means also 'outlaw,' the story is an important witness to the belief itself, as is seen from the words of Goðmund to Sinfjötill, 'Thou thyself hast eaten wolves' meat and murdered thy brother. Thou hast often sucked wounds with cold mouth, and slunk, loathsome to all men, into the dens of wild beasts' (Vigtusson-Powell, i. 126).

In another wild tale from the *History of Hroif Kraka*, Björn was transformed into a bear by his stepmother, who shook a wolf-skin glove at him. He lived as a bear and killed many of his father's sheep, but by night he always became a man, until he was hunted and slain (Sir W. Scott, *Minstrelsy*, London, 1889, p. 354).

⁴ Cf. Vigtusson-Powell, i. 425; Baring-Gould, p. 36 f.

The poet Ari has a curious tale of two 'skin-changers,' Duhthach and Storwolf. The former took the form of a bull, the latter of a bear. They fought, and next day were found in bed badly bruised.

Modern collections of Scandinavian and German *Marchen* contain many werewolf stories.

In one Swedish tale a cottager was transformed by a Vargamoor or Wolf Crone (Troll-wife), because he had not crossed himself when felling a tree. Years after, he appeared at his house, and recovered his true form when his wife gave him food.¹ In a Danish tale a man, when in his wife's company, noticed that the time of the accustomed change drew near. He bade her strike with her apron at anything which came to her. Soon after a wolf attacked her; she struck at it, and the wolf bit a piece of the apron and disappeared. Presently the man came, carrying the piece, and explained that now he was free from the curse.² In a N. German tale a reaper saw his neighbour gird himself with a strap and become a wolf.³ In another a woman told her husband to throw his hat at any wild beast which came. When she appeared as a wolf among the hay-makers, a boy stabbed her with a pitchfork. The wolf changed back to the woman, who was found to be dead.⁴ A Dutch story tells how a man shot with an arrow a wolf which was attacking a girl, and that the arrow stuck in the wound. Next day he heard that a strange serving-man was dying with an arrow sticking in his side. He went to see him, and found his own arrow, whereupon the man confessed that he was a werewolf.⁵ In a Flemish tale a shepherd received a wolf-skin from the devil, by which he became a wolf at night. If the skin was burned, he himself would suffer as if his own skin were being burned, but would be freed from this curse. In the sequel his master succeeded in releasing him in this way.⁶

In many modern tales and also in mediæval witchcraft belief the transformation of the witch was usually into a cat, dog, hare, or duck (the bird of Freya, great mother of the witches), and these, when wounded, became the woman with a similar wound in her body. Spina says that such cat-women ate the brain of a cat and rubbed themselves with the flesh of a newly-born child which had been offered to Satan.⁷

In England and Scotland werewolf stories are scanty, but there are traces of the superstition in early literature. The word *werwolf* in the sense of 'robber' occurs in the *Laws of Canute*, and it is also found in later ballads and poems. Gervase of Tilbury refers to the existence of men called *gerulfos* in Wales, *werwolf* in England, who change their form at the change of the moon. William of Malmesbury also alludes to the superstition.

A well-known old English poem, translated from a 12th cent. French poem, is that of *William and the Werwolf*, in which the king of Spain's son, changed to wolf form by his stepmother, rescues the king of Sicily's child, whom his uncle wishes to murder. The story relates how the wolf cared for the boy, his further adventures, and the eventual re-transformation of the wolf to his human form.⁸ Drayton, in his *Mooncalf* (u. 504), tells of a man who found that by gathering a certain herb at a certain hour with appropriate spells, and eating it, he would be changed into a wolf. Having done this, he committed much havoc on sheep, etc. When he attacked an ass which was a man so transformed, the latter assumed his rightful shape and caused the people to slay the lycanthrope.

If tales of werewolves are scanty, there are innumerable tales and traditions of witches changing to hares, cats, dogs, and the like in order to do harm. No charge is more common in the 16th and 17th cent. witch trials, and frequently the belief is found, as in the case of the werewolf, that such a wer-animal can be hurt only by a silver bullet. In some instances wounding causes the witch to assume her true shape, when she is found with a corresponding wound.⁹

In France the earliest literary version of the belief is found in the *Lai du Bisclaveret* of Marie de France (13th cent.).

A knight went from time to time to the forest, then the haunt of many werewolves, undressed, and became a wolf. He

told his wife the secret, and she obtained his clothes on one of these occasions, after which he had to remain in wolf form. As a wolf he retained human wisdom, and eventually, through the king's command, his clothes and consequently his own form were restored to him, but not before he had revenged himself on his unfaithful wife.

This story is found in other literary versions—e.g., the *Roman de Renard* of the Clerk of Troies (14th cent.), in the *Lai de Melion* (ed. F. Michel, Paris, 1832), in the story of *Arthur and Gorlagon*, and elsewhere. These are all literary versions of a folk-tale.¹ The legend of St. Ronan in mediæval Brittany told how he had taken the form of a werewolf and had eaten children.²

Gervase of Tilbury, in his *Otia Imperialia*, tells of a certain Pontio de Capitofo, who out of despair became a werewolf in Auvergne, ate children, and wounded older people. A carpenter hacked off one of his feet, and at once he resumed his human form, and acknowledged that the loss of his foot was his salvation.

The belief survived in modern times. In Normandy the werewolf was a godless man or one under a curse, who for four or seven years must nightly assume wolf-shape and submit to castigation by the devil.³ In Berry those who, by a pact with the devil, at the cross-roads, at midnight, become *loups-garous* can be wounded only by a ball which has been blessed or has had the Lord's Prayer or Ave Maria said over it five times. Once wounded, they take human form, and the spell which attached them to Satan is broken.⁴ In Brittany, towards the end of the 18th cent., sorcerers were supposed to take the form of wolves or clothe themselves with a wolf's skin when going to the Sabbat.⁵ In many parts of France every *flûteur* is supposed to lead wolves, himself sometimes changed into a wolf, whereby he is placed beyond the power of shot. He directs the wolves where to go for hunting.⁶ In Périgord sons of priests must rush to a fountain at full moon and plunge into it. They emerge, clad in a goat-skin, which the devil has given them, and rush about on all fours, attacking men and animals. They resume human form by plunging again into the fountain at daybreak.⁷ This recalls the Arcadian and Livonian beliefs (see above). Numerous stories relate how a *châtelaine*, transformed into a wolf, cat, etc., has a paw cut off, and is afterwards found in bed with one hand lacking.⁸ In a Breton tale a werewolf hid his wolf-skin in an oven. Sympathetic magic established a link between skin and owner, so that whatever was done to the skin happened to him. A fire was lit in the oven, and the owner of the skin soon began to leap about, crying, 'I burn, I burn.'⁹

In Portugal a seventh son, where there were no girls, was thought to belong to the devil and to become a werewolf—a belief found also in the Azores.¹⁰

Cervantes, in his *Péresiles y Sigismunda* (ch. 8), relates how an enchantress made advances to Rutilio, who repelled her. She turned into a wolf. He stuck his knife into her breast, and as she fell her human form came back to her.

Passing now to Asia, clear evidence of the belief is found in Armenia. Sinful women are sometimes forced by a spirit to don a wolf-skin and become wolves for seven years. Soon the wolf nature

¹ For *Arthur and Gorlagon* see *FL* xv. [1904] 50 ff. Gorlagon was changed to a wolf by being struck with the thin end of a sapling which grew up on the night he was born. For the folk-tale see 'Prince Wolf'—a Danish version—*FLR* iii. [1880] 225 f., and a Norse version in Dasent, no. 36. In both the husband remains a wolf or bear through the wife breaking a tabu, and has originally been transformed by a stepmother.

grows in them. They devour their children, then those of relatives, then children of strangers. Doors and locks fly open before them by night. In the morning the skin is doffed. If the skin is found and burned, then the woman suffers fearful agony and vanishes in smoke.¹ In Asia Minor generally werewolves are feared especially at Christmas and in Holy Week.

In India, where the tiger is the fiercest creature known, its form is supposed to be adopted. Already in the *Satapatha Brāhmaṇa* the monomaniac is said to be consecrated to the man-tiger.² In most instances the Hindus attribute the power of shape-shifting to the aboriginal tribes. Numerous stories are current regarding men with the power of becoming wer-tigers—e.g., among the Khonds (with whom, by the aid of a god, one of a man's four souls becomes a *mleepa* tiger), the Lushais, Kukis, etc.³

Dalton describes how a Kol, tried for murder, maintained that his victim was a wer-tiger, which he had followed to the man's house after it had killed his wife. The relatives of the victim had admitted that they had suspected him of such power and had handed him over to the prisoner, who slew him.⁴

Sometimes the eating of a root is believed to produce the change.⁵ Occasionally the witch assumes the form of a badger and carries off children.⁶ Witches also ride about on tigers or in the water on crocodiles, dishevelled, with glaring eyes, and heads turned round. Wizards also have tigers as familiars, or, as a Thana belief has it, mediums are possessed by a tiger-spirit.⁷ The souls of those slain by tigers are believed to pass into tigers to slay and devour in their turn, or to sit on the heads of tigers and direct them to their prey, calling out in a human voice so as to attract the unwary.⁸

In Indonesia the wer-tiger is very commonly believed in among the Malays, Dayaks, etc. Sometimes the power of transformation is thought to be confined to one tribe, as in Sumatra to the Korinchi Malays. There are many tales of men leaving their garments in a thicket, whence a tiger has presently emerged, or in human form vomiting feathers of fowls eaten when in their tiger form. A wer-tiger slain was found to have gold-plating in its teeth, as the man who assumed tiger form had. The Lavas of Burma are also regarded as wer-tigers. While the wer-tiger is generally very dangerous, in Java it is believed to guard plantations against pigs, and the change is effected by spells, charms, fasting, etc. In Malaysia the medicine-man is sometimes possessed by a tiger-spirit, and acts as a tiger when exorcizing a spirit from a sick man.⁹

A gruesome Malay story of a Semang who became a tiger (*Si Ridang*, 'He of the hairy face'—a euphemism), and sucked blood rather than ate flesh, is told by H. Clifford. The tiger burst into a hut where several people were collected. One of them was able to reach a shelf near the roof, and from there he saw how the tiger killed them all and drank deep draughts of blood. One girl he first played with as a cat with a mouse, and all night he tossed the bodies about and tore them, disappearing at dawn.¹⁰ Another story tells how the transformation was seen taking place. A bride saw her Korinchi husband returning home as a tiger, which thrust its head above the top rung of the entrance ladder. 'It palpitated and changed, and the face of the husband came up through the face of the beast.' Later this wer-tiger was caught in a trap, but escaped, when it was tracked to the house. There the man was said to be sick, and

soon after he and his sons disappeared. The story was reported to the District officer, and such a transformation is 'to the native mind a fact, not a mere belief.'¹

The tiger familiar spirit is also possessed by certain men, and after their death their spirits appear as tigers, or the medicine-man has subject to him an actual tiger which is immortal (Benua of Johore).² The soul of a dead wizard enters the body of a tiger, and the corpse is left in the forest for seven days until the change is effected.³ A curious Malay belief concerns the fold in which tigers possessed of human souls are penned. Periodical attacks of fierceness come on them, when they break bounds and go after their prey. Passing through one door, they become men, and on returning through another door they become tigers again. Their chief is always in human form, and enters the bodies of sorcerers when they invoke the tiger spirit.⁴ The transformation into tiger form is effected in different ways: by sympathetic magic—e.g., donning a *sarong* (yellow with black stripes) and repeating charms—by offerings to evil spirits, by charms, or by a mysterious poison which is supposed to affect the soul; or the power is conceived as hereditary. Among the Semang the medicine-man lights incense and invokes a spirit. Presently fur and a tail appear on him, as he himself believes, and he goes about for twelve days destroying cattle. Then he returns home and is sick, vomiting bones. During the twelve days his wife must always keep the fire burning and burn incense, else he would disappear. Such a wer-tiger cannot be shot, as it disappears so quickly.⁵ Various beliefs are held regarding the transformation among the Malays—the whole body takes part in it, or merely the soul substance, the body remaining at home.

Among the wild Malays of the Patani States there is a belief in *badi*, or mischief, which remains by a body after death and devours the *semangat* or, sometimes, the liver of passers-by. Birds and beasts also have *badi* or, in the case of tigers, leopards, and jungle-cats, *pegrung* or *begrob*; and, if a man is affected by this, he goes mad, and either imitates the actions of the creature or is subject to an abnormal growth resembling one natural to it.⁶

In Lombok the crocodile form is assumed by certain men in order to destroy their enemies, and many strange stories are told of them. This form is also taken among the Klemantans, one group of whom claim the crocodile as a relative. One man found his skin become rough, his feet like a crocodile's, and a tail forming, until he was completely transformed. He made his relatives swear that they would never kill a crocodile. Many people saw him in his crocodile form.⁷

In China there are various wer-animals—tiger, wolf, dog, fox, etc. The change is usually a bodily one, but an ethereal human double may pass into an animal either before or after death. There are many literary notices of such transformations.

An early instance is mentioned in a document of the 2nd cent. B.C., in which, after the crisis of an illness, a man changed to a tiger and killed his brother.⁸

Such transformations are often ascribed to delirious patients, and, if the patient does not kill a man, he may return to human form. This suggests a popular confusion between the fancies of insanity

and actual belief in the power of shape-shifting. Sometimes the transformation is ascribed to a community of aborigines, and is effected by magical means. In other cases the cause may be divine displeasure because of the neglect of religious duties. Here the victim goes mad and turns into a tiger. In one such instance he is covered with a spotted skin by the god, as in European cases, where a wolf-skin is used. Stories of transformation by wearing a tiger-skin are said to abound in China.

A 14th cent. writer tells how he saw a man slowly becoming covered with hair like a tiger, his body adorned with spots and stripes. During the night he ate a hog.¹

Other cases of this kind are of frequent occurrence. Wer-tigers and tigresses are sometimes favourably disposed and give presents. This is especially the case with wer-tigresses on behalf of those who excite their love.²

The wolf transformation is also known.

In one case a peasant was attacked by a wolf and cut off its paw. By the traces of the blood he followed it to a house, where an old man was found lacking a hand. He was killed, and in dying took the form of a wolf. Before his period of transformation he had been long ill, and, after being healed, had disappeared. In another instance a youth after an illness acquired the power of sending forth his soul in the form of a wolf, and devoured children—obviously a case of hallucinatory insanity combined with cannibalism, as in European instances.

Other tales of this kind are current.

An old woman finds her body being covered with hair and a tail forming, after which she becomes a wolf, and escapes, though sometimes she returns to see her family. In another instance a man weds a woman who is really a wolf, as also are her servants, and he is devoured by her.³ In a 4th cent. work all wolves are said to be transformed to men after the five-hundredth year of their age.⁴

Other wer-animals are also known—e.g., the dog, though here, as in the case of the fox, perhaps it is the animal that takes human form. In one instance men who are beaten become dogs; and a dog-man who was stabbed changed to a dog when dying.⁵

In China the fox superstition is a kind of inverted werewolf belief, especially in N. China. The wer-foxes dwell in the debatable land between earth and Hades, and can take human form at will—most frequently that of a young and pretty girl—but they may be detected by the possession of tails. Spirits of the dead may occupy the bodies of such foxes and revenge injuries on the living. Some legends show that the fox lives in graves and borrows human form from a corpse by instilling into himself the soul-substance. Wer-foxes can do either good or ill to men, but are grateful to those who are kind to them. Foxes in male form live with women, in female form with men; in either case a morbid erotic state is produced, resembling that caused by the medieval *incubi* and *succubæ*. When killed in human form, all that remains is the body of a fox. Their animal form also appears spontaneously in sleep, or when they are overcome by wine, of which they are very fond. Sometimes they enter and occupy a house invisibly, acting exactly like the *Poltergeist*.⁶

It is also believed that witches can take the form of the fox, cat, or hare.⁷ The tiger-ghost is also believed in.

'When he wishes to eat people he puts off his clothes and is changed into a striped tiger. He then advances with a great roar, and the traveller is instantly torn to pieces.'⁸

Tigers are said to make slaves of the souls of men devoured by them. These souls go before them to point out traps or to act as beaters,⁹ as in the similar Indian belief.

The wer-fox superstition is found in *Japan*, but was not introduced there until the 11th century. There are different kinds of foxes. The wild fox, Nogitsune, can take any form, or become invisible, but its reflexion in water is always that of a fox. The Ninko fox can also take various forms, especially that of a pretty girl, in which shape it will even marry a man.¹ These foxes also possess men, or live in their houses, bringing luck if well treated, but they are dangerous if ill-treated. Some Samurai families are believed to own foxes, which steal for them or torment their enemies. Foxes to whom some kindness has been shown, either in their own or in human form, reward the doer of it with money, etc., part of which turns to grass. Often the house in which the fox lives is illusory and cannot be found again (see FAIRY, vol. v. p. 679). Men possessed by foxes run about yelping and eat only what foxes eat, but the possessing goblin-fox may be exorcized.²

The same fox-belief exists among the Ainu, and with them the fox has both good and evil powers, and can cause death. Foxes also exhume and eat corpses. But the same powers of transformation to human form are ascribed to the horse, mole, crow, etc. The spirit of the bear, dog, otter, and especially the cat, can enter into and bewitch a man as a punishment; the victim eats as a cat, wastes away, and dies mewing like a cat. This may occur when a man has killed a cat. To prevent possession by its spirit, he must eat part of it.³ The Eskimos and some American Indian tribes also possess the fox superstition.⁴

The wer-animal superstition is found in *Africa* in connexion with a variety of savage beasts. All over N. Africa it is believed that the *jinn* can take animal forms—wolf, jackal, lion, serpent, scorpion. This is also true of the *ghûls*, who appear as men or animals, and feed on dead bodies, or kill and eat living men.⁵ More akin to the werewolf superstition is the belief that twin children go out at night as cats, their bodies meanwhile remaining at home as if dead. If they are beaten by any one, they tell this to their parents next day.⁶ Among the Berbers witnesses maintain that they have seen girls, when born, change into ogresses, who throw themselves on men until they are strangled.⁷ Among the Abyssinians there is a wide-spread belief in the *budas*, who change into hyenas and kill and devour. They are distinguished from ordinary hyenas by greater malice. The *budas* are sorcerers: and blacksmiths, found mainly among the Falashas and Agaos, are supposed to be *budas*. Hyenas have been killed with earrings in their ears, and these are believed to be *budas*, though it has been thought that sorcerers put earrings in the ears of young hyenas to bolster up this superstition. The *budas* have a king in the neighbourhood of Abbolo to whom they bring offerings of corpses daily. As blacksmiths are a hereditary folk, their sorcery is also hereditary, but a *buda* confers the gift on his children by a mysterious decoction of herbs. Cases of transformation are believed to have been actually witnessed. In one such case

¹ Cf. the Baluchistan belief that the black bear 'takes the form of a beautiful woman at night, and hugs men to death if they are not wary' (M. L. Dames, *FL* xiii. [1902] 265).

⁷ R. Basset, *Contes populaires berbères*, Paris, 1888, iii., iv

the *buda* sprinkled ashes over his shoulders, and the change began. Besides killing men and drinking their blood, the *buda* takes possession of his victim, entering his body by a look, or when he is eating, or in illness. The victim becomes more or less insane, laughing like a hyena, then falling into a trance, when the *buda* speaks through him, often telling who he is and why he thus personates the patient. Sometimes the victim tries to get into the forest, where the *buda* is supposed to devour him. The *buda* is kept off by the wearing of amulets, by which also he can be exorcized. He can also transform his victims into animals, and sometimes digs up corpses to eat them. This is also done by actual hyenas.¹

The belief in the wer-hyena occurs from the Sudan to Tanganyika, and is perhaps strengthened by the fact that wizards at their meetings howl and caper like hyenas, eat horrible food, and commit excesses the sight of which makes the onlooker mad. Even in the daytime their glance causes a deadly sickness. Certain tribes in the Sudan are supposed to possess this power of transformation, but it is dangerous to shoot them. One of them who was shot was seen to enter the hut of a wizard, who died soon after. The man who shot him soon followed him to the grave.² Generally among the black races the usual animals, besides the hyena, are the lion, leopard, and crocodile. In Nubia old women are called hyenas, and are believed to enter the bodies of these animals by night.³ In the Sudan the hyena shape is supposed to be assumed at an ant's nest. The Awemba wizards receive power to become wild beasts from spirits called *vibanda*.⁴ The Wanyamwezi of E. Africa think that sorcerers can transform themselves into animals in order to injure their enemies.⁵ In E. Central Africa witches kill men, and in the form of hyenas try to get at the graves of their victims in order to eat their flesh.⁶ The Akikuyu tell of a man, who, after his marriage, went to the wilds and lived like a hyena on dead bodies. Returning home, he ate his child. His brothers killed him, but the woman's second husband also became a hyena and ate her and his child.⁷ In British Central Africa the bewitcher (*myiti*) can turn himself into a hyena, leopard, crocodile, etc. He then digs up dead bodies and eats them. Sometimes the change takes place after death, and, if the creature kills people, some method of appeasing it is adopted. The wer-hyena is thought by the Makanga to have a wife who at night opens the door of the *keraal* to admit him and then runs off with him to feast. In one case, when a goat was carried off, tracks of a hyena and of human feet were seen together.⁸ Among the Tumbuka of Central Africa certain women wander about smeared with white clay, and are believed to have the power of changing into lions.⁹ In W. Africa the Yoruba think that the wer-hyenas assume their animal shape at night to prey on cattle and sheep, and, if possible, on human beings, who are sometimes compelled to go out to them when

they utter certain howls.¹ In Loanda the belief existed that the chief could change himself to a lion, kill some one, and then resume his own form.² The Ibos believe that a man's spirit can leave his body and enter into an animal. This is called *isha anu*, 'to turn animal,' and it is done by means of a drug. If the animal is killed, the man dies; if wounded, his body is covered with boils.³ Wilson says of sorcerers in Guinea that they can turn into leopards and change their enemies into elephants, in which form they kill them.⁴ In Senegambia a sorcerer who changes to an evil animal is kept off by means of salt; or, when transformed, he leaves his skin behind him. If it is rubbed with salt, he suffers, and comes to beg that the grains of salt be removed.⁵ In W. Africa generally the power of certain persons to change into leopards or to send their souls into leopards, which are then guided by the human possessor to kill such persons as are obnoxious to them, is very commonly believed in. The person so changed is called *wengwa*, and cannot be killed. Many persons actually believe that they have thus metamorphosed themselves and done harm. Other animals—lion, panther, crocodile, or shark—are occasionally made use of.⁶ One family, living at the mouth of the Congo, can change into leopards, but, if once they lap blood, they remain leopards for ever, exactly as in the case of the Arcadian werwolves.⁷ In Calabar a man may become a rat, bat, or owl, etc. In this form he throws his victim into a deep sleep. He then resumes his human form, and sucks his blood, and the victim falls sick and dies. After burial, the body is taken by witches from the grave for a cannibal feast. A witch continues to have this power after death, and may still be called to cannibal feasts or summoned to aid living witches. In old days witches laid aside their skins to assume animal form. If such skins were found, pepper was rubbed into them, so that the witches could not resume them. They were thus caught, and burnt to death, care being taken to destroy the heart, in which the witch power resided.⁸ In equatorial Africa the wer-leopard is also much dreaded.⁹ The whole belief in such transformations is much mixed up with the existence of leopard societies, the members of which disguise themselves in leopard-skins and commit murders.

In S. Africa similar beliefs are common. The lion form is assumed by wizards on the Zambesi by means of drinking a certain liquid. They kill men and animals.¹⁰ In N. Rhodesia even educated natives believe in the power of certain men to become evil wer-lions or leopards through magic. This is combined with a belief that the soul of the chief is transformed at death into a lion. It comes as a cub from his grave and is told to be good, but by means of a test it may be discovered to be an evil wer-lion.¹¹ The Barotse credit certain persons,

both living and dead, with power to change to an animal—hyena, lion, serpent, or alligator—and to do harm to men or cattle.¹ Among the Baronga a secret society exists the members of which send out their spirit-bodies or go out bodily at night to devour human flesh. They leave their shadow, or the appearance of themselves, behind, but this is in reality a wild animal with which the person has chosen to identify himself. If this appearance is stabbed, a hyena rushes howling from the hut, and the real man falls through the roof with a similar wound. Such persons enter huts, take the true self of the occupant, and eat him. Only his shadow is left, and he dies next morning. Some think that such wizards are not aware of their night work. Those who have long practised it, however, are aware. Perhaps the basis of the whole idea is to be found in the dream-conceptions of hysterical subjects.² The Basuto also believe in wer-animals, *mahlithoumes*, men who turn temporarily into animals and kill and eat human beings. They have the tradition of the introduction of sorcery through a queen who could call troops of wolves, monkeys, etc., to her nocturnal gatherings—a belief not unlike that of the wolf-leader in France.³ The Hottentots believe in the power of changing to lion shape and killing men or animals. This is illustrated by a story bearing some resemblance to European werwolf tales.

A Hottentot and a Bushwoman travelling saw some horses. He bade her turn into a lion and kill one, as he knew her to possess this power. Hair appeared on her neck, her nails became claws, her features altered, and she bounded off as a lion, the man in turn climbing a tree until she re-assumed her human form.⁴

The Bushmen believed that sorcerers could assume the form of jackals, etc., and, conversely, that the lion could take human form.⁵

Similar beliefs exist among the Negroes of America, carried thence by their forefathers from Africa. In Missouri the Negroes think some cats are devils, i.e. witches in disguise.⁶ The Voodoo is credited with the power of changing to a black wolf, dog, cat, owl, or bat at night. To stop this the human or the animal skin must be found and salted. This assumes a real change of skin.⁷

With all the *N. American Indian* tribes it was believed that wizards and witches could take the form of wolves, foxes, bears, owls, bats, or snakes—a belief which was probably strengthened by the wizards wearing skins of animals and imitating their howls, etc.⁸

The Nishinam had a legend of a medicine-man who was seized with a spasm and went on all fours. His nails grew long and sharp, a tail grew on him, hair covered his body, and he became a bear. This transformation lasted until the spasm passed.⁹

A belief similar to that of the Chinese fox superstition exists, as with the Narraganset, and the Tlaxcalans believed in a wer-dog. The Musquakies have curious tales about trees which appear as human beings, each bearing the marks of injuries done to the other, and of an old man who, denying that he was a bear, is proved to have taken that form by the fact that his tracks and those of the bear both have traces of grease. He is therefore killed because he has 'a devil in his nose.'¹⁰ Lafitan

tells of wizards who, having taken the form of birds and been wounded, are found to have identical wounds, while the magical bolts with which the birds were shot are found in their bodies. The Chippewa sorcerer for a fee will turn into an animal and inflict injuries on the person described to him.¹

In a Chippewa story a boy left by his father in charge of his elder brother and sister is neglected and eats the leavings of wolves. These pity him, and he follows them. The brother one day heard a child's voice crying, 'I am turning into a wolf,' followed by a howl. Then he saw the boy half turned into a wolf. As he watched, the change became complete, and with the words, 'I am a wolf,' the werewolf disappeared.²

Among the higher American Indian peoples similar beliefs prevailed. Maya sorcerers could turn into dogs, pigs, etc., and their glance was death to a victim; and in Guatemala the name of the priests was derived from the fact that they could take animal forms. In Yucatan sorcerers claimed to have such powers, and one in dying confessed to a priest that he had often so transformed himself.³ Among the Tarahumare Indians of Mexico, if a sorcerer sees a bear, he will beg an Indian not to shoot it, as it is he, or, if an owl screeches, he will say, 'It is I who am calling.'⁴ The European belief in the transformation of witches into cats was carried to America.⁵

Following the belief into *S. America*, we find that the Aipone *keebet*, or priest, was believed to turn himself into an invisible tiger which could not be killed. When a *keebet* threatened to transform himself and began to roar like a tiger, the onlookers fled, believing that the change was actually taking place.⁶ The people of Guiana believe in the *kenaima*, a being who can send forth his spirit to injure or cause wasting disease, or place it in the body of any animal—jaguar, serpent, bird, or insect—which follows up the victim and slays him. His spirit may also enter a man in the form of a caterpillar, and cause disease. Such a caterpillar is often withdrawn from a patient's body by a *peaiman*, or doctor, and killed, but the spirit escapes, so that the *kenaima* does not die. The animal in which the *kenaima* usually places his spirit is the jaguar or tiger—the *kenaima*-tiger—which it puzzles an Indian to kill. A certain small bird is also much feared as a *kenaima*-bird; this is shot and every scrap of it carefully burned, so that there may be one enemy the less. Certain *peaimen* are thought to have the power of sending their spirit into an animal.⁷ The wer-jaguar is believed in by many of the tribes.

A Tucuman story tells how a man saw his brother take three grains of salt, spread a jaguar-skin on the ground, and dance round it, when he became a jaguar. Much horrified, he later obtained the skin and burned it. Returning home, he found his brother dying, but was asked by him to procure a piece of the skin. He did so, and the dying man threw it over his shoulders, and became a jaguar, which fled into the forest. In this case bullets merely rebounded from the wer-animal. In a Paraguay story the man becomes a man-eating jaguar by falling prone, and is re-transformed by reversing the process. Once he was wounded by a youth, who followed him up and killed him in his den, which was filled with human bones.⁸ In another tale from the Paraguayan Chaco two men who visited a village when the men were absent decamped when they heard from the women that they would soon return. When the men returned, they said that the visitors were jaguars, who had come to deceive and destroy them, and they had seen the marks

of their claws near the village. They were then pursued and killed.¹

Among the *Melanesians* in Banks Islands the nearest analogy to the werwolf is the *talamaur*, the soul of a person which leaves the body to eat a corpse. A woman threatened to do this. Watch was kept, and, when a noise was heard near the corpse, the watchers threw a stone and hit something. Next day the woman was found to have a bruise on her arm caused by the stone which hit her soul.² In Lepers' Island wizards transform themselves into blow-flies and cause sickness to their victim, or into a shark and eat enemies. In Aurora magicians take the form of sharks, owls, and eagles.³ A story from this island illustrates the belief.

Tarkeke devoured men by turning into a fish, or entering a fish or a kind of magic image of a fish. His son found this image and got into it, when it went out to sea. Tarkeke then went after the boy and punished him.⁴

In the examples quoted it is interesting to note in how many ways the change is thought to be effected. In many instances—Scandinavian, German, Slavic, French, Chinese, and the Tucumans of S. America—it is by donning an animal skin or girdle (see GIRDLE), presumably after removing the clothing, as this is a necessary preliminary in other methods. Eating a drug or root or rubbing the body with a salve or oil is found in ancient Italy, the Netherlands, England, India, Indonesia (where also a poison infecting the soul is thought to be the cause of the change), and in Africa, and in many cases tried judicially in Europe. Charms, spells, and other magical methods also effected the change in Celtic, Slavic, Chinese, Indonesian, Cambodian, and other instances, and no doubt the use of spells accompanied the other means referred to. The power might be given by the devil (Russian), or by spirits (Awemba), or the change might be caused in a man by a witch. It might be the effect of a divine or saintly punishment or other curse (ancient Greece, China, Celts of Ireland, Normandy); or it might be the result of eating human flesh (ancient Greece), or of making use of some particular action—swimming (ancient Greece, Périgord), falling prone (Paraguay), yawning (ancient Greece); or it might be the natural gift of a seventh son (Portugal), or of one born on Christmas night (Naples) or between Christmas and Twelfth-night (Greece).

In some cases the power is ascribed to a special tribe or to a people living in a special district—Arcadians, Korinchi Malays, aboriginal tribes in China, Sei'ar of Hadramaut. This has perhaps an equivalent in the appearance of epidemics of lycanthropy in certain places, so common in the Middle Ages and later.

Very often it is said that, when the wer-animal is wounded or killed, the human form comes back spontaneously. This is found in many European instances, and also inversely in that of the fox and dog superstition in China.

In general, where the animal skin may be separated from the man, there is still a sympathetic relation between it and him. Thus, if it is burned (Flemish, Breton, American, S. American instances), or rubbed with salt or pepper (Senegambia, Calabar, Negroes of America), he suffers terribly and may die, as in the case of the *Iamboyo* in Celebes (below, p. 218 f.). On the other hand, this may release him from being a werwolf, as in the case of other men under enchantment who lose their beast nature when the skin is burned. Conversely, the seal or mermaid wife recovers it when she discovers her skin.

³ *Ib.* p. 207.

⁴ *Ib.* p. 407 f.

While in Europe the man who is a werwolf is known by his eyebrows growing together over his nose, or by a small wolf's tail growing between his shoulder-blades, in Indonesia the man-tiger as a man lacks heels or the furrow of the upper lip, or is marked by twisted feet or by peculiar actions.¹

There are various methods of curing or ending the transformation. Burning the skin and wounding have already been mentioned. Another method was for the witch to cover the werwolf with a skin with hair turned outwards (Serbia). In the case of wounding, some special methods are referred to—the werwolf had to be scratched above the nose so as to extract three drops of blood (Brittany), and in Germany stabbed on the brow three times with a knife or pitchfork. The effusion of blood as a cure here corresponds to the drawing of blood from a witch as a well-known means of destroying her power. Naming the werwolf by his baptismal name and reproaching him were also effective.² In one story cited above the wife shakes her apron at her husband and so restores him. In Cambodia the werwolf is deprived of his power if struck with a hook on the shoulder.³

2. Lycanthropy as a theological doctrine.—Throughout the Middle Ages, but more emphatically in the 16th and 17th centuries, theologians turned their attention to lycanthropy as a branch of sorcery. The general doctrine was that by the help of Satan sorcerers could transform themselves into noxious animals, particularly wolves, for purposes inimical to others. Innumerable theologians expressed these views, and many treatises were written on the subject, while it was also discussed in general works on the evils of sorcery. Of these theologians J. Bodin is one of the best examples; in his *De Magorum Demonomania* (Frankfort, 1603) he maintains the reality and certainty of the transformation. Theological opinion thus coincided with popular superstition, and many of the instances cited as proofs are little better than the popular tales referred to above—e.g., where a wolf is wounded and a human being is found with a similar wound soon after. The severest measures were therefore taken against lycanthropes, especially on the part of the Inquisition, and this authoritative announcement of the reality of the transformation added to the popular terrorism. People easily imagined the truth of the charges brought against those charged with them, or came forward as witnesses of the alleged facts. Indeed, the prisoners themselves often maintained their truth, showing that insanity and hallucination had much to do with the matter (§ 3). The peculiarly heinous aspect of the crime is seen in this: H. Boguet, a judge who tried many cases and who wrote many works against sorcery, drew up a code in 1601 in which he stated that, while sorcerers should be first strangled and then burned, the *loups-garous* should be burned alive.⁴ The belief in sorcery as well as the theological animus against it often led to epidemics of sorcery; the people in a district, e.g., became terrorized by the idea that all around them were sorcerers, or many persons, half crazy, maintained this regarding themselves. At the beginning of the 16th cent. in Lombardy, during such an epidemic, witches were freely accused of having changed into cats and entered houses to suck the blood of children.⁵ Reports of many trials of reputed lycanthropes are still extant, and afford sad evidence of human credulity.

⁴ See the code in J. Garinet, *Hist. de la magie en France*, Paris, 1818, p. 202.

⁵ Bourquelot, p. 246.

In 1521 Pierre Burgot and Michel Verdun were tried by the prior of the Dominicans of Poligny, in the diocese of Besançon. The former alleged that years before, when his cattle had strayed, a black cavalier had brought them together after he had agreed to give himself to his master, the devil. Later Verdun taught him at the Sabbat how to become a werewolf by rubbing himself with a certain ointment. Then he saw himself with four paws and his body covered with hair, while he was able to run like the wind. Verdun also transformed himself in the same way; the ointment had been obtained from his demon master. In the form of wolves they killed several children, sucked their blood, and ate part of their flesh, finding it excellent. Burgot also said that he had sexual relations with wolves. Both men were burned alive at Besançon.¹ In the same year, before the same court, three sorcerers were executed for the same crime. One of them had been wounded as a wolf by a hunter, who, following the trail, came to a hut, where he found him having his wound dressed by his wife. These lycanthropes are represented in a painting in the chapel of the Dominicans.² A curious case is that of Gilles Garnier, a hermit of Lyons, who, finding his solitude irksome, had taken a female companion. They had several children and lived in great misery. In 1572 a wolf terrorized the district, and the bodies of several children were found half devoured. A boy was attacked by the wolf, but his cries attracted attention. Garnier was found near the body, and at his trial before the Parlement of Dôle avowed that he was the wolf, that he had sold himself to the devil, and had obtained the power of transformation by the use of an ointment. He had killed and eaten the children, the woman also sharing in the ghastly meal. He also was burned alive.³

In Auvergne in 1588 the wife of a gentleman was burned alive as a werewolf. Her husband had asked a hunter to bring him some game. The hunter was attacked by a wolf, and cut off one of its paws. On his return to the château he drew the paw from his bag, when it was seen to be the hand of a woman, with a ring on the finger which the gentleman recognized as his wife's. Suspecting her, he went in search of her, and found that she had lost a hand. On her confession that she was the wolf, she was condemned.⁴

Henri Boguet, grand judge of the ecclesiastical court of St. Claude (1569-1616), was most active against sorcerers, and, according to Voltaire, boasted of having put to death more than 600 lycanthropes. His *Discours exécration des sorciers* (Lyons, 1602) contains many instances of alleged lycanthropy, with the confessions of those accused. He believed firmly in the possibility of the transformation, whether by rubbing with an ointment or otherwise, some chapters of his work dealing specially with this subject. It is remarkable also, as showing the state of feeling at the time, that on 3rd Dec. 1573 the Parlement of Franche-Comté gave a ruling for the pursuit of *loups-garous*.⁵

Towards the end of the 16th cent. Pierre Stumpf was executed at Bibburg, in the diocese of Cologne, on his own confession of having lived with a *succuba*, who gave him a girdle by which he could become a wolf, not only in his own sight, but in that of others. He had killed and eaten fifteen children in his wolf form, and had tried to eat two of his daughters-in-law.⁶

The beginning of the 17th cent. was marked by new epidemics of lycanthropy, and hundreds of executions took place.

In 1608 Jean Grenier, a boy of 14, alleged before the judge of Roche-Chalans that he was a werewolf, as a result of a demoniacal gift, and that he had eaten some children. He also accused his father of being a werewolf and possessing a wolf's skin, and another man, Pierre la Thillaire, of having his skin and ointment. The conduct of the boy in court showed that he was insane, and he was detained in a convent. Nevertheless the charge was continued against the two men. The youth was visited in his convent by De Lancré in 1610, who found that he could run on all fours with ease, and that his method of eating was disgusting. He still persisted in his delusion of being a werewolf.⁷

In 1604 at Lausanne five persons were burned as werewolves. A peasant of Oressi had cursed his child and, as a result, five sorceresses in the form of wolves had carried him off to the devil, who sucked his blood. The sorceresses then cut him up, boiled him in a cauldron, and made an ointment of his flesh.⁸

These will suffice as examples of the trials and executions for alleged lycanthropy which were so numerous at this period. Not the least noteworthy fact in the whole sordid business is that some of

the writers on the subject show the most extraordinary credulity regarding the cases. Petrus Marmorius, in his *De Sortilegiis*, maintained that he had seen the change of men into wolves in Savoy.¹ Bourdin, procureur général of the king, assured Bodin that there had been sent to him from Belgium the *procès*, signed by judge and witnesses, regarding a wolf shot in the thigh with an arrow. Soon after a man was found in bed with the arrow in a wound, and, when it was drawn out, it was recognized for his own by the person who had shot the wolf.² Other cases are related in which cats attacked a man, who wounded them. Women were then found in bed with similar wounds, and they were at once believed to be the cats in question.³ While the whole was generally attributed to diabolical influence, there were different ways of accounting for it. Some writers thought that there was a real transformation,⁴ or that the devil clothed the men with an actual wolf-skin⁵ or with one condensed out of air.⁶ Others, however, thought that the devil wrought by fantasy or by means of unguents on the man or on the onlookers, so that they imagined that the man or woman was an animal, while he or she was similarly deluded.⁷ Others, again, suggested that the devil caused the person in sleep to imagine that he was a wolf, and that he actually did the deeds of which he dreamed.⁸ This is akin to the theory of St. Augustine, who refused to believe that the demons could actually change man's corporeal substance. In sleep or trance the man's 'fantasm' went from him and might appear to others in corporeal, animal form, while to the unconscious man himself it might then appear that he was in such a form and acting in accordance.⁹ The effect of such drugs as stramonium caused hallucinations of riding through the air and of transformation, such as witches confessed to, and this may have been the food given by women to others in Italy so that they believed themselves beasts of burden.¹⁰ Such a drug might occasionally be responsible for lycanthropic hallucination. Still others, more rational, regarded lycanthropes as lunatics who imagined themselves wolves. The last is probably the true solution of the whole matter.

3. Lycanthropy as a form of mental aberration.

—Both in earlier times and even in the period when severe sentences were being passed against alleged werewolves, the existence of a diseased mental condition in which the patient imagined himself to be an animal—a form of melancholia with delirium—was clearly recognized by some. The popular belief in werewolves was not accepted by scientific writers in antiquity. Herodotus (iv. 104) would not be persuaded of the alleged transformation of the Neurians. Pausanias, admitting the transformation of Lycaon as a divine punishment, refused to believe in the recurrent transformations in Arcadia. Pliny (*HN* viii. 34) was equally incredulous. Medical writers regarded lycanthropy as a form of mental derangement. Of these, Marcellus of Side wrote a poem in which he treats lycanthropy in this fashion. The poem has not survived, but a prose version, abridged, by Aëtius exists.

⁷ P. de Lancré, *Tableau de l'inconstance des mauvais anges et démons*, Paris, 1613, p. 252.

⁸ Bourquelot, p. 245.

According to Marcellus, those afflicted by the lupine or canine madness go out at night in February, imitating wolves or dogs, and lurk among tombs. He gives the signs by which they may be known—pale face, tearless eyes, dry tongue, burning thirst, etc. He also suggests various remedies for this disease, which he regards as a form of melancholia.¹ Greek physicians knew also the *κυνόλεπρος*, the man who imagined himself to be a dog.²

The existence of such a form of madness was known to the Semites, as the account of Nebuchadnezzar (Dn 4³⁸) shows.³ Several 16th and 17th cent. writers regard lycanthropy as a form of madness. Of these Wier is the best known, though he still believed in demoniacal influence. According to him, those who believed themselves wolves were really troubled in their minds by the devil, so that in sleep they imagined that they had actually perpetrated the actions of which they accused themselves. He also cites the passage of Marcellus just referred to.⁴ J. de Nynauld, a doctor who wrote on lycanthropy, thought that the lycanthropes were deluded by the devil, or that he actually gave them unguents, liquids, or powders, by which their sense impressions were affected. There were, however, natural lycanthropes, persons afflicted with *folie louvrière*. He denies any actual transformation,⁵ such as was insisted on by Bodin. The possibility of persons, more or less imbecile, living in a wild state in the forests, or even found among wild animals, such as wolves, was also suggested by some later writers.⁶ Modern alienists take the view that lycanthropy was a form of insanity, often endemic. The patient suffers from a degradation of the personality, and imagines that he is a beast. The disease was common in the Middle Ages, because people then believed such a transformation possible. Now such melancholia with delirium is rare, because this belief hardly survives in Europe. Sporadic cases, however, are still known; in one instance the patient imagined that he was a wolf, and ate raw meat.⁷

Some of the instances cited in the previous sections may be best explained as cases of insanity of the type described. Cf. the Greek *βουκόλακος* and the human Kallikantzari, the Malay instances of men with *badī*, several Chinese examples, the Japanese belief in fox-possession, the Ainu belief in possession by various animals, the Abyssinian belief in possession by a *buda*, the Nishinam man possessed by a bear, as well as various European instances. In all these the imitation of the possessing animal is noticeable, and the additional accounts of the growth of hair, claws, etc., may be imaginary, or may be exaggerated accounts of abnormal growth of hair or nails in cases of such insanity (cf. Nebuchadnezzar) or of hypertrichosis in general.⁸ The instances of medicine-men pretending to become animals, and of the witnesses actually believing that they see hair and claws growing on them, are perhaps exploitations of this diseased condition.

Further examples of possession from all stages of culture are worth citing.

² Galen, x. 502.

³ Some theologians thought that there was a real change, others that it was imaginary, and others that his soul had passed into the body of a beast.

⁴ Wier, pp. 241 f., 446 f., 453 f.

⁵ De Nynauld, ch. i. For other writers who took the view that madness was the cause of lycanthropy see Bourquelot, p. 268. Voltaire appears to regard the demoniacs of Scripture, who wandered among the tombs, as lycanthropes, who also had that habit (*Essai sur les Mœurs, in Œuvres*, Paris, 1819, xiii. 196).

⁸ See A. F. Le Douarin and F. Houssay, *Les Velus*, Paris, 1912, p. 170, and *passim*.

A. Werner, writing of the tribes of British Central Africa (among whom the possibility of transformation is firmly believed in), tells of a man who had a strong feeling at times that he was a lion, and was impelled, as a lion, to kill and mutilate. He would watch by the wayside, leap out, and stab his victim, and was undoubtedly insane. Other men believed that they were similarly transformed.¹ A boy was burned in Ashango-land because he confessed that he had changed into a leopard and murdered two men—a case not unlike certain occurring in the 16th century.² Some men of the Garo hill tribes are afflicted occasionally by a temporary delirium, in which they walk like tigers and shun society. This is known among these tribes as 'transformation into a tiger,' and is supposed to be caused by the application of a medicine to the forehead. Those who thus suffer do not know what has happened when they return to their senses.³ Certain demoniacs among the Gonds are believed to be possessed by the tiger-god, and will fall on a kid and devour it alive.⁴ In the Malay peninsula so real is the belief in the wer-tiger that boys play a game based on the belief. In this one boy is hypnotized, and the others run off, imitating cries of fowls. Then he rises, pursues, scratches, and bites any whom he catches, or climbs trees in his assumed character. Any one who finds himself at his mercy may break the spell by calling out his real name (cf. the European werwolf instances parallel to this)—probably because this was pre-suggested to him. He is supposed to be temporarily possessed by a spirit, but it is obvious that this is on a par with actual cases of insanity, and that the boy might easily become insane, imagining himself to be a tiger. The game is also played in Sumatra and Java, where other animals are also imitated.⁵ Among the Dayaks men who eat forbidden flesh are liable to penalties. They will run about the woods naked, imitating a deer, if they have eaten deer's flesh.⁶ In Annam an adept who wishes to ask something from the tiger-god prays it to incarnate itself in him. He falls on all fours, growls, eats raw meat, and breaks with his teeth the vessel which contains it. When he is calmed down, he is rubbed with alcohol so that he may come to himself.⁷

Most of these cases from low levels of civilization are obviously temporary cases of insanity, actual or assumed, explained in terms of current belief regarding shape-shifting, etc. They suggest that, even among savages, with whom the general shape-shifting belief is very strong, insanity may, partially at least, have suggested actual wer-animal ideas.

In Europe, during the period when the werwolf superstition was most prevalent, the belief in the possibility of transformation and in the power of the devil over men deluded by him was generally too strong to allow of the truth of the matter being understood. Nevertheless some alleged werwolves were clearly seen to be lunatics and treated as such.

The case of Jacques Rollet, arrested as a werwolf at Condé in 1598, is an example. Two wolves were seen devouring a child's body, while a third rushed off into a neighbouring field. There a man of wild appearance was found, who claimed to be the wolf and maintained that the two wolves were his brother and cousin, and that they had killed and devoured the child. His answers at his trial were contradictory, but he clearly believed that he sometimes became a wolf by means of an ointment. His life was one of great poverty and misery, and it is not impossible that he had killed the child and devoured part of it, and that his ghastly meal was interrupted by wolves. He was sentenced to death, but the Parlement of Paris annulled the sentence and sent him to a hospital.⁸ In another case related by Lercheimer, he describes how he visited an alleged werwolf in prison. He was really a lunatic, but maintained that at Easter, through the power of his master, the devil, he became a wolf, took off his chains, and flew out of the prison window. This man would have been burned alive, but Lercheimer obtained his release.⁹ In a third case, at Pavia in 1541, a man maintained that he was a wolf and had killed several persons, and that he differed from other wolves merely in the fact that their skin was covered with hair, while his hair was between his skin and his flesh. He was given over to the doctors for treatment, but died soon after.¹⁰ In more modern times such cases are sporadic. Gurney recounts that of a young man at Cortu who in a state of maniacal frenzy imitated a serpent, crawling

about, hissing, and also howling like a dog.¹ In another instance, treated by Morel in the asylum at Maréville, the patient had the delusion that he was a wolf, and ate raw meat.²

It is obvious that in facts like these lies one explanation of the origin of the belief in lycanthropy. The unfortunate victims of melancholia with such delusions, imitating in their frenzy the cries and actions of various animals, must have suggested, both in primitive and in later times, certain aspects of the shape-shifting dogma, especially that of the werwolf. And, where the people believed in the possibility of such transformation, it was easy for them to think that such persons, when actually seen imitating the actions of an animal, were really in that animal's shape. Examples of this hallucination have already been given from among the Abipones and the Abyssinians. The frightful prevalence of this mania during the later Middle Ages and in the 16th and 17th centuries may be explained by the miserable conditions under which thousands of the peasantry lived, constantly on the verge of starvation, by their pre-conceived ideas, and by the terrorism to which so many were reduced by the wide-spread demonology, with its sinister shapes of fear and horror as well as its peculiarly vile conceptions of both cruelty and sensuality.³ Nor is it impossible that half-insane persons, suffering constantly from hunger, may have killed and eaten human victims, whether under the delusion that they were wolves or not.⁴ Necrophagy is not unknown in the annals of mental science,⁵ and no crime was more commonly attributed both to werwolves and to witches at the Sabbat, and also alleged by them, than the eating of human flesh. This crime was doubtless largely hallucinatory, but it may have had a foundation in fact. Such persons may have actually covered themselves with a wolf-skin in order to terrify their victims more completely.⁶ Among savages, sorcerers and medicine-men have traded on the existing delusion or dementia, and have claimed the power of transformation, as many of the above instances show. This is the case with Abipone sorcerers, and another instance is found among the Chippewa and other American Indian tribes, with whom sorcerers dress in the skin of an animal, and imitate its howls and gestures, until the spectators believe in the reality of the transformation.⁷ Nicaraguan sorcerers were much feared for their supposed power of assuming animal forms. To strengthen this belief, they disguised themselves in the skins of animals.⁸ In such cases, where an exact imitation of the animal's howls or movements was gone through, credulity would aid the deception, and, as the sorcerer pulled off the skin, he would be thought to have resumed his human form. Mediæval and later sorcerers doubtless also exploited the current delusion in these and other ways. This would account for such cases of the change being witnessed as have already been cited.

The constantly recurring idea that the animal change is for a certain period, so many days or years, and the statement that the person knows when the change is about to come, are also strongly suggestive of periodical or recurrent attacks of insanity.

In several of the above instances, where the change occurs

⁶ Voltaire suggests as one explanation of lycanthropy a joke played by a young peasant who covered himself with a wolf-skin to frighten old women and so to gain the reputation of a werwolf (*Dict. philosoph.*, s.v. 'Enchantment'). The alleged necrophagy by witches is already found in Apuleius.

⁷ Dorman, p. 248.

⁸ *NR* iii. 496.

through the donning of an animal's skin, there may be a trace of the fact that insane persons with lycanthropic delusions did actually heighten the delusion by wearing a skin, as perhaps in the case of the *berserker*. In the Irish instance mentioned by Giraldus, the human body is visible underneath the skin. As far as the popular belief was concerned, in many cases the clothing was first removed. This may point to what actually occurred before the animal skin was put on. But it may be the relic of an older belief that the human skin was first removed; cf. the Voodoo instance (above, § 1, p. 213*).

Perhaps the werwolf belief was also aided by such phenomena as imbecile children, brutalized, and having animal appetites. These 'wild boys' were often believed to have been stolen by animals—the bear, the wolf—and to have been brought up and suckled by them. While many stories about such children are not authentic, there are some cases in which boys were actually found in the dens of wolves in India. They could not stand upright, went on all fours, ate raw meat, and tore clothes into shreds. Various theories have been suggested to explain their having been thus brought up, but, if some cases are authentic in wolf-haunted districts in India, there may have been instances from time to time in similar districts in Europe. This would in part explain the numerous folk-stories about children suckled by animals—e.g., that of Romulus and Remus.¹ The cases are of the kind described as 'idiocy by deprivation,' and, if such children survived, they would hardly differ from the insane persons who imagined they were wolves, went on all fours, and ate raw flesh.²

The case is parallel to that of women carried off by baboons or orang-outangs, which has doubtless some foundation in fact (see *CF*, p. 277).

4. Werwolf and vampire.—While both werwolf and vampire have a liking for human flesh and blood, there is a marked difference between them. The werwolf is a living person assuming animal form for the sake of gratifying his desire. The vampire, on the other hand, is a resuscitated corpse, which rises from the grave to prey on the living, the reasons for the resuscitation being of various kinds (see *VAMPIRE*). But here and there links of connexion exist. Thus in Germany, Serbia, and modern Greece it is thought that the man who was a werwolf in life becomes a vampire after death. Hence the werwolf was burned, not buried, lest he should do mischief.³ Again, the dead sometimes appear as werwolves. King John Lackland was said to be a werwolf after his death, on the evidence of a monk of Worcester.⁴ In Normandy within the last century priests watched at the grave to be sure of the good conduct of the deceased. If they saw that some lost person was about to become a werwolf, they cut off his head and threw it into the river.⁵ A ghost may also appear as a wolf, like the wolf of Anspach in 1684, which was the ghost of a dead Burgomeister.⁶ This corresponds to the Malay belief that ghosts of dead wizards enter the bodies of tigers, unless the son of the wizard by certain rites attracts his father's spirit to himself.⁷ Similar beliefs have already been noted among the Slavs, Benua, Chinese, natives of British Central Africa, Rhodesians, etc. (§ 1). In New Zealand lizards were feared because the souls of those whose death-rites had been neglected became malignant and entered such creatures. They then gnawed the entrails of living men.⁸ Demons and

spirits of all kinds frequently take animal forms and act as the werewolf or vampire. Thus the French *lubin* was a spirit in the form of a wolf, which haunted churchyards to prey on the dead, like the Arabian *ghul*, which takes the form of men or animals and eats corpses.¹ In Ethiopian lives of saints the king of the devils rides on a fire-breathing wolf and is followed by fiends in the form of wolves, while in Meroe the wicked are thought to be visited by evil spirits as wolves, jackals, etc.²

5 The 'sending'.—A phenomenon analogous to that of the werewolf is that of the 'sending'—a thing or animal, sometimes animated or even created by the sorcerer, or some part of the sorcerer himself (his soul, etc.) and sent out by him to annoy or injure people. Examples occur over a wide-spread area and at various levels of civilization. The 'sending' is a kind of familiar of the wizard. In S.E. Australia the lizard is such a wizard familiar and is sent out to do injury.³ Among the Roro-speaking tribes of British New Guinea snakes and crocodiles are sent by sorcerers to kill. A fragment of the victim's garment is put beside the snake in a pot; then heat is applied to the pot, and the snake strikes at the fragment. Then it is let loose near where the victim passes, and attacks him because it recognizes the smell of the fragment on him. More magical is the method of the Bartle Bay sorceress, a 'sending' from whose body causes death. It leads a separate life from her after her death, or may pass to her daughter. At Gelaria this 'sending' is called *labuni*, and resembles a shadow. It leaves the woman's body when she is asleep, and causes disease by inserting bone or stone in the victim. Should any one see it, it turns into an animal, and then again takes its human form. At Collingwood Bay the 'sending' is called *farum*, and is like a limbless old woman. It turns to a mosquito and sucks the victim's blood, resuming human form at dawn.⁴ In Banks Island, if any one eats a piece of a corpse, its ghost will go forth to harm a victim at the will of the eater. Here also and in the New Hebrides the *mae*, or sea-snake, acts as the familiar spirit of those who profess to have had intercourse with it.⁵ Among the Malays and in Java insects and even horned deer are used as 'sendings'.⁶ Among the Yoruba sorcerers use the owl as a 'sending', and, should it be caught by the person whom it is intended to destroy, and its claws and wings broken, a similar injury is done to the sorcerer's limbs.⁷ In the Cameroons a man selects a hippopotamus, leopard, elephant, gorilla, etc., as a friend, and the animal is then supposed to harm his enemies by stealth. But, if the animal dies or is slain, the man dies. Hence such animals are usually not hunted by fellow-tribesmen.⁸ Matabele wizards dig up corpses, transform them into hyenas, and use them as messengers or steeds. A wounded hyena escaping into a *kraal* is thought to show that this is the dwelling of a wizard.⁹ Baronga wizards send forth crocodiles, lions, snakes, etc., to kill or wound.¹⁰ In Calabar each wizard has two owl messengers, or sends forth insects—stinging ants, beetles, etc.—into the house where he is to find

his victim. Then he sends his *ikim*—a gourd—to examine the house. Insects and *ikim* report whether there is any dangerous *jiju*, or medicine, in it.¹

Bavili sorcerers will leopards and crocodiles to go and destroy, having obtained this power through a medicine rubbed into their eyes. Then the animal becomes visible to them, and they know that it is at their service.² In British Central Africa wizards can create lions, or sometimes inspire existing lions, to go forth and destroy.³ Among the Bondei 'dolls' of Indian corn are animated by the sorcerer, and go forth to suck the blood of a victim, who turns sick and dies.⁴ Zulu wizards send out owls and other animals, and Basutos crocodiles, to injure their victims. These are called their *amanxus*, 'attendants'.⁵ The Eskimo *angakok* sends a *tupilak*—a seal made by him. Should the victim kill it, he loses all strength and becomes a cripple. This seal is made of bones of various animals, covered with turf and blood, and charmed into life by a magic song.⁶ A Siberian shaman will send out a *ye-keela*, or witch-animal, to fight that of another shaman. The shaman whose *ye-keela* is worsted shares its fate. Lapland wizards send flies and darts against their enemies, and also a kind of ball. The last was fatal to the victim as well as to any one who came in its way.⁷ Witch-doctors among the Paraguay Indians send forth witch-beetles to enter their victims, and these beetles cause great terror when seen.⁸ In Mexico, among the Tarahumare Indians sorcerers cause snakes, scorpions, toads, and centipedes to eat a man's heart so that he dies.⁹ The Twanas explain sickness as caused by an evil animal sent by a sorcerer to eat away the patient's life.¹⁰ In ancient Scandinavia it was believed that sorcerers could raise up a ghost or a corpse by their magic power and send it to do harm to an enemy.¹¹ The Indian, Benua, and Japanese examples of the animal familiar, cited above (§ 1), should also be noted.

Danish witches were believed to make a hare out of some wooden pegs and an old stocking, and send it to steal milk from cattle.¹² The Estonians believed in magic packets made by wizards and sent forth to do all kinds of mischief—e.g., to transform the victim.¹³ Among the Celts the druids had the power, by singing spells over a wisp of straw and flinging it in their victim's face, to cause him to become mad, and all madness was attributed to such a 'sending'.¹⁴

Not dissimilar to this conception of the 'sending' is the belief entertained in Celebes regarding the wer-man. The Torajas believe that a man's spirit or inside, *lamboy*, cango forth from him as a deer, pig, cat, ape, etc., while he is asleep at home. The *lamboy* then assumes human form (this resembles the New Guinea *labuni*). Its victim is first made unconscious; then in human form the *lamboy* cuts him up, eats the liver, and joins the body together again. Soon after the victim wakes,

¹⁰ Junod, p. 466 f.

he dies. Elsewhere in Celebes a man is thought to have three souls. One of these, the *tonoana*, leaves him in sleep and acts as a werewolf, but, if it is long away or is fatally hurt, the owner dies.

A wer-man in human shape arranged for a rendezvous with a woman. Her husband overheard, and followed the wer-man, whose bodily form was meanwhile at work. He struck the *lamboyo oritonoana*, which turned to a leaf. This he thrust into his bamboo tobacco box. Then, carrying it to the place where the man was at work, he placed it on the fire. The owner begged him not to do this. But he still kept it in the fire, whereupon the man fell dead.

In some cases this power of sending forth the soul is a natural gift, in others it is the result of contagion from another wer-man, or from anything with which he has been in contact. This contagion can be made to leave such a person in the form of snakes or worms by means of severe medical treatment. The wer-man is known by his long tongue and unsteady eyes, which are of a green colour. A wer-man, when discovered, is punished by death. In these instances the spirit is but little different from the 'sending' or familiar spirit. In some cases, however, it is thought that there is an actual bodily transformation, and here, if the animal is wounded, the man who has thus changed his form is similarly hurt when discovered, or dies.¹ Among the Oraons a witch sends out her soul as a cat, herself remaining insensible. Should it be injured in any way, she bears a similar wound.²

This likeness may be further extended to the kindred phenomena of the bush-soul and the *magual*, both of which bear some resemblance to the 'sending' and to the *lamboyo* or *tonoana*. In Calabar the bush-soul is one of four souls possessed by every man. It lives in a pig, leopard, etc., unseen by its owner, but it must not be neglected by him, else the owner turns sick. Then the witch-doctor advises that an offering be made to it. If this appeases it, all is well. If not, the man dies. The witch-doctor can tell the man what sort of animal encloses his bush-soul. He then takes care that neither he nor any one else harms it, for, if it is shot or trapped, the man dies; *vice versa*, when the man dies, the bush-soul also dies.³ Another observer, J. K. Macgregor, writes that the death of the bush-soul merely causes weakness to its owner. But it is possible for a man to purchase an extra bush-soul from a witch-doctor which is stronger than the other, and can be used for purposes of offence. He may command it to go and kill goats, if a leopard, or trample a farm, if a hippopotamus. If this soul dies, the owner also dies. The owner of a bush-soul can transform himself into the animal in which his bush-soul is.

A chief's son who had a hippopotamus for his bush-soul had been paying a visit to another chief, but sent away his canoe. Asked how he would cross the river, he replied, 'You will see.' He took the leaf of a coco-yam, placed it on the water, sat on it, and at once disappeared below the surface. Then he was seen to cross the river as a hippopotamus, and on the other side he became a man.

It should be observed also that a man's human soul, residing in himself, may leave his body through a medicine and take the souls of things that he desires out of a house. Then he materializes them, and the original articles fall to pieces.⁴ In Northern Nigeria among the Angass a man is

held to have a *karua* which enters him at birth, and another, its counterpart, which enters an animal. The death of the one causes the death of the other.⁵ The whole belief in the bush-soul is not unlike the Roman belief in the genius. A man's health depended on that of his genius, which often resided in a snake. If that was killed, the man whose genius it was also died.⁶

The *magual* belief is found in Central America. In this case a youth obtained his *magual* by dreaming of an animal after a period of solitude and fasting. The *magual*-animal is closely bound up with the man henceforward. When it dies, the man dies; when it is sick, he is sick. He has also the power of appearing as his *magual*. Any wound caused on the animal form is then found on the man.⁷ This resembles the belief in Motu, Melanesia. A lizard, snake, or stone, etc., is selected as a man's *tamanu*. His life is bound up with it. If it dies, or gets broken, or lost, the owner dies.⁸ As already seen, the *talamaur* may be the soul, and, if it is wounded, the body is found to have a similar wound. In an Eskimo story the spirit of a witch who has made a young man ill is wounded in the heel. At the same moment the witch dies in the next house.⁹

Between the werewolf superstition and the various beliefs cited in this section there are certain similarities. Of these that which recurs constantly is the belief in repercussion.

Injury to the 'sending' entails injury to the sorcerer (Yoruba, Eskimos, Siberia); injury to the animal friend entails injury to the owner (Cameroon); injury to the bush-soul, *magual*, *tamanu*, wer-soul, entails injury to the owner (Celebes, African instance, Oraons, Indians of Guiana); injury to the soul which takes the form of an animal entails injury to the owner; injury to the soul which enters an animal temporarily entails injury to the owner; injury to the soul absent from the body for some mischievous purpose entails injury to the owner (Eskimos, Melanesians); injury to the werewolf or other wer-animal entails injury to the man in his human form.¹⁰

The real point of connexion between all the beliefs is that something belonging to the man, some part of the man, or the man himself in another form is injured. The injury then, because of the vital connexion between the part and the whole, or thing owned and owner (sympathetic magic), is seen on the man himself. But it is not clear that, as Frazer supposes, the wide-spread belief in wer-animals may 'be found to resolve itself into a belief in the external soul.'¹¹ The wer-animal is, save in a very few instances (Khonds, Oraons, Malays, Chinese, Ibos and other W. African peoples, Indians of Guiana), the man himself transformed, not his soul. And, even where the owner of bush-soul or *magual* is supposed to change himself into the animal containing it, or an animal of the kind, the transformation is a bodily one. The external soul, injury to which causes injury to the owner, is one thing; the wer-animal, which is really the man himself transformed, is another. But the same theory or belief in repercussion is applicable to both. It is not by any means certain that the instance on which Frazer bases his theory of the wer-animal and the external soul can support it. There is no evidence that, when the Nûtká novice is supposed to die and come to life

again before becoming a member of the wolf-society, he has exchanged souls with a wolf, so that both man and wolf are werwolves, or that there is anything here akin to the bush-soul.¹ Nor again is it clear, as N. W. Thomas maintains,² that lycanthropy is connected with nagualism rather than with transformation, or that the wer-animal was originally the familiar of the medicine-man. The comparatively few instances of the spirit going forth as a wer-animal suggest that we are here on the track of a different if analogous superstition to that of lycanthropy with its supposed bodily transformation. Again, the familiar is hardly a form of the man himself, as the werwolf is, but rather sometimes of part of the man, or it is his messenger, which the werwolf does not seem to be.

There may, however, be a connecting link if we regard the phenomena of lycanthropy as based on the hallucinatory dreams of insane persons, preoccupied with ideas of transformation. Where a medicine-man is supposed to send forth his spirit either in its own shape or in that of an animal, while he remains quiescent at home, this may also be suggested by a hallucinatory dream.

It seems better, therefore, to regard lycanthropy with its bodily transformation as distinct from the transformation of the outgoing spirit, and also from the 'sending,' messenger, or familiar. They are analogous beliefs, to which similar conceptions—e.g., that of repercussion—have attached themselves. But they are in origin different. In the same way, though there is much in the fairy, demon, or witch superstitions which is common to all (see FAIRY), these are really distinct in origin.

6. Conclusion.—The wide diffusion of the werwolf superstition forms an excellent example of a universal belief being worked up into a superstition or story bearing a common likeness in different regions. Without the belief in shape-shifting the werwolf superstition could not have existed. But, this being granted, persons of diseased mind in all stages of civilization easily conceived themselves to be ferocious animals preying upon other human beings. The belief itself was easily exploited by interested persons—medicine-men, sorcerers, etc.; or some of these might themselves be half-crazed, as medicine-men often are through their austerities (see AUSTERITIES). In certain cases—e.g., that of the Norse *berserks*—the insane fit was heightened by the wearing of animal-skins; or, in others, totemism, in its later stages, may have helped the form of the superstition, as in the Arcadian and some Irish Celtic examples.

LITERATURE.—Of the numerous works written on this subject in the 16th and 17th centuries, the following are the most important: B. de Chanvancourt, *Discours de la lycanthropie*, Paris, 1599; J. de Nynauld, *De la Lycanthropie*, Louvain, 1606; Wolfeshusius, *De Lycanthropia*, Leipzig, 1691. More modern works are: R. Andree, *Ethnographische Parallelen und Vergleiche*, Leipzig, 1889, pp. 62-80; S. Baring-Gould, *The Book of Werewolves*, London, 1895; M. F. Bourquelot, 'Recherches sur la lycanthropie,' *Mémoires de la société des antiquaires de France*, new ser., ix. [1848] 198-262; J. Grimm, *Teutonic Mythology*, Eng. tr., London, 1882-88; W. Hertz, *Der Werwolf: Beitrag zur Sagen-geschichte*, Stuttgart, 1882; R. Leubuscher, *Ueber die Wehrwölfe und Thierverwandlungen im Mittelalter*, Berlin, 1850; E. B. Tylor, *PC*, London, 1891, i. 308 f.

J. A. MACCULLOCH.

LYING.—The English word 'lie' with its congeners and derivatives represents a concept which, if hard to define, is yet unique and irresolvable into any other. While it cannot be claimed either (a) that all persons are agreed as to what precisely constitutes a lie or lying, or (b) that anything like the same ethical significance has at all times and in all communities been attached to the practice generally understood to be denoted by the Teutonic word and by the words commonly regarded as its equivalents in other languages, yet in English at

any rate this term, and in a somewhat less degree any word or periphrasis which is thought to be merely a covert alternative for it, is viewed and, by those to whom it is applied, is resented as conveying a reproach, or at least an opinion, generically different from any other. It would probably be conceded that nowhere has antipathy to lying and sensitiveness to the imputation of it reached a higher intensity than among ourselves; and a study of the import of the term in our own language may therefore be taken as in a manner typical and representative.

1. Sources of modern conception.—Historically the English lie has, if we may so speak, a fourfold pedigree—Saxon, Jewish, Græco-Latin, and Christian. It signifies, that is, a vice or vicious act, which derives its peculiar reputation partly from the language and sentiment of our pagan forefathers, partly from conceptions that find expression in the Hebrew Scriptures of the OT, partly from Greek and Roman thought and literature, and, as we shall contend, partly from the specific teachings of Christianity. If it be alleged against this analysis that our sensitive regard for veracity is rather of feudal origin, the objection, even if well-founded, is of no moment, that feature of feudal ethics being itself derived from some or all of the four sources enumerated.

(1) *Saxon*.—The presence in all the Teutonic languages of a substantially identical word of like meaning attests the perennial importance of the thing meant. To 'lie' is to say that which is not. And we cannot doubt that the tribesman who had the skill, and the heart, on occasion to do this undetected was held in different esteem from the man who could not or would not; whether in higher or in lower esteem, we cannot in the absence of adequate evidence be sure; that might perhaps depend on, and change with, the varying circumstances of the community.

(2) *Jewish*.—When at length on British soil the Anglo-Saxon invaders were gradually led to profess the Christian faith, that faith brought with it a moral code derived in unequal degrees from the three other sources named above, of which the most ancient and explicit was the Hebrew. Although the Decalogue contains no precept 'Thou shalt not lie,' the prohibition of 'false witness' reprobates the most frequent and injurious form of lying. Prophets and moralists enlarged the prohibition. 'The voice of the Lord crieth unto the city,' says Micah (6⁹), 'for the inhabitants thereof have spoken lies, and their tongue is deceitful in their mouth' (6¹³; cf. Is 30⁹ 59¹³, Jer 23¹⁴); 'Lying lips are an abomination unto the Lord' (Pr 12²²); 'A righteous man hateth lying' (13⁴; cf. Ps 119¹⁶⁸). Especially guilty are 'false prophets' who in the name of the Lord 'prophecy lies . . . a lying vision . . . a thing of nought, and the deceit of their own heart' (Jer 14¹⁴; cf. Zec 13⁸).

(3) *Græco-Latin*.—Meanwhile early Hellenic sentiment viewed lying without horror; virtually, as craft, it had in Hermes a patron-god. Perjury, however, was deemed perilous, incurring the wrath of Zeus. Subsequently, as witness the gnomic poets,¹ civic morality coupled veracity with justice as laudable (cf. Plato, *Rep.* i. 331 B); and Sophocles proclaimed the ugliness of falsehood:

'Honourable (καλόν) it nowise is to speak lies; though when the truth brings a man dire destruction, 'tis pardonable to say even what is not honourable' (frag. 323).

Finally, philosophy pronounced falsehood intrinsically vicious. Plato (*Rep.* ii. 382 A, 389 B-D), while permitting his 'guardians' to 'use it, now and again, medicinally and officially' for the benefit of the State, bids them punish it rigorously in private individuals as 'a practice pernicious and subversive

¹ e.g. Minnermus, frag. 8: 'With thee and me be truth, most just of all things.'

¹ Totemism and Exogamy, ii. 599, iii. 549, G.B.³, pt. vii., *Balders the Beautiful*, ii. 270 f.

² *EB* vii. 149, *Man*, ii. [1902] 117.

of the commonwealth,' and in his latest work (*Laws*, 730 B f.) extols truth as 'foremost of all good things'; for the truthful man is 'trustworthy, whereas he who loves wilful falsehood is untrustworthy (*ἀπιστος*), and he who loves involuntary falsehood is foolish.' Aristotle (*Eth. Nic.* iv. 7. 6) deems 'lying' (*τὸ ψεύδος*) essentially 'mean' (*φαιδλον*) and blameworthy.' The 'truth-lover' (*φιλολήθης*) stands in notable contrast with him who rejoices in falsehood (*ὁ τῷ ψεύδει αὐτῷ χαίρων*), a type of character distinct from him who lies for the sake of gain or glory (*ib.* § 12). In Stoicism the viciousness of falsehood, although not expressly affirmed, is tacitly assumed. Thus ideal good is in effect defined by Seneca (*Ep.* lxvi. 6) as 'a mind set on truth.'¹ To the consistent Stoic acceptance of unverified 'opinion' as a substitute for truth or real knowledge would be equivalent to inaccuracy. Altogether, Greek philosophy had energetically discountenanced the art of lying, and, when Latinized, had found an ally in old-fashioned Roman prejudice against wilful untruth.

(4) *Christian.*—The NT endorsed and deepened the injunctions of Jewish theology and Gentile ethics. 'Lie not one to another,' writes St. Paul to the Colossians (3⁹); the Christian is to forgo all 'lying,' and this for the new and characteristically Christian reason that 'we are members one of another' (Eph 4²⁵). And with this Pauline monition the warnings of the Apocalypse agree. Into the heavenly city no 'liar' may enter (Rev 21⁷); outcast thence is 'every one that loveth and maketh a lie' (22¹⁵), where nothing is lost to the ethics of truth if by 'lie' be meant idol or counterfeit god; that, theologically, is the typical lie—idolatry falsifying man's conception of the divine attributes and therewith the standard of truth. In the Synoptic Gospels 'hypocrisy' (Mt 23²⁸, Lk 12¹) would appear to express what in St. John is called simply 'lying' (*ψεῦδος*), of which 'the devil' (Jn 8⁴⁴) is first cause. Thus for Christianity the spirit of lying is opposed to the spirit of truth as darkness is to light. It is antagonistic to God and incompatible with fellowship in the Church of Christ. And this abhorrence of lying as deadly sin, though too often grievously violated in nominal Christendom, has endured throughout the centuries, permeates our finest literature, and is reflected in the life and conduct of many a plain, honest man to-day.

2. *Philosophical theories.*—Theology and custom-morality apart, moral philosophers of different schools condemn lying on different grounds; the intuitionist as intrinsically repugnant to 'right reason' or 'moral sense' or 'conscience,' the eudæmonist or perfectionist because it impairs well-being and self-development, the utilitarian because, on the whole, if not in every instance, it would tend to the diminution of the sum-total of pleasure experienced. Whether the utilitarian sanction is well-founded in fact may be questioned. It is arguable that the wide acceptance of utilitarian ethics has been attended by an increased indifference to truth. Whereas lying is demonstrably contrary to other ideals—universal benevolence, perfection, or the beautiful—there is no guarantee that truth-seeking will bring either to the individual or to the community a surplus of pleasure, or that more pleasure may not be secured by an admixture of well-timed falsehood. But, even if utilitarian theory could demonstrate the all but universal inexpediency of lying, such calculative disapproval of it as hedonistically impolitic is not the same thing as hating a lie for its own sake. It is this that would seem to be ethically the point of main consequence, distinguishing man from man—the

presence or absence of a deep aversion to lying as such. Of less real importance is the much debated question, too complex to summarize here, of exceptional contingencies in which, notwithstanding that aversion, it may be right to speak falsely, just as killing is sometimes right. But we may consider whether lies can be classified, and attempt a more exact determination of the essential constituents of lying.

3. *Analysis and classification of lying.*—The aim of a lie is to misrepresent facts, or purpose, or feeling. To be a liar is to do this habitually and wilfully. Of each particular lie the motive is normally some gain foreseen or conjectured as attainable by deceiving somebody as to (1) what has happened, (2) what one purposes, or (3) how one feels. In popular usage the term 'lie' is apt to be limited to the first kind. But I lie no less really, if (2) I promise what I have no intention of doing, or if (3), being glad, I feign sorrow. This is sometimes overlooked or even denied. With regard to declarations of purpose, it is rightly urged that unforeseen circumstances alter cases, and to promise what one may eventually see reason not to perform is no falsehood. But it is lying, if at the time of speaking I have not the intention professed; or if I deliberately, but insincerely, protest that in no circumstances will I change my mind; or if, having changed it, I allow those concerned to go on believing my purpose to be unchanged. The last is a very common form of falsehood. Similarly, as regards feeling, many people who would be ashamed to state that they had seen what they had not seen, make no scruple about pretending goodwill towards persons for whom they have none, with the object sometimes of getting general credit for a kindness of heart which is not theirs, sometimes of misleading the victims of their dissimulation.

Not all deceit, however, is lying. For, although the essence of lying is intent to deceive, there must be also, to constitute a lie, either (a) untrue words, or (b) such reticence as in the context (of speech or action) amounts to false statement—e.g., if I say 'He gave me twenty pounds,' when in fact he gave me fifty (cf. Ac 5⁸), or if I adopt and publish as my own an essay largely written by another man. To lie is, as Kant well says, 'to communicate one's thoughts to another through words which (intentionally) contain the opposite of that which the speaker thinks.'¹ It matters not whether the false belief is created by positive affirmation or by omission of words necessary to the establishment of a true belief.

Allegory is not falsehood, provided it is designed and adapted to embody truth. It was because early Greek mythology did not in Plato's judgment fulfil this condition that he regarded allegorizing interpretations of it as in no way bettering the case for Homer and Hesiod (*Rep.* ii. 378 D). As with allegory, so with all fiction. Stage-plays and novels exhibit in the form of 'stories' events that are not history, present or past, and yet mislead nobody. A 'story' is a lie, then, only when it falsely disowns its fictitious origin. Even pseudonymous authorship does not necessarily involve falsehood. Not all illusion is deception. Daniel is dramatically as legitimate as Hamlet or Coriolanus. But the pope who, to intimidate a Frankish king and practising on his credulity, sent him a private letter purporting to come from St. Peter was no dramatist, but a forger; and forgery is falsehood. It is doubtful whether equivocation, where a statement is equally susceptible of two meanings, one false and one true, should, because calculated to deceive, be accounted lying. As an isolated act, it probably should not. But the man who habitually

¹ 'Animus vera intuens, peritus fugiendorum ac petendorum, non ex opinione, sed ex natura prelia rebus imponens.'

¹ E. Caird, *Critical Philosophy of Kant*, Glasgow, 1889, ii. 337.

equivocates is an untruthful man. Under the head of equivocation may fairly be brought many of those partially deceptive utterances which are sometimes, but unconvincingly, defended as mere social conventions on a par with the customary phraseology of address and other 'common forms of speech generally understood.'¹ If, e.g., in declining an unwelcome invitation I express regret at being unable to accept it, the defence that this is a usual and well-understood way of notifying my intention, while disguising the motive, is inadequate. But, supposing I do regret the disappointment which my refusal may cause or the circumstances which render the invitation unacceptable, the phrase employed is equivocal rather than actually false. If, instead of declining, I profess 'pleasure in accepting' the invitation, the pleasure need not be wholly fictitious; for it is in my power by an effort of goodwill (a) to feel pleasure in accepting, and not refusing, the civility offered, and (b) to find altruistic pleasure in a visit not naturally attractive. By thus *choosing* to be pleased, a man determines on the side of truth what would have been equivocation. Even where there is an actual element of falsehood, we recognize degrees of insincerity. A statement which in the main reveals the speaker's purpose, feeling, or knowledge of fact, but disguises some detail, is not in the same degree vicious as an entirely misleading utterance, unless, of course, the point misrepresented is the most essential, in which case the saying may be exemplified that 'the worst lies are half truths.' Yet we cannot altogether reject the widely spread view of 'common sense,' that a direct lie stands on a different footing from any indirect device whether of hiding the truth (*suppressio veri*) or of creating a false impression (*suggestio falsi*). There is a common understanding that, when we speak, we do not state what we know to be untrue. Socially regarded, then, a direct lie is a graver breach of faith, and a worse blow to mutual confidence, than any statement, however evasive, which does not actually violate this understanding.

4. Conclusion.—On the whole, the main difference between ancient and 'modern' views of inaccuracy is that in the latter censure is directed primarily on discrepancy between statement and thought rather than on the divergence from reality of a spoken, or unuttered, proposition. 'Modern' morality tends to be severe upon misstatements, apparently wilful, of particular facts, but is strangely lenient wherever 'ignorance' can be pleaded—as if ignorance was not often wilful, or reckless, indifference to truth. Many persons will habitually declare as fact anything that they do not positively know to be untrue, and, when con-

victed of error, take no shame to themselves. They 'thought' it was so. To Plato such untrue 'thought' or 'lie in the soul' appeared more manifestly evil than any spoken lie; and, though Christianity, supervening, emphasized the distinction between wilful sin and intellectual error, there is nothing in the NT to justify, and the Johannine writings abundantly discountenance, the 'modern' view aforesaid, which indeed rests upon nothing better than the assumption that we are entitled to ignore truth, if not to pervert it. In practice the former habit leads on to the latter. Having once entertained and echoed some untruthful allegation, a man will often shut his ears to all disproof and pervert other facts in support of it. Again, if 'lying' proper implies some kind of utterance, the wider concept of 'falsehood' includes (a) self-deception, and (b) the unuttered lie cherished in the heart and potent to vitiate judgments whether of fact or of value. The dishonest-minded man frequently propagates untruth without any formal or positive lying. If he thus on technical grounds escapes being designated a liar, he yet comes within Aristotle's description of 'the man who delights in falsehood as such.' Doubtless this permanent disposition is acquired only through repeated indulgence in lying for the sake of some particular gain. If it is seldom attained, an intermediate stage is very frequent. Many men and women rarely tell the truth, regarding it as something too precious to give away!

The relation of inaccuracy to 'that most excellent of all virtuous principles, the active principle of benevolence,' emerges in Butler's 'Dissertation of the Nature of Virtue.' Linking 'falsehood' as a cardinal vice with 'injustice' and 'unprovoked violence,' Butler holds that 'veracity as well as justice is to be our rule of life'; by these our benevolence must be conditioned.

Of the view which condemns lying as violation of a man's duty to himself, the typical exponent is Kant, who stigmatizes a lie as 'an annihilation of the dignity of man,' and deprecates argument from the injury done by the liar to others as confusing 'the duty of truth with the duty of beneficence' (Caird, ii. 384). On the other hand, the best English moralists of the past century, notably Sidgwick and Martineau, take a wider and at the same time a more discriminating view of the nature and harmfulness of falsehood.

LITERATURE.—In addition to the authorities quoted in the art. see H. Sidgwick, *Methods of Ethics*, London, 1907, bk. iii. ch. vii. (from the intuitionist standpoint), bk. iv. ch. iii. (from the utilitarian standpoint); J. Martineau, *Types of Ethical Theory*, Oxford, 1888, section on 'Veracity' (pt. ii. bk. i. ch. 6, § 12); T. H. Green, *Prolegomena to Ethics*, do. 1883, p. 344 f.; J. S. Mackenzie, *Manual of Ethics*, London, 1897, pp. 189, 319 f.; H. Rashdall, *Theory of Good and Evil*, Oxford, 1907, i. 90, 192-196. For the attitude of non-Christian peoples towards lying see *MI*, ch. xxx. f. J. M. SCHULHOF.

M

MA'ARRI.—

x. Life.—Abu'l-'Alâ Ahmad ibn 'Abdallâh ibn Sulaimân al-Ma'arri, the celebrated Muhammadan poet and man of letters, was born in A.D. 973 at Ma'arra (Ma'arrat al-Nu'mân), a prosperous Syrian town situated about 20 miles south of Aleppo. At an early age he became almost completely blind in consequence of an attack of smallpox, but so extraordinary was his power of memory that this misfortune did not seriously interfere with the literary studies to which he afterwards devoted himself. It would seem that at first he intended to make poetry his profession. The sums gained by writing panegyrics were often immense, and may well have tempted an ambitious youth with the example of Mutanabbî before him. Abu'l-'Alâ, however, declares that his poems were not written for hire. Probably this is true in the sense that he soon

abandoned a career which, lucrative as it might be, entailed dependence on the precarious favours of patronage and was destructive of every feeling of self-respect. From the age of 20 to 35 he remained at Ma'arra, a poor and comparatively unknown scholar, supported by a small annual pension paid from a trust-fund. During this time he composed the greater part of the collection of poems entitled *Sifr al-zand* ('Sparks from the Tinder'), in which the influence of Mutanabbî is apparent. With the object of seeking a wider field for his talents, he left Ma'arra in A.D. 1008 and journeyed to Baghdâd, where he was well received by the learned men; but, instead of settling there, as he had planned, he departed after a stay of eighteen months, and, on returning home, announced his intention to retire from the world. Though, according to his own statement, it was lack of means and the news of his mother's illness that caused him

to quit the capital, there seems to be little doubt that he took this step on account of an indignity which he suffered at the hands of a powerful noble whom he was so imprudent as to offend. The remainder of his life was passed in teaching and writing. His picture of himself as a misanthropic recluse conveys a false impression. From Baghdad he returned with a reputation that not only made him the first man in his native town, but also brought disciples from all parts to hear him discourse on Arabic philology and literature. He had many friends, and his letters to them show 'a kindly interest both in men and things' (*The Letters of Abū'l-ʿAlā*, ed. Margolouth, Introd. p. xxx). He complains of his poverty, but the Persian poet Naṣīr-i Khusrāu, who visited Ma'arri in A.D. 1047, describes him as very rich (*Safar-nāmah*, ed. C. Schefer, Paris, 1881, p. 10 = p. 35 of the Fr. tr.). Ma'arri died in A.D. 1058.

2. *Writings*.—Besides the *Suṭ al-zand*, already mentioned, Ma'arri is the author of another and far more remarkable volume of poetry, entitled *Luzūm mā lam yalzam*, in reference to a technical peculiarity of rhyme, and generally known as the *Luzūmiyyāt*. These poems, written after his visit to Baghdad, contain religious, moral, and philosophical reflexions and deal with a great variety of topics. The prevailing tone is pessimistic and sceptical, but many passages occur in which Ma'arri speaks as an orthodox Muslim. The *Risālat al-ghufrān* (described and partially translated by the present writer in *J.R.A.S.*, 1900, pp. 637-720, and 1902, pp. 75-101, 337-362, 513-547; ed. Cairo, 1907) takes the form of an epistle addressed to 'Alī ibn Manṣūr of Aleppo, who is better known by the name of Ibn al-Qārīh. In this Lucianic work Ibn al-Qārīh is imagined to have entered paradise, where he holds a series of conversations with pre-Islamic poets, and the author discusses the opinions of the leading Muhammadan freethinkers (*zanādīqā*). His *Letters*, composed in an elaborately artificial and allusive style, have been edited, with Eng. tr., by D. S. Margolouth. The long list of his minor works, of which only a few are extant, includes a supposed imitation of the Qur'ān, entitled *Al-fuṣūṭ wa'l-ghayāt*. Ma'arri is said to have boasted that, if it were 'polished by the tongues of four centuries of readers,' it would bear comparison with the original (see references in I. Goldziher, *Muhamm. Studien*, Halle, 1889-90, li. 408); but this appears to be an invention. What he attempted was probably a parody of Qur'ānic style rather than a deliberate challenge to the dogma of 'iʿjāz, which claims for the Qur'ān a miraculous and inimitable perfection.

3. *Doctrines*.—It is difficult to give a clear account of Ma'arri's religious and philosophical beliefs. Not only are they, to a large extent, negative in character, but the evidence derived from some passages in his writings is counter-balanced by other passages which, if they stood alone, would lead us to the opposite conclusion. These contradictions are most strikingly exemplified in his attitude towards Islām. Any one who wished to prove him orthodox might quote from the *Luzūmiyyāt* numerous instances in which the poet unequivocally accepts nearly all the chief Muhammadan doctrines, yet his pages are full of denials, doubts, and criticisms which, though cautiously expressed, show a strong anti-Islamic tendency, and will convince any impartial reader that the charge of heresy brought against him by certain of his contemporaries was not unjustified. Several explanations of the inconsistency have been offered. The question is important, since whatever solution we adopt must affect our estimate of Ma'arri. Can it be assumed that he is equally sincere when he writes as a pious Muslim and when he preaches the gospel of rationalism? That seems incredible, except on the hypothesis that Ma'arri, while doubting the divine origin of Islām, also distrusted the human intellect, and hesitated to cut himself loose from the faith in which he was bred. Such an explanation, however, does not accord with his confident and emphatic appeal to reason as the highest authority. The following quotations from the Cairo ed. of the *Luzūmiyyāt* (A.D. 1891) illustrate his views on this point.

'Reason is the most precious gift thou hast received' (i. 151. 1). 'Traditions have come down to us which, if they be genuine, possess great importance; but they are weakly attested. Consult Reason and pay no heed to anything else. Reason is the best adviser in the world' (i. 288. 8 f.). 'Be guided by Reason and do whatever it deems good' (i. 394. 8). 'My Reason is indignant that I should lay it aside in order to follow Shāfiʿi and Mālik' (ii. 150. 3). 'O Reason, 'tis thou that speakest the truth. Perish the fool who invents traditions or expounds them!' (ii. 186. 4).

Those who hold that Ma'arri's orthodox utterances do not express what he wholly or partly

believed, but were designed to mask his real convictions and to serve as a defence against any dangerous attack, are attributing to him a course of action that he himself openly professes.

'Society compels me to play the hypocrite' (ii. 139. 4). 'I raise my voice to pronounce absurdities, but I only whisper the truth' (ii. 38. 13). 'Conceal thy thoughts even from the friend at thy side' (i. 272. 1).

His opinions were of a sort that could not be communicated without some disguise; and this necessity, which he disliked (cf. ii. 34. 2), is the source of many superficial contradictions in his writings. The suggestion that his ideas were dictated and controlled by the complex form of rhyme which he uses throughout the *Luzūmiyyāt* is inadequate as a general explanation of the facts, although it may cover part of them. Something also should be allowed for the influence of an Islāmic atmosphere and tradition upon the language of the poems, an influence to which, perhaps, their author at times consciously surrendered himself.

While Ma'arri adopted certain ascetic practices and held certain religious and moral beliefs, his genius was essentially critical, sceptical, more apt to destroy than to construct. He could think for himself, but lacked the power of developing and combining his speculations. Unable to find rest in any religious or philosophical system, he fell into a fatalistic pessimism tempered, as not seldom happens in such cases, by a good deal of active benevolence. He claims to unfold to his readers the secret thoughts of mankind (i. 230. 15), and it is true that his poems reveal the inmost spirit of contemporary Muhammadan culture in its many-sided aspects. We are here concerned only with his main points of view and with the opinions and beliefs to which he was led by reflecting on the problems of life. For the sake of convenience the subject may be classified under a few general heads.

(a) *Scepticism*.—In several passages of the *Luzūmiyyāt* Ma'arri discusses the origin and nature of religion. He ignores, although he does not formally deny, the theory of divine revelation. Religion, as he sees it, is a matter of inheritance and habit.

'They live as their fathers lived before them, and bequeath their religion mechanically, just as they found it' (i. 248. 18). 'In all thy affairs thou art satisfied with blind conformity, even when thou sayest, "God is One"' (i. 252. 2).

He disapproves of conformity (*taglīd*), not because it is opposed to genuine faith, but on the ground that it is irrational.

'It is not reason that makes men religious: they are taught religion by their next of kin' (ii. 403. 13); cf. the celebrated verses (ii. 201. 7 ff.). 'The Muslims are mistaken and the Christians are on the wrong road, | And the Jews are all astray and the Magians are in error. | Mankind fall into two classes—the intelligent | Without religion, and the religious without intelligence.'

The whole fabric of popular religion is raised on fear, fraud, and greed (i. 251. last line, 65. 9, ii. 196. 5). The poet characterizes the great world-systems as a mass of forged traditions and doctrines which not only are repugnant to reason but have undergone vital alteration at the hands of their own adherents (ii. 20. 15, 196. 3, 404. 2, 409. 9). All of them are tainted with falsehood; no community possesses the truth (*ḥudā*) entire (ii. 177. 10). Ma'arri does not shrink from applying this principle to Islām, though here, as has been remarked above, he speaks with two voices and avoids positive statements of disbelief. In the case of other religions his criticism is less restrained; thus, referring to the Crucifixion, he says (ii. 409. 7 ff.):

'If what they [the Christians] say concerning Jesus is true, where was His father? How did He abandon His son, to His enemies? Or do they suppose that they defeated Him?' He disbelieves in miracles (ii. 252. 11), augury

(i. 104. 3, 327. 10), and astrology (i. 254. 1, ii. 330. 2). On these matters he had been able to reach a definite conclusion, but he was rarely so fortunate. Experience assured him that human knowledge is a leap in the dark.

'There is no certainty; my utmost effort results only in opinion and conjecture' (ii. 23. 14). 'Colocyth does not know what gave it its bitterness, nor honey why it is sweet. Ye asked me, but I had no power to answer you: any one who pretends to know is a liar' (i. 108. 6). All his metaphysical speculations close on the note of agnosticism.

'Some men assert that nothing really exists, but have they proved that there is neither misery nor happiness? We oppose them in this controversy, and God knows which of us is farther from the truth' (ii. 281. 1).

As regards the question of a future life, he admits that the soul may perhaps be immortal (ii. 171. 7). No one can tell whither it goes (i. 225. 7, 248. 6). It is a subtle thing, and, although it is confined in the body, the intellect cannot perceive it; will it be conscious of what befalls it hereafter? (i. 211. 6). If mind accompanies it, it may have memory of its life in this world (i. 140. 6). The doctrine of metempsychosis is not corroborated by reason (ii. 171. 9 ff.). In other passages, however, he alludes to an infinite cycle of dissolution and re-composition, of death and re-birth, as the destiny of all living beings (ii. 169. 13 ff.).

(b) *Pessimism*.—Amidst the welter of doubt from which he struggled in vain to escape Ma'arri found one undeniable fact, namely, death (i. 256. 6, 291. 1 f.). Wherever he looked, he saw the cruel hand of Fate dragging all to destruction (ii. 146. 13). The life of man is a journey to the tomb (ii. 81. last line), a bridge between two deaths (i. 308. 12), a disease which only death can cure (i. 182. 3), a long torment (i. 69. penult.). Contemplating the futile pain of existence, he exclaims:

'May I never rise from the dead! I take no delight in living, though my fame is spread afar' (i. 426. 9 f.; cf. i. 374. 17).

Of such a view of life celibacy is the logical consequence, nor in this case could the poet be accused of preaching what he did not practise (ii. 359. 7 ff.). He held that procreation is a sin (i. 45. 3 ff., ii. 299. 4). No one has the right to increase the sum of suffering by bringing children into the world (i. 349. 13):

'If you wish to be kind to your sons, leave them in your loins' (i. 397. last line).

Children are burdens (i. 289. 12), and a man's son is his worst foe (i. 400. 2; cf. i. 45. 3 ff.). Fathers should provide husbands for their daughters, but should warn their sons not to marry (i. 216. 10). Ma'arri depicts the universal misery and wickedness of mankind in terms that no satirist has surpassed. The world is a sea of raging passions which drive us to and fro until we are engulfed (i. 49. 6); it is like a carcass, and we are the dogs barking around it (i. 224. 9).

'When you come back to realities, every human being is wretched' (ii. 20. 7).

He repeats again and again that human nature is radically evil (i. 50. 8, 94. 3, 353. 11 f., 403. 5).

'Better than the best of them is a rock which commits no wrong and tells no lies' (i. 95. 12).

Good is soon burnt out, but evil smoulders for a long time (i. 270. 11 f.). The proportion of good in the world is exceedingly small (i. 315. 3). Fate, not free will, is the cause of men's wickedness, and the crow cannot change its colour (i. 311. 6 ff.).

'Do not seek to reform a world whose righteousness God never ordained' (i. 110. 3).

It follows that no human actions incur blame or deserve praise, and the poet says in one place (ii. 79. 10 f.) that only religious scruples prevented him from accepting this doctrine. Elsewhere he denies that men sin under compulsion (i. 354. 8, ii. 254. 3).

'They are unjust to each other, but the Creator of injustice is certainly just' (ii. 280. 6).

While castigating his neighbours and contemporaries, Ma'arri does not spare himself (i. 48. 7). His pessimism extends to the future:

'If this age is bad, the next will be worse' (ii. 171. 17).

(c) *Asceticism*.—He earnestly desired to withdraw from a society of knaves and hypocrites and a world of bitter illusions.

'Would that I were a savage in the desert, idly smelling the spring flowers!' (i. 28. 14). 'Be a hermit as far as possible, for one who speaks the truth is a bore to his friends' (i. 66. 1). 'The happiest man in the world is an ascetic who dies childless' (i. 212. 3).

But the value of asceticism depends on the motives by which it is inspired: the humble father of a family is superior to the ostentatious pietist (i. 208. 17 ff.). Ma'arri seems to have learned at Baghdād, if not during his earlier travels, some peculiar doctrines and practices of Indian origin, connected more particularly with the Jains. He thinks it wrong to kill animals for food or to hurt them in any way, and therefore excludes from his diet not only meat, but also eggs, milk, and honey (i. 232. 9 ff., ii. 169. 9, 210. 13, 264. 13, 373. 9; cf. *JRAS*, 1902, p. 313 ff.). In his opinion there is greater virtue in letting go a captured flea than in giving alms to a beggar (i. 212. 9). He praises the Indian custom of burning the dead instead of burying them, and adduces practical arguments in favour of cremation (i. 235. 5 ff., 418. 20 f., ii. 407. 3). The religious enthusiasm of the Indian ascetics who throw themselves alive into the flames fills him with admiration (i. 260. 6 ff., ii. 253. 5 f.). Characteristically enough, he alleges as a reason for abstaining from wine the fact that the forbidden beverage is destructive to the intellect (ii. 312. 14, 361. 11).

(d) *Religion and ethics*.—Though Ma'arri believed the whole conception of religion as a supernatural revelation to be false, he was nevertheless a firm monotheist (i. 47. 12, 279. 12, 281. 4 f.). Reason, he says, assures us of the existence of an eternal Creator (i. 249. 9), whom he seems to have identified with an omnipotent, all-encompassing Fate. Whether his idea of God is truly expressed by the orthodox phrases which he employs may be left an open question. At all events, his religious beliefs were based on intellectual conviction, not on traditional authority (i. 128. 8, 129. last line, 358. 15).

'Truth is not to be found in the Pentateuch: follow thy reason and do what it deems good' (i. 394. 8 f.).

Religion, as he defines it, is fear of God, renunciation of pleasures, and avoidance of sin (i. 315. 12, 361. 17, ii. 298. 12, 329. 12), but also embraces the obligation of dealing justly with every one (i. 103. 11). He asserts that all acts and forms of worship are useless without obedience to the unwritten moral law which is prescribed by reason and conscience. It is evident that he regarded this law as supreme and self-sufficing, for he never made the pilgrimage to Mecca nor did he take part in the public prayers (i. 100. 8). Virtue consists not in fasting and praying and wearing ascetic garb, but in abandoning wickedness and purging the breast of malice and envy (i. 285. 13 f.). That man is ignorant of true piety who, when he has an opportunity of satisfying his desires, does not abstain (ii. 159. 13 f.). A trivial wrong to one's neighbour will be more severely punished hereafter than neglect to fast or pray (ii. 294. 9). Ma'arri had no sympathy with religious or sectarian prejudice.

He observes that, 'when a religion is established, its adherents condemn and revile all other creeds' (ii. 405. last line), but his own opinion is that a Christian priest may do one more good than a Muslim preacher (i. 93. 7). 'Were it not for the radical hatred implanted in human nature, churches and mosques would have risen side by side' (ii. 82. 5).

Worldly ambition causes theologians to write controversial books full of vain words and endless analogies (i. 249. 5 ff.).

'Ask pardon of God and pay no heed to what is said by Abu'l-Hudhail and Ibn Kallab' (i. 131. 5).

While refusing to acknowledge any authority that is less than divine, the poet finds the source and sanction of his freedom in the reason with which God has endowed him.

'Serve God Himself, not His servants, for religion enslaves and reason emancipates' (i. 326. 13).

Though man is naturally evil, the mind can acquire virtue (i. 241. 4). Virtue must be sought and practised for its own sake without desire of praise from men or hope of reward from God: it is a consolation for the woes of this life (ii. 341. 15 f.; cf. i. 142. 5, 312. 10, 333. 10, 437. 7). Humility should go hand in hand with charity.

'Do as you would be done by' (ii. 87. 7). 'Show kindness to the poor and never despise them for receiving your bounty' (i. 175. 11). 'Forget your good deeds' (i. 349. 15). 'Forgive your neighbours, but be merciless to yourself' (i. 360. 13).

Slaves ought to be treated kindly, also animals and birds (ii. 25. 16 f., 31. 4). If Ma'arri says some hard things about women, he is far from being a misogynist, and he makes handsome amends when he declares that a good wife is man's first paradise (i. 356. 12). He regards polygamy as unjust to the wife and calamitous for the husband, but his views on the education of women must have seemed to his Muslim readers curiously old-fashioned (i. 62. 12 ff., 192. 2 ff., ii. 235. 1 ff.).

LITERATURE.—The most complete biography of Ma'arri is contained in D. S. Margoliouth's ed. of the *Letters*, Oxford, 1898, *Introd.*, and the best general survey of his religious and philosophical opinions in A. von Kremer, 'Ueber die philosophischen Gedichte des Abu'l-'Ala Ma'arri,' *SWA W*, phil.-hist. Classe, cxvii. 6 [1889]. See also, in addition to the works cited in the art., C. Rieu, *De Abu'l-'Ala Poetae Arabici vita et carminibus*, Bonn, 1848; A. von Kremer, *Culturgeschichte des Orients unter den Chalifen*, Vienna, 1875-77, ii. 386-396, also in *ZDMG* xxix. [1875] 304-312, xxx. [1876] 40-52, xxxi. [1877] 471-483, xxxviii. [1884] 498-529; D. S. Margoliouth, 'Abu'l-'Ala al-Ma'arri's Correspondence on Vegetarianism,' *JRAS*, 1902, pp. 289-332; R. A. Literatur*, Weimar and Berlin, 1898-1902, i. 264 f.

REYNOLD A. NICHOLSON.

MACEDONIANISM. — 1. Introduction. — In the closing years of the 4th and the first half of the 5th cent. the Arians, Eunomians, and Macedonians were regarded as the most important heretical groups deriving their origin from the Arian controversies. Three laws of Theodosius, dating from A.D. 383 and 384 (*Cod. Theod.* xvi. v. 11-13), are in the main directed against them, and the latest of these speaks of the three heretical designations as 'inter sacre religionis officia pro suis erroribus famosa nomina.' About three years afterwards Jerome (*in Eph.* ii. [on 4th], ed. D. Vallarsi, Venice, 1766-72, vii. 1, p. 610 C = *PL* xxvi. 528) and, as far down as 450, Nestorius (*Liber Heraclidis*, tr. F. Nau, Paris, 1910, p. 148) link together the names of Arius, Macedonius, and Eunomius in a similar way. Didymus of Alexandria, in his *de Trinitate* — a work which is not distinctly named in Jerome's *Catalogue of Authors* (ch. 109), and which, therefore, cannot have been written long before A.D. 392, and may even be of later date—regards the Arians, Eunomians, and Macedonians, whom he sometimes conjoins (ii. 11 [*PG* xxxix. 661 B], ii. 12 [*ib.* 673 B and 688 B]), as the most outstanding adversaries of orthodoxy. Augustine (c. 402) brings them before us as the non-Catholics of the East (*de Unit.* echl. i. iii. 6 [*PL* xliii. 395]); in 415 Jerome describes them in similar terms (*Ep.* cxxxiii., 'ad Ctesiphontem' 11 [*Vall.* i. 2, p. 1040 B = *PL* xxii. 1159]); and Socrates (c. 440) recognizes them as the heretical sects of his time (*HE* i. vi. 41, v. xx. 1). As regards the heresy τῶν Εὐνομιανῶν, εἰρουν Ἀνομιῶν, καὶ τὴν τῶν Ἀρειανῶν, εἰρουν Εὐδοξιανῶν (Council of Constantinople in 381; J. D. Mansi, *Sacrorum conciliorum . . . collectio*, Venice, 1759-

98, iii. 560), we are so well informed that in dealing with them we can start from their date of origin. In the case of the Macedonians, however, the position is less favourable. It will therefore be advisable, first of all, to determine the characteristic standpoint of the Macedonians who, towards the close of the 4th and in the first half of the 5th cent., formed a definite sect distinct from the orthodox Church.

2. Sources for the history of the Macedonians from c. 383 to 450.—As sources for our inquiry we have, besides the historians of the 5th cent., the following works: (a) the *de Trinitate* of Didymus mentioned above (*PG* xxxix. 269-992); (b) the third of the five pseudo-Athanasian dialogues, *de Trinitate* (*ib.* xxviii. 1201-1249: *Διάλογος Ἰ' περὶ τῆς ἁγίας Τριᾶδος, ἐν ᾗ ἀρετικῶν φρονούντων τὰ τοῦ Πνευματομάχου Μακεδονίου ἀντιθέσται πρὸς Ὀρθόδοξον*); (c) the two pseudo-Athanasian *Dialogi contra Macedonianos* (*PG* xxviii. 1291-1330, and 1330-1338); and (d) the fragmentarily preserved *Sermones Arianorum*, printed in Migne (*PL* xiii. 593-630) from A. Mai's *editio princeps* (*Veterum scriptorum nova collectio*, Rome, 1825-38, iii. ii. 208 ff.). Of these four sources, the *Sermones Arianorum*, which seem to have been composed c. 400, or some years later, in the Latin-speaking portion of the Balkan Peninsula, are of little service for our purpose; but what they say regarding the teaching of the Macedonians rests, to some extent at least, on what 'Sozophanes [of whom otherwise we know nothing], princeps eorum, scriptis' (613 C). As regards Didymus, *de Trinitate*, and the two sets of dialogues enumerated above, the present writer, in a recent paper ('Zwei macedonianische Dialoge,' in *Sitzungsberichte der Königlich Preussischen Akademie der Wissenschaften*, xix. [1914] 526-551), seeks to show (1) that in *Did. de Trin.* we find no fewer than thirty-one fragments (printed and numbered *loc. cit.* pp. 526-534) of a learned dialogue of Macedonian origin, written between c. 381 and the date of Didymus's work; (2) that this dialogue was known to and used by the author of the third of the five *Dialogi de Trinitate*, who wrote, as it would seem, in the period between the date of *Did. de Trin.* (c. 392) and the Nestorian controversy (c. 430), and that many sections of this third dialogue have probably been taken—verbatim, more or less—from the said Macedonian dialogue; (3) that the first of the two *Dialogi contra Macedonianos* is of prior date to *Did. de Trin.*, and that its preliminary disquisitions (i.-viii. [pp. 1292-1301]) enable us to reconstruct a second dialogue of Macedonian origin, considerably shorter than that mentioned in (1) above, and written between A.D. 381 and c. 390 (printed as no. 32 in Loofs, 'Zwei maced. Dialoge,' p. 536 f.). With these data at our disposal we are in a position to sketch the teaching of the Macedonians to a great extent from their own writings, and, in order to bring out this point clearly, we shall in the following paragraphs, when quoting from the two Macedonian dialogues in question, give the number of the relevant fragment as found in the present writer's paper cited above.

3. Doctrine of the Macedonians in the same period.—The leading doctrine of the Macedonians is found in the thesis characterized by their opponents as 'Pneumatomachian,' viz. that the Holy Spirit is not to be designated Θεός (frag. 32, lines 1-8, *Dial. c. Maced.* i. 1 [p. 1292 A]; frag. 29, *Did. de Trin.* iii. xxxvi. [p. 965 B]). The development of this thesis on its negative side seems to have been conditioned among the Macedonians by the antithetic positions of the Nicæno-Constantinopolitan Creed: the Macedonians disputed the κυριολογεῖσθαι of the Holy Spirit (frag. 32, ll. 8-12, *Dial. c. Maced.* i. 3 [p. 1293 B]), His ζωνοποιεῖν (frag. 16, *Did. de Trin.* ii. vii. 3 [p. 573 A]),

and His προσκυνητέον εἶναι (frag. 32, ll. 13–33, *Dial. c. Maced.* i. 4 [p. 1293 C, D]; frag. 12, *Did. de Trin.* ii. vi. 18 [p. 545 B, C]; frag. 22, *ib.* ii. x. [p. 641 B]). Only τῷ δυνάμει τῷ τοῦ Πνεύματος συναριθμεῖται [sc. τῇ Τριάδι] (frag. 32, ll. 33–35, *Dial. c. Maced.* i. 6 [p. 1297 C]). On the positive side it was urged that in 1 Ti 5²¹ St. Paul does not mention the Holy Spirit ὡς συντάξας ὁἶθεν τοῖς ἀγγέλοις (frag. 14, *Did. de Trin.* ii. vi. 19 [p. 548 B, C]; cf. frag. 18, *ib.* ii. vii. 8 [p. 581 D]: κατὰ γὰρ . . . τὸ Ἅγιον Πνεῦμα εἰς ἀγγέλου φύσιν); the angels, too, are ἄγιοι καὶ πνεύματα τοῦ Θεοῦ (frag. 4, *ib.* ii. iv. [p. 481 B]). The Holy Spirit, however, was not regarded as merely one of the angels; He was described as Θεοῦ μὲν ἦσαν τῇ φύσει, ἀγγέλων δὲ κρείττων, μέσην τινὰ φύσιν καὶ τῶν εἰληχῶς (frag. 17, *ib.* ii. vii. 3 [p. 576 B]). Nor is it only orthodox writers who on these grounds ascribe to the Macedonians the doctrine that the Holy Spirit is a created being, for we find it stated also in the *Sermones Arianorum* that 'Macedoniani Spiritum Sanctum iussu Patris per Filium creatum defendunt, et nuntium et ministrum Patris eum esse prædicant, sicut et nos' (*PL* xiii. 611 A). The Macedonians themselves sought rather to disguise their position here; for, although they were willing to admit that the Spirit was included among the πάντα of Jn 1³: πάντα δι' αὐτοῦ (i.e. διὰ τοῦ Λόγου) ἐγένετο (frag. 32, ll. 44–46, *Dial. c. Maced.* i. 8 [p. 1300 C]; frag. 27, *Did. de Trin.* iii. xxxii. [p. 957 B]), they expressly denied that He should on that account be described as τῶν κτισμάτων ἐν (loc. cit.: οὐ κοινοποιεῖται τοῖς πᾶσι μοναδικὸν ἐν τῷ ἁγίῳ Πνεύματι; cf. frag. 20, *Did. de Trin.* ii. viii. 1 [p. 617 C]: οὐτε εἰς θεϊκὴν ἀξίαν ἀνάγοιμι τὸ Πνεῦμα, οὐτε εἰς τὴν τῶν λοιπῶν φύσιν καθέκουσιν). Even so, however, they do not advance beyond the Arian doctrine of the Spirit, as the *Sermones Arianorum* likewise assert that 'Spiritus Sanctus . . . melior et maior ceteris omnibus in tertio loco . . . singularis atque solus in sua singularitate dinoscitur' (*PL* xiii. 601 A).

In their interpretation of the Scripture texts on which the orthodox writers based their doctrine of the Spirit, the Macedonians proceeded partly on grounds of purely grammatical exegesis—e.g., frag. 32, l. 12, *Dial. c. Maced.* i. 3 (p. 1293 B): περὶ τοῦ Κυρίου λέγει [sc. Paul, in 2 Co 3¹⁷] ὅτι ὁ κύριος τὸ Πνεῦμα; and partly on arguments of textual criticism—e.g., that in Ro 8¹¹ we should read διὰ τὸ ἐνοικοῦν αὐτοῦ Πνεῦμα, as the one or two MSS with διὰ τοῦ ἐνοικοῦντος, κτλ. in the hands of the orthodox had been tampered with (frag. 25, *Did. de Trin.* ii. xi. [p. 664 C]; cf. *Dial. de Trin.* iii. 20 [p. 1233 B, C]), while in Ph 3³ the correct reading was πνεύματι Θεῷ not Θεοῦ (frag. 25, *Did. loc. cit.* 664 B, etc.; cf. frag. 25, ll. 9–13, *Did. loc. cit.* and *Dial. de Trin.* iii. 26 [p. 1244 B, C]); partly, again, they applied the principle that οὐ χρὴ ὁμωνύμιας ἢ συνωνύμιας ἢ ὁμοιολογίας προσέχειν (frag. 3, *Did. de Trin.* ii. iii. [p. 476 A]), or that τὰ ἀλληγορικῶς ἢ προσηγορικῶς ἢ μεταφορικῶς ἢ ὁμωνύμως λεγόμενα οὐ χρὴ εἰς δόγματος ἀκρίβειαν παραλαμβάνειν (frag. 23a, *ib.* ii. x. [p. 645 A]). It seems clear that the last of these devices was largely adopted by the Macedonians (cf. the ὁμωνύμως also in frag. 9, *Did. ii. vi. 4* [p. 516 C], and frag. 19, l. 19, *ib.* ii. viii. 1 [p. 605 B]). A view held by the learned, and supposed—wrongly, as the present writer thinks—to have the support of Augustine (*PL* xlii. 39), viz. that certain Macedonians regarded the Spirit as a δυνάμεις ἀνυπόστατος (cf. J. A. Mingarelli's note [83] on *Did. de Trin.* i. xviii. = *PG* xxxix. 357, n. 83), cannot be verified directly from Macedonian sources. It appears to lack probability, and seems to the present writer to have no better support than the casual and forced interpretations of orthodox controversialists (*Did. de Trin.* ii. viii. 1 [p. 620 A]), or the misinterpretation of certain passages in

which the Macedonians distinguished between the Πνεῦμα Ἅγιον and the spiritual power of God inseparable from God Himself (*Dial. de Trin.* iii. 23 [p. 1240 A]; *Dial. c. Maced.* i. 20 [p. 1328 B, C]; cf. *Did. de Spiritu Sancto*, xxiii. [*PG* xxxix. 1053 A]).

As regards the Christology of the Macedonians, we have, as far as the present writer knows, only a single statement emanating directly from the Macedonian side, and unfortunately it cannot be detached with certainty from its context. In the *Sermones Arianorum* we read as follows:

'Macedoniani post hæc omnia (there is, unhappily, a lacuna in what precedes) corrigunt se et dicunt: Filium similem per omnia et in omnibus Deo Patri esse dicimus; his autem qui dicunt esse differentiam inter lumen natum et inter lumen non natum, non communicamus, quia nullam differentiam esse inter deum natum et inter Deum non natum dicimus; æquales honore, æquales virtute Soziphanes, princeps eorum, scripsit' (*PL* xiii. 613 B, C).

Is it only the words here italicized that are ascribed to Soziphanes, or are we to regard the whole statement, i.e. also the affirmation of the doctrine ὁμοιος κατὰ πάντα (and therefore κατὰ οὐσίαν), as a formulation due to him or some other Macedonian? Be this as it may, the present writer has now—formerly he advocated a different view (cf. *PRE*³ xii. 47)—no doubt that the sect of the Macedonians (and it is of the sect only that we are meanwhile speaking) were Homoiousian, not Homoousian, in their mode of thought. This is, in fact, distinctly stated—even if we leave out of account the passage just quoted from the *Sermones Arianorum*—by Didymus (*de Trin.* i. xxxiv. [p. 437 A]: ὁμοιούσιον . . . καὶ οὐχὶ ὁμοούσιον λέγοντες), by the author of the *Dial. de Trin.* (iii. 1 [p. 1204 C]: ἡμεῖς [οἱ Μακεδονίαν] . . . ὁμοιούσιον λέγομεν καὶ οὐχὶ ὁμοούσιον), and by the writer of the *Dial. c. Maced.* (ii. [p. 1336 B, C]); and there are good grounds (cf. Loofs, 'Zwei maced. Dialoge,' p. 549 f.) for supposing that the passage in *Dial. de Trin.* iii. 16 (καὶ ἐν τοῦτον δέλεγς, γίνονται ὁμοουσιαστές [p. 1228 A]) is borrowed from the longer Macedonian dialogue. There is in addition the fact that the so-called Confession of Lucian (Athanasius, *de Synodis*, xxiii. [*PG* xxvi. 721 B]), which the Macedonians, to judge from their own utterances (cf. Loofs, 'Zwei maced. Dialoge,' p. 550 f.), would seem to have regarded as their confession, does not contain the Homoousia. The present writer has therefore no doubt that the Macedonians of the closing years of the 4th cent. and the first half of the 5th cent. were Homoiousians in their mode of thought. Statements to the contrary are found only among Western writers who did not know the facts (Augustine, *de Hæres.* lii.: 'de Patre et Filio recte sentiunt, quod unus sint eiusdemque substantiæ'; also Philastrius [see below], or among Arians and Eunomians, who regarded the Homoousia as no less objectionable than the Homoousia (*Sermones Arianorum* [*PL* xiii. 611 A]: 'de Patre et Filio convenit illis'; on Philostorgius cf. J. Bidez, in the pref. to his ed., Leipzig, 1913, p. cxxiv f.). Moreover, in circles where the Homoousian orthodoxy of the later Nicæans differentiated the τρεῖς ὑποστάσεις in an almost polytheistic fashion (*Dial. de Trin.* iii. 6 [p. 1212 A] = *Dial. c. Maced.* i. 18 [p. 1320]), the distinction between the Homoiousian and the Homoousian way of thinking was so slight that even the author of the *Dial. c. Maced.*, who was acquainted with the Homoiousian teaching of the sect (ii. [pp. 1329 C, 1336 C]), could represent the Macedonian as saying to the orthodox: περὶ μὲν τοῦ τοῦ καλῶς λέγεις (i. 20 [p. 1325 C]). As regards their Christology in the narrower sense, it need only be observed that, according to the *Dial. c. Maced.* (ii. [pp. 1329 C, 1333 C]), the Macedonians, like the Arians, denied

that the *Τίδς σαρκωθεῖς*, or *Τίδς ἐνὶ ἑνὶ ὁρμηκῶς*, had a human soul.

4. The relation between these Macedonians and the Homoiousians of the 4th century.—What we know of the teachings of the Macedonians in the period between A.D. c. 381 and c. 430 (cf. § 3) would make it necessary to assume (even if we had no direct information on the point) that the sect was historically connected with the Homoiousian or semi-Arian party. In point of fact, however—even apart from Rufinus, Socrates, and Sozomen, whom meanwhile we leave out of account (cf. § 5, below)—that connexion can be traced in the older sources. Jerome, who, when referring (c. 380) in his *Chronicle* (*ad ann.* 342 [ed. R. Helm, Leipzig, 1913, p. 235 h]) to the installation of Macedonius as bishop of Constantinople, does not fail to add, 'a quo nunc heresis Macedoniana,' regards the Homoiousian doctrine alone as the 'Macedonianum dogma' (*ad ann.* 364 [ib. p. 243 d]); and in the famous twenty-four anathemas of Damasus (A.D. 380 [?]), given by Theodoret (*HE* v. 11 [ed. L. Parmentier, Leipzig, 1911, p. 298; in Latin, *PL* xiii. 359 A; cf. Parmentier, p. lxxxii]), all that is said of the *Μακεδονίαν* is:

οἱ τινες ἐκ τῆς Ἀρείου ῥήξης καταγόμενοι οὐχὶ τὴν ἀσέβειαν ἀλλὰ τὴν προσηγορίαν ἐνέλλαξαν.

Further, Auxentius of Dorostorum writes (c. A.D. 383) of Ulphilas as follows:

'Omoecusio autem dissipabat, quia . . . Filium similem esse Patri suo non secundum Macedonianum fraudulentam pravitatem dicebat' (ed. F. Kauffmann, *Aus der Schule des Wulfila* (= *Texte und Untersuchungen zur altgerman. Religionsgesch.*, I, Strassburg, 1899, p. 74; cf. p. 17).

By c. 380, however, the 'Macedonianum dogma' embraced also the Pneumatomachian thesis. The 'Ἡμεριανὸι, ἄγουν Πνευματομάχοι, who were condemned by the Synod of Constantinople (381, can. 1; Mansi, iii. 559), were, like the Pneumatomachian Semiariani of Philastrius (*Hæc.* lxxvii.; *Corpus hæc.*, ed. F. Oehler, Berlin, 1856, i. 66), indubitably, in part at least, the same as the Macedonians of Jerome. Nicetas likewise, hardly before 381, speaks distinctly of the 'Macedoniani vel eorum in hac curiositate participes' as those 'qui questionem de Spiritu induxerunt' (*de Spir.* v. 2 [*PL* lii. 853 B]). As the anathemas of Damasus in their opening words impugn Pneumatomachian ideas—though without applying any heretical designation—we may probably infer that Damasus was acquainted with the doctrine of the Spirit held by the Arians, Eunomians, and Macedonians. And the reason that Auxentius does not mention the Macedonian doctrine of the Spirit is that, like Ulphilas, he had nothing to criticize in the so-called Pneumatomachian ideas.¹ For, like Origen, all the theologians who in the Arian controversy rejected the Homoousia of the Son affirmed by the Nicene Creed—Eusebians, Arians, Homoiousians, and Eunomians—regarded the Spirit as a *κρίσμα* subordinate to the Son. Even the Nicene Creed itself did not proscribe that view; all that it says regarding the Spirit is: *καὶ [πιστεύομεν] εἰς τὸ Ἅγιον Πνεῦμα*. Moreover, its partisans were at first concerned to assail only the Logos-doctrine of their opponents. At the earliest it was in the *Epistles to Serapion* (*PG* xxvi. 529–676), written by Athanasius during his exile from 9th Feb. 356 to 21st Feb. 362, that that theologian contended also for the Homoousia of the Spirit. The opponents of whom Serapion had informed him, and against whom these *Epistles* were directed—*ἐξελθόντες ἀπὸ τῶν Ἀρειανῶν διὰ τὴν κατὰ τοῦ Υἱοῦ τοῦ Θεοῦ βλασφημίαν, φρονούντες δὲ κατὰ τοῦ Ἁγίου Πνεύματος καὶ λέγοντες αὐτὸ μὴ μόνον κρίσμα, ἀλλὰ καὶ τῶν λειτουργικῶν πνευμάτων ἐν αὐτῷ εἶναι* (*Ep.* i. 1 [p. 529 f.])—were obviously the precursors of the Macedonians of the

¹ The words 'contra Pneumatomachos' in Auxentius, lxi. (ed. Kauffmann, p. 75), rest upon a false reading and a false conjecture; cf. K. Müller, *Ulphilas Ende*, Leipzig, 1914, p. 88 f.

5th century. This is shown by the demonstrable similarity between the *Dialogues* of Didymus and the *Epistles to Serapion* in many of their ideas, although the former is, no doubt, dependent upon the latter (cf., e.g., *ad Serap.* i. 10 [pp. 556 C and 557 A] with *Did. de Trin.* ii. vi. 19 [p. 548 B, C]). Not only do the opponents of Athanasius as well as those of Didymus make use of 1 Ti 5²¹ as a 'dictum probans' (*Ep. ad Serap.* i. 10; *Did. loc. cit.*; cf. also Basilus, *de Spir. Sancto*, xiii. 29 [*PG* xxxii. 117 C])—here Didymus may well have borrowed from Athanasius—but we find also that Am 4¹³ (*κτείνων τὸ πνεῦμα*) and *Zec* 4⁶ (*ὁ ἀγγελὸς ὁ λαλῶν ἐν ἐμοί*) are appealed to by the opponents of Athanasius (*Ep.* i. 9 [p. 552 B, C], i. 11 [p. 557 B]) as well as by the Macedonians of the 5th cent. (*Dial. de Trin.* iii. 26 [p. 1244 B, C] and 23 [p. 1237 C]). Above all, we have the fact that the mockery poured by Athanasius upon the *τρόποι* recognized by his adversaries (*Ep.* i. 7 [p. 548 B])—whom he stigmatizes as *τροπικοί* (ib. 21 [p. 580 D], 32 [p. 605 A])—recalls that Macedonian practice of resorting to *δωρονύμια*, *συωνύμια*, etc., to which Didymus draws attention.

It is surprising, however, that Athanasius here makes no mention of Macedonius; as a matter of fact, he names no exponent of the doctrine which he criticizes.¹ Nor even later, when, as a result of the attitude assumed by Athanasius, of the anathema uttered by the Alexandrian Synod of A.D. 362 against all who regarded the Holy Spirit as a *κρίσμα* (Athan. *ad Ant.* iii. [*PG* xxvi. 800 A]), and of the acceptance of that doctrine by Meletius of Antioch at an Antiochian Synod of A.D. 363 (Mansi, iii. 366 f.), many had become interested in the Pneumatomachian question, do we hear anything, to begin with, about Macedonius himself. Neither Basil of Cæsarea, who in 372 went definitely over to the anti-Pneumatomachian side, and for that as for other reasons quarrelled with his friend Eustathius of Sebaste in the following year, and who composed his *de Spiritu Sancto* (*PG* xxxii. 67–218) in 375, nor Epiphanius, who, writing in 376, inserts the *Πνευματομάχοι* in his catalogue of heretics (*Hæc.* lxxiv.), mentions Macedonius by name. Epiphanius, without giving any name at all, is content to characterize the Pneumatomachians as *ἀπὸ τῶν Ἡμεριανῶν καὶ Ὁρθοδόξων τινές*; Basil, in his *de Spiritu Sancto*, likewise gives no name; but two years later (377) he states that Eustathius is the *πρωτοστάτης τῆς τῶν Πνευματομάχων αἰρέσεως* (*Ep.* cclxiii. 3 [p. 980 B]); on the attitude of Eustathius towards the doctrine of the Spirit as a created being cf. Soc. *HE* ii. xlv. 6). In view of these facts, we must ask what was the connexion between the Macedonians and their nominal head.

5. Macedonius and the Macedonians.—This question leads us to a consideration of the life of Macedonius. It will not be necessary to discuss here the difficulties regarding the date and circumstances of his elevation to the episcopal throne of Constantinople (on these matters the present writer may perhaps refer to his art. 'Macedonius,' in *PRE³*, and to E. Schwartz, 'Zur Geschichte des Athanasius,' ix., in *GGN*, hist.-phil. Klasse, 1911, p. 476 ff.).² Here we need merely state that Macedonius, who,

¹ The bishops Acacius of Cæsarea and Patrophilus of Scythopolis, to whom he alludes in *Ep. ad Serap.* iv. 7 [p. 648 B], were Arian Homoians.

² Although V. Schultze (*Altchristl. Städte und Landschaften: I. Konstantinopel*, Leipzig, 1913, p. 45, note) regards the present writer's labours on this subject as inferior to what was done nearly twenty years earlier by Franz Fischer ('De patriarcharum Constantinopolitanorum catalogis et de chronologia eorum primorum patriarcharum,' in *Commentationes philologice Jenenses*, iii. [1884] 263–338), yet the present writer cannot withdraw his objection in principle to what he regards as an unsatisfactory mode of using Socrates and Sozomen (*PRE³* xii. 48; cf. xviii. 486), and to Schultze's and Fischer's over-exaltation of their merits.

according to Socrates (II. vi.), had as an aged deacon (τῇ ἡλικίᾳ γέρον) contested the see of Constantinople with Paul upon the death of Alexander (installed, in all likelihood, while Constantine was still reigning), found himself in secure possession of the see after what the present writer (*SK*, 1909, p. 294) regards as the final deposition of Paul in 342. He had been raised to the dignity by the anti-Nicene party, and, as regards his theological position, must have belonged to it, although, as the presbyter of Paul, he must have been in ecclesiastical communion with the latter (Athan. *Hist. Ar.* vii. [PG xxv. 701 A]). This does not necessarily imply that he had been an 'Arian'; for the later Homoiousians also belonged, till A.D. 358, to the 'Eusebian' group of the opposition, and even at the event which ushers in the rise of the Homoiousians, Macedonius, as documentary evidence shows, is found in that group: the Epistle of George of Laodicea, written in 358, and preserved by Sozomen (IV. xiii. 2 f.), names him first among the persons addressed. Epiphanius (*Hær.* lxxiii. 23 and 27 [ed. D. Petavrus, Paris, 1622, 870 D and 875 C = PG xlii. 445 A, 456 B]) recognizes him as one of the Homoiousian party which was (from 358) opposed to the Acacians, the later Homoians, just as his presbyter, Marathionius, subsequently¹ bishop of Nicomedia, and Eleusius, whom he made bishop of Cyzicus (Soc. II. xxxviii. 4; Soz. IV. xx. 2), were partisans of Basil of Ancyra and Eustathius of Sebaste.² At the Synod of Seleucia (359) he was associated with Eleusius and the other Homoiousians in supporting Basil against the Acacians (Soz. IV. xxii. 7 ff.), and, like Basil, Eleusius, Eustathius, and other Homoiousians—as, indeed, the most prominent of them all—he was deposed by the Acacians at the end of the year 359 or in January 360 (Jer. *Chron. ad ann.* 359 [ed. Helm, p. 241 h]; Philostorg. v. 1 [ed. Bidez, p. 66; cf. p. 224]; Soc. II. xlii. 3; Soz. IV. xxiv. 3). He then retired, according to Sozomen (IV. xxvi. 1), to a place in the vicinity of Constantinople, and died there. He cannot have very long survived his deposition, as he does not appear in the important movements of his party after 364. In the interval between his deposition and his death, according to Socrates (II. xlv. 1-3) and Sozomen (IV. xxvii. 1, 2),³ he founded a new party. Socrates states that (by letter? [see below]) he called upon his associates Sophronius (of Pompeiopolis) and Eleusius (of Cyzicus) to adhere for the future to the Antiochian formula recognized at Seleucia, i.e. the Confession of Lucian (cf. C. P. Caspari, *Alte und neue Quellen*, Christiania, 1879, p. 42 f.). Sozomen (IV. xxvii. 1) is more explicit:

ἐιστηγείτω δὲ τὸν ὕδον θεὸν εἶναι, κατὰ πάντα τε καὶ κατ' οὐσίαν ὁμοιον τῷ Πατρὶ· τὸ δὲ ἄγιον Πνεῦμα ὁμοιον τῶν αὐτῶν πρεσβυτέρων ἀπεφάνετο, διάκονον καὶ ὑπηρέτην καλῶν καὶ ὅσα περὶ τῶν θείων ἀγγέλων λέγων τις, οὐκ ἂν ἁμάρτο.

Rufinus (*HE* i. 25 [ed. T. Mommsen, Leipzig, 1908, p. 990]) somewhat earlier makes a similar statement. The tradition is nevertheless untenable. It refers in reality to the earliest public appearance of the Homoiousians, not of the Macedonians, and it displays even less knowledge of the actual beginnings of the Homoiousian party some two years previously than does Philostorgius (IV. 9 [p. 62]). Then, in the further course of the narratives of Socrates and Sozomen, the term 'Macedonians' becomes, in conformity with that report, the regular designation of the Homoiousians generally. Thus the 'Macedonians,' in the reign

¹ Cf. Tillemont, *Mémoires*, Venice ed., vi. 397, 770.

² On Eleusius, cf. Epiph. *loc. cit.*; on both, Philostorgius, vii. 17 (ed. Bidez, p. 115).

³ It may be remarked that these two Church historians differ noticeably in their judgment of Macedonius; for, while Socrates simply disparages him, Sozomen betrays a certain admiration of the monastic ideals which he shared with Marathionius (cf. Soz. IV. xxvii. 3 ff.).

of Valens, draw closer to the orthodox party; they accept the *ὁμοούσιον*; they come to an understanding with Pope Liberius, and, especially in Constantinople, live in religious communion with the orthodox (cf. esp. Soz. VII. ii. 2), until at length (cf. *ib.* 3), after the death of Valens, they once more stand forth as a party by themselves. But, had the Homoiousians been in reality universally designated Macedonians, as Socrates and Sozomen assume, we should certainly have found some evidence of the fact in Athanasius and the Cappadocians. One is prompted to ask, nevertheless, whether the statement of Sozomen (v. xiv. 1), viz. that during Julian's reign *οἱ ἀμφὶ Μακεδόνιον, ὃν ἦν Ἐλεῦσιος καὶ Εὐστάθιος καὶ Σωφρόνιος, ἦδη εἰς τὸ προφανές Μακεδονίαν οἱ καλεῖσθαι ἀρχόμενοι*, can possibly be based upon mere error. We are compelled to assume that, just as in Antioch, after the installation of Euzoius, the loyal adherents of Meletius came to be called 'Meletians,' so in Constantinople the followers of the deposed Macedonius who did not attach themselves to the church of Eudoxius, his successor (Soz. IV. xxvii. 7, VIII. i. 7), were presently designated 'Macedonians.' The connexion between Macedonius and the later 'Macedonians' would thus simply be that the latter gained accessions from the Homoiousian circles of which the adherents of Macedonius, as dwellers in the metropolis, formed the best-known group in the Balkan Peninsula. This solution of the historical problem—a solution which surrenders the literal significance of the name 'Macedonians'—is certainly a possible one. For it was in the neighbourhood of Constantinople—on the Hellespont, in Bithynia, and in Thrace—that the 'Macedonians' were most numerous (Soz. IV. xxvii. 2; Soc. II. xlv. 8, IV. iv. 5); and it is from Constantinople and its neighbourhood that, with a single exception (Damasus), our oldest authorities for the use of the name (Jerome, Auxentius, Nicetas) are derived, while both Socrates (cf. v. xxiv. 9) and Sozomen (cf. II. iii. 10) wrote largely under the influence of the same local tradition. In view of the active intercourse between Rome and Constantinople, the single exception of Damasus does not mean much. Rufinus, again, may have gained his information from Jerome through literary channels (cf. Jer. *Chron. ad ann.* 364 [ed. Helm, p. 243 d] with Ruf. *HE* i. 25 [p. 990]) as well as by personal contact; and Didymus had relations with both. Moreover, the random use of the name 'Macedonians' is confirmed by the fact that, according to Socrates (II. xlv. 4) and Sozomen (IV. xxvii. 5), the Macedonians were also called 'Marathonians'; and Sozomen (*loc. cit.*) even expresses the opinion that, in view of the personal and material support for which the party were indebted to Marathionius, the name was not inappropriate.

Still, it is quite intelligible that K. Holl (*ZKG* xxv. 388 f.), especially in view of the witness of Didymus, should put forward the question whether the connexion between Macedonius and the Macedonians was not, after all, of a more substantial character. The present writer is, however, of opinion that the information possessed by Didymus is less than Holl makes out. Didymus seems, e.g., to have regarded Marathionius as the successor of Macedonius (*de Trin.* II. x. [p. 633 A]: *Ἀπεικων τῶν χειροτονησάντων τὸν ἀπεικωνήσαντα ἡμῶν Μακεδόνιον καὶ μετ' αὐτὸν Μαπαθώνιον*); and if, as the present writer thinks possible (cf. 'Zwei maced. Dialoge,' p. 544), the person addressed in *de Trin.* II. viii. 1 (p. 613 C) is not the author of the Macedonian dialogue, but, by a figure of rhetoric (cf. frag. 17, *Did. de Trin.* II. vii. 3 [p. 576 A]), Macedonius himself, then the information given in *de Trin.* II. viii. 1, viz. that Macedonius was made bishop by the

Arians, but was previously a deacon of the orthodox Church, supplements that given in II. x. only by the latter—and, indeed, correct (cf. Soc. II. vi. 3)—statement. Nor is it inconceivable that Didymus obtained the name 'Macedonians' and his information regarding Macedonius from the Macedonian dialogue used by him. Yet the correspondence between what that dialogue tells us regarding the Macedonian teaching and what Athanasius must have known when he wrote his *Epistles to Serapion* is striking. Can it have been the case that the above-mentioned summons of Macedonius to Eleusius and Sophronius, referred to by Socrates (II. xlv. 2), was contained in a letter, and that this letter had come into Serapion's hands? This would explain how the Alexandrians had obtained information regarding the Macedonians at a relatively early stage; it would explain the information possessed by Didymus regarding the ἀρεσιάρχης Μακεδώνιος, and also the account given by Socrates (and Sozomen) of the origin of the Homoiousian party. The hypothesis is not impossible; for the first letter of Athanasius to Serapion may quite well have been written as late as A.D. 361. The point, however, cannot be decided in the present state of our knowledge.

6. *The persistence or recrudescence of Homoiousianism among the Macedonians.*—There is still another question to be considered. Athanasius was aware that those who were known to Serapion as opposed to the Deity of the Holy Spirit felt themselves repelled by the Arian 'blasphemy' against the Son (*Ep. ad Serap.* i. 1 [p. 529 f.]), and that they were detested by the Arians (ib. i. 32 [p. 605 B]); this fits in remarkably well with the situation from the beginning of A.D. 360). Somewhat later the Homoiousians ('Macedonians'), as a result of negotiations with Liberius at a synod held at Tyana in 367, passed completely over to the side of the Nicene Creed (Basil, *Ep.* cexliv. 5 [PG xxxii. 917 D]; Soz. vi. xii. 2 f.; cf. Sabinus, *ap. Soc.* iv. xii. 11). Thereafter, as we read (Soc. v. iv. 1; Soz. vii. ii. 2), the 'Macedonians,' who at that time had neither a church nor a bishop in Constantinople (Soz. iv. xxvii. 6, viii. i. 7), maintained ecclesiastical communion with the Homoiousians. Thus the question arises how it came about that the later Macedonian doctrine was Homoiousian. Basil (*Ep.* cexliv. 9 [PG xxxii. 924 B]) tells us that, at a synod held at Cyzicus in A.D. 376—otherwise unknown to us (Loofs, *Eustathius*, p. 17 f.)—Eustathius of Sebaste, the πρωτοστάτης τῆς τῶν Πνευματομάχων ἀπεύσεως (cf. § 4), subscribed a formula which, together with Pneumatomachian clauses, contained statements pointing away from the Nicene Creed to the Homoiousion (τὸ ὁμοούσιον κατασιγάσαντες τὸ κατ' οὐσίαν ὕμνον νῦν ἐπιφέρουσι), and that from 375 he had drawn closer, ecclesiastically, to the Homoiousian court-bishops (Basil, *Ep.* cexliv. 7 [p. 921 A, B]; cf. 5 [p. 920 A], celi. 3 [p. 936 B]; cf. Loofs, *Eustathius*, p. 76 ff.); Basil is of opinion that the fundamental Arian tendency of Eustathius had once more manifested itself (*Ep.* cxxx. 1 [p. 564 A]). Was this reversion of Eustathius to the Homoiousion—an act that (as he merely suppresses, without overtly rejecting, the Homoiousion) did not as such altogether exclude recognition of the Nicene Creed¹—a decisive factor in the later position of the Macedonians? Our sources do not enable us to answer the question. But to the present writer it seems beyond doubt that what is here said of Eustathius lends support to an account of similar purport given by Sozomen (VII. ii. 3), and less fully by Socrates (v. iv. 2 f.), regarding a synod held at Antioch in Caria (378). These

historians record that, when, after the death of Valens (9th Aug. 378), the Emperor Gratian enacted a law (not now extant) conferring freedom of worship upon all religious parties except the Manichæans, the Photinians, and the Eunomians (Soc. v. ii. 1; Soz. vii. i. 3), the Macedonians seceded again from the Homoiousians, with whom they had hitherto been in communion, abandoning the Nicene Creed, and asserting their preference for the ὁμοούσιος as against the ὁμοούσιος. From that time a section of the Macedonians (Homoiousians) had continued to exist as a distinct party (ἰδίᾳ ἐκκλησιαστικῶν), while another, breaking away from the latter, had united themselves all the more closely to the Homoiousians. These statements are not altogether free from difficulties. The present writer would not lay stress upon the fact that the notice in Soz. iv. xxvii. 6 (cf. the words οὐ γὰρ συνεχῶν, κτλ.), which obviously refers to this re-appearance of the Macedonians, points to the reign of Arcadius,¹ as the notice in question is manifestly erroneous. Here, indeed, Sozomen seems to have wrongly interpreted the statement of his authority (Sabinus), which he renders verbatim in VIII. i. 7.² May it not be the case, however, that in Soz. vi. xii. 4 we have a doublet of VII. ii. 3, clearly derived from Sabinus, and providing fresh difficulties? In VI. xii. 4 likewise we read of a synod in the Carian Antioch, where, in opposition to the Homoiousion, the Confession of Lucian was made the standard; this synod, however, was held subsequently to the synod of Tyana (367), and in opposition to those members of the Homoiousian party who had gone over to the Homoiousion. The present writer must admit that he finds this 'doublet'—if it is a doublet—a disturbing element. Still, it is possible that, as H. Valesius (*Adnot.* to Soz. vi. xii. 4) assumes, there were two Homoiousian synods at Antioch in Caria (A.D. 368 and 378); and, in fact, if the bishop of that city was an intransigent Homoiousian, there is much to be said for the theory. If we accept it, we must regard it as probable that the second of these synods likewise gave its adherence to the Confession of Lucian, which, as we have seen, was so highly esteemed by the Macedonians. It is in the period succeeding that date that we find the later Macedonians. For Macedonianism was simply the Homoiousianism which, on account of the doctrine of the Spirit, broke away from the Homoiousians adhering to the Nicene Creed. The fact that Epiphanius had also heard of certain Pneumatomachians who were orthodox as regards their Christology (see above) proves nothing to the contrary, since that author wrote at a time prior to the synod of Antioch; nor is our statement refuted by the fact that Gregory of Nazianzus, in a Whitsuntide sermon of the year 381, addressed the Pneumatomachians as περὶ τὸν ἵδον ὁμιλοῦντες (*Or.* xli. 8 [PG xxxvi. 440 B]). Gregory had as valid grounds for this friendly judgment as had the Orthodox when, shortly afterwards, at the synod of 381, they reminded the thirty-six Pneumatomachians who attended under the leadership of Eleusius of their negotiations with Liberius (Soc. v. viii. 7; Soz. vii. vii. 4).

The breach which had been started by the rupture between Eustathius and Basil, and by the synods of Cyzicus and Antioch in Caria, was rendered absolute by the Council of 381. The Pneumatomachians withdrew from the Council, and were condemned by it (cf. § 4). The amicable overtures made at the instance of Theodosius I. to the Arians, Eunomians, and Macedonians at

¹ J. Bidez has kindly informed the author of this art. that all the MSS read Ἀρκαδίου.

² μέχρι τῆς ἐχομένης βασιλείας. If the source here is referring mainly to the time of Valens, this would point to Gratian's reign.

¹ Cf. Loofs, *Eustathius*, p. 78, with note 2, where, however, the defection of Eustathius from the Nicene Creed is not sufficiently recognized.

Constantinople in 383—Eleusius being once more the representative of the last-named group (Soc. v. x. 24; Soz. vii. xii. 9)—were unsuccessful in winning the sect back to the Church. The Macedonians, undisturbed by the laws against heretics passed in 383 and 384 (cf. Soc. v. xx. 4; see above, § 1), still remained a distinct group apart from the Church, but how far beyond A.D. 450 they maintained their position the present writer cannot say.

LITERATURE.—In addition to the Histories of Dogma and the more general works dealing with the Arian controversy, the following may be consulted with advantage: L. S. Le Nain de Tillemont, *Mémoires pour servir à l'histoire ecclésiastique*, ed. Venice, 1732–39; G. H. Goetze, 'Dissertatio historica de Macedonianis,' in J. Vogt, *Bibliotheca historica hæresiologyce*, i. 1, Hamburg, 1723, pp. 165–199; *Damasus pagus opera*, ed. A. M. Merenda, Rome, 1754 (PL xlii. 109–442); F. Loofs, *Eustathius von Sebaste*, Halle, 1898; J. Gummerus, *Die homöusianische Partei bis zum Tode des Konstantius*, Leipzig, 1900; T. Schermann, *Die Gottheit des heil. Geistes nach den griechischen Vätern des vierten Jahrhunderts*, Freiburg i. B., 1901; F. Loofs, art. 'Macedonius,' in PRE³ xii. 41–48; K. Holl, in ZKG xxv. [1904] 388 f.; V. Schultze, *Altchristliche Städte und Landschaften: I. Konstantinopel (324–450)*, Leipzig, 1913; F. Loofs, 'Zwei macedonianische Dialoge,' *Sitzungsberichte der Königlich Preussischen Akademie der Wissenschaften*, xix. [1914] 526–551. F. LOOFS.

MADAGASCAR.—The religion of the Malagasy is extremely simple. They believe in one god, whom they call Zanahary, 'creator of all things'; but this god, being essentially good and, consequently, incapable of doing evil, is more or less neglected. His attributes are vague, and there is, properly speaking, no cult connected with him. Indeed, with the exception of sorcerers, there are in Madagascar no individuals or classes of individuals connected officially with any religion or cult.

1. **Ancestor-worship.**—The shades of ancestors, however—for all the Malagasy believe in a future life—are the objects of profound veneration, and inspire their worshippers with extraordinary awe. They are credited with all power of good and evil over the living, whom they visit from time to time. A dead husband, e.g., will sometimes pay a visit to his widow, and in this case the birth of posthumous children is considered perfectly legitimate. Offerings are made to ancestors, generally of a small piece of ox-flesh and a few drops of rum, which are taken to the grave of the ancestor whose favours are sought.

2. **Sorcery and fetishism.**—The Malagasy do not believe in death from natural causes, except in the very rare case of extreme old age. Their idea is that death is always the effect of witchcraft or evil spells cast by sorcerers, and they are, therefore, careful to collect all hair-cuttings, nail-parings, etc., in case a sorcerer should find them and use them to work evil on their owner. The Sakalava kings were always accompanied by a servant whose sole charge was to gather up the earth upon which they had spat.

Diviners or sorcerers play a very important part in the life of the Malagasy. The natives believe that they are in communication with the spirits of the dead and can cure disease, foretell the future, discern whether the outcome of any enterprise will be favourable and what is the most suitable moment for undertaking it, indicate lucky and unlucky days, and warn against what is forbidden (*fady*). The Malagasy never embark upon any important undertaking without first consulting the sorcerer, who makes use of *sikidy*—a ceremony in which a handful of seed is spread out on a cloth, according to well-defined rules, so as to form sixteen figures, which are then interpreted with the aid of a code. The *sikidy*, which was introduced, or at least very frequently employed, by the Antimorona, has been in general use throughout the island for a long time.

The sorcerers, who are called *mpanazary*, *ombiasa*, *masina*, etc., according to the different provinces, have as one of their occupations—and that not the least lucrative—the manufacture of amulets or talismans (*ody*), which generally consist of small pieces of carved wood, bulls' horns ornamented with glass beads, or crocodiles' teeth. The horns and teeth are usually filled with earth or sand and various small objects such as gilt nails, iron-filings, and so on. After invoking the god and sprinkling the talisman with grease, the sorcerer, for a consideration, hands it over to the purchaser, who then hangs it round his neck. The result is supposed to be that the wearer is successful in all his undertakings, fortunate in love, immune from gun-shots or crocodile bites, and so on. The natives have the most implicit faith in these *ody*.

The Merina introduced the worship of national fetishes, which were very similar to the foregoing. These fetishes were regarded as royal personages, and had a special residence with officiating servants. The oldest and most famous of them was Kelimalaza.

3. **Fady.**—In almost every case there is some *fady* connected with these amulets and fetishes—i.e., it is forbidden to do certain things and to eat certain foods. If this prohibition is not rigidly respected, the *ody* loses all its virtue and is useless. The *fady*, which occurs throughout the whole of Madagascar, is extremely curious, and recalls the tabu of the Oceanians. There are some places which are regarded as *fady* for every one, while others are *fady* only for certain families or even for certain individuals. There are *fady* days, when no one should begin anything new or start on a journey. If a child is born on one of these unlucky days, it is killed—or, rather, it was until quite recently, especially in the southern parts of the island—because it is supposed to bring evil upon its family. There are also *fady* words, i.e. words which must not be pronounced; naturally, these are fast disappearing from the language. As an example of this we have the words which went to make up the names of the Sakalava kings, the use of which was prohibited after their death. These *fady* are really of a religious nature; their aim is to appease the wrath of spirits and otherwise gain their favour.

4. **Human sacrifice.**—Human sacrifice has now been abolished in Madagascar, but it is not very long since it was the custom, when a Sakalava king was shaving for the first time, to dip the razor for this important operation in the blood of some famous old chief killed for the occasion. This ceremony was still in vogue when the king of Ménabé, Toera, who met his death in the attack on the village of Ambiky by the French troops in 1897, reached the age of manhood. Not many years ago, in accordance with an ancient custom practised in S. and W. Madagascar, the favourite wife of a great Mahafaly chief was killed on his grave, that he might not be alone in the other world; four of his servants were also put to death and their bodies laid under those of the chief and his wife, so that they might not touch the ground.

5. **Crimes and punishments.**—The Malagasy have no moral code. Their religion seems to authorize anything and everything, and the only recognized sin is failure to observe the external formalities of worship; such a sin of omission may be absolved by the penitent's making a small offering to the god.

Before the conquest of Madagascar by the French, justice was of an extremely summary nature (except in the case of the Merina, who had a code of laws modelled on European codes), based simply upon traditional use and wont.

Justice was meted out by the king or the village chief, and in certain tribes—e.g., the Betsileo—by an assembly of the leading men of the tribe. The *lex talionis* was in universal use. The principal crimes were cow-stealing, failure to pay debts, and—the greatest crime of all—sorcery, which was always punished by death.

6. Ordeals and oaths.—In cases of doubt, recourse was had to trial by ordeal. The poison test, or *tanghin*, which has made so many victims among the Hova, is one of the best-known methods, and another test consisted in making the accused cross a river infested with crocodiles, or an arm of the sea where sharks abounded, these animals being supposed to eat the guilty and to do no harm to the innocent.

Another interesting practice is the 'water-oath.'

Into a bowl half full of water are put a bullet, some powder, earth from a sacred spot—e.g., the tombs of the old kings of Imerina—and especially a bit of gold. The accused, or the two litigants in a law-suit, drink this water, vowing their good faith during the process; and all the ills that flesh is heir to are supposed to fall on those who swear falsely.

There is another ceremony similar to this—the 'blood-oath,' or *fatidra*—by which two persons promise each other mutual aid and protection throughout their lives, and enter into a voluntary relationship more intimate and binding than real blood-relationship.

To the contents of the bowl described above are added a few drops of each individual's blood, drawn from a slight cut made on his breast. While each holds in his hand the shaft of his spear or the ramrod of his gun, with the points dipped in the bowl, an orator announces the news of this fraternal union to their ancestors in an eloquent speech, and calls upon God to inflict the most severe punishment if either of them fails to keep his oath (cf., further, art. BROTHERHOOD [Artificial], § 13).

7. Exorcism.—The Malagasy have a peculiar ceremony which shows their belief in demoniacal possession and exorcism. Its aim is to cure certain maladies, and also to render thanks to God for the cure effected. This is practised chiefly in the west and south of the island, and is termed *bilo*¹ or *salamanga*. Those who are submitted to treatment of this kind are supposed to be possessed of a devil, which must be expelled.

The patient is led out of the village to a large open space where a platform 10 or 12 ft. high, with a primitive ladder leading up to it, is erected for the occasion. At the foot of this platform all the inhabitants of the neighbourhood are grouped on one side, and the cattle belonging to the invalid or his family on the other. When he arrives, dancing and singing begin, and there are great libations of *toaka* (rum), large quantities of which must be consumed by the patient. The unfortunate man is then led into the middle of the cattle, where he has to point out with a stick two oxen, one of which acts as a kind of scape-animal and is sacred to the man's parents, who treat it with every kindness, while the other is immediately sacrificed and eaten by the spectators. The patient, drunk with alcohol, noise, and the heat of the sun, has then to climb up to the platform—an operation not altogether free from risk. If he reaches the top without much help, God is supposed to be favourable to him and he will get better; if not, his case is hopeless. Once he is safely established on the mat covering the top of the platform, a woman, who has had to remain in a state of absolute chastity for twenty-four hours previously, gives him food which she has cooked specially for him, particularly newly-killed ox-flesh. If he eats it, or even pretends to do so, that is a sure sign of his speedy recovery to health and long life. The tumult of singing and shouting then begins again with redoubled energy. The sick man is left lying there, several feet above the ground, sometimes for a very long time, while those who have assisted at the ceremony intoxicate themselves with rum and gorge themselves with meat. He is then carried back with great pomp to his dwelling, where, nine times out of ten, he succumbs to the effects of his treatment.

8. Death and disposal of the dead.—Among the most characteristic customs of the Malagasy are those connected with burial of the dead. The funeral rites are not the same throughout the whole island; some peoples hide their cemeteries in the heart of the forest, among hills and rocks, in desert places, or anywhere far from the sight and sound

¹ The Arabic word for 'devil' is *Iblis*, and from this the Malagasy have formed *bilo*, which is the name both for the evil spirit and for the ceremony of exorcizing it.

of man; others, again, bury their dead by the side of the high road or right in the midst of human dwellings. The former, who are terrified at death and everything connected with it, are mainly found among the coast tribes, except in the south-east, where the people are of Arab origin. The latter, who like to live within sight of their last resting-place, belong to the centre of the island, and consist chiefly of the Merina, Betsileo, and other tribes civilized by the Malays.

The eastern tribes put the dead body in the hollowed-out trunk of a tree, closed with a badly-fitting lid in the form of a roof, and this improvised coffin they lay either on the ground or on a small platform in the middle of a palisade roofed over with branches and leaves.

The Antankarana make their cemeteries in the natural grottoes or rock-caves found in the numerous small islands along the coast or in the limestone mountains of the north, and here again the coffins, with beautifully carved lids, are simply laid on the ground. Some Betsileo and Bara families follow the same custom, and bury their dead in the hollows and caves which abound on the higher reaches of their mountains.

The other natives of the island bury their dead beneath the ground. The western and southern tribes—the Sakalava, the Mahafaly, the Antandroy, and most of the Bara—cover their graves with a heap of loose stones in the form of a long parallelepiped, while some Sakalava families surround their tombs with posts carved in different shapes (human beings, birds, crocodiles, etc.), which recall certain cemeteries of Oceania.

The Merina custom is to hollow out a mortuary chamber, above which they usually build a small house for those of noble birth, and for the Hova, or freemen, a small rectangular wall, where they gather together stones and blocks or fragments of quartz, with a raised stone at one end. The head is generally turned to the east.

All the Malagasy have the same idea of the impurity of a dead body and its power to communicate uncleanness to others. A funeral procession must never pass in front of the king or anywhere near his residence, and it must also avoid the neighbourhood of sacred stones. Those who have taken any part in a burial ceremony must cleanse themselves before going home.

As may be gathered from the prevalence of ancestor-worship, all the Malagasy without exception stand in awe of the dead, and desire above all things to be buried in the family tomb. When a Malagasy (in particular a Merina) dies away from home, his urgent wish is that his relatives should come, no matter how long after his death it may be, and carry his bones back to his native land. This desire is respected in almost all cases, and even to-day it is no rare thing to meet little processions of Hova carrying back the mortal remains of a member of their family wrapped in a white cloth hung on a long bamboo pole. In many cases they go as far as four or five weeks' journey from Tananarivo. When the body cannot be recovered, the pillow or mattress of the deceased is buried in his stead, or a stone or a post is erected to his memory at the side of the road or near his native village.

In Madagascar mourners cut their hair short and keep it dishevelled; they wear coarse dirty clothes, and are not allowed to wash or look in a mirror, even if they possess one—they must appear as unkempt as possible so as to keep other people at a distance. On the death, or—as the phrase goes in Madagascar, where ordinary everyday words would never be used in connexion with such high and exalted personages as kings—on the 'departure,' of a sovereign, a number of sumptuary

laws came into force which had to be strictly obeyed, if one did not wish to run the risk of being considered responsible for the death of the king and of being subjected to capital punishment as a sorcerer. The following are some of the restrictions enforced on the death of Radama I. (1810-28): all the inhabitants of the kingdom, with the exception of the heir to the throne, had to shave their heads, sleep on the ground instead of in beds, use neither chairs nor tables, pass each other without greeting in the street, neither play any musical instrument nor sing, have no fire or light at night, do no work except in the fields, refuse to be carried in a palanquin, use no mirror, go about bare-headed, wear no fine clothes, and, in the case of women, keep the shoulders bare. As in the East, white, not black as in Europe, is the colour of mourning.

Several Malagasy tribes—e.g., the Betsileo and the Antankarana—have the peculiar and repugnant custom of not burying their dead immediately after death; frequently they even wait till decomposition has set in; and in many cases the putrid liquid is collected and set apart. Their funeral watches are naturally far from agreeable, and, to be able to live at all in the midst of the nauseating odours, the relatives and friends of the dead man drink rum all the time and burn quantities of incense, suet, and even leather. This custom, which is of Oceanic origin, comes from the desire not to bury any putrescible or impure matter along with the bones. Even the tribes which do not have this practice generally have two burial ceremonies—one consisting in simply burying the dead, and the other taking place some years after, when nothing but the skeleton remains, and when the body is finally placed in the family tomb. Sometimes, as in Imerina, the body is put into the family vault at once, but it is wrapped round with several silk *lambas* and is not placed in a coffin. Later, at a certain specified time, the ceremony of the *mamadika* takes place. This consists in changing the soiled *lambas*, and the Merina say then that they turn the bodies on their other side so that they may not get tired of lying in one position.

Funerals in Madagascar are always the occasion of feasts in honour of the dead. The richer the man is and the more cattle he possesses, the more brilliant are the orgies that are indulged in. Shots are fired and bulls are killed, the flesh being eaten at the funeral feast, and the head and horns being placed with great ceremony on the tomb of the deceased. Rum flows like water, and as long as there is anything left to eat or drink the feast continues; the funeral festivities of great and noble personages have been known to last for months.

MĀDHVAS, MADHVĀCHĀRIS.—The Mādhvas or Madhvāchāris are an Indian sect, one

of the four *sampradāyas*,¹ or churches, of the Vaiṣṇava Bhakti-mārga (see art. BHAKTI-MĀRGA, vol. ii. p. 545). It has usually been stated that this sect represents an attempt to form a compromise or alliance between Śaivas and Vaiṣṇavas,² but an examination of the authoritative documents of the faith shows that this is far from the truth. It is therefore advisable to include in this article an account of the life of the founder of the religion, and of the legends connected with his coming.

The authorities on which the following account is based are: (1) the *Manimaitjari* (quoted as *Mm.*), which deals with the religious history of India down to the birth of Mādhva, the founder of the sect; (2) the *Madhva-vijaya* (*Mv.*), which deals with the life of Mādhva himself; both these works are in Sanskrit, and are written by one Nārāyaṇa, who was the son of Trivikrama, an actual disciple of Mādhva; (3) the *Vāyustuti* of the above Trivikrama; and (4) C. N. Krishnaswami Aiyer's *Śrī Mādhva and Madhvaism* (K.), which includes a summary in English of (1) and (2).

1. **Accounts of the founder.**—The basis of the Mādhva religion is, first, that Viṣṇu is the Brāhman of the *Upaniṣads*; and, secondly, that, whenever he becomes incarnate, he always has his son, Vāyu, the air-god, as his friend and helper. Accordingly, the first four *sargas*, or chapters, of *Mm.*, after describing the order of creation, give detailed accounts of the Rāma and Kṛṣṇa incarnations, Rāma's great friend and ally being Hanumat, the son of Vāyu, and Kṛṣṇa's ally being, not Arjuna, as we might expect, but Bhīma (cf. *Mv.* i. 41), one of the five heroes of the *Mahābhārata*, and also a son of the air-god. In both of these cases the sonship is looked upon as equivalent to incarnation. In the *Mahābhārata* Bhīma is described as having performed many glorious feats, and as having conquered many terrible demons; but in Mādhva theology these are all ignored save one, which, compared with the others, is, in the epic, of quite minor importance. In the *Vana-parvan* (*Mahābh.* iii. 11,661 ff.) it is related that Bhīma attacked certain Yakṣas or Rākṣasas belonging to the country beyond the Himalāya, and killed their leader, Maṇimat. Maṇimat had formerly offered a filthy insult to the Indian sage Agastya (the apostle of southern India), and had been cursed by him to be slain by a mortal. Such stress is laid upon this story by the Mādhvas that they maintain that the version, as we have it now in the *Mahābhārata*, was, with the sanction of Vyāsa, the author of the epic, rewritten and completed by Mādhva himself (K. p. 42).

The narrative of the events in the Kaliyuga, or present age of the world, commences in the 5th *sarga* of *Mm.* At first, the knowledge of the Vedas, as taught by Kṛṣṇa and Bhīma (*Mm.* v. 1), reigns supreme. Then the Āsuras conspire to spread false doctrines. The demon Śakuni, urged by Chāṇakya, the son of Lokāyata, points out that other heresies, such as those of the Chārvākas, Jains, and Pāsupatas, had all failed (9-15). Therefore Maṇimat, who alone had sufficient skill, must become incarnate as a Brāhmana ascetic, and must destroy the Vedānta, under cover of explaining it (15 ff.). Maṇimat is dispatched with instructions to abolish the Vedas and Purāṇas, to ridicule the theory that Viṣṇu has *gūṇas*, or qualities, and to establish the identity of the soul with Brāhman (19 ff.).

Here (20) the story digresses to tell how at that time the whole earth was under the sway of Buddhism, and to describe the efforts of Śābara and Kumārila to refute it by the aid of the *Pūrva-Mīmāṃsā* system of philosophy. The 6th *sarga* continues this, narrating the successes of Kumārila and the rise of the rival Prābhākara school.

At this stage of affairs Maṇimat is born as a widow's bastard (*Mm.* vi. 6; *Mv.* i. 46). He is hence named Saṃkara.³ He is

¹ It is called the *Brahma-sampradāya* because it is said to have been first communicated by Viṣṇu to Brāhman, who spread it through the world with the help of his brother, Vāyu. See below.

² e.g., by Wilson, *Religious Sects of the Hindus*, p. 149.

³ The Mādhva books uniformly change the great Saṃkara's name to Saṃkara. The object is plain. Saṃkara means

brought up in great poverty, and (as a slap at the monism subsequently taught by him) it is related that in his boyhood he could count only one thing at a time, never being able to see a second (*Mm.* vi. 10). He is taken to Saurāstra, where, under the patronage of Śiva, he quickly masters the sacred books (14). He then goes from teacher to teacher, but is turned off by them for his heretical views. He invents his doctrine, described as *śūnya-mārga* and *nirguṇatva*, and is hailed by the demons as their saviour (24). On their advice he joins the Buddhists and teaches Buddhism under cover of Vedāntism. He makes the Vedas without meaning, and equates Brāhman with nothingness (*śūnyatva*) (46). He becomes a Śākta, and messenger of Bhairavī, who confers upon him a magic spell (51).

The 7th *sarga* describes further disgraceful events in Saṅkara's life. He seduces the wife of his Brāhmaṇa host (1 ff.). He makes converts by magic arts. He falls sick and dies. His last words are instructions to his disciples to uproot the learned Satyaprajña, the last of the great teachers of the true Vedic doctrine.

In the 8th *sarga* we have the doings of Saṅkara's followers. They persecute their opponents, burning down monasteries, destroying cattle-pens, and by magic arts killing women and children (2). They forcibly convert one of their chief opponents, Prājñatīrtha, and compel him and his disciples to adopt the *māyā*-system (5). These, however, still secretly adhere to the true religion, and, after consulting Satyaprajña, determine to cause one disciple to become thoroughly learned in the *māyā*-system, who should start a line of disciples, outwardly Māyins, but really devoted to Hari (i.e. Viṣṇu). In this line of disciples came, in due course, Achyutaprekṣa. In his time the Lord, i.e. Vāyu, became incarnate as Madhva, in the house of Madhyageha, and studied under Achyutaprekṣa (34 ff.). The book ends with a brief account of Madhva's work, specially mentioning that he composed a commentary on the Vedānta Sūtras utterly destroying that made by the thief Maṇimat-Saṅkara.

It thus appears that Madhva, like Bhīma, was an incarnation of Vāyu, who came to the earth to destroy the followers of Saṅkara and all their teaching, that the true religion was delivered to the present age by Kṛṣṇa and Bhīma, that it was upheld by Kumārila in the *Pūrvā-Mīmāṃsā*, and that it was revived by Madhva. Saṅkara's *māyā*-system was declared to be only Buddhism in disguise (*prachchhanna-Bauddha* [*Mv.* i. 51]). There is no trace whatever of any attempt to reconcile the Śaiva teaching of Saṅkara with Vaiṣṇavism. Here also must be mentioned one other doctrine of Mādhvism not referred to above, but of considerable importance—that salvation can be obtained only through Vāyu (i.e. in the present age, through Madhva), and through no one else (K. p. 68).

In *Mv.* the first *sarga* sums up briefly the contents of *Mm.*, special stress being again laid on the Maṇimat story (i. 39), and on Bhīma's close connexion with Kṛṣṇa (41). The incarnation of Vāyu is plainly stated in ii. 24. The rest of the work is a prolix account of Madhva's life, too long to analyze here. The main facts are as follows: Madhyageha Bhaṭṭa, Madhva's father (*Mv.* ii. 9, 14), was a Brāhmaṇa living at Rajatapīṭha¹ (6), close to the modern Udipi, a town on the sea-coast of the present district of S. Kanara, and about 40 miles due west of Sringeri, then, and still, the head-quarters of the Smārta followers of Saṅkarāchārya.

The ancient name of the country now comprising the Districts of Dhārwar and N. and S. Kanara, together with the western portion of the State of Mysore, was Tuluva, the modern Tulū, and it is here that the Mādhyas have always been strong. No census figures are available for their number, but a very rough estimate of the materials available leads us to put it at something like 70,000. Elsewhere they are very few.²

After the usual natal rites, the boy was named Vāsudeva, but in later years he was known as Madhva. The most probable date of his birth is the Śaka year 1119 (=A.D. 1197), but some authori-

'auspicious,' but Saṅkara 'misbegotten' or 'rubbish.' The whole account is a ferocious libel on the founder of the system which it opposes.

¹ Probably identical with the ancient town and still existing village of Kalyāṇapura (*IGI* xiv. [1908] 314).

² It is, however, important to note that the Vaiṣṇavism of Bengal, founded by Chaitanya (*q.v.*), is an offshoot of Mādhvism (see Prāṭāpa-Sūha, *Bhakta-kalpadrūma*, Lucknow, 1884, p. 46).

ties put it as late as A.D. 1238.¹ Numerous tales are told of his youthful exploits and of miracles that will be referred to below. His prowess in physical exercises was recognized by his school-fellows, who nicknamed him 'Bhīma' (*Mv.* iii. 42-48). When he grew up, he became a pupil of the Achyutaprekṣa already referred to (*Mv.* iv. 6), and in due course, amidst a burst of prophecy from the assembled crowd, received initiation under the name of Pūrnabodha or Pūrnaprajña (33). He continued his studies under Achyutaprekṣa in the Anantēśvara monastery at Udipi, and finally received from him the name of Anandatīrtha (*Mv.* v. 2), the title adopted by him in future as his pen-name. All this time, it must be remembered, he was studying the Vedānta, according to the *māyā*-school of Saṅkara.

After further study, he made a tour through southern India, having in the meantime developed his own system of dualism in opposition to the monism of Saṅkara. He journeyed along, disputing with the doctors in each town, his most important combat being at Anantapura (the modern Trivandrum) with the head of the Saṅkara monastery at Sringeri (*Mv.* v. 36). Here there seems to have been a drawn battle. The combatants parted in enmity, and thenceforth began the deadly hatred that ever after existed between the followers of the two systems. Madhva had to take refuge for four months at Rāmeśvara (v. 41 ff.), after which he returned to Udipi. The result of this first tour was to establish Madhva as the leader of a new sect and to widen the breach between him and the authorities at Sringeri (K. p. 32).

After some years of further study at Udipi, during which (K. p. 33) he seems to have completed his commentary on the *Vedānta Sūtras*, Madhva started on his second tour, this time through northern India. He at length reached Hardwar. Here, after fasting and meditation, he left his followers and went off alone into the heart of the Himālaya, where he is said to have stayed with Vyāsa, the compiler of the *Mahābhārata* (*Mv.* vii. 16 ff.). Vyāsa encouraged him to return to India and there to publish his commentary (viii. 44 ff.). He accordingly went back to Hardwar, where he widely proclaimed his doctrine, and 'ground opposing commentaries and false systems to dust' (ix. 6 ff.). He made a leisurely return to Udipi, converting more than one eminent Saṅkarite on the way (ix. 17), and finally converted his own teacher, Achyutaprekṣa (ix. 35).

There now began a period of persecution (*Mv.* xii. and xiii.), in which the Saṅkarites, led by the head of the Sringeri monastery, did all that they could to destroy the new teacher and his followers. They even went so far as to carry off Madhva's entire library, and it was restored only through the interposition of the local prince, Jaya Simha of Viṣṇumaṅgala. It was shortly after this that Madhva converted Trivikrama (xiii. 50 ff., xv. 64), the father of the author of *Mm.* and *Mv.* In his last years Madhva again toured to the North, and is said to have rejoined Vyāsa, in whose company he still remains awaiting the conclusion of the present age. His final journey is described in *Mv.* xvi. The date of his death was probably Śaka 1198 (=A.D. 1276), when he was 79 years old.² Thirty-seven different works are attributed to him, of which the most important are his commentaries on the *Vedānta Sūtras* and on the *Bhagavad-Gītā*, and his commentary on the *Mahābhārata*, entitled the *Mahābhārata-tātparyā-nirṇaya*.

¹ See Subba Rau, *Bhagavad-Gītā*, p. xi ff.; cf. Bhandarkar, *Vaiṣṇavism, Śaivism, and Minor Religious Systems*, p. 59.

² See Bhandarkar, p. 59. A list of the thirty-seven works attributed to him is given in Bhandarkar's *Report on the Search for Sanskrit MSS in the Bombay Presidency for 1882-83*, Bombay, 1884, p. 207.

2. Doctrines of the sect.—Mādhvism rejects not only the monism of Sāṃkhya but also the *Vīśiṣṭādvaita*, or qualified monism, of Rāmānuja (see art. BHAKTI-MĀRGA, vol. ii. p. 545). Its followers call themselves Sad-Vaiṣṇavas to distinguish themselves from the Śrī-Vaiṣṇava followers of the latter. The basis of the whole philosophical system is *dvaita*, or dualism. By this is not meant the dualism of spirit and matter, or that of good and evil, but the distinction between the independent Supreme Being (*Paramātmā*) and the dependent principle of life (*jīvātman*). There are five real and eternal distinctions (*pañcābheda*), viz. (a) between God and the individual soul, (b) between God and matter, (c) between the soul and matter, (d) between one soul and another, and (e) between one particle of matter and another. The account of the order of creation given in *Mm.* i. 2 ff. closely follows the well-known Sāṃkhya-Yoga system, as modified by the Purāṇas, and need not detain us. Viṣṇu, Nārāyaṇa, or Paśo Bhagavān, not Brāhman, is the name given to the Supreme Being. He is endowed with all auspicious qualities (*guṇa*), and has a consort, Lakṣmī, distinct from, but dependent on, him. By her he has two sons, Brāhmān, the Creator, and the Vāyu mentioned above, who is the Saviour of mankind. *Mokṣa*, or salvation, consists in release from transmigration and eternal residence in the abode of Nārāyaṇa. Souls (*jīva*) are innumerable, and each is eternal, has a separate existence, and is subject to transmigration. They fall into three groups, viz. (a) the lesser gods, the *pūrs*, *rṣis*, kings, and a few other select classes of the good; these are destined to salvation; (b) those who are neither sufficiently good to belong to the first class nor sufficiently bad for the third; these are destined to perpetual transmigration (*saṃsāra*); and (c) demons, etc., and sinners, especially followers of the *māyā*-doctrine and other heretics who reject Vāyu; these are destined to eternal hell. Again, it must be noted that there is no salvation, except through Vāyu, i.e., in the present age, through Madhva. It is also noteworthy that in this religion the idea of eternal bliss, or *mokṣa*, is balanced by the idea of an eternal hell—a logical symmetry that is missing in the other religions of Madhva's time.

The natural soul is characterized by ignorance (*avidyā*), and this ignorance is dispelled, and salvation is obtained, by right knowledge of God. This knowledge is obtainable by souls of the first class, and eighteen means are described as necessary for its attainment. Such are distaste of this world (*vairāgya*), equanimity (*śama*), attendance on a *guru*, or religious teacher, *bhakti* directed to God, due performance of rites and ceremonies (cf. the *Pūrva-Mīmāṃsā*), reprobation of false doctrines, worship (*upāsana*), and so on.¹

Service to Viṣṇu (i.e. to God) is expressed in three ways: (a) by stigmatization, or branding (*aṅkana*) the body with the symbols of Viṣṇu; (b) by giving his names to sons and others (*nāma-karṇa*); and (c) by worship (*bhajana*) with word, act, and thought. Worship with word consists in (1) veracity, (2) usefulness, (3) kindliness, (4) sacred study; with act, in (5) almsgiving, (6) defence, (7) protection; with thought, in (8) mery, (9) longing, and (10) faith. Worship is the dedication to Nārāyaṇa (i.e. God) of each of these as it is realized.²

The custom of branding symbols of Viṣṇu on the shoulders and breast is not peculiar to the followers of Madhva, being also adopted by the Śrī-Vaiṣṇavas; but among the Mādhyas, instead of being occasional, it is universal, and is declared to be necessary according to the *śāstras*. All classes, whether monks or lay, are branded. The chief of each *math*, or

monastery, tours among the faithful, and every time he makes his visitation the laity undergo the ceremony (K. p. 40). These sectarian marks, common to monks and laity, are, besides these brands, two white perpendicular lines on the forehead, made with *gopi-chandana* earth, and joined at the root of the nose. Between them is a straight black line made with incense-charcoal, and terminating in a spot of turmeric. Madhva did not allow bloody sacrifices. The old sacrifices were retained, but he enjoined the substitution of a fictitious lamb made of rice-meal as the victim, instead of a lamb of flesh and blood.³ Mādhvism is also remarkable for the extreme lengths to which fasting of great rigour is carried out. The life of an orthodox Mādhva is one continuous round of fasts, and, according to one writer, this has had an injurious effect on the average physique of the members of the sect (K. p. 70). A full account of these fasts will be found in the BG xxii. 72 ff.

The chief *math*, or monastery, of the sect is at Udipi, and is said to have been founded by Madhva himself. He also founded two others at Madhyatāla and Subrahmanya respectively—both, like Udipi, in the coast district of Mangalor—and gave a *svāmin*, or head, to each of the three. The main settlement he divided into eight sub-monasteries, to each of which he also gave a *svāmin*. Each of these eight *svāmins* conducts the worship of Kṛṣṇa at the head monastery in his turn, his term of office lasting for two years. The change (*paryāya*) of *svāmins* thus takes place every second year, when the sun enters the sign of Makara, or Capricorn, early in January. It is the occasion of a great fair and festival. The succession of chief pontiffs is recorded in the BG xxii. (p. 59), and the thirty-fifth pontiff was living in 1883. There are now eighteen subsects, of which ten are the followers of the ten *svāmins* appointed by Madhva and five were started by his four immediate successors. Only two, and these still more modern, refuse to acknowledge the authority of the head pontiff at Udipi. The most salient doctrinal difference depends on the interpretation of the word *bhajana*, or worship, and even this is of small importance (K. p. 60).

3. Influence of Christianity.—In the art. BHAKTI-MĀRGA (vol. ii. p. 548) it was pointed out that the southern Indian reformers had probably been to a certain extent influenced by the Christianity then existing in their neighbourhood.⁴ The apparent influence of Christianity is especially noteworthy in Mādhvism. Madhva's birthplace was either in the ancient city of Kalyāṇapura or close to it. Kalyāṇapura has always been reputed as one of the earliest Christian settlements in India, and here, so long ago as the 6th cent. A.D., Cosmas Indicopleustes (p. 178 f. [PG lxxxviii. 169]) found a bishop who was appointed from Persia.⁵ These Christians were Nestorians (Garbe, p. 155). No stress need be laid on most of the childish miracles attributed to Madhva in *Mv.*, because they are such as are attributed to the infancy of many religious teachers; but some of the legends deserve

¹ It will be remembered that Madhva is said to have revised the *Mahābhārata*, and in this connexion it should be noted that in the southern recension of the epic, after xii. ccxlv. 20, six verses have been inserted in which it is directed that animals of four should be used as sacrifices.

² The present writer takes this opportunity of withdrawing the remark made in *IRE* ii. 548 that Alopan had visited the court of Śiṣāḍitya. See *JR.A.S.*, 1913, p. 144.

³ A. Burnell, *JA* ii. [1873] 274 ff., iii. [1874] 310 ff.; cf. R. Garbe, *Indien und das Christentum*, Tübingen, 1914, p. 151 ff. The passage in Cosmas is not quoted in J. W. McCrindle's *Ancient India*, Calcutta, 1877. Garbe (p. 152) considers it probable that the Kalliana of Cosmas was another Kalyāṇa farther north and near Bombay, but it seems to the present writer that the wording of Cosmas connects Kalliana so closely with Male (Malabar) that it must be the town near Udipi. Garbe himself appears to accept this in his note on p. 273.

¹ The complete list is given by Bhandarkar, p. 60 f.

² *Sarva-darśana-saṅgraha*, tr. p. 91.

a passing notice. Thus, before Madhva appeared on earth, at a festive gathering at the temple at Udipi the spirit of Anantēśvara (Viṣṇu) came upon a Brāhmaṇa and made him a messenger of good news to proclaim that the kingdom of heaven was at hand (K. p. 13). After the child had been presented in the temple at Udipi, as his parents were taking him through a forest, a *grāha*, or evil spirit, opposed their way, but departed on being rebuked by the divine child (K. p. 16; *Mv.* ii. 32 ff.). When the child was five years old, his parents missed him, and after an anxious search of three days found him at Udipi, in the temple of Anantēśvara, teaching gods and men to worship Viṣṇu according to the *śāstras* (K. p. 16; *Mv.* iii. 1 ff.). On his southern tour Madhva multiplied food in a wilderness, to meet the needs of his followers (K. p. 27; *Mv.* v. 32). On one of his northern tours he walked across water 'without wetting his clothes' (K. p. 35; *Mv.* x. 27), and on another occasion he stilled an angry sea by his look (K. p. 48; *Mv.* xvi. 11). The substitution at sacrifices of a lamb of rice for a lamb of flesh and blood also offers a striking analogy, but, as K. p. 68 points out, it may with equal probability be ascribed to Jain influence. Under any circumstances, considering the fact that Madhva was born and brought up in the neighbourhood of Christians and that the doctrine of *bhakti* is common to all forms of Vaiṣṇavism and to Christianity, there is considerable probability that at least some of these legends grew up under Christian influence. Still more striking, however, is the central article of Madhva belief that Vāyu is the son of the Supreme God, Viṣṇu, and that salvation can be obtained only through him. This is evidently an idea borrowed from Christianity, quite possibly promulgated as a rival to the central doctrine of that faith.

4. Traces of Manichæism.—In the two papers already quoted, Burnell points out that Persian immigrants were welcomed in this part of India long after the time of Cosmas, and that before the beginning of the 9th cent. A.D. they had acquired sovereign rights over their original settlement of Manigrāma, by a grant from the *perumal*, or local chief. Burnell goes on to suggest that these Persians were Manichæans, and that the name of their settlement meant 'Manes- (Mani-) town,' not 'Jewel-town,' as the compound would ordinarily mean in Sanskrit. Burnell's theory was attacked in the same journal and, according to Garbe (p. 152), completely controverted by R. Collins. To the present writer it seems that, in the discussion, Collins failed in his main point—the meaning of 'Mani' in 'Mani-grāma'—and that Burnell's suggestion, though certainly not proved, may possibly contain more elements of truth than Garbe was prepared to admit.¹ It seems that Burnell's suggestion that 'Mani' refers to Manes receives some confirmation from the Manimat theory of the Mādhyas. It is intelligible that Bhīma should be selected as the hero, but it is unintelligible why the altogether unimportant Manimat of the epic should be selected as the origin of the arch-heretic Saṃkara. Bhīma killed many much more noteworthy demons, who would have served Madhva's purpose better; but so small a part does Manimat, the demon from beyond the Himalaya, play in the epic² that Madhva had, according to the legend, actually to get Vyāsa's permission to re-write the story, so as to make it complete. It must, on the other hand, be admitted

that there is little resemblance between Manichæism and Saṃkara's theology. The former is dualist and the latter is monist. But Mani's dualism taught the existence of two beings—light and darkness. Light had God at its head, and darkness had no god at its head. There is a certain resemblance between this and Saṃkara's Brāhmaṇa obscured by *māyā*. At any rate, it is possible that Madhva, who (K. p. 36) could speak the language of the Mlechchhas (foreigners), may have become acquainted with Manichæism, and may have associated it in this way with Saṃkara's theory of *māyā*. The question deserves more investigation than has hitherto been given to it.

LITERATURE.—The *Manimatjari* and the *Madhva-vijaya* have been already mentioned. Several editions of these have been published in India. A useful summary of Mādhyas doctrines will be found on p. 16 ff. of the *Sakalāchārya-mata-saṃgraha*, an anonymous work published in the Benares Sanskrit Series in 1907. A fuller account will be found in Padmanābhasūri, *Madhvasiddhānta-sāra*, Bombay, 1883, quoted by Bhandarkar, p. 59. Finally, there is Mādhyāchārya, *Sarva-darśana-saṃgraha*, of which many editions have been published in India. Of this there is an Eng. tr. by E. B. Cowell and A. E. Gough (2nd ed., London, 1894). The system of Purnaprajña, i.e. Madhva, will be found in ch. v. p. 87 ff. of the translation.

As for works in English, the earliest account of the Mādhyas is contained in 'Account of the Marda Gooroo, collected while Major Mackenzie was at Hurryhurr, 24th August 1800,' printed on p. 33 ff. of the 'Characters' in the *Asiatic Annual Register* for 1804 (London, 1806). We next have H. H. Wilson, *Sketch of the Religious Sects of the Hindus*, reprinted from vols. xvi. and xvii. of *Asiatic Researches*, London, 1861, i. 139 ff. A useful little book is C. N. Krishnaswami Aiyer, *Sri Madhva and Madhvaism*, Madras, no date. This has been freely utilized in the foregoing pages. See also the following: R. G. Bhandarkar, *Vaiṣṇavism, Śaivism and Minor Religious Systems* (= *GIAP* in. 6), Strassburg, 1913, p. 57 ff.; BG, vol. xxii., 'Dhārwar,' Bombay, 1884, p. 66 ff. (full account of the history, religion, and customs of the Mādhyas of the present day); and G. Venkoba Rao, 'A Sketch of the Hist. of the Madhva Acharyas,' beginning in *IA* xliii. [1914] 238 (refers to C. M. Padmanābhāchārya, *Life of Madhvaachārya*).

For an authentic account of Madhva's doctrines see S. Subba Rao, *The Vedānta-sūtras, with the Commentary by Sri Madhvaachārya, a complete Translation*, Madras, 1904, *The Bhagavad-Gītā, Translation and Commentaries in English according to Sri Madhvaachārya's Bhāṣyas*, do. 1906. Both of those are in English. The preface of the latter contains a life of Madhva from the orthodox point of view; cf. also P. Ramachandra Rao, *The Brahma Sūtras: Construed literally according to the Commentary of Sri Madhvaachārya* (Sanskrit text), Kumbakonam, 1902. G. A. GRIERSON.

MADHYAMAKA, MĀDHYAMIKAS.—Madhyamaka is the name of a system of Buddhist philosophy, 'the system of the middle way,' 'the system of the Mean' (*μέσος*); the adherents of this system are called Mādhyamikas.

1. Nāgārjuna.—The work upon which the Madhyamaka philosophy is based, the *Mūlamadhyamakakārikā*, still survives, and tradition is agreed in ascribing it to Nāgārjuna; numerous commentaries have been written upon it: Nāgārjuna's own, the *Akutobhaya*; those of Buddhapaṇita and Chandrakīrti, which seem to give a faithful rendering of the author's meaning; and that of Bhāvaviveka, which transmits his personal views. There are two branches of Madhyamaka, but the difference between them has not been studied, and seems to consist in a mere divergence in the method of demonstration.

All this literature is, or will soon be, accessible in the editions of the originals or in translations.¹ The *Mūlamadhyamaka* is probably the authentic work of Nāgārjuna, who flourished about the middle of the 2nd cent. A.D. We knew that this mysterious and miraculous person was the putative father of the Great Vehicle, or Mahāyāna (*q.v.*), and, in particular, the revealer of the *sūtras* of the *Prajñāpāramitā*, the teaching of which is akin to that of the Madhyamaka. It is even possible that several *sūtras* of the Great Vehicle were written with the sole purpose of stating the theories of the Madhyamaka philosophy under the guise of 'words of

¹ The following are the references to the whole controversy. Garbe (*loc. cit.*) refers only to one of Collins's communications, and does not notice any of Burnell's replies: *IA* ii. 273 (Burnell), in. 308 (Burnell), iv. [1875] 158 (Collins), 181 (Burnell), 311 (Collins), v. [1876] 26 (Burnell).

² For the references see S. Sørensen, *Index to the Names in the Mahābhārata*, London, 1904 ff., p. 464.

¹ See Literature at end of article.

the Buddha.' It is difficult to determine what part Nāgārjuna took in the redaction of the *sūtras*, but respect for tradition would lead us to believe that his share was a large one. In any case, the Madhyamaka school must be held responsible for a considerable proportion of the Great Vehicle. All this must be assigned, probably, to the early centuries of the Christian era, from the first onwards.

2. The Madhyamakasystem and its antecedents.

—It is not difficult to show the place occupied by the Madhyamaka in the development of Buddhist philosophy from its beginning, and such a historical sketch is indispensable to a definition of the system itself.

The Buddha had given his revelation as a 'path,' or a 'way' (*magga*, *paṭipadā*), and had qualified this path by 'middle' (*maṃjhimā* = *madhyama*), doubtless, as has been often said, because he repudiated two 'extremes' (*anta*)—an exaggerated asceticism (*tapas*), and an easy secular life (*sukhallikā*). But he had also condemned other 'extremes,' viz. contradictory theories, such as: 'Everything exists,' 'nothing exists'; 'The person who feels is the same thing as sensation,' 'the person who feels is a different thing from sensation'; 'The Buddha exists after death,' 'the Buddha does not exist after death'; and some texts—few, but explicit—prove that, at the time of the redaction of the Pāli *Nikāyas*, 'middle way' meant a 'way between certain negations and affirmations.' This way is simply the philosophy of the *dharma*s and of the negation of the individual (*puṭḡala*, 'ris'), which is almost exactly the philosophy of the Canon, and finds, from the very first, clear and skilful expression in the theory of dependent origination (*paṭiccasamuppāda*, *pratyasamutpāda*).

The Canon teaches that there is no individual (*puṭḡala*), one and permanent, of whom we can say that he is identical with sensation or different from it, or that he survives or fails to survive the destruction of the body. The individual does not exist in himself (*puṭḡala-nairātmya*); he is merely a mass of *dharma*s following one another in unbroken succession, cause and effect.

But what is meant by *dharma*? This word, as Max Müller said,¹ is difficult to translate, though easy to understand. Man is a collection, a 'series' of *dharma*s; every thought, every volition, every sensation, is a *dharma*. His body is composed of material *dharma*s. Sound, colour, smell, whatever can be struck or touched, is composed of material *dharma*s. The organs of sense and intellect (*mana*, *indriya*) are *dharma*s of subtle matter. Concupiscence, hatred, and delusion are mental *dharma*s, 'co-ordinated with thought.'

The *dharma*s are 'realities,' things which actually exist, and nothing exists but these elementary realities, which are all doomed to destruction; some—e.g., the mental *dharma*s and the *dharma*s forming the successive instants of the existence of a flame—perish moment by moment, while others sometimes last for a long time.

Just as a waggon is nothing but the collection of the parts of a waggon, so man is simply the collection of the elementary realities, material and spiritual, which constitute his pseudo-individuality. Apart from *dharma*s, man and waggon have only an ideal existence—an existence of designation (*prajñāpti*), as the Buddhists say.

It will be observed that none of these elementary realities exists in isolation, but that every *dharma* combines with other *dharma*s to form a more or less solid complex. The four chief elements (*mahābhūta*) combine in the formation of every material thing. Anger presupposes, besides delusion, an elaborate complex of intellectual *dharma*s—contact, sensa-

tions, ideas, and intellections; and this intellectual complex presupposes, at least as a rule, a physical complex—body, sense-organs, heat, vital organ, not to mention former actions to be rewarded, which are sometimes regarded as subtle matter.

All *dharma* is intimately bound up with its causes and effects; its essential nature is to be an effect and to be a cause; it is a moment in continuous time. Every thought has as determining causes (*pratyaya*) a great number of *dharma*s more or less exterior to itself (object of vision, visual organ, etc.), but its cause, properly so called (*hetu*), is the thought immediately preceding it—just as every moment of the duration of a flame depends, of course, upon the oil, the wick, etc., yet is, as a matter of fact, the continuation of the preceding moment of the flame. The Buddhists were quick to see that flame and thought are made up of 'instants' of flame and thought succeeding each other moment by moment. Extending this observation, they formulated the general theory that 'the *dharma*s perish the very moment they are born.' They perish without any other cause of destruction than their very birth or their nature; they are not merely 'transitory' (*anitya*), as the Buddha said; they are 'momentary' (*kṣanika*) (cf. art. IDENTITY [Buddhist]). There can be no distinction between a stone and a human being: they are both collections, more or less complex, of *dharma*s, which do not last. The collections last by constituting series, because the *dharma*s renew themselves—always the same in the case of the stone, often very different in the case of the living being. In the course of an existence our vital organs, sense-organs, etc., renew themselves without any essential modification; volition, on the contrary, creates *dharma*s—retribution, etc.—which are different from volition itself. Volition is controlled by judgment; and, when judgment is illumined by the law of the Buddha (*yoniṣo manasikāra*), 'supramundane' (*lokottara*) actions become possible, and these destroy passions, desire, action, and retribution, and make for the realization of *nirvāṇa*, that is to say, the collection of mental *dharma*s begins to become impoverished and finally disappears; desire is no longer present to give life to it. Such is the philosophy of ancient Buddhism, and it can be summed up in two words: *puṭḡala-nairātmya*, the unreality of the individual, and *dharmaṇityatva* or *dharmaḥkṣaṇikatva*, the transitory or momentary character of the *dharma*s.

This philosophy satisfied Buddhists for a long time. But it did not satisfy the Madhyamaka school, who put a more rigorous interpretation upon the word 'void,' so often applied by the Buddha to everything in general, and held that this philosophy is in its nature not free from the two 'extremes' of perpetual duration and annihilation (*śaśvata*, *ucchhreda*), seeing that it inevitably regards *nirvāṇa* as the annihilation of a series of thoughts. The Madhyamaka school claims to find the true 'middle way' by declaring, not only the unreality of the individual (*puṭḡala-nairātmya*), but also the unreality of the *dharma*s themselves; it denies the existence not only of the being who suffers, but also of pain. 'Everything is void.'

Nāgārjuna and his school seem to hesitate between two positions.

i. Everything takes place as if things and living beings were composed of substantial *dharma*s, and, to arrive at *nirvāṇa*, the methods defined by the ancients must be followed: eliminate the *dharma*s which generate new *dharma*s because they are associated with desire; and insert, in the complex series that constitutes our being, the *dharma*s of the knowledge that destroys desire, and so arrest the renewal of the *dharma*s. Yet we do not put

¹ SBE x. [1896] 31.

an end to existence by this method, for existence is void of reality in itself, since the *dharma*s do not exist substantially; we put an end to a *processus* of 'void' (*śūnya*) *dharma*s which renew themselves in 'void' *dharma*s. It is important to know this, for the only knowledge that can arrest the renewal of unreal *dharma*s is knowledge of their radical and fundamental unreality.

The ancients saw that the essential nature (*dharma*tā) of things (*dharma*) is to be produced by concurrent causes (*pratityasamutpanna*), 'dependently originated.' The Madhyamaka school observes that 'what is produced by causes is not produced in itself, does not exist in itself.' The essential nature of things consists in not being produced in themselves, in being void of all substantial reality—i.e. in 'vacuity' (*śūnyatā*). This term 'vacuity' has been variously understood. For some it is 'nothingness'; for others it is a permanent principle, transcendent and undefinable, immanent in transient and illusory things. It would be a long and difficult task to explain the mystical significance that it has in certain Buddhist books; we know that it ends by being confused with the term *vajra*, 'thunder-bolt, diamond, male organ.' One thing is beyond all doubt: for the Madhyamaka, 'vacuity' is neither nothingness nor a transcendent-immanent principle, but the very nature of what exists; 'things are not void because of vacuity' (*śūnyatayā*)—conceived as exterior to things—'but because they are void,' and they are 'void' because they are produced by causes. 'Vacuity' means 'production by causes,' and is only an abstraction, a mere word; 'void' means 'produced by causes.'

Existence (*samsāra*), therefore, is a complex *processus* of *dharma*s which have no reason in themselves for existing and which cannot exist substantially by reason of their causes, i.e. former *dharma*s which do not exist by themselves. The following formula explains this clearly: *dharma*s resembling delusions of magic or reflexions in a mirror (*māyopama*, *pratibimbopama*)—we might say 'contingent' *dharma*s—give birth to *dharma*s that are equally illusory. Like begets like.

The objection of the realist against the Madhyamaka is, therefore, fruitless: 'If everything is void, then existence and *nirvāṇa*, impurity and purity, ignorance and wisdom, are the same thing; and the path of salvation does not exist.'

Nāgārjuna himself formulates this difficulty, and answers it. Existence is the continuous production of phenomena not substantial but actually existent, because they are existent by the only existence that there is—void existence, or existence produced by causes. *Nirvāṇa* is the end of the production of these phenomena. Impurity is attachment to phenomena conceived as pleasant; purity is complete detachment from phenomena. Ignorance is a clinging to the substantiality of phenomena, which induces attachment; wisdom is real truth, knowledge of the vacuity of things.

Nāgārjuna, Chandrakīrti, and Śāntideva very often took this point of view, which is quite within the logic of Buddhism and not unreasonable. But, in order to give a true picture of the Madhyamaka as it is, we must add that our teachers often go much further.

ii. Just as their criticism destroys all ideas of experience and religion—the notion of movement, of time, of 'passion' (since the connexion between the passionate man and passion 'does not bear investigation')—it also destroys the notion of causality; not only do the *dharma*s not exist substantially; they do not exist at all, either in reality or apparently. They are like the daughter of a barren woman, like the beauty of the daughter of a barren woman: this beauty evidently does not

exist except in so far as it may be described; but, in reality, the object described, the description, and the person describing are all similarly non-existent.

Absolute truth, which is, properly speaking, 'knowledge of a Buddha,' is a 'not-knowledge'; it is midway between affirmation and negation. The *dharma*s are like the hairs that a monk with diseased eyes thinks he sees in his almsbowl; he does not see them, for the knowledge which he has of them does not exist any more than its object. This is proved by the fact that a man with undiseased eyes has no thought about these hairs at all; he neither denies nor affirms their existence, because he knows them in their true nature (which is 'void') by not knowing them. The legitimate conclusion of this system is formulated in our sources: 'Absolute truth is silence.'

L. DE LA VALLÉE POUSSIN.

MADRAS AND COORG.—In the Government Census for 1911 the vast majority of the population in the Madras Presidency are classed as Hindus. Out of a total population of 41,870,160 in the Presidency and the small Feudatory States included in it, the Hindus number 37,230,034. The rest of the population are classified as follows: Musalmāns, 2,764,467; Christians, 1,208,515; Animists, 638,466; Jains, 27,005; Buddhists, 697; Parsis, 489; Brāhma Samāj, 374; Jews, 71; while 42 are classed simply as 'others.'

i. **Christianity.**—The most progressive of all these religious bodies is the Christian. Excluding the 40,928 European and Anglo-Indian Christians, whose numbers do not largely vary from decade to decade, we find that the Indian Christians have increased during the decade from 1901 to 1911 by 168,964, or 17 per cent—a rate more than double that of the increase in the total population, and one which compares favourably with an increase of 8 per cent among Hindus, and 11 per cent among Muhammadans.

The main cause of this increase in the Christian population is the movement among the out-castes of Hindu society towards Christianity that has been in progress in S. India for the last sixty years. Conversions to Christianity from the higher castes of Hindus or from the Musalmāns have been comparatively rare. On the other hand, the out-castes are being gathered into the Christian Church in the village districts in increasingly large numbers, especially among the Telugus in the northern part of the Presidency. The causes that have led to this great movement are mainly social. The out-castes are the hereditary slaves or serfs of their Hindu masters, and have been kept for many generations in a state of abject poverty and utter ignorance. They have seen in the Christian Church the hope and possibility of new life, and for the last half century have been crowding into it in thousands. The great force behind the movement, therefore, is a natural human craving for life

and freedom. At the same time, there is also a strong spiritual element in the movement. In almost every district where it is in progress it has owed either its origin or its power to a few men and women of true spirituality, and the fact that a large number of the converts have to endure a very bitter persecution when they first join the Christian Church is in itself an indication that the movement is due to something higher than a mere desire for immediate temporal gain. This great movement is bound to have a very striking influence in the future, not only upon the Christian Church itself, but also upon the religious life and thought of India as a whole. A great Christian Church is steadily and rapidly rising up in India from the lowest stratum of Hindu society. The conscience of educated Hindus is becoming awakened to the injustice and the social evils inherent in the caste system. Slowly and surely the work of the Christian Church is preparing the way for a great economic, social, and religious revolution throughout the length and breadth of India.

2. *Hinduism*.—Hinduism in the Madras Presidency does not differ greatly as regards either its doctrines or its customs from Hinduism in other parts of India. One striking difference observable between the Hinduism of S. India and that of N. India is the predominance of the Brāhmins in the South, but this difference is social and political rather than religious. The Vedāntist philosophy and the monism of Saṅkara are more widely held in the South than in the North, mainly owing to the fact that Muhammadanism, with its clear teaching on the unity and transcendence of God, has had far less influence there than in N. India. The stern and gloomy worship of Śiva, the Destroyer, which has absorbed into itself many elements of the old animistic cults, is the predominant form of Hinduism; but the worship of Viṣṇu, the Preserver, in all his manifold incarnations, has a large number of devotees, and has a special attraction for the lower castes of Śūdras whom it has admitted more freely to its temples than the rival cult of Śiva.

3. *Animism*.—The prevalence of animism in the Madras Presidency is very inadequately represented by the small number of people (638,466) classed as animists in the Government Census. The large majority of the Hindus in the villages, with the exception of the Brāhmins, even when they are devotees of Viṣṇu and Śiva, are also animists worshipping the village deities, the Grāma-Devatās, as they are called in the vernacular, and a host of spirits, good, bad, and indifferent. The worship of these village deities forms an important part of the conglomerate of religious beliefs, customs, and ceremonies which are often classed together under the term Hinduism. In almost every village and town of S. India may be seen a shrine or symbol of the Grāma-Devatā, who is periodically worshipped and propitiated. As a rule, the shrine of the village deity is far less imposing than the Brāhmanical temples in the neighbourhood; very often it is nothing more than a small enclosure with a few rough stones in the centre, and often there is no shrine at all; but still, when calamity overtakes the village, when pestilence, famine, or cattle-disease makes its appearance, it is to the village deity that the whole body of the villagers turn for protection. Śiva and Viṣṇu may be more dignified beings, but the village deity is regarded as a more present help in trouble, and is more intimately concerned with the happiness and prosperity of the villagers. In the animal sacrifices offered to these deities the treatment of the blood, which is sometimes drunk by the worshippers, sometimes sprinkled upon their bodies, sometimes sprinkled on the houses or the gate-way of the village, and

sometimes mixed with boiled rice and sprinkled all round the village site, and also the sacrificial feast upon the flesh of the victim, connect the sacrifices to the Grāma-Devatā in India very closely with the primitive systems of animal-sacrifice which are found all over the world. Traces of human sacrifice, too, are often found in connexion with these cults. In Mysore the present writer came across a ceremony called 'the human sacrifice ceremony,' in which the man who represents the victim, instead of being killed, is simply touched with a bunch of coco-nut flowers. Lewis Rice states that similar traces of human sacrifice are found among the Coorgs in the hill country to the west of the Mysore State, whose religion is anti-Brāhmanical and consists of the worship of ancestors and demons. With reference to the worship of Grāma-Devatās among them, he says that, as among other Dravidian mountain tribes, so also in Coorg, the tradition relates that human sacrifices were offered in former times to secure the favour of their Grāma-Devatās, who are supposed to protect the villages from all evil influences. At the present day a he-goat or a cock is often sacrificed instead of a man.

The special features which broadly distinguish the worship of the village deities in S. India from that of Śiva and Viṣṇu are three. (1) The fact that the village deities, with very few exceptions, are female. In the Tamil country, it is true, almost all the village goddesses have male attendants, who are supposed to guard the shrine and to carry out the commands of the goddesses; and one male deity, Iyenar, has a shrine to himself, and is regarded as the night watchman of the village. In the Telugu country there is a being called Potu-Razu, who figures sometimes as the brother and sometimes as the husband of village goddesses, and sometimes as an attendant. But, with the exception of Iyenar and one or two other deities, all the male deities are so distinctly subordinate to the goddesses that they do not contravene the general principle that village deities are female and not male. (2) The fact that the village deities are almost universally worshipped with animal sacrifices. Buffaloes, sheep, goats, pigs, and fowls are freely offered to them, sometimes in thousands. In the Tamil country this custom is modified by the influence of Brāhmanism, which has imbued the villagers with the idea that the shedding of blood is low and irreligious. The animal sacrifices are regarded, therefore, as offered to the male attendants of the goddess and not to the goddess herself. (3) The fact that the Pujaris, i.e. the men who perform the worship and officiate as priests, are not Brāhmins, but are drawn from the Śūdra castes or sometimes from the out-castes. On the other hand, in the temples of Śiva and Viṣṇu, the officiating priests are Brāhmins, no animal sacrifices are ever offered, and the principal deities are male and not female. The origin of these cults is lost in antiquity; they are certainly pre-Aryan, but have been more or less modified in various parts of S. India by Brāhmanical influence. Some details of the ceremonies used in them seem to point back to a totemistic stage of religion; some of the deities are obviously agricultural, others are the spirits of women who have died in childbirth or of men or women who have died by violent deaths, others are connected with disease and pestilence, especially cholera and smallpox; many of the deities are of quite recent origin, and it is easy to observe a deity in the making even at the present day.

Snake-worship and tree-worship are also widely prevalent throughout S. India and have become incorporated in popular Hinduism. Almost every village has its sacred *pipal* tree, representing a

female, and a *margossa* tree, representing a male, planted close to each other. These two trees are married with the same ceremonies as human beings. In every house of one section of the Brāhmins (called Mādhvas [q.v.] or Raojis) there is a *tulasi* plant (sacred to Viṣṇu). The snake is closely connected with the worship both of Viṣṇu and of Śiva. A cobra forms the *vāhana* (sacred vehicle) on which Viṣṇu rides, and Śiva is always represented with a cobra in his hand. At the entrance of almost every village of S. India there are figures of the cobra carved on stone in bas-relief erected on raised platforms for the adoration of the public. Brāhmins and Śūdras alike make offerings at these shrines. The living serpent is very generally worshipped, and few Hindus will consent to kill one. If a cobra takes up its abode in the thatched roof of the house or in one of the walls of the compound, it is not only left undisturbed, but is fed with milk. A woman is often the priest in the worship both of trees and of serpents, and women are the chief worshippers, mainly for the purpose of obtaining offspring.

On the W. Coast in Malabar snake-worship is especially prevalent. Some families are supposed to be consecrated to the snake deity, and to exercise a peculiar influence over the deadly cobras which are reputed to swarm in their houses and crawl in and out among the members of the family without ever doing them any injury.

Demonolatry is very prevalent, especially in the Southern part of the Tamil country, and devil-dancing, performed by a class of men who are supposed to have supernatural powers over the devils, forms a weird feature of the religion of the Tamil villagers. Some diseases, especially nervous maladies, are supposed to be the result of possession by an evil spirit. Devils innumerable surround the village—water-devils, cow-devils, horse-devils, and buffalo-devils—who are always ready to pounce down upon the unhappy villager. The poor people who are supposed to be possessed by these devils are often put to terrible tortures by the exorcist. Red-hot iron needles are sometimes stuck all over their bodies, or they are bound hand and foot and then beaten with sticks.

The innumerable superstitions connected with popular Hinduism are excellently described by Edgar Thurston in his *Omens and Superstitions of Southern India*.

Whitehead, *The Village Deities of Southern India*, *Bulletin of Madras Government Museum*, v. [1907] no. 3, reprinted, London, 1915; J. A. Dubois, *Hindu Manners, Customs, and Ceremonies*, tr. H. K. Beauchamp, Oxford, 1906. H. WHITEHEAD.

MADURA.—Madura is the name of an important District in S. India—280 to 380 miles south of the town of Madras. Its capital, Madura, had a population of 134,130 in 1911, and is situated 10° N. lat. by 78° E. longitude. It is a prosperous town among whose progressive people are found about 50,000 weavers. Yet, apart from government and railway works and the Scottish spinning mill, there is hardly one horse power of steam used in the whole community—by which it may be known that modern prosperity in the East is not necessarily connected with the use of most modern industrial appliances and forces.

Madura is a town of considerable antiquity. It was known to Ptolemy (VII. i. 89, VIII. xxvi. 17) as *Módoupa*, and was the centre of the ancient Pāndya kingdom whose fame spread westward through the Greeks and Romans even before the advent of the Christian era. Even to-day ancient Roman coins are occasionally discovered in the town and surrounding regions.

Madura has long been designated 'the Athens of

S. India'; the ancient and famed Madura College was the source and inspiration of Tamil classical literature for centuries. Many of its most popular legends gather round its poet-saints, the narrative of whose struggles and conflicts is a perennial source of delight to the people.

But it is its great Minākṣī temple that is the source of its pride and the centre of its life. The town is built around its sacred precincts, all the main streets running parallel to the four walls of the temple. This temple has a past which runs far beyond history into the misty realm of legend and myth.

The first historical reference is to its partial destruction by Malik Kāfir, the famous general of the Mughal emperor, 'Alā-ud-dīn, in 1310. He destroyed its outer wall and fourteen high towers, and left little but the inner shrines, which were saved only by an opportune dissension among the vandals.

Perhaps all that now exists of this architectural pride of S. India (except the inner shrines and contiguous courts) is not older than the 16th cent. and is largely the gift of kings of the Nayaken dynasty, by far the most prominent of whom was Tirumala Naik (1623–59).

S. Indian temples are the most spacious in the world. The Madura shrine is the third in size, but is the first in architectural excellence, best in its upkeep, and most thoroughly devoted to its religious purposes. Its outer walls, which are 25 ft. high, form almost a square (830 ft. by 730 ft.) and enclose an area of about 14 acres. Each wall is surmounted at its centre by a richly embellished *gopura*, or tower, which is about 150 ft. high. These towers are the landmarks of the country around.

Granite is almost exclusively the material used in the temple, even the roof being of granite slabs. Its monolithic pillars are legion, and nearly all of them are elaborately carved, some exhibiting marvellous patience and skill. The 'Hall of a Thousand Pillars' (correctly speaking, its pillars are only 985 in number) is the culmination of its architectural claims. Of this J. Fergusson writes: 'Its sculptures surpass those of any other hall of its class I am acquainted with . . . but it is not their number but their marvellous elaboration that makes it the wonder of the place' (*Hist. of Indian and Eastern Architecture*, i. 392).

This hall is eclipsed, perhaps, by only one other, the so-called Choultry, or Puthu Mandapam, which is outside and to the east of the temple proper and is the most imposing of all sacred edifices in S. India. It was erected by Tirumala Naik about 250 years ago, is 330 ft. by 105 ft., and is supported by 124 richly sculptured pillars 20 ft. high. It is a worthy granite monument to one of the great kings of S. India. The whole temple is distinctly Hindu in its architecture—a style in which the arch is entirely absent and densely pillared halls predominate. Its many *gopuras* are pyramidal in form, and are a striking development of the ancient *stūpa*, or pagoda, of Buddhism.

The temple is one of the most distinguished fane of Saivism, representing that type of the Brāhmanic cult which first appealed to and was adopted by the Dravidian people of S. India. Because this is the more austere form of Hinduism, it is more closely allied than the mild Vaiṣṇavism to the cruel demonolatry of the aboriginal people of that region. This temple and its worship also admirably illustrate the habit of the Brāhmanic propaganda, which never antagonized a new and contiguous faith, but rather fraternized with it, then adopted its leading features, and finally absorbed it entirely. Śiva's representative in this shrine is Sōkkalingam or Sundarēśvara. The first name is Dravidian, revealing the non-Brāhmanic or non-Aryan origin of the god who was adopted

from the pantheon of the Dravidian cult to that of the Aryan. Later, this S. India manifestation of Siva popularized the northern faith among the people of Madura by marrying the most dreaded demoness of that region, Minākṣī. The latter, doubtless, was an ancient queen who was slain in war, and was soon exalted to the highest place in the Dravidian pantheon. By this marriage the Aryan cult of the north was wedded to the supreme faith of the south, and the great annual marriage-festival of the temple celebrates and perpetuates the union of the two diverse cults in that region. In that most popular festival there is another interesting feature: Minākṣī is said to be the sister of Alahan, a popular Vaisnava demon-deity a few miles from Madura, and this brother comes to attend the wedding ceremonies of his sister at Madura; but, unfortunately, he arrives a day late, and is so incensed by the fact that he will not enter the city or temple; his idol is thus kept for three days on the outskirts of the town, during which period all the people, both Saivites and Vaisnavites, fraternize together and bring their offerings to the aggrieved god. Thus, upon this occasion, we find the three cults of that region, Saivism, Vaisnavism, and demonolatry, most strikingly brought together.

In many ways the worship of this famous Hindu temple reveals a fact which outsiders can understand only with much difficulty. In a certain way, all the Dravidian people are a part of Hinduism and are loyal to that faith. But it is a Hinduism which is completely impregnated with Dravidian and animistic ideas. The worship of the Aryan deities in S. India is a pleasing pastime; but the people are still obsessed with the fear of their myriad demons, and find their chief religious concern in appeasing them in the many demon shrines which are found in every town and village. Even Kālī, the chief consort of Siva, who also finds a prominent place in this temple, is so Dravidianized and demonized with a bloodthirsty passion that no one can separate her from the many Dravidian *amman*s, or demonesses, who haunt that region and terrorize the whole community.

It is thus that we learn what the amorphous thing called Hinduism is in S. India. In outward form it poses as an Aryan cult, but in its inner spirit it reveals the pervasive animistic genius which has characterized the Dravidian mind and heart from time immemorial. The Aryan has given to the religion its outer form and *éclat*; but the Dravidian has retained and conveyed into it all the animism which his ancestors entertained and practised. It is largely the spirit of the south robed in the garb of the north. The Madura temple furnishes one of the best illustrations of this animistic type of Hinduism.

MÆNADS.—The character of the Mænads was long a subject upon which the most mistaken ideas prevailed. The accounts of them given by poets, mythographers, and historians were all mingled together, and were, moreover, mixed up indiscriminately with the representations of the cult of Dionysus in art, while, again, these artistic products were not submitted to any process of critical analysis. Thus arose the conception of a wildly fantastic religious service celebrated by delirious women in nearly all parts of Greece and Asia Minor. The first to reduce the literary and artistic data to order, and to give a clear impression of the development and character of the Dionysus-cult, was A. Rapp, in his 'Die Mänade im griechischen Kultus, in der Kunst und Poesie'

(*Rhein. Mus.* xxvii. [1872] 1-22, 562-611; cf. Roscher, ii. 2243-2283). Then at length the powerful movement introduced into Greece by the new deity, and the influence of that movement upon the spiritual life of the people, were exhaustively delineated by E. Rohde (*Psyche*,⁴ Tübingen, 1907, ii. 5 ff.). The researches of the folklorists among other peoples have also brought to light interesting parallels to the ancient Dionysian cult and customs; but great caution must be exercised with regard to the ideas of 'vegetation deities,' 'spirits of fertility,' etc., to which the modern tendency to trace analogies everywhere has given rise (cf., e.g., O. Gruppe, *Griechische Mythologie und Religionsgeschichte*, Munich, 1906, p. 905 f.).

Dionysus, the lord of the Mænads, of the 'Bacchæ,' so named after him, was, as is now universally recognized, and as was already known to Aristarchus, not originally a Greek deity, but was derived from Thrace (cf. Herod. v. 7, and the notes of W. W. How and J. Wells, London, 1912), where he was worshipped under the name of Sabos or Sabazios (schol. Aristoph. *Vespæ*, 9 ff.). It is true that Sabazios is also spoken of as a Phrygian deity (reff. in Rohde, ii. 7, note 3), but, as the Thracians and the Phrygians were, in the judgment of the ancients, closely related peoples, we need not be surprised that the worship of the Phrygian national goddess Cybele should show so many points of contact with the forms of the Thracian cult of Dionysus. The latter was a non-Greek cult which was celebrated upon the mountain heights of Thrace in the winter of every alternate year (and in Greece, therefore, subsequently called the *ργαεργία*). At these celebrations women danced in wild frenzy amid the glare of torches, whirling dizzily to the clangour of rude music—the clashing of bronze vessels, the hollow roll of large drums (cf. CYBELE), the shrill whistling of flutes—and with loud shouts of *εὐὸ* or *εὐὸ* (which afterwards became *euhoe*, *evoe*, and finally *evōē*). These raving creatures (*μαῖνάδες*; used generically as early as Hom. *Il.* xxii. 460), with their dishevelled hair streaming in the wind, were clothed in long flowing *βασσάραι* (whence they were also called *βασσαρίδες*), over which they wore the *νεβρίς* (cf. *Æsch.* frag. 64, and the pictorial representations), and in their hands they carried serpents (animals sacred to Sabazios [*Theophr. Char.* xxx. 4; cf. the *πομπή* of Ptolemy II. in Athens, 198 C, etc.]), daggers, or thyrsi. In their religious frenzy they threw themselves upon the sacrificial animals, tearing them in pieces with their teeth (*Eur. Bacch.* 736 ff., etc.; but cf. the singular explanation of the practice in Gruppe, p. 731 f.). In these riotous scenes the fumes of wine played no part; the women used no strong drink to stimulate their frenzy, but, on the contrary, were able to work themselves into such a condition of over-excitement as would bring about the ecstatic state. Their delirium was regarded as a means of compelling their god to appear (*Eur. Bacch.* 141 ff., 306 f.; Paus. vi. xxvi. 1: *καὶ τὸν θεὸν σφίσιν ἐπιφοιτᾶν ἐς τῶν θυλῶν τὴν ἐορτὴν λέγουσιν*). A notable analogy to these practices is found in the leaping of the Perchtas in the Tyrol; here, on Shrove Tuesday (cf. art. CARNIVAL, vol. iii. p. 225 ff., esp. p. 228*), the Perchtas (so named, like the Bacchæ, after the deity whom they thus honour) work themselves into a frenzy. Their raving is carried to such a pitch that at length they think that they actually see Percht herself in their midst, and it is even said that she has sometimes mangled her worshippers (F. A. Voigt, in Roscher, i. 1041 f.).

This tumultuous cult, whose votaries were also called *Κλώδωρες* and *Μυμαλλόρες*, maintained itself till later times; even Queen Olympias, the mother of Alexander the Great, was devoted to the wild

practices of the Thracian religion, and her tame snakes, which would suddenly wriggle out from amongst the ivy or from the sacred winnowing-fans, not seldom startled the court of Philip (Plut. *Alex.* 2). In that form, however, the cult certainly met with opposition as it spread through Greece. What mythology tells us, now of Lycurgus and the struggle which he made against Dionysus and his *τῆθύαι* (so Hom. *Il.* vi. 132 ff.; concrete details regarding the *τῆθύαι* are lacking), as of Pentheus, and now of the Minyads and the Proetids, shows at least that at some time the Bacchus cult had once or oftener encountered enemies in various districts to which it spread. Its complete triumph throughout almost the whole of Greece is, of course, a commonplace of history. The new religion, with its outlandish features, came to be so thoroughly naturalized that its alien origin was almost forgotten: Herodotus speaks (iv. 79) of the Bacchic frenzy as a peculiarly Hellenic characteristic in contrast to the practices of other lands; the Spartan Mænads, the *δόσμαιναι*, raved upon the heights of Taygetus (reff., e.g., in Rohde, ii. 46, note 2); and Galen (*de Antid.* 8, vol. xiv. 45 [Kühn]) could speak of snake-rending as still practised at the Bacchic festivals.

But the educative power of Delphi was now at work, and Apollo exercised his softening influence upon the raging Bacchus. It was with very different rites that the women performed their worship of Bacchus on Mt. Parnassus. Here, every two years, about the time of the shortest day, the Thyiads 'awaked' *Δικυλῆης*, the god who lies in the sacred winnowing-fan (Plut. *de Is. et Osir.* xxxv.); here (Rapp, *Rhein. Mus.* xxvii. 5) a caste of priestesses was employed, who attended to the rites of this winter festival on Parnassus. With such rites, too, the Attic Thyiads celebrated at similar intervals the orgies of the god at Delphi. Thus the celebration had now to do not with Dionysus only, but with Apollo as well (Paus. x. xxxii. 7). Of this cult, whose Bacchic ecstasy had been refined by Apollonian moderation, we find a picture in the celebrated chorus of the *Antigone* of Sophocles (1126 ff.), which tells indeed of the torch-swinging *Θύιαι* and of their dancing by night upon Parnassus, but does not speak of the mad fury of the Thracian observance—the reason being that in the precincts of Delphi this element no longer had a place. Then Euripides, who, in contemplating the unrestrained frenzy imported from the North, broadened and enriched that poetic sense which understands all, produced a permanent memorial of the thrillingly graceful activities of the Mænads. In his *Bacchæ* the actual and the poetic run naturally into each other. Here the enthusiastic troops of women, crowned with wreaths of ivy and smilax, garbed in the many-coloured *πεσπῆς*, and holding the thyrsus in their hands, plunge madly through the mountains, and fall to the ground in the fullness of their rapture; while, again, they rush to the slaughter of the goats, the ground flows with milk and wine, and the stroke of the thyrsus upon the rock causes a spring to break forth; ferocious animals are on a friendly footing with the Mænads, who offer the breast to fawns and young wolves, while ill-disposed men flee before the hurtling thyrsus (*Bacch.*, *passim*).

Investigators have had great difficulties also with the portrayal of the Bacchus cult in art. In this field, too, it was necessary to disengage the mythological aspects from the presentation of the real. As a whole, it is only the general impression to be found here that corresponds to the literary account. On the artistic side it is pre-eminently the Attic vases that merit consideration. On the earlier specimens of these we see the orgiastic dancing of women to the cadence of flutes; later

additions are the swinging of torches, the beating of drums, and the head thrown back upon the shoulders. According to the more recent explanation, the celebration thus represented is the Lenæa, the festival of the raving women (*ἄνραι*), which had been brought from Boeotia (on all this cf. A. Frickenhaus, *Lenæenvasen* [Programm zum Winkelmannsfeste der archaolog. Gesellsch. lxxii.], Berlin, 1912). With these designs are mingled others showing a distinct background of mythology, and here we also find names of the Mænads, such as *Μαῖρας*, *Θηρά*, etc. (cf. C. Fränkel, *Satyr- und Bakchennamen auf Vasenbildern*, Halle, 1912). Then later art brought the depiction of that furious, almost hysterical, ecstasy to its most vigorous expression, and even extended it, most unnaturally, to the uncouth satyrs; this intense expression of feeling is seen in its finest form in the Mænads of Scopas (M. Treu, in *Mélanges Perrot*, Paris, 1902, p. 317 ff.). Nearly everywhere in art, however, the representation of the Mænads is an expression of early religious emotion, and the vase-paintings designedly set forth the strict reserve of the Bacchæ in contrast to the loose merry-making of the satyrs. The introduction of the Bacchic procession, with its troops of men and women rolling wantonly along, and the transformation of the primitive festival, attended by females only, into a turbulent orgy were the work of the superficial art of the Hellenistic age.

LITERATURE.—This has been sufficiently indicated in the article.
J. GEFFCKEN.

MAGADHA.—Magadha, an ancient kingdom in India, was the scene of the greater part of Buddha's preaching and the last stronghold of his faith in India. It was equivalent to the modern districts of Patna, Gayā, and Shāhābād in S. Bihār. The name Bihār itself, which is now that of a vast district, is evidence of the predominance of Buddhism in these lands, for it was originally the name of a town with a celebrated Buddhist monastery (Skr. *viḥāra*). Buddha was not born in Magadha, but in the country to the north of it, at the grove of Lumbinī (*q.v.*), near Kapilavastu (*q.v.*), the Śākya capital in the Nepālese Tarāi. Magadha was the home and the nucleus of two of the greatest Indian empires, the Maurya and the Gupta. It is celebrated in Sanskrit literature as one of the richest, most fertile, and best irrigated districts in India. As the home of Buddhism and Jainism, it is full of archaeological remains of the greatest religious interest.

Its earliest capital was a very ancient hill fortress named Girivraja (Pāli Giribbaja), built, according to tradition, by an architect named Mahāgovinda; its place was taken in the 6th cent. B.C. by the better known Rājagṛha (Pāli Rājagaha), built at the foot of hills on which Girivraja stood; Rājagṛha is the modern Rājgṛh, which, however, stands about a mile to the south. Its walls still exist, and are probably the oldest stone buildings in India. Rājagṛha had reached its zenith about Buddha's time, soon after which it began to decline with the growth of Pāṭaliputra (the modern Patna). The modern town of Gayā, although now a place of pilgrimage for Hindus, has no ancient religious associations; 7 miles to the south, however, are the remains of Bodh (Buddh) Gayā (see GAYĀ, vol. vi. p. 181 ff.), one of the most interesting sites in India, where Gautama Śākyamuni finally attained enlightenment (*bodhi*). To the south of Gayā is the hill of Dhongra, the Prāgbodhi (Po-lo-ki-pu-ti) of Hiuen Tsiang, with a cave in which Buddha once rested. Punāwān, 14 miles east of Gayā, is rich in Buddhist sculptures; to the south of it is Haṣṛā hill, which has been identified with the Kukkuṭapādagiri of the Chinese pilgrims.

A. Cunningham, however, recognizes the latter in Kurkūār, which lies some miles to the north. Gunerī, Dharawat, and Kavadal are all rich in Buddhist remains, the last-named with a colossal stone image of Buddha. Jetian, or Jakhtiban, is the Yaśtivana ('bamboo-forest') of Buddha's wanderings; near it at Tapoban are the hot springs, visited by Hiuen Tsiang, at which Buddha bathed. In this neighbourhood the Chinese pilgrim visited a cave with a stone which had been used by Indra and Brahmā for pounding sandalwood to anoint Buddha's body. In the side of Baibhār hill, near Rājgār, was the Sattapanni cave in which the first Buddhist synod met in 543 B.C.; according to Cunningham, this cave is the modern Son Bhāndār cave on the southern side of the hill. On the adjacent hill of Ratnāgiri is the *pipal*-tree cave of Fa-Hian in which Buddha used to meditate after his meals. On the top of this hill there still is a small Jain temple; Ratnāgiri is the Pandao of the Pāli chroniclers and the Rṣigiri of the *Mahābhārata*. The extensive ruins at the modern Baragaon are the ancient Nālandā (*q.v.*), the greatest centre of Buddhist learning in ancient India. Near Giriak on the Panchāna river a bathing festival is held annually to commemorate Kṛṣṇa's crossing of the river here on his way to challenge Jarāsandha. Sasaran, Monghyr, and Shergarh are rich in relics of Muhammadan architecture. At Sitāmarhi is a cave with which a legend of Sitā is associated. The annual bathing festival of Sonpur, held in November at the junction of the Gandak and the Ganges, is one of the oldest and most popular in India; it was here that Viṣṇu rescued the elephant from the crocodile, and here Rāma built a temple. At Afsar there is a fine sculpture of the *varāha* (boar) *avatār* of Viṣṇu.

MAGAS.—See SAURAS AND MAGAS.

MAGH.—Magh, or, popularly, Mugh, Mugg, is the designation of a group of Indo-Chinese tribes, numbering 128,545 at the Census of 1911, and practically all confined to Bengal. The derivation of the name is uncertain. A. P. Phayre (*Hist. of Burma*, London, 1884, p. 47; cf. H. Yule and A. C. Burnell, *Hobson-Jobson*², do. 1903, p. 594) connects it with Magadha, the ancient name of modern Biḥār, while L. Vivien de St. Martin (J. W. McCrindle, *Ancient India as described by Megasthenes and Arrian*, Calcutta, 1877, p. 133, note), identified the Magh with the Maccocalingae of Pliny (*HN* vi. xxi. 8).

² All Maghs are Buddhists of the Southern school, and regard the Northern Buddhists of Tibet as wholly unorthodox. The wilder sections of the Thongchas, however, retain some vestiges of an earlier animistic faith, which bids them sacrifice cattle, goats, and swine, and make offerings of rice, fruits, and flowers to the spirits of hill and river. Among the Maramagris, on the other hand, the tendency is to follow after modern Hinduism, particularly in its Tantric developments, and to add the gross worship of Siva and Durga to the simple observances prescribed by their own communion. It thus comes to pass that while the Buddhist *Phungyis* or *Rdolis* are the recognized priests of all the tribes, considerable respect is shown to Brahmins, who are frequently employed to determine auspicious days for particular actions, and to assist in the worship of the Hindu gods. Among the Thongchas old women often devote themselves to the service of religion, and although not charged with special ceremonial functions, are regarded as in some sense priestesses, and are called by the distinctive name *lerdama* (H. H. Risley, *TC*, Calcutta, 1891, ii. 88).

The people thus described are the Khyoungtha of the hill tracts of Chittagong, who, as T. H. Lewin states (*Hill Tracts of Chittagong*, Calcutta, 1869, p. 37, *Wild Races of S.-E. India*, London, 1870, p. 95), are known to the Bengalis of the plains

¹ *Ancient Geography of India*, p. 463.

as 'Hill Mugh,' and are to be carefully distinguished from the true Maghs of the Chittagong District, otherwise called Rājbanṣī, who are the offspring of Bengali women by Burmans, when the latter possessed Chittagong. They supply the famous Magh cooks, well known in Calcutta and other parts of Bengal. The true Khyoungtha are Buddhists and believe in the doctrine of metempsychosis or transmigration of souls; but their Buddhist worship is of a simple character—the presence of a priest is not indispensable; prayers are made and offerings of flowers, food, etc., are placed before the shrine of Gautama by the people themselves. Many villages have no priest, except wandering friars, who are not so much ministers of religion as recipients of alms. Each village has a temple (*khiong*), a bamboo structure built under the shade of some trees, inside which, on a small raised platform of bamboos, stands an image of Gautama, made either of gilded wood or of alabaster, the figure being in a sitting posture, with a pagoda-shaped headress indicative of superior power. Before it the village girls lay offerings of flowers and rice every morning, and, at the same time, bring the daily food of any priest or wayfarer who may be resting there. By the side of the image hangs a small stand of bells, which each villager, after removing his turban and bowing to the semblance of the Teacher, rings to announce his presence. Each one prays for himself, except that now and again a father may be seen leading his young son by the hand and teaching him how to pray. Each year, before the commencement of the burning of the jungle for the purpose of sowing their crops, the boys are clothed in yellow robes of the priesthood, have their heads shaved, and go through a rite before a priest which seems to be an assumption on their part of religious responsibilities. Women do not participate in this rite; but it is common for a man to perform it two or three times during his life. If a relative is sick, or he himself has escaped any danger, he performs the ceremony as a supplication or as an acknowledgment of the mercies which he has received.

LITERATURE.—The authorities are quoted in the article.

W. CROOKE.

MAGI.—1. The name (Gr. *Máγos*, Lat. *Magus*, from Old Pers. *Magu*) is familiar to us from the classical writers, and from two appearances in the NT. It meets us first on the Behistān Inscription of Darius, where the king describes (*Bh.* [Pers. text] i. 35 ff.) the usurpation of 'Gaumata the Magus' (*Gaumāta tya Magus*) and his own successful plot against him, by which he restored the Achæmenian dynasty to its ancient throne. There is nothing in the inscription to show what *Magu* meant, and we must fall back on our Greek sources, Herodotus first, and the rest *longo intervallo*. In Herod. i. 101 we are told that *Ἀρταβρολ, Μάγος*, and four others were *Μήδων γέρεα*. The six names were explained as Aryan caste-titles by J. Oppert long ago (*Le Peuple et la langue des Médes*, Paris, 1879, p. 7), and again, on different lines, by A. J. Carnoy (*Muséon*, new ser., ix. [1908] 121 ff.); the tolerable certainty that five are Aryan makes a strong presumption that *Máγos* must be interpreted from the same language group.

The etymology, however, must be left undecided. Putting aside some attempts of Semitists to claim it, we have at least two plausible accounts from the Indo-European side. Carnoy (*loc. cit.*) compares *μαγική* and *μαγεία* with the meaning 'helper, healer,' while Moulton (*The Thinker*, ii. [1892] 491; see his *Early Zoroastrianism*, pp. 428-430) connects Gothic *magus*, O. Ir. *mug*—a connexion which Carnoy accepts, but in a different sense. The Gothic word translates *révov* once, and *maís* (= 'servant') elsewhere. The latter meaning is that of the Irish word; we may probably compare the development of our 'maid' and local uses of 'boy.' That 'boy' is the primitive meaning is confirmed by the Later Avestan *ma-yava*, 'unmarried.' The significant fact that *magus* (= O. Pers. *magu*) occurs only once in the Avesta, and that in a prose passage (*Ys.* lxv. 7)

obviously late, speaks for the meaning 'servant'; the Magi were thus the leading tribe of the aboriginal population, enslaved or reduced to political subjection by the invading Aryans. But the whole history of the word is open to great uncertainty. The authority of T. Noldeke and C. Bezold (*ap. C. Bartholomae, Ahriman. Wörterbuch*, Strassburg, 1904, p. 1111) may be referred to against the Semitic claim.
